Dr. Ernest Martin has published a very extraordinary work, the "History of Monsters from antiquity down to the present time." Legislation was very cruel on the subject of monsters, and was based on conceptions scientifically erroneous. Riolan, a celebrated doctor, had to examine several monsters and to say, ought they to be sacrificed; he concluded, that when the deformity was not too gross, the being might be preserved; in the contrary case, it ought to be sacrificed, following the precept of Greece, which was adopted by the Romans. It is only when several organs are profoundly altered, so as to place the being at a considerable distance from its species, that the term monster is applied, and it generally does not live long after its birth. Monstrosity is but the arrest, during the embryonic stage, an accident in the development of a definite and specific state. The eggs of birds are admirably adapted for the production and study of artificial monsters, as by incubation the means can be varied indefinitely, on the position of the egg; its calcareous covering, or the temperature. But the same disturbing influence will not produce identical results, because each egg has its germ, its individual character; varying in constitution, volume, color, chemical constitution, and relative proportion between yellow and white. Further, each condition has a different hereditary disposition. There is no analysis sufficiently fine to discern what constitutes the individuality of the germ, but which nevertheless exists in the embryo from its very first hour. M. Dareste has been able to observe the earliest stage of the constitution of the bird's heart—two sacs which approach each other, and then rest together; he has also seen in the phenomena of evolution, that if any cause interferes with, or retards the development of an organ, the others continue to be formed, but the result is not the less a monster, without head, or without eyes, or with only one eye. In Molière's *Médecin malgré lui*, the author makes Sganarelle place the heart at the right side, and in the latter's reply to Geronte who remarked it was at the left. Sganarelle admits it was so formerly, *mais nous avons changé tout cela*. Molière derived his idea from the *post mortem* examination of an old soldier, all of whose viscera had been transposed. Monstrosities with birds perish before being hatched, because unlike mammalia, a monstrosity has to depend upon itself during development. In the case of double-members, Milly Christina for example, scientists are of opinion that the phenomenon is produced by the union of two embryos at first distinct, and not from an organism primitively simple, duplicating itself. Dr. Martin in his curious treatise on the mutilation of the feet of Chinese women shows, that such sufferings have had no influence on the vigor of the race or fecundity, as the annals of ten centuries indicate no deterioration; but he inclines to believe, when mutilation affects the cranium that moral monstrosities can ensue. M. Lebon has shown from the cubical capacity of the skulls of Boileau, Gall, Volta, Descartes, &c., in the Museum of Natural History, that it is only by exception that marked intelligence can exist in a skull of small capacity.

M. Varenne draws attention to a singular property of iron: when the metal is placed in ordinary nitric acid, an intense reaction ensues; but if the iron be placed in contact with the

same acid in concentrated form, no action ensues: the metal remains in a passive state, owing to a gaseous sheath being formed around the iron. This gaseous sheath is composed of bi-oxide of nitrogen, which disappears the moment it comes in contact with the air. How does this sheath maintain itself in contact with the metal? That's the question.

Boerhaave, a Dutch physician, observed, keep the feet warm and the head cool, and you can mock the doctors. Now cold feet form an index of a special state of the organism, capable of engendering maladies, but not in itself an ailment. It is a test of animal heat, as the pulse is of circulation. It is at points farthest from the heart, that cold is first sensible; the calf of the leg is warmer than the sole of the foot, and the top of the knee than the calf of the leg. Moderate cold is not bad for people well fed and warmly clad, it stimulates circulation and provokes appetite, the blood becomes richer and the mind more lucid. A sudden and vigorous cold hastens the *dénouement* of chronic maladies arrived at their last period; hence, 24 hours of such weather suffices to terminate several days struggling of an invalid against death. The best of feet-warmers are good stockings and strong shoes, and the best means to provoke warmth, is exercise—work, and not idleness. Martignac remarked, that "coquettes never catch cold," but the latter would do well to remember, that bare shoulders rather than cold feet are most calculated to produce congestion of the lungs.

#### DARING ATTACK ON A LADY IN THE HONGKONG HOTEL.

About two o'clock yesterday morning a most daring and brutal attack was made upon a lady visitor in the Hongkong Hotel. It appears that Mrs. Schraub and child arrived here on Monday afternoon from Yokohama and took apartments in the hotel, occupying room No. 9, which is on the first floor. Mrs. Schraub retired to rest on Monday night with her child and kept a light burning during the night. About two o'clock yesterday morning she was awakened by hearing a Chinaman (the boy who had waited upon her since her arrival) entering her room. She asked him what he required and at the same time ordered him to leave the room, which he refused to do. Mrs. Schraub then told him if he did not go she would ring the bell. The scoundrel then approached the bed and drawing from under his jacket an instrument (probably a dagger) struck her upon the left side of the head, thereby stunning her for a short time. Mrs. Schraub's child being frightened began to cry, whereupon the ruffian struck it on the head and rendered it senseless. Having silenced opposition, the boy collected the booty he had come for, and carried off Mrs. Schraub's gold watch, a jet chain, a pair of valuable gold earrings, several trinkets, a morocco travelling-bag, and \$15 in cash, with which he decamped. Just at this moment Mrs. Schraub came to herself again and gave an alarm. Assistance was immediately forthcoming, and the police authorities were at once communicated with. The Captain Superintendent of Police, Chief-Inspector Horspool, Detective Inspector Lindsay and Inspector Mackie soon arrived at the hotel, and no one was allowed to leave the premises. After making a few inquiries, the police had all the servants of the establishment mustered in the passage on the ground floor, when several of the boys were found missing, but their absence was accounted for in various ways. The watchmen at the hotel stated that after the alarm was given no person was allowed to leave the premises. Mrs. Schraub was then interviewed by the police and she described the Chinaman who attacked and robbed her, at the same time mentioning that he was the boy who had attended to her since her arrival. The hotel boys, who in the meantime had been detained in the hall, were again examined personally and those answering the description given were placed on one side and afterwards taken before Mrs. Schraub, when she at once identified one boy (named Li Aman) as the culprit. Upon that the police made a more minute examination of his body, and upon his left little finger was found a spot of blood, and also another spot on his left shoe. He was accordingly taken into custody and marched off to the Central Police Station. Yesterday the prisoner was taken before the sitting magistrate, the Hon. C.B. Plunket, and charged by Detective-Inspector Lindsay on two counts; first with robbing Mrs. Schraub of the articles before mentioned; and second with wounding Mrs. Schraub and her child. The case was remanded until the 17th instant. Dr. Ayres, Colonial Surgeon, was sent for immediately after the attack, at the same time the report was made to the police, and

he was very promptly upon the spot and attended the wounded lady and child. From late enquiries made last night both Mrs. Schraub and the child were progressing very favourably. Prisoner has since confessed his guilt and been committed for trial.—*Hongkong Daily Press*.

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

## COURT, POLITICAL AND OFFICIAL.

A meeting, which commenced on the 15th instant, is being held in the town of Sendai, and consists of six delegates from each of the surrounding districts, Shonai, Yamagata, Akita; Morioka, Mihar, Nihon-matsu, and Fukushima, &c. They propose to make arrangements for forwarding a petition to the Government demanding the establishment of a National Assembly. The object of the meeting has been communicated to Mr. Akiyama, a member of the local Assembly of the prefecture of Miyagi, who is now in Tokio.

The politicians of the province of Shin-shu, have formed a society called *Sho-ki-sha*, for the purpose of applying for the establishment of a representative body.

The *Nichi Nichi Shimbun* states that the foreign consuls in Yokohama, are shortly going to visit the Tokio *Fucho*, in order to congratulate the new Governor on his appointment.

It is said that the present prefecture of Kochi is to be divided into two, and that a new prefecture will be established in the province of Awa, under the name of Tokushima *Ken*.

Consul Yegawa has been ordered to New York, to replace Consul Takagi, and will proceed to his post at the beginning of next month. Mr. Konda has been appointed Consul for Fusan, Corea, and Consul Maida, formerly at that port (Fusan), has been promoted to be Consul-General, and will be transferred to the new port to be opened at Gensan, where the Consulate-General is to be established.

Mr. Kawano, the superintendent of the Hakodate Custom House, returned to his post on Saturday last, by the *Kumamoto Maru*.

His Majesty the Emperor left the Palace at about nine o'clock on Monday the 23rd instant, accompanied by their Excellencies, Prime Minister Sanjo, Vice-Prime Minister Iwakura, Privy Councillors Okuma, Yamagata, and Ito, and arrived at the House of Assembly about 9.45 a.m. His Majesty was received by the President and the assembled members, and the meeting was opened at half-past ten o'clock in His Majesty's presence. The subject under debate was the precautionary measures to be taken against famine. His Majesty left the Assembly at 3.10 p.m.

The *Mainichi Shimbun* says:—"It is currently rumoured that two or three of the Privy Councillors have sent in their resignation in consequence of their opinions being opposed to the rest of the cabinet, on the question of the establishment of a National Assembly, but we cannot vouch for the truth of the report." The *Hochi Shimbun* states:—"We are informed that three Privy Councillors viz.;—General Yamagata, Terashima and Oki, have sent in their resignations."

A special meeting of the Central Board of Health has been held.

From the first of last July until the end of last December, 32,629,040 postage stamps, 15,255,900 post cards, and 150,000 envelopes, were printed by the Printing Office in the Finance Department, for the Post Office.

The members of the local Assemblies in different prefectures, who came up to Tokio for the purpose of listening to the deliberations of the Local Governors' Assembly, numbered altogether a hundred and thirteen. They met at the Nakamura-no Restaurant, situated on the banks of the Sumida, on the 22nd instant, for the purpose of making arrangements for applying to the Government for the establishment of a National Assembly, and the majority ultimately resolved to return to their respective prefectures, where they will ascertain the opinions of the residents, and then meet again in Tokio. Mr. Wooyoda, a member of the local assembly of the prefecture of Miyo, declared at the meeting that he would forward a memorial to the Senate on the following day, (23rd instant), asking for the establishment of a National Assembly.

Mr. Matsukata, Assistant Minister of Finance, has been appointed Chief Commissioner, and Mr. Kawase, the Chief Secretary of Finance, Mr. Tanaka, Secretary of the Interior, and Mr. Takayama, an attaché of the Home and Finance Departments, managing officers for the Japanese section at the forthcoming Melbourne Exhibition. Mr. Kawase has been ordered to proceed to Australia within a short time.

Her Majesty the Empress Dowager has called Prince Kujo at Nabecho, Kanda, where she was present at a theatrical performance.

Mr. Tanaka, the Assistant Minister of Education, who is now in Kiushiu on a tour of inspection, is expected back in Tokio about the 14th or 15th of next month.

The debates in the Local Governor's Assembly have ended and the closing ceremony was presided over to-day by the Emperor in person.

The members of the Assembly were honoured with an audience with His Majesty the Emperor yesterday, and were entertained by His Excellency Ito, Minister for the Interior, to-day.

Mr. Yegi Takato, Secretary of the first class to the Japanese Legation in Washington, and Mr. Yegawa Kumpai, Consul for New York, will leave for America by the mail steamer on the 9th proximo.

Mr. Kawase, Chief Secretary of the Finance Department, who has been in Osaka to attend the opening of the Competitive Exhibition of Cotton and Sugar, returned to Tokio the day before yesterday.

Governor Nagayama, of the prefecture of Niigata, has received an increase of fifty yen a month to his salary, as an acknowledgment of his long and diligent services.

Mr. Matsukata, the Assistant Minister of Finance, is going to Osaka about the 10th of next month on official business connected with the Competitive Exhibition of Cotton and Sugar. He will return to Tokio after five or six days' stay in Osaka.

The following notice from the *Aikokusha* or the Patriotic Society in Osaka, has appeared in various Japanese papers:—

NOTICE: As it was decided at our general meeting held in November last that a memorial should be addressed to His Majesty the Emperor in March next, demanding the establishment of a National Assembly, we have despatched agents in all directions to ascertain the state of public opinion throughout the whole country. Wherever our emissaries went, the residents generally complied with their request to join our association, and informed them that they would apply for the establishment of a national assembly in conjunction with us; and therefore a meeting will be held of our society on the 10th of next month, and we wish delegates from all associations composed of more than ten persons to attend our meeting, if they hold the same opinions as we do on this subject.

## NAVAL AND MILITARY.

Vice-Admiral Ito, the chief of the Eastern admiralty office, inspected the *Nisshin Kan* on Monday last.

As a meeting of commanding officers is about to be held, Lieutenant-Generals Soga, Miyoshi and Ida arrived in Tokio on the 26th instant, and all the other commanding officers are expected shortly.

Five of the midshipmen who lately passed the examination at the Naval College have been appointed to ships.

A squadron of cavalry belonging to the Imperial Guard have started on a four weeks march to Nikko, Takasaki, Hachi-o-ji, and Odawara for the purpose of practicing manoeuvres.

"We," (*Mainichi Shimbun*) "have already several times heard of the resignation of General Toriwo, the Commander-in-Chief of the Imperial Guard, and it is now again reported that he has sent in his resignation."

Five hundred and seventy-six men of the Imperial Guard were dismissed to their homes the day before yesterday, on the expiration of their term of service. Of the men disbanded, four hundred and seventy-eight belonged to the infantry, thirty-two to the cavalry, thirty-seven to the artillery, and twenty-nine to the engineers.

## INDUSTRIES, TRADE, AND FINANCE.

Permission was granted on Thursday last to the native merchants, to establish a Chamber of Commerce in Yokohama.

A competitive exhibition for cereals, tobacco, rape-seed, &c., will be opened in Tokio, in 1882.

A Chamber of Commerce was established in the town of Kanagawa, in the province of Kaga, on the 15th instant.

The total expense incurred in the suppression of the south-western rebellion amounted to 41,567,726 *yen*, 68 *sen*.

The revenue of the Government printing office for the half-year ending on the 31st of December, 1879, amounted to 480,854.21 *yen* and the expenditure to 398,802.15 *yen*. The net profit, according to the published statement, was 82,052.06 *yen* and the accumulated savings of the officers and workmen of the bureau 27,758.76 *yen*, which has now been committed to the care of the First National Bank.

The usual meeting of the Tokio Chamber of Commerce was held in the rooms of the Chamber, on the evening of the 24th instant. Mr. Shibusawa was elected Chairman, and Messrs. Fukuchi and Masuda, Vice-Chairmen. Several committees were appointed.

The monthly salaries of Government Officials below the class of secretaries are to be increased from next month after the following rate:—1st class *Sakan* 75 *yen*; 2nd class 60 *yen*; 3rd class 55 *yen*; 4th class 50 *yen*; 5th, 45 *yen*; 6th, 40 *yen*; 7th, 35 *yen*; 8th, 30 *yen*; 9th, 25 *yen*; and 10th, 20 *yen*. Of the supernumeraries, the 1st class will receive a monthly increase of 15 *yen*; the 2nd of 15 *yen*; the 3rd of 12 *yen*; and the 4th of 10 *yen*.

The *Hiogo Maru* brought coin to the value of 10,000 *yen* in gold five *yen* pieces, and 17,750 *yen* in one *yen* silver and 1,200 *ryo* in old one *bu* silver, consigned to Mr. Nishimura Kinaburo of Yokohama by Gan-san-sha of Kobe. The same vessel also brought 5,005 *yen* in gold five *yen*, and 750 in one *yen* silver to Mr. Matsunoya Kinzaku of Yokosuka from Mr. Ota Heibei of Osaka.

The number of visitors to the Competitive Exhibition at Osaka during the week ending the 21st instant, amounted to 1,013. The number of tickets sold during the same period was 331 ordinary, and 675 season tickets; the latter representing 13 *yen* 50 *sen*.

A native paper states that "a certain foreign merchant in Kobe is going to export 800,000 pounds of rice to Australia."

The Yokohama Specie Bank, established at 4th Street, Honcho-dori, commences business to-day.

A native contemporary states that trade in Yokohama is much worse this year than last year, only twenty-three merchant ships and twelve mail steamers having arrived since the 1st of last month.

#### MISCELLANEOUS.

The Shintomiza Theatre will be opened for the season on the 29th instant.

The editors of the *Ukiyo Shimbum*, the *Asomori Shimbum*, and the *Osaka Asahi Shimbum*, have been fined five *yen* each, for libels contained in their respective journals.

The police made a successful raid upon the pickpockets in the capital on Sunday last. About one hundred offenders were captured.

His Royal Highness the Duke of Genoa arrived in Osaka on the 19th instant, and visited the Mint. In the afternoon he attended the Competitive Exhibition of Cotton and Sugar accompanied by the Governor, and on the following day he inspected the castle, also under the escort of the Governor, by whom he was entertained in the evening. On the 21st instant, His Royal Highness went to Kyoto, where he proposed to remain for two or three days. The Duke intended to subsequently visit Uji, and Nara, and then return to Kobe.

On the 23rd instant a fatal accident occurred at the Imperial Mint at Osaka. One man was killed.

A school for imparting a knowledge of the Chinese language has been opened in the Yei-ju ji Temple, at Onaye-cho, Nishino-kubo, Tokio.

Permission has been accorded to Prince Nabeshima (the ex-Daimio of Hizen) to purchase an extensive tract of land in Yesso, in order to find employment for his former retainers.

Mr. Arakawa, a member of *Hokushin-sha*, who delivered a lecture at Ibumuro-ro, Asakusa, Tokio, on the 21st instant, was prohibited by the Police Authorities, the day before yesterday, from delivering lectures at public meetings in future.

#### IMPERIAL GOVERNMENT RAILWAYS.

#### ARRIVAL OF THE FRENCH MAIL.

The *Volga* came into port on Thursday and we reproduce such of the items of news by the files to hand, as have not already appeared. The reported forced loan at Cabul, and particulars respecting General Roberts' proclamation, etc., we published after the arrival of the last P. & O. steamer.

Calcutta, 17th January.—Mr. Gribble, Officiating Post Master-General, Bengal, died this morning of cholera after a few hours' illness.

Kandahar, 17th January.—A Ghazi was killed this morning while trying to stab a sergeant of the Engineers. A sapper split the Ghazi's skull with a pickaxe.

Mahomed Jan, the notorious highway robber, who has been the terror of Southern Afghanistan for ten years was captured on Thursday by the city Kotwal after a desperate resistance, in which he was severely wounded.

A gigantic swindling by the principal purchasing agent of the Commissariat, a Parsee named Cowasjee, has been discovered. It is said that Cowasjee remitted R35,500 to India in two months. His pay was R200 a month.

Kurrachee, 18th January.—There is great excitement among the Parsee community here owing to the arrest at Kandahar of one Cowasjee Rustonjee, a Commissariat subordinate. He accompanied Major Staveley's Battery to the front, and it is said that in a short time he managed to remit thousands of rupees to his friends in Kurrachee. In November last he remitted R14,000, and lately R20,000 to Shapurjee Hormusjee Soopareewalla, who stood surety for him on his employment. The latter sum was remitted by four hundies of R5,000 each. Payment of these has been stopped by order of the collector. One Dadabhoj Merwanjee, who had not a farthing to his name, has also remitted R15,000. He went to Kandahar from here on Cowasjee's special invitation.

Jallalabad, 18th January.—A party under Mugal Khan is dispersing, and returning to their homes, in consequence of the failure of their supplies. Asmatulla Khan is sending reports all round the country, especially amongst the Mohunds, that Mahomed Jan means advancing to Argandeh; that Gholam Hyder is coming from Turkistan to Charikar; and that Ayab Khan is about moving from Herat towards Kabul. The truth of these reports is not established, but the object is to keep up hopes with the hostile tribes, who are disheartened by constant reverses.

Allahabad, 18th January.—During the engagement of the 13th, Mogul Khan's nephew was killed by a shell. The enemy were taken completely by surprise at the rapidity with which the guns opened fire from the positions selected by Colonel Fryer. One hour elapsed between the receipt of the order and the guns coming into action, the distance travelled being about seven miles from Jallalabad.

Calcutta, 19th January.—On the 17th, 500 men under Colonel Brienagon successfully crossed the Calul river by rafts at Kam Dacca and occupied Beina; a reconnaissance four miles down the river showed the road to Palori level, and the country quite deserted. No enemy could be seen. On moving on the 18th

Reina was burnt, and the force recrossed to Kam Dakka. Another small party rode straight to Lalpura. Not a shot was fired on the 17th or 18th. The enemy's loss on the 15th cannot be less than about sixty killed and as many wounded.

Allahabad, 19th January.—Moghul Khan has gone to Khanjar Khell, his fort in Kamah. The Musa Khels, who joined his party from independent territory, are all dispersing. The Shinwaris have refused up to the present all overtures of the Mohmunds and Moollahs to rise. The advance of General Duran's force from Lundi Kotal was delayed by the great difficulties on the road. However, some of the enemy were caught on the narrow path, retreating along the river's bank and suffered severely. Their losses are supposed to have been about 100.

Bombay, 19th January.—The Government of India has ordered the Madras troops to be withdrawn from South-west Afghanistan and relieved by Bombay regiments. Besides the troops I telegraphed about on Saturday, three regiments of cavalry stationed at Dacca, two regiments of Scinde Horse stationed at Jacobabad, and the Poona Horse stationed at Serovi, have been ordered to hold themselves in readiness for service in Southern Afghanistan. Sir Richard Temple accompanied by Sir Robert Sandeman, goes to the front on the 27th January.

Calcutta, 21st January.—There have been occasional meetings of the border tribes, but the frontier generally is tranquil. Active intrigues continue around Ghuzni, and in the Logar Valley, where excitement and disorder still prevail. Among the tribes generally in that direction the feeling is said to be one of suspense and anxiety. The Shinwaris still hold aloof from the solicitations of the Mullahs, and a gathering in Lughman, has been dissolved by the Governor, who is supported by our Jallalabad troops. The sons of the Mustaufi have come in to Kabul and have visited General Roberts. General Gough's brigade is getting comfortably housed in the Bala Hissar. The defences on the hills above are being rapidly strengthened. An excellent bridge has been thrown across the Kabul river by the 23rd Pioneers on the direct road from Sherpur to Siah Sung, and the construction of roads in different directions is progressing satisfactorily. The convoy of ammunition and warm clothing reached General Roberts on the 18th instant. A Jallalabad letter of yesterday's date states that fighting took place five miles from Jallalabad on the 12th instant. The late Governor having collected large bodies of men, constant attacks were expected. The troops were ordered to remain under arms both day and night and to be ready to turn out at a moment's notice. No mails from the front have been received to-day in consequence of large bodies of Mohmunds being about.

Allahabad, 23rd January.—People in Logar and the surrounding districts are said to have refused to join in the new jihad as they think Mohamed Jan has no chance of permanent success against the British. The astrologers at Ghuzni will consult in five days to decide whether the stars are propitious for another attack upon Sherpur. The Hazaras are collecting in force to attack Mahomed Jan with the determination to avenge the destruction of their villages and the murder of their families by Hassan Khan of Jellalabad. Dr. Owen is now treating in a charitable dispensary in Kabul the men wounded in action against us.

Bombay, 23rd January.—The following troops have been warned for immediate service on the Kandahar line. A Battery R.H.A., a Field Battery, Kurrachee, Seventh Fusiliers, 66th Regiment. It is expected that other troops will shortly be sent. The *Tenasserim* sails to-day for Kurrachee towing the *Charewitch* with the 28th N. I. Two Batteries of Artillery which lately arrived from Burnah with the intention going home by the next troopship have been unexpectedly stopped, and told to await further orders. It is supposed they will be sent to the front or required to take the place of some other Batteries selected for field service.

London, 24th January.—It is reported that the inhabitants of the Province of Kars exhibit hostile feelings towards the Russians.

The *Times*, does not regard the proposed increase in the German army as menacing to peace, nor yet confirmatory of recent disturbing rumours, but as a vivid revelation of the terrible condition of armed truce of Europe. Consols closed at 98½.

Madras, 27th January.—The Palni Taluq in the Madura district is suffering severely for want of the usual rainfall. Less than five inches fell in October and November, and none in December. The dry crops are a failure and the people are beginning to suffer extremely.

Allahabad, 28th January.—Mohamed Jan has issued a general order to the tribes, saying that February 24th is the day fixed to renew the attack on the British. Seditious placards are posted on the city walls. Several Spoyes of the Ardal regiments have been seen at Kabul. Gholam Hyder, the Governor of Turkistan, has sent six horses as a present to Mohamed Jan as showing his sympathy with their movements. Armed men are gathering at Kalungar in Logar. We are making a small magazine at the Bala Hissar. Some officers absent from the Kabul division on recruiting remount duty have been ordered

to rejoin by the 15th March. This looks like renewed military activity in the spring.

Allahabad, 30th January.—Tahir Khan is now at Ghuzni with Mus Khan, and has sent letters to General Roberts saying that the Ghuzni faction have resolved to fight to the death unless Yakooob Khan is reinstated as Amcer. Great uneasiness prevails.

Madras 26th January.—A public meeting was held to-night at the Club to consider the question of the Irish distress. General O'Connell presided, but only 11 attended. R. 2,500 was subscribed in the room, and it was decided to telegraph to the Mayor of Dublin for detailed information.

Calcutta, 20th January.—Information from Afghan Turkestan states that Gholam Hyder's power there is much weakened by rebellion. No news has been received of Abdul Rahman. The report of his arrival in Balk, which came out some time ago to India from England has not yet been confirmed from any other source. From Kabul it is stated that the reports of fresh gatherings still continue. There is nothing very definite at present. The opposition appears to be concentrating at Ghuzni.

Calcutta, 23rd January.—Advices from Kabul dated 22nd instant, state that the Bala Hissar has been brought into telegraphic communication with Sherpur. Supplies are being brought in fairly well. Gularam and other malcontents are doing their best to keep up the excitement in Logar, but no serious disturbance is reported either from there or Kohistan. Mullah Mieshi Alam has gone to his own village about six miles from Ghazni. Mahomed Jan's whereabouts are still uncertain. Some reports say he is in Kottiwari, others that he has gone to Ghuzni. From the Ghuzni direction news comes of further fighting between the Huzaras and the Ghuzni insurgents. Advices from Kandahar state that a Ghuzni was killed inside the gate of the fort on the 17th while attacking a sergeant of engineers, who was unhurt. He is supposed to be a Talibaliim from the country north of Lelat.

St. Petersburg, 28th January.—The semi-official *Agence Russa* declares that there is no foundation for the statement that Russian troops are being concentrated on the Polish frontier, and also states that the Russian Government has not offered to withdraw troops from that quarter at the desire of the German and Austrian Governments, as was reported. The only foundation for the reported Russian defeat at Telikialar lies in the capture of a transport train by the Tekke Turkomans.

London, 29th January.—It is stated that the Home Rulers in Mayo will start Messrs. Davitt and Brennan as members of Parliament on condition that they abstain from attending Parliament.

The Duchess of Marlborough yesterday addressed a meeting of the relief fund committee, and repudiated aspersions made by Mr. Parnell.

A Moscow paper states that General Turgakosow has arrived at Tiflis with the object of discussing the possibility of Russia continuing offensive operations against the Tekke Turkomans, considering the great scarcity of camels.

London, 28th January.—Major-General Clifford temporarily succeeds Sir Garnet Wolseley at the Cape.

The Mayor of Dublin attended a levee held by the Lord Lieutenant of Ireland yesterday, which will probably effect a reconciliation.

Obituary.—Major-General Woods, of the Madras Army; and Major-General Boyd, of the Bengal Army.

Vienna, 28th January.—In a speech by the Austro-Hungarian Minister for Foreign Affairs, he said the Austrian policy towards France was pacific and that France was not threatened by the Austro-German alliance. He added that the relations between Austria and Russia were very friendly.

London, 28th January.—The Ceylon Government Loan has been subscribed seven times.

St. Petersburg, 30th January.—The *Golos* advocates a reconciliation with the Poles, and reasserts that negotiations are believed to have failed for the establishment of an independent Polish kingdom.

## THE JAPANESE PRESS.

### THE WAR MINISTER'S NOTIFICATION.

(Translated from the *Mainichi Shimbun*.)

THE Minister for War issued a notification on the 12th instant to the following effect:—"Cadets, non-commissioned officers, and the rank and file of the army have been forbidden to attend political lectures and meetings, yet it is reported that some are in the habit of acting in contravention to this regulation. They are therefore ordered to strictly observe the rule in question." On reading this notification we commiserated the military forces throughout the Empire upon their unhappy condition, and, as the matter has caused us great concern, we will now offer a few ob-

servations, with a view to procuring the cancellation of the notification.

Before this regulation came into operation, our editor, who is in the habit of delivering lectures at different places in Tokio, frequently noticed among the audience men attired in military garb, sitting quietly listening to the discourse. The lecturer was invariably gratified when soldiers were present, as he knew that with them, as with Government officials and newspaper editors, Sunday is the one day of relaxation from the toil of the week. Most soldiers devote their leisure to guzzling and gluttony, but these particular men preferred to avoid the contaminations inseparable from such a debased line of conduct and desired instead to improve their minds by attending lectures, thus showing an excellent example both to their fellow-soldiers and fellow-countrymen generally.

Who in walking through the streets of the capital has not been attracted by sounds of quarrelling and fighting, and on making inquiry has not found that the rioters were drunken soldiers? Is it not the case that the vast majority of the disturbances so common in Tokio on Sundays are caused by the intoxicated soldiery enjoying their hours of relaxation in the only way open to them? Compare the brutal conduct of these Sunday revellers with that of the orderly attendants at the lectures, and then say which is more desirable? Whenever we witnessed these scenes of drunken debauchery we became more and more impressed with the admirable behaviour of those soldiers who preferred listening to a quiet discourse; in fact, we came at length to regard them as "beautiful flowers growing out of a muddy pond." Now the Minister for War has issued a stringent order forbidding the soldiery from attending lectures. We confess we are wholly unable to arrive at a satisfactory reason for the promulgation of this regulation.

What is meant by the "rank and file"? According to the revised military code, the army of Japan is divided into the soldiers serving with the colours, the reserve, and the second reserve. The term of service is three years in the first division, three in the second and four in the third—in all ten years. Now, if the "rank and file" comprises the soldiers in the first, second, and third divisions, as certainly appears reasonable, then under the terms of the notification all the young men in the country will be prevented from attending lectures for the long period of ten years!

The revised code also states that "the reserve forces may reside at their own dwellings except when called out for active service." Thus it appears that although they are allowed the privilege of living in their own homes, they still are denied liberty to attend lectures. If this is the case we are certainly astonished at the stringency of the regulation. Surely "rank and file" must mean simply the men on actual service?

We believe the Minister for War permits the soldiers to read books and newspapers. How is it then that they are prohibited from attending lectures? In what respect does a lecture differ from a newspaper? They both express the opinions of learned men; the one delivered orally, the other in writing. Reading a newspaper is permitted, listening to a lecture forbidden: freedom is granted to the eyes and denied to the ears!

Some people say that the Minister is only following the example of European nations where the soldiers are neither allowed to attend lectures or read the papers, and the course adopted is defended by referring to the case of Germany and France. They allege that in Germany, before the war, the soldiers were debarred from reading papers, while in France the contrary was the case, and that in consequence the discipline of the French army deteriorated, and was overcome by that of the Germans, and the streets of Paris resounded with the tramp of the victorious hosts. This is the argument of those who defend the notification! We certainly did hear some such rumour a long time ago, but we attributed it to the ignorant Europeans. We never thought to find our countrymen adopting such an erroneous idea. However, the notification shews that our military authorities share the opinions of the ignorant Europeans and we cannot avoid expressing our regret that such should be the case.

Now it is very well known that Napoleon III. had a very powerful army, and that, before his defeat by the Germans, the French armies were uniformly successful; they achieved great victories and conquered many

countries. If the reading of newspapers and attending lectures caused the French soldiers to become cowardly, how are their victories before the war with Germany to be accounted for? We all know perfectly well that at no time were Napoleon's soldiers prohibited from reading papers and attending lectures, and therefore their victories and defeats are in no way connected with their doing so, but depended entirely upon the relative skill of their adversaries. Take the case of the war between the northern and southern states of America. The north always published full accounts of proceedings, and ultimately defeated the powerful and desperate southern army, and restored the constitution of the United States to its former position. It appears to us that forbidding soldiers to acquire knowledge will not increase their powers as an engine of warfare, and we therefore desire to see the late notification rescinded, in order, if possible, to check the discreditable drunken squabbles so prevalent among the soldiers in Tokio.

#### A NATIONAL ASSEMBLY.

(Translated from the *Mainichi Shimbun*.)

THE following memorial praying for the establishment of a representative assembly has been presented to His Excellency Sanjo Sanetomi, the Prime Minister, by Messrs. Masuda, Yendo, Akiyama, Minegishi, Chiba, Atami, &c., acting on behalf of the local assembly of the prefecture of Miyagi:—

To His Excellency SANJO SANETOMI,  
Prime Minister.

We have the honour to present to your Excellency the following memorial:—

We consider that in a great many respects the management of a country is like the regulation of water. It is impossible altogether to restrain the force of a running stream, and therefore those who are acquainted with hydraulics learn how to humour and direct the force of the current so as to avoid damage. When a flood occurs the surface of the adjoining land is submerged. The same happens to the administration of a country. When the pent-up excitement of a nation breaks forth, no force can restrain the people from accomplishing their desires; they must be allowed to attain their ends in order to avoid disastrous consequences. This submission to the will of the people is, we consider, the proper way to control their actions.

We have ascertained, as the result of careful investigation, that the people of Japan have developed a spirit of independence, and now thoroughly appreciate the respective rights of the monarch and the general mass of the community. The result of the knowledge is an ever-increasing demand for the establishment of a constituent assembly, vesting legislative power in the people, and it is now very apparent that the movement will never cease until the required object is achieved.

We respectfully submit that, until legislative powers are lodged in the hands of the people through their representatives, the judicature cannot be placed on a thoroughly satisfactory footing; and if this be the case with the judicature with how much more force does it apply to the executive? When the people are properly represented in the Government, and the judicature and executive are in a satisfactory condition, then the wealth and prosperity of a nation increases. Every nation in Europe enjoys the advantages which are termed "constitutional government."

His Imperial Majesty, the great and gracious Emperor who now rules over us with the assistance of your Excellency's wisdom and experience, leaves nothing to be desired in conducting the administration of the country, and yet dissatisfaction is prevalent at home, while abroad we suffer by reason of the exaction of foreigners. How is this to be explained? Is it not because no proper feeling of harmony has been established between the governors and the governed?

The prosperity of a country is inseparable from the prosperity of its inhabitants; the Government and people should therefore act in unison. Can it be right that the Government should alone be charged with all affairs pertaining to the welfare of the state?

It is indisputable that the most urgently pressing measure is the establishment of a constituent assembly, so that the people shall take a part in legislative functions. Thus the

three great bodies which go to build up prosperous communities would be working in harmony, and the welfare of the Empire advanced as that of a single individual.

It is within our memory that His Majesty the Emperor, when he first ascended the imperial throne, made solemn oath before Heaven that "the will of the people shall be ascertained and the administration of the Empire carried on conformably with their wishes." Seven years afterwards His Imperial Majesty issued an edict that "constitutional government shall be gradually introduced." His Majesty's virtues are indeed great and his wisdom profound. Is there any other means of ascertaining the will of the people and introducing constitutional government, except by the establishment of a national assembly?

At the time we refer to, His Majesty evidently desired to grant political rights to the people, but they treated the matter with an indifference born of ignorance, and although the ex-privy councillor Goto Shojiro and others presented a memorial on the subject, there were many among the public who expressed a conviction that the country was not ripe for so radical an innovation. Thus the matter has been put off until the present day.

The circumstances of the Empire are, however, very different now to those of the 7th year of Meiji (1874.) Not only do the people no longer think that the establishment of a constituent assembly would be premature, but societies and leagues have been formed throughout the length and breadth of the land, in order to secure the boon. Who therefore can now affirm that the people are indifferent, or that they cannot be entrusted with participation in legislative functions?

Troubles and disturbances often take place in a country from unexpected causes, and if those members of the political societies who are desirous for a national assembly should find their hopes frustrated, it is to be feared that they will rise in insurrection and refuse to be pacified.

Again, if your Excellency, taking advantage of your exalted position and acknowledged popularity, despises the current of public opinion, and does not seek a suitable outlet for its violence, future history in speaking of your Excellency will say that you "occupied the position of Prime Minister, but did not enforce the imperial edict, allow the people to succeed in their reasonable desires, or carry on the administration of the Empire so as to meet with the approbation of the public. On the contrary the people were dissatisfied, and foreigners still maintained their haughty disregard for the independence of the nation." How could your Excellency's admirers rid you of this blame? The subject has caused us much perplexity and embarrassment.

Your Excellency is well aware of all these circumstances, and will doubtless take the necessary steps to carry out the desired reforms with due care and prudence. We feel assured of this from the establishment of local and other subordinate assemblies in the cities and prefectures with the view of educating the people to the proper use of their political rights when entrusted into their hands.

But what course is to be adopted if the people are not content with the existing assemblies? We are anxious to avoid any statements which might prove unpalatable, but it is undeniable that the clamour of the public, and more especially the inhabitants of our prefecture, for a constituent assembly, is now like that of a hungry man for food. This is why we have addressed a memorial to your Excellency on the subject, as we have no intention of forcing the question upon you by a conspiracy or the assemblage of multitudes of people. We do so simply because we consider it our duty, having regard to the present state of the Empire. We have not considered ourselves in this matter, but only our beloved country, and if, in the fulness of our feelings, we have exceeded the bounds of politeness, we pray your Excellency to excuse our offence and regard only the meaning and spirit of our memorial.

#### CONSTITUTIONAL GOVERNMENT.

(Translated from the *Choya Shimbun*.)

"SELFISHNESS," says the proverb, "is ingrained in the heart of man." This remark has a great bearing upon political organization, to which it behoves everyone at this particular juncture to devote careful attention.

If it was not for this selfishness the administration of a country might be left with safety in the hands of two or three people, and it would be of no benefit to take any trouble respecting a constitution to prevent arbitrary actions. If such was the case an absolute monarchy would be the most convenient form of government.

However, man is, unfortunately, a selfish and greedy being, and all the nations of Europe act upon the principle of self-interest, openly and without shame. Thus all the world is saturated with the same feelings of greed; and if there is no limit to the tyrannical acts of government and the submissive conduct of the people, so that a proper harmony may exist between the governors and the governed, it is plain that powerful ministers will ignore the rights of the people in order to advance their own partizans, while the nobles will employ the privileges rightly belonging to the country for their own individual benefit. Although there may not be anything of the kind in Japan at present, still it would be impossible to affirm that indirectly the same evil results may not be attained. It is, however, evident that, if all power and authority is surrendered to a single individual, he will undoubtedly sacrifice the good of the community for the advancement of his own personal aggrandizement. Should the whole government of a country be relegated to a few functionaries who will seek only their own interests regardless of the rights of the general body of the people?

It appears to us very clear that, if the welfare of a community is studied, authority will be distributed among all classes composing it. A man may embark upon a war without cause, thus embroiling whole multitudes of people in disturbances. If the rascal prove successful and assume sovereign powers, he will undoubtedly wring every possible farthing out of the pockets of the community and apply it to support himself in extravagant luxury. He will strip his followers of their wealth to increase his own influence, and by bribery or intimidation will interfere with the course of justice. The currency will be debased to make good deficiencies in the revenue, and tyrannical laws passed curtailing the freedom of the people. This is an example of a despotic monarch exercising authority solely for the promotion of his own selfish interests. Again, take the case of a territorial noble. He treats his people as slaves, deprives them of their rights, and, if they question his proceedings, throws them into prison. Anyone who stoops to pauper to his vanity and flatter him, will be raised to a position of wealth and importance, while he levies heavy taxes upon his people, all for the purpose of satisfying his own greed. Is not this a true picture of a selfish territorial noble? In Senegal the nobles and monks had the special privilege of being exempt from the land-tax. In Hungary the aristocracy paid no tolls. In France the lower orders alone contributed to the expenses of the state. In England there existed a law known as the "Black Act" under which whoever was found trespassing on a fish-pond, or in a rabbit-warren with fire-arms, was put to death. In Scotland the nobles sold their fellow-men to other countries for slaves. In India the Brahmin caste monopolized all the advantages; and here in Japan until a recent period the gentry possessed the privilege of paying no taxes at all, and there was a law that anyone killing a crane should be executed. Those in or above the rank of gentry alone could keep falcons or ride on horseback. Examples of this class legislation are so abundant both in ancient and modern times that it would be utterly impossible to specify every single instance.

Now, the foundation of all these laws was selfishness, and it is amply proved that the governing bodies consisted of persons who were mainly actuated by a regard for their own interests. No doubt there were many wise and able Ministers in those days, and excellent laws were promulgated fit to be classed with the "Golden Rules," but of what use were they when the governors could use influence to promote their own selfish ends? How much more unsatisfactory must it be when the laws are not equitable, nor the Ministers just and impartial.

This being the case, it is necessary to curb the authorities with an iron bit, in order to prevent them from following a course of action which results in such a disaster as the sacrifice of a whole people for the advancement of a few powerful individuals. Therefore it is of the utmost importance for every country to possess a constitution.

There are three things which constitute the backbone of a constitutional government and the very

pulse of freedom. These are, 1st, that no monarch can levy taxes without the consent of the national assembly; 2ndly, all laws must be consented to by the assembly before they can be enforced; and, 3rdly, no person can be arrested or imprisoned unless a warrant be first issued specifying his name and alleged offence. Every constitution contains many important laws, but the three we have mentioned are the most important of all, and if these three be once firmly secured, the freedom of the people is an assured fact, although the subordinate legislation may not be perfect. On the other hand, even if a constitution is established and these laws are not in force, two or three influential persons can rule the country as they please and promote their own private interest. Therefore, if the people wish to retain control over the authorities and thus ensure their working for the public welfare alone, these fundamental laws must be depended upon to accomplish the desired object.

Now it can be shown conclusively from the actions of some monarchs and governments that the three laws above-named are of primary importance. It is noticeable that, whenever any monarch has attempted to trample upon the rights of the people, his first step has been to violate these fundamental principles, because so long as they remain in force his design could not be accomplished. We are justified in saying that modern English history is the only history which affords us examples of how the monarchs attempted to transgress these three laws, and yet the people maintained their rights inviolate.

A demand for a national assembly has now grown up in Japan as strong as a force conflagration. The reason of this is that the people of the country are now alive to the fact that they cannot secure their freedom and welfare unless by the establishment of constitutional government. How this should be effected is a matter upon which we have many ideas, but as regards a constitution we would place no dependence in any measure of the kind, which did not contain the three great fundamental laws we have mentioned, as a protection to the people against the actions of unworthy rulers.

#### THE INFLUENCE OF COMMERCE.

(Translated from the *Hochi Shimbun*.)

**A**N extensive commerce is necessary to make a nation wealthy and powerful. Look at China with a teeming population and vast area, but depleted treasury, and then turn to Great Britain, a small group of islands but the most wealthy and powerful state in the whole world. It is therefore plain that the strength of a nation does not consist in its extent or population, but rather in the development of its commerce.

The record of commercial affairs teaches us the decay or progress of a country's influence. Every state which has attained a foremost position has done so by developing its natural resources, but no single nation has ever become wealthy by means of a single great industry. It is a fact too that the natural resources of all countries are more or less different. One state excels in agriculture, another in mineral products, a third in facilities for communication, a fourth in climate, a fifth in the activity and energy of the inhabitants, and a sixth in the bodily strength of the people. Thus every state possesses a different source of power, but they are all only means to one great end—commerce.

For example, England is rich in iron and coal, France has great fertility, Italy unrivalled means of communication, and Germany is noted for the exceeding strength of her people who belong to the Saxon race. But these potentialities of wealth lie dormant until vivified by skilled intellect. The mines of England have been worked for more years than we can number, but it was not until Watt discovered the steam-engine that the mineral wealth of the country became serviceable. Therefore the possession of natural resources is not alone sufficient; development by human intellect is also necessary.

There are several countries distinguished for the triumphs achieved over nature by the inhabitants. Holland wrested a considerable territory from the ocean, and defends it by sea-walls and dykes against the attacks of the waves; Italy has cut a tunnel through the huge Alpine mountains; to France the world owes the Suez canal. How is it then that none of these nations can rival England?

A hundred years ago commerce received but little attention. About that time, however, Australia and New Zealand were discovered: the forces of nature were diverted in aid of the efforts of man, and great strides made in the arts and sciences. Then all nations experienced an era of commercial development, which had been prevented previously by disastrous wars and ignorance. Up to that period England alone had directed attention to the fostering of her trade and commerce. Although beset with many difficulties she achieved a great triumph, and thus it is that at the present day we find England surpassing all other nations, both in commercial enterprise and the magnitude of her shipping interests.

France, again, continually engaged either in domestic or foreign wars, enjoyed only the blessings of peace at short intervals, so that the inhabitants of the country had no leisure to devote themselves to the pleasant and peaceful paths of commercial enterprise. When a pause in the warlike operations of the nation occurred in 1763, the people of France found it impossible to be content with their political condition, and shortly afterwards formed an alliance with the North Americans, and materially assisted in bringing the war of independence to a satisfactory conclusion. The position of the domestic affairs of France then became slightly improved, but in 1789 the great revolution took place, and from that time until the treaty of Vienna, France was constantly engaged in either foreign or domestic warfare for a period of nearly twenty years. The house of Bourbon was swept from the throne in 1830, and in the succeeding reign, under Louis Philippe, the country being at rest enjoyed great prosperity. Another revolution took place in 1848, which again checked the material advance of the nation, and was followed by a republic and eventually an empire in 1852, which has since succumbed in turn to another republic. During all this time France excelled greatly in the martial sciences, and was the terror of neighboring nations. At last France made war upon Germany, notwithstanding the remonstrances of other countries, and suffered a defeat so crushing, complete and disastrous, that the nation has since left war alone and turned its attention in other directions. Of course, while France was constantly embroiled with other states, no care was paid to commerce, and accordingly it fell into a very decayed state and, in fact, made no progress whatever. However, in 1855, Napoleon III. revised the commercial code, and mercantile interests commenced to flourish, and for ten years, from 1858 to 1868, the exports increased annually at an average rate of seven and a half per cent. This is a brief sketch of French commerce, and discloses the effect which war exercises upon trade. France has a fertile country, an ingenious and intellectual people foremost in the arts and sciences, and teems with natural wealth. The Atlantic ocean is on one side and the Mediterranean sea on the other—thus affording unrivalled facilities for communication taken in connection with the large navigable rivers, canals, and 14,000 miles of railway—and if the nation would only devote itself to commerce it would soon be in a very prosperous condition. But, unfortunately, the people of France thirst for military glory, and care nothing for the peaceful triumphs of commercial enterprise. Thus it is that England has outstripped France in the race for wealth and influence.

The people of Holland, on the other hand, are diligent in business, and, while other nations of Europe were involved in war, they devoted themselves to the improvement of their country and the profitable administration of their colonial dependencies. Thus Holland has been brought into a flourishing condition, which is evidenced by the exports from 1857 to 1867 increasing at an average annual rate of five per cent. Now nothing but the energy and perseverance of the people of Holland has placed the country in its present prosperous position. Samuel Brown\* in his statistical report says, "Holland was very energetic in bygone times in the cause of religious freedom, and thus became relieved of an oppression under which all the other nations of Europe groaned. In order to defend her coasts from the influx of the ocean, Holland has constructed great sea-walls and dykes, and the people are determined, in order to repel an enemy, to flood the country if necessary. No such patriotic feeling can be found in any other country; and thus it is that Holland has many ships and merchants, and has raised herself above all

\* The native paper is responsible for the quotation.—Translator.

other nations in wealth and prosperity." Judging from this, the flourishing condition of Holland is not due to an advantageous position or abundant natural resources, but simply to the energy and indomitable will and perseverance of the people, which has resulted in the smallest country in Europe having now dependencies six times greater both in area and population than the parent country, and rivaling in wealth any other other civilized nation of the world.

(To be continued.)

### A STORY OF THE LATIN QUARTER.

"He is one of the Americans," his fellow *locataires* said among themselves. "Poor and alone and in bad health. A queer fellow." Having made this reply to those who questioned them, they were in the habit of dismissing the subject lightly. After all it was nothing to them, since he had never joined their circle.

They were a gay, good-natured lot and made a point of regarding life as airy as possible and taking each day as it came with fantastic good cheer. The house—which stood in one of the shabbiest corners of the Latin Quarter—was full of them from floor to garret—artists, students, models, French, English, Americans, living all of them merrily, by no means the most regular of lives. But there were good friends among them: their world was their own and they found plenty of sympathy in their loves and quarrels, their luck and ill-luck. Upon the whole there was more ill-luck than luck. Lucky men did not choose for their headquarters such places as this rather dilapidated building,—they could afford to go elsewhere, to places where the Quarter was better, where the stairs were less rickety, the passages less dark and the *concierge* not given to chronic intoxication. Here came the unlucky ones, whose ill-luck was of various orders and degrees: the young ones who were some day to paint pictures which would be seen in the Palais de l'Industrie and would be greeted with acclamations by an appreciative public; the older ones who had painted pictures which had been seen at the Palais de l'Industrie and had not been appreciated at all; the poets whose sonnets were of too subtle an order to reach the common herd; the students who had lived beyond the means allowed them by their highly respectable families and who were consequently somewhat off color in the eyes of the respectable families in question—these and others of the same class, all more or less poor, more or less out at elbows and more or less in debt. And yet, as I have said, they lived gayly. They painted, and admired or criticised each others pictures, they lent and borrowed with equal freedom; they bemoaned their wrongs loudly, and sang and laughed more loudly still as the mood seized them; and any special ill-fortune befalling one of their number generally aroused a display of sympathy which, though it might not last long, was always a source of consolation to the luckless one.

But the American, notwithstanding he had been in the house for months, had never become one of them. He had been seen in the early spring going up the stair-way to his room, which was a mere garret on the sixth story, and it had been expected among them that in a day or so, he would present himself for inspection. But this he did not do, and when he encountered any of their number in his outgoings or incomings he returned their greetings gently in imperfect French. He spoke slowly and with difficulty, but there was no coldness in his voice and manners, and yet none got much further than the greeting.

He was a young fellow, scarcely of middle height, frail in figure, hollow-chested, and with a gentle face and soft, deeply set dark eyes. That he worked hard and lived barely it was easy enough to discover. Part of each day he spent in the various art galleries and after his return from these visits he was seen no more until the following morning.

"Until the last ray of light disappears he is at his easel," said a young student whom a gay escapade had temporarily banished to the fifth floor. "I hear him move now and then and cough. He has a villainous cough."

"He is one of the enthusiasts," said another. "One can read it in his face. What fools they are—these enthusiasts! They throw away life that a crown of laurel may be laid upon their coffins."

In the summer some of them managed to leave Paris, and the rest had enough to do to organize their little excursions and make the best of the sunshine, shade and warmth. But when those who had been away returned and all settled down for the winter, they found the "American," as they called him, in his old place. He had not been away at all; he had worked as hard as ever through midsummer heat and autumn rain; he was frailer in figure, his clothes were more worn, his face was thinner and his eyes far too hollow and bright, but he did not look either discouraged or unhappy.

"How does he live?" exclaimed the *concierge* dramatically. "The good God knows! He eats nothing, he has no fire, he wears the clothing of midsummer—he paints—he paints—he paints! Perhaps that is enough for him. It would not be for me."

At this time—just as the winter entered with bleak winds and rains and falls of powdery snow—there presented herself among them an arrival whose appearance created a sensation.

One night, on his way upstairs, the American found himself confronted on the fourth floor by a flood of light streaming through the open door of a before unoccupied room. It was a small room, meagrely furnished, but there was a fire in it and half a dozen people who laughed and talked at the top of their voices. Five of them were men he had seen before,—artists who lived in the house,—but the sixth was a woman whom he had never seen and whose marvellous beauty held him spell-bound where he stood.

She was a woman of twenty-two or three, with an oval face

whose fairness was the fairness of ivory. She was dark-eyed and low-browed, and as she leaned forward upon the table and looked up at the man who spoke to her, even the bright glow of the lamp, which burned directly before her face, showed no flaw in either tint or outline.

"Why should we ask the reason of your return?" said the man. "Let us rejoice that you are here."

"I will tell you the reason," she answered, without lowering her eyes. "I was tired."

"A good reason," was the reply.

She pushed her chair back and stood upright; her hands hung at her sides; the men were all looking at her; she smiled down at them with fine irony.

"Who among you wishes to paint me?" she said. "I am again at your service and I am not less handsome than I was."

Then arose among them a little rapturous murmur and somehow it broke the spell which had rested upon the men outside. He started, shivered slightly and turned away. He went up to the bare coldness of his own room and sat down, forgetting that it was either cold or bare. Suddenly, as he had looked at the woman's upturned face, a great longing had seized upon him.

"I should like to paint you—I," he found himself saying to the silence about him. "If I might paint you!"

He heard the next day who she was. The *concierge* was ready enough to give him more information than he had asked.

"Mademoiselle Natalie, Monsieur means," he said; "a handsome girl that; a celebrated model. They all know her. Her face has been the foundation of more than one great picture. There are not many like her. One model has this beauty—another that; but she, *mon Dieu*, she has all. A great creature, Mademoiselle."

Afterward, as the days went by, he found that she sat often to the other artists. Sometimes he saw her as she went to their rooms or came away; sometimes he caught a glimpse of her as he passed her open door, and each time there stirred afresh within him the longing he had felt at first. So it came about that one afternoon, as she came out of a studio in which she had been giving a sitting, he found waiting outside for her the thinly clad, frail figure of the American. He made an eager yet hesitant step forward, and began to speak awkwardly in French.

She stopped him.

"Speak English," she said, "I know it well."

"Thank you," he answered simply, "that is a great relief. My French is so bad. I am here to ask a great favor from you, and I am sure I could not ask it well in French."

"What is the favor?" she inquired, looking at him with some wonder.

He was a new type to her, with his quiet directness of speech and his gentle manner.

"I have heard that you are a professional model," he replied, "and I have wished very much to paint what—what I see in your face. I have wished it from the first hour I saw you. The desire haunts me. But I am a very poor man; I have almost nothing; I cannot pay you what the rest do. To-day I came to the desperate resolve that I would throw myself upon your mercy—that I would ask you to sit to me, and wait until better fortune comes."

She stood still a moment and gazed at him.

"Monsieur," she said at length, "are you so poor as that?"

He colored a little, but it was not as if with shame.

"Yes," he answered, "I am very poor. I have asked a great deal of you, have I not?"

She gave him still another long look.

"No," she said, "I will come to you to-morrow if you will direct me to your room."

"It is on the sixth floor," he replied: "the highest of all. It is a bare little place."

"I will come," she said, and was turning away when he stopped her.

"I—I should like to tell you how grateful I am—" he began.

"There is no need," she responded with bitter lightness. "You will pay me someday—when you are a great artist." But when she reached the next landing she glanced down and saw that he still stood beneath, watching her.

The next day she kept her word and went to him. She found his room poorer and barer even than she had fancied it might be. The ceiling was low and slanting; in one corner stood a narrow iron bedstead, in another a wooden table; in the best light the small window gave, his easel was placed with a chair before it.

When he had opened the door in answer to her summons, and she saw all this, she glanced quickly at his face to see if there was any shade of confusion upon it, but there was none. He appeared only rejoiced and eager.

"I felt sure it was you," he said.

"Were you then so sure that I would come?" she asked.

"You said you would," he answered. He placed her as he wished to paint her, and then sat down to his work. In a few moments he was completely absorbed in it. For a long time he did not speak at all. The utter silence which reigned—a silence which was not only a suspension of speech but a suspension of any other thought beyond his task—was a new experience to her. His cheek flushed, his eyes burned dark and bright; it seemed as if he scarcely breathed. When he turned to look at her she was conscious each time of a sudden thrill of feeling. More than once he paused for several moments, brush and palette in hand, simply watching her face. At one of these pauses she herself broke the silence.

"Why do you look at me so?" she asked. "You look at me as if—as if——" And she broke off with an uneasy little laugh.

He roused himself with a slight start and colored sensitively, passing his hand across his forehead.

"What I want to paint is not always in your face," he answered. "Sometimes I lose it, and then I must wait a little until—until I find it again. It is not only your face I want, it is yourself—your-

self!" And he made a sudden unconscious gesture with his hands.

She tried to laugh again,—hard and lightly as before,—but failed.

"Myself!" she said. "*Mon Dieu!* Do not grasp at me, Monsieur. It will not pay you. Paint my flesh, my hair, my eyes,—they are good,—but do not paint *me*."

He looked troubled.

"I am afraid my saying that sounded stilted," he returned. "I explained myself poorly. It is not easy for me to explain myself well."

"I understood," she said; "and I have warned you."

They did not speak to each other again during the whole sitting except once, when he asked her if she was warm enough.

"I have a fire to-day," he said.

"Have you not always a fire?" she asked.

"No," he answered with a smile; "but when you come there will always be one."

"Then," she said; "I will come often, that I may save you from death."

"No!" he replied; "it is easier than you think to forget that one is cold."

"Yes," she returned. "And it is easier than you think for one to die."

When she was going away, she made a movement toward the easel, but he stopped her.

"Not yet," he said. "Not just yet."

She drew back.

"I have never cared to look at myself before," she said, "I do not know why I should care now. Perhaps," with the laugh again, "it is that I wish to see what you will make of me!"

Afterward, as she sat over her little porcelain stove in her room below, she scarcely comprehended her own mood.

"He is not like the rest," she said. "He knows nothing of the world. He is one of the good. He cares only for his art. How simple, and kind, and pure! The little room is like a saint's cell." And then, suddenly, she flung her arms out wearily, with a heavy sigh. "*Ah, Dieu!*" she said, "how dull the day is! The skies are lead!"

A few days later she gave a sitting to an old artist whose name was Masson, and she found that he had heard of what had happened.

"And so you sit to the American?" he said.

"Yes."

"Well—and you find him——?"

"I find him," she repeated after him. "Shall I tell you what I find him?"

"I shall listen with delight."

"I find him—a soul! You and I, my friend—and the rest of us,—are bodies; he is a soul!"

The artist began to whistle softly as he painted.

"It is dangerous work," he said at length, "for women to play with souls."

"That is true," she answered, coldly.

The same day she went again to the room on the sixth floor. She sat again through an hour of silence in which the American painted eagerly, now and then stopping to regard her with searching eyes.

"But not as the rest regard me," she said to herself. "He forgets that it is a woman who sits here. He sees only what he would paint."

As time went by, this fact, which she always felt, was in itself a fascination.

In the chill, calm atmosphere of the place there was repose for her. She found nothing to resent, nothing to steel herself against, she need no longer think of herself at all. She had time to think of the man in whose presence she sat. From the first she had seen something in his slight stooping figure, thin young face, and dark womanish eyes, and after she had heard the simple uneventful history of his life, she found them more touching still.

He was a New Englander, the last surviving representative of a frail and short-lived family. His parents had died young, leaving him quite alone, with a mere pittance to depend upon, and throughout his whole life he had cherished but one aim.

"When I was a child I used to dream of coming here," he said, "and as I grew older I worked and struggled for it. I knew I must gain my end some day and the time came when it was gained."

"And this is the end?" she asked, glancing round at the poor place. "This is all of life you desire?"

He did not look up at her.

"It is all I have," he answered.

She wondered if he would not ask her some questions regarding herself, but he did not.

"He does not care to know," she thought sullenly. And then she told herself that he did know, and a mocking devil of a smile settled on her lips and was there when he turned toward her again.

But the time never came when his manner altered, when he was less candid and gentle, or less grateful for the favor she was bestowing upon him.

She scarcely knew how it was that she first began to know the sound of his foot upon the stair-way and to listen for it. Her earliest consciousness of it was when once she awakened suddenly out of a dead sleep at night and found herself sitting upright with her hand upon her heavily throbbing heart.

"What is it?" she cried in a loud whisper. But she spoke only to herself and the darkness. She knew what it was and did not lie down again until the footsteps had reached the top of the last flight and the door above had opened and closed.

The time arrived when there was scarcely a trifling incident in his every-day life which escaped her. She saw each sign of his poverty and physical weakness. He grew paler day by day. There were days when his step flagged as he went up and down the stair-

case: some mornings he did not go out at all. She discovered that each Sunday he went twice to the little American chapel in the Rue de Berri, and she had seen in his room a small Protestant Bible.

"You read that?" she asked him when she first saw it.

"Yes."

She leaned forward, her look curious, bewildered, even awed.

"And you believe in—?"

"Yes."

She resumed her former position but she did not remove her eyes from his face and unconsciously she put her hand up to her swelling throat.

When at length the sitting was over and she left her chair he was standing before the easel. He turned to her and spoke hesitantly.

"Will you come and look at it?" he asked.

She went and stood where he bade her and looked. He watched her anxiously while she did so. For the first moment there was amazement in her face, then some mysterious emotion he could not comprehend—a dull red crept slowly over brow and cheek.

She turned upon him.

"Monsieur!" she cried, passionately. "You mock me! It is a bad picture."

He fell back a pace, staring at her and suddenly trembling with the shock.

"A bad picture!" he echoed. "I mock you—I?"

"It is my face," she said, pointing to it, "but you have made it what I am not! It is the face of a good woman—of a woman who might be a saint! Does not *that* mock me?"

He turned to it with a troubled, dreamy look.

"It is what I have seen in your face," he said in a soft, absent voice. "It is a truth to me. It is what I have seen."

"It is what no other has seen," she said. "I tell you it mocks me."

"It need not mock you," he answered. "I could not have painted it if I had not felt it. It is yourself—yourself."

"Myself!" she said. "Do you think, Monsieur, that the men who have painted me before would know it?"

She gave it another glance and a shrill laugh burst from her, but the next instant it broke off and ended in another sound. She fell upon her knees by the empty chair, her open hands flung outward, her sobe strangling her.

He stood quite near her looking down.

"I have not thought of anything but my work," he said. "Why should I?"

The following Sunday night the artist Masson met in going down stairs a closely veiled figure coming up. He knew it and spoke.

"What, Natalie?" he said. "You! One might fancy you had been to church."

"I have been," she returned in a cold voice.—"to the church of the Americans in the Rue de Berri."

He shrugged his shoulders.

"Has it done you good?" he asked.

"No," she answered, and walked past him leaving him to look after her and think the matter over.

She went to her own apartment and locked herself in. Having done so, she lighted every candle and lamp—flooding the place with a garish mockery of brightness. She sang as she did it—a gay, shrill air from some *opéra bouffe*. She tore off her dark veil and wrappings. Her eyes and cheeks flamed as if touched by some unholy fire. She moved with feverish rapidity here and there—dragging a rich dress from a trunk, and jewels and laces from their places of safe keeping, and began to attire herself in them. The simple black robe she had worn to the chapel lay on the floor. As she moved to and fro she set her feet upon it again and again; as she felt it beneath her tread a harsh smile touched her lips.

"I shall not wear you again," she stopped her song once to say.

In half an hour she had made her toilette. She stood before her glass a blaze of color and jewels. For a moment she sang no more. From one of the rooms below there floated up to her sounds of riotous merriment.

"*This* is myself," she said; "*this* is no other."

She opened her door and ran down the staircase swiftly and lightly. The founder of the feast whose sounds she had heard was a foolish young fellow who adored her madly. He was rich, and wicked, and simple. Because he had heard of her return he had taken an apartment in the house. She heard his voice above the voices of the rest.

In a moment she had flung open the door of the *salon* and stood upon the threshold.

At sight of her there arose a rapturous shout of delight.

"Natalie! Natalie! Welcome!"

But instantaneously it died away. One second she stood there, brilliant, smiling, defiant. The next, they saw that a mysterious change had seized upon her. She had become deathly white, and was waving them from her with a wild gesture.

"I am not coming!" she cried, breathlessly. "No! No! No!"

And the next instant they could only gaze at each others' terror-stricken faces, at the place she had left vacant—for she was gone.

She went up the stairs blindly and uncertainly. When she reached the turn of the fourth floor where the staircase was bare and unlighted, she staggered and sank against the balustrade, her face upturned.

"I cannot go back," she whispered to the darkness and silence above. "Do you hear? I cannot! And it is you—you who restrain me!"

But there were no traces of her passion in her face when she went to the little studio the next day as usual. When the artist opened the door for her, it struck him that she was calm even to coldness.

Instead of sitting down, she went to the easel and stood before it.

"Monsieur," she said, "I have discovered where your mistake

lies. You have tried to paint what you fancied must once have existed although it exists no longer. That is your mistake. It has never existed at all. I remember no youth, no childhood. Life began for me as it will end. It was my fate that it should. I was born in the lowest quarter of Paris. I knew only poverty, brutality, and crime. My beauty simply raised me beyond their power. Where should I gain what you have insisted in bestowing upon me?"

He simply stood still and looked at her.

"God knows!" he answered at length. "I do not."

"God!" she returned, with her bitter little laugh. "Yes—God!"

Then she went to her place, and said no more.

But the next Sunday she was at the American chapel again, and the next and the next. She could scarcely have told why herself. She did not believe the doctrines she heard preached, and she did not expect to be converted to belief in them. Often, as the service proceeded, a faint smile of derision curved her lips: but from her seat in the obscure corner she had chosen she could see a thin, dark face and a stooping figure, and could lean back against the wall with a sense of repose.

"It is quiet here," was her thought. "One can be quiet, and that is much."

"What is the matter with her?" the men who knew her began to ask one another. It was not easy for them to discover how the subtle change they saw had been wrought. They were used to her caprices and to occasional fits of sullenness, but they had never seen her in just such a mood as she was now. She would bear no jests from them, she would not join in their gayeries. Sometimes for days together she shut herself up in her room and they did not see her at all.

The picture progressed but slowly. Sometimes the artist's hand so trembled with weakness that he could not proceed with his work. More than once Natalie saw the brush suddenly fall from his nerveless fingers. He was very weak in those days, and the spot of hectic red glowed brightly on his cheek.

"I am a poor fellow at best," he would say to her, "and now I am at my worst. I am afraid I shall be obliged to rest sooner than I fancied. I wish first I could have finished my work. I must not leave it unfinished."

One morning, when he had been obliged to give up painting, through a sudden fit of prostration, on following her to the door, he took her hand and held it a moment.

"I was awake all last night," he said. "Yesterday I saw a poor fellow who had fallen ill on the street, carried into the Hôtel Dieu, and the memory clung to me. I began to imagine how it would be if such a thing happened to me—what I should say when they asked for my friends—how there would be none to send for. And at last, suddenly I thought of you. I said to myself, 'I would send for her, and I think she would come.'"

"Yes, Monsieur," she answered. "You might depend upon my coming."

"I am used to being alone," he went on; "but it seemed to me as I lay in the dark thinking it over, that to die would be a different matter. One would want some familiar face to look at—"

"Monsieur!" she burst forth. "You speak as if Death were always near you!"

"Do I?" he said. And he was silent for a few seconds and looked down at her hand as he held it. Then he dropped it gently with a little sigh. "Good-bye," he said, and so they parted.

In the afternoon she sat to Masson.

"How much longer," he said to her in the course of the sitting,—"how much longer does he mean to live—this American? He has lasted astonishingly. They are wonderful fellows, these weaklings who burn themselves out. One might fancy that the flame which finally destroys them, also kept them alive."

"Do you then think that he is so very ill?" she asked in a low voice.

"He will go out," he answered, "like a candle. Shall I tell you a secret?"

She made a gesture of assent.

"He starves! The *concierge* who has watched him says he does not buy food enough to keep body and soul together. But how is one to offer him anything? It is easy to see that he would not take it."

There was a moment of silence, in which he went on painting, "The trouble is," he said at last, "that a man would not know how to approach him. It is only a woman who can do these things."

Until the sitting was over neither the one nor the other spoke again. When it was over and Natalie was on the point of leaving the room, Masson looked at her critically.

"You are pale," he remarked. "You are like a ghost."

"It is not becoming?" she asked.

"Yes."

"Then why complain?"

She went to her own room and spent half an hour in collecting every valuable she owned. They were not many; she had always been recklessly improvident. She put together in a package her few jewels, and even the laces she considered worth the most. Then she went out, and, taking a *fiacre* at the nearest corner, drove away.

She was absent two hours, and when she returned she stopped at the entrance, intending to ask the *concierge* a question. But the man himself spoke first. He was evidently greatly disturbed and not a little alarmed.

"Mademoiselle," he began, "the young man on the sixth floor—"

"What of him?" she demanded.

"He desires to see you. He went out in spite of my warnings. Figure to yourself on such a day, in such a state of health. He returned almost immediately, wearing the look of Death itself. He sank upon the first step of the staircase. When I rushed to his

assistance he held to his lips a handkerchief stained with blood! We were compelled to carry him upstairs."

She stood a moment, feeling her throat and lips suddenly become dry and parched.

"And he asked—for me?" she said at last.

"When he could speak, Mademoiselle—yes. We do not know why. He said, in a very faint voice, 'She said she would come.'"

She went up the staircase slowly and mechanically, as one who moves in a dream. And yet when she reached the door of the studio she was obliged to wait for a few seconds before opening it. When she did open it she saw the attic seemed even more cold and bare than usual; that there was no fire; that the American lay upon the bed, his eyes closed, the hectic spots faded from his cheeks. But when she approached and stood near him, he opened his eyes and looked at her with a faint smile.

"If—I play you—the poor trick of—dying," he said, "you will remember—that the picture—if you care for it—is yours."

After a while, the doctor, who had been sent for, arrived. Perhaps he had been in no great hurry when he had heard that his services were required by an artist who lay in a garret in the Latin Quarter. His visit was a short one. He asked a few questions, wrote a prescription, and went away. He looked at Natalie oftener than at the sick man. She followed him out on to the landing, and then he regarded her with greater interest than before.

"He is very ill," she said.

"Yes," he answered. "He will die, of course, sooner or later."

"You speak calmly, Monsieur," she said.

"Such cases are an old story," he replied. "And—you are not his wife?"

"No."

"I thought not. Nevertheless, perhaps you will remain with him until—"

"As Monsieur says," she returned, "I will remain with him until—"

When the sick man awoke from the sleep into which he had fallen, a fire burned in the stove and a woman's figure was seated before it.

"You are here yet?" he said faintly. She rose and moved toward him.

"I am not going away," she answered, "if you will permit me to remain."

His eyes shone with pathetic brightness, and he put out his hand. "You are very kind—to a poor—weak fellow," he whispered.

"After all—it is a desolate thing—to lie awake through the night—in a place like this."

When the doctor returned the next morning, he appeared even a shade disconcerted. He had thought it quite likely that, upon his second visit, he might find a scant white sheet drawn over the narrow bed, and that it would not be necessary for him to remain or call again; but it appeared that his patient might require his attention yet a few days longer.

"You have not left him at all," he said to Natalie. "It is easy to see you did not sleep last night."

It was true that she had not slept. Through the night she had sat in the dim glow of the fire, scarcely stirring unless some slight sound of movement from the bed attracted her attention. During the first part of the night her charge had seemed to sleep; but as the hours wore on there had been no more rest for him, and then she had known that he lay with his eyes fixed upon her; she had felt their gaze even before she had turned to meet it. Just before the dawn he became restless, and called her to his side.

"I owe you a heavy debt," he said drearily. "And I shall leave it unpaid. I wish—I wish it was finished."

"It?" she said.

"The picture," he answered. "the—picture."

Usually he was too weak for speech; but occasionally a fit of restlessness seized upon him, and then it seemed as if he was hunted continually by the memory of his unfinished work.

"It only needed a few touches," he said once. "One day of strength would complete it—if such a day would but come to me. I know the look so well now—I see it on your face so often." And then he lay watching her, his eyes following her yearningly, as she moved to and fro.

In the studios below, the artists waited in vain for their model.

They neither saw nor heard anything of her, and they knew her moods too well to be officiously inquisitive. So she was left alone to the task she had chosen, and was faithful to it to the end.

It was not so very long it lasted, though to her it seemed a lifetime. A few weeks the doctor made his visits, and at last one afternoon, in going away, he beckoned her out of the room.

He spoke in an undertone.

"To-night you may watch closely," he said; "perhaps toward morning—but it will be very quiet."

It was very quiet. The day had been bitter cold and as it drew to a close it became colder still, and a fierce wind rose and whistled about the old house, shaking the ill-fitting windows and doors. But the sick man did not seem to hear it. Toward midnight he fell into a deep and quiet sleep.

Before the fire Natalie sat waiting. Now and then a little shudder passed over her as if she could not resist the cold. And yet the fire in the stove was a bright one. She had smiled to herself as she had heaped the coal upon it, seeing that there was so little left.

"It will last until morning," she said, "and that will be long enough." Through all the nights during which she had watched she had never felt the room so still as it seemed now between the gusts and sighing of the wind. "Something is in the air which has not been in it before," she said.

About one o'clock she rose and replenished the fire, putting the last fragment of coal upon it and then sat down to watch it again.

Its slow kindling and glowing into life fascinated her. It was not long before she could scarcely remove her eyes from it. Sh

was trying to calculate—with a weird fancy in her mind—now long it would last, and whether it would die out suddenly or slowly.

As she cowered over it, if one of the men who admired her had entered he might well scarcely have known her. She was hollow-eyed, haggard and pallid—for the time even her great beauty was gone. As he had left her that day, the doctor had said to himself discontentedly that after all these wonderful faces last but a short time.

The fire caught at the coal, lighted fitful blazes among it, and crept over it in a dull red, which brightened into hot scarlet.

And the sick man lay sleeping, breathing faintly but lightly.

"It will last until dawn," she said—"until dawn, and no longer." When the first cinder dropped with a metallic sound, she started violently and laid her hand upon her breast, but after she scarcely stirred.

The fitful blazes died down, the hot scarlet deepened to red again, the red grew dull, a gray film of ashes showed itself upon it, and then came the first faint gray of dawn, and she sat with beating heart saying to herself,

"It will go out soon—suddenly." And the dying man was awake, speaking to her.

"Come here," he said in a low, clear voice. "Come here."

She went to him and stood close by the bedside. The moment of her supreme anguish had come. But he showed no signs of pain or dread, only there was a little moisture upon his forehead and about his mouth.

His eyes shone large and bright in the snowy pallor of his face, and when he fixed them upon her she knew he would not move them away.

"I am glad—that it is—finished," he said. "It did not tire me to work—as I thought it would. I am glad—that it is—finished."

She fell upon her knees.

"That it is finished?" she said.

His smile grew brighter.

"The picture," he whispered—"the picture."

And then what she had waited for came. There was a moment of silence; the wind outside hushed itself, his lips parted, but no sound came from them, not even a fluttering breath; his eyes were still fixed upon her face, open, bright, smiling.

"I may speak now," she cried. "I may speak now—since you cannot hear. I love you! I love you!"

But there came to her ears only one sound—the little grating shudder of the fire as it fell together and was dead.

The next morning when they heard that "the American" had at last fulfilled their prophecies, the *locataires* showed a spasmodic warmth of interest. They offered their services promptly, and said to each other that he must have been a good fellow, after all—that it was a pity they had not known him better. They even protested that he should not be made an object of charity—that among themselves they would do all that was necessary. But it appeared that their help was not needed—that there was in the background a friend who had done all, but whom nobody knew.

Hearing this they expressed their sympathy by going up by two and three to the little garret where there was now only icy coldness and silence.

Not a few among them were so far touched by the pathos they found in this as to shed a tear or so—most of them were volatile young Frenchmen who counted their sensibilities among their luxuries.

Toward evening there came two older than the rest, who had not been long in the house.

When they entered a woman stood at the bed's head—a woman in black drapery, with a pale and haggard face which they saw only for a moment.

As they approached she moved away and going to the window stood there with her back towards them, gazing out at the drifted snow upon the roof. The men stood uncovered, looking down.

"It is the face of an Immortal," said the elder of the two. "It is such men who die young."

And then they saw the easel in the shadow of the corner and went and turned it from the wall. When they saw the picture resting upon it, there was a long silence. It was broken at last by the older man.

"It is some woman he has known and loved," he said. "He has painted her soul—and his own."

The figure near them stirred—the woman's hand crept up to the window's side and clung to the wooden frame.

Moved away did not turn, and was standing so when the strangers moved away, opened the door and passed, with heads still uncovered, down the dark rickety stairs.

A fiercer cold had never frozen Paris than held it ice and snow bound through this day and the next. When the next came to its close all was over and the studios were quiet again—perhaps a little quieter for a few hours than was their wont.

Through this second day Natalie lived—slowly: through the first part of the morning in which people went heavily up and down the stairs; through the later hours when she heard them whispering among themselves upon the landings; through the hour when the footsteps that came down were heavier still, and slower and impeded with some burden borne with care; through the moment when they rested with this burden upon the landing outside her very door, and inside she crouched against the panels—listening.

Then it was all done, upon those upper floors there was no creature but herself.

She had lighted no fire and eaten nothing. She has neither food, fuel, nor money. All was gone.

"It is well," she said, "that I am not hungry, and that I would rather be colder than warmer."

She did not wish warmth, even when night fell and brought more biting iciness. She sat by her window in the dark until the moon rose, and though shudders shook her from head to foot, she made

no effort to gain warmth. She heard but few sounds from below, but she waited until all was still before she left her place.

But at midnight perfect silence had settled upon the house, and she got up and left her room, leaving the key unturned in the lock. "To-morrow, or the day after, perhaps," she said, "they will wish to go in." Then she went up the stairs for the last time.

Since she had heard the heavy feet lumbering with their burden past her door a singular calm had settled upon her. It was not apathy so much as a repose born of the knowledge that there was nothing more to bear—no future to be feared.

But when she opened the door of the little room this calmness was for a moment lost.

It was so cold, so still, so bare in the moonlight which streamed through the window and flooded it. There were left in it only two things—the narrow, vacant bed covered with its white sheet, and the easel on which the picture rested, gazing out at her from the canvas with serene, mysterious eyes.

She staggered forward and sank down before it, uttering a low, terrible cry.

"Do not reproach me!" she cried. "There is no longer need. Do you not see? This is my expiation!"

For a while there was dead silence again. She crouched before the easel with bowed head and her face veiled upon her arms, making no stir or sound. But at length she rose again, humbly and stiffly. She stood up and glanced slowly about her—at the bareness, at the narrow, white-draped bed.

"It will be—very cold," she whispered as she moved toward the door. "It will be—very cold."

And then the little room was empty, and the face upon the easel turned toward the entrance seemed to listen to her stealthily descending feet.

The next morning, the two artists who had visited the dead man's room together, were walking—together again—upon the banks of the Seine, when they found themselves drawing near a crowd of men and women who were gathered at the water's edge.

"What has happened?" they asked as they approached the group. "What has been found?"

A cheerful fellow in a blue blouse, standing with his hands in his pockets, answered.

"A woman. *Ma foi!* what a night to drown oneself in! Imagine the discomfort!"

The older man pushed his way into the centre, and a moment later uttered an exclamation.

"*Mon Dieu!*"

"What is it?" cried his companion.

His friend turned to him, breathlessly pointing to what lay upon the frozen earth.

"We asked each other who the original of the picture was," he said. "We did not know. The face lies there. Look!"

For that which Life had denied her, Death had given.—*Scribner's.*

## THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXXVIII.

KAJIWARA KAGETOKI.

The Genji army re-entered the capital in triumph after an absence of exactly nine days. Men's tongues were still busy with prophecies of the expedition's failure, for even though the difficulties of the attempt had been less formidable, the citizens would have found it impossible to forecast the collapse of a power under whose inflexible yoke they had so long bowed down. Day after day, however, the curious multitude, flocking out to the plains of Rokuhara, saw gibbeted before the main gate of the well known castle, seven heads of noblemen on whose faces they might not once have ventured to gaze, and so, persuaded at last by this infallible evidence, began to tell each other openly that the justice of the gods had been accomplished, and to hang on the blossom laden branches of the plum trees verses extolling the deeds of the incomparable hero, Yoshitune.

From the tale of bloody trophies exposed over the portals of the Taira palace there was wanting, however, one that many would have rejoiced, but few expected, to see there; for the captain of spies, they told each other, was not likely to be found in the van of a doubtful battle. Nevertheless if retribution were not altogether blind, he must sooner or later receive the guerdon of his evil deeds, and revenge would be none the less sweet for being deferred.

But while those who had most reason to execrate Hiro-mori's memory consoled themselves after this fashion, a strange story began to be bruited abroad in the city.

In the cemetery of the Fane of Kumano there had been lately erected a tombstone of unusual magnificence. Worshippers at the shrine had remarked that for many a month past, vases of newly gathered flowers had been daily set up and fresh incense lighted beside a grave undistinguished by either tablet or headstone, and now learning from the

tardy epitaph that the sepulchre contained the remains of the Lord Abbot's niece, they understood the cause with which it had been tended, but marvelled much at the delay in the completion of its monument.

When, however, Yoshitsune rode into Kiyoto after the victory at Fukuham, two knights already known by fame to half the city, turned aside from the procession and made their way to the shrine at Kumano. Their action did not attract any particular attention, for such visits to the fane were often undertaken by the warriors of those days both before and after the battle, but for all that a considerable fragment of the idle multitude attached itself to the two cavaliers, and following them to the portals of the temple discovered the solution of the mystery which had enveloped the grave with the new tombstone. For the sepulchre was Iné's, and the purpose of the two visitors was to place at its foot the head of her murderer. For seven days and nights this ghastly evidence of a just revenge might be seen in the cemetery, after which it was thrown into the burial pit of the common malefactors on the execution ground. During the whole of that time Saburo and Benkei never once left the grave's side, and their vigil was shared by Yoshitsune, always at night, and by day whenever an occasion could possibly be contrived, so that the story of one not unworthy to have inspired such devotion, presently came to be indissolubly associated with the history of these three heroes' lives.

It was here that Yoshitsune formed his earliest and deepest attachment. The triumph of the Genji cause had furnished a theme of unalloyed delight to the whole city, for prince and subject alike recalled with execrations the reign of terror when Yoshinaka's troops enjoyed unrestrained license, as well as the days when all power and privilege belonged by the right of might to the Taira chiefs alone. These things were now fortunately nothing more than a memory. No spies crept about the streets seeking to pick up grains of profitable scandal, nor was the possibility of obtaining justice or preferment any longer measured by the degree of a man's affinity to the dominant clan. Thus the rejoicing would have been general had it not been marred by the presence of such a pestilence as had seldom visited the fair city at spring-time. For months the sun had shone in cloudless skies, and the dusty ways known no moisture save the dripping of an occasional icicle or the dew of the frost's breath, so that little by little noxious vapours, brooding in crowded alleys and above stagnant moats, had stolen out into the thoroughfares and sowed the seeds of fever and disease.

At last the ex-emperor ordered that prayers should be publicly offered up at all the shrines on a fixed day, and such other ceremonies performed as might avert the Gods' displeasure, for surely to nothing else could the people's sorrows be referred. Now among these rites the one deemed most important was the performance of a dance before the chief fane by a virgin of noble lineage, whose beauty and accomplishments should constitute her a worthy mediator between the deities and their subjects. Under ordinary circumstances the choice of a maiden fitted to fill this part might have been embarrassing, but fame made the matter easy on this occasion by emphatically establishing the preëminence of Shidzuka, the daughter of a prince of the Fujiwara line.

Shidzuka was just sixteen when she was summoned by the Imperial command to perform the chief rôle in the ceremony of supplication. Of her face and form history has preserved only this record, that to describe their excellence were not more possible than to depict the ecstasy of those who had the good fortune to witness her performance. It is sufficient to know that she was second to none in an age when nature was no less bountiful than to-day, nor the art of enhancing the value of her gifts less thoroughly understood.

The seventh and last day of the vigil at Iné's tomb happened to be the one chosen for the festival. Yoshitsune had passed the night at the fane, and was on the point of returning cityward when the clashing of the cymbals and the notes of the hautboys heralded the approach of the procession. Curious to witness a performance so graceful and a performer so peerless that both were deemed worthy to move the obdurate gods, he joined the spectators before the shrine, becoming himself, as was natural, an object of no

less observation than the unwonted pageant which had summoned half the city from their homes.

It was difficult to conceive a more crucial test of moral and physical comeliness than this ordeal to which Shidzuka was about to submit. Any shadow of natural ungainliness must have been deepened and any latent spark of self-sufficiency kindled into flame by the position in which she found herself, for not once in a cycle did it fall to any maiden's lot to be chosen for such a duty, neither might she easily forget that not by the verdict of observant myriads alone would her performance be appraised, but by the sentence of the Gods themselves. But Shidzuka added to a faultless form that rarest of all attributes, complete unconsciousness of her beauty. However astonishing she found her election to a post all others seemed better fitted to fill, it never occurred to her to suppose that her part in the approaching pageant was either referable to her own merits or in anything more important than that of her neighbours, and so being from first to last perfectly natural in all she did, her performance was so peerless that it seemed impossible to doubt the success of its object.

As for Yoshitsune, from the moment he saw Shidzuka his heart was hers completely and irrevocably. He had not hitherto lived altogether beyond the reach of those influences with which the gentler moiety of our race is dowered; but he knew at once that this love he now felt was without precedent in the past, as it should also be without parallel in the future of his life.

We need not dwell upon this incident of our hero's career, more especially as history has only preserved the details of its sequel. If any man in Japan deserved to win affection it was surely he, and for the rest, such a love as he bestowed, is seldom destined to lack requital. Men said there had never been joined a better matched couple, and the Gods themselves seemed to approve the union, for even as Yoshitsune's envoy submitted his master's suit to Shidzuka's father, the first peal of thunder was heard in the distance and that same night the long wished for rain descended upon the parched city.

The summer months were spent by Yoshitsune at Kiyoto. Rumours from the southern provinces reached the capital with more and more frequency as the year grew older, but though they told of vast preparations in progress and unceasing efforts made by the Taira chiefs to rebuild the ruins of their power, the people gave themselves small concern about what was going forward, for it seemed impossible that disaster should overtake the victor of the Valley of Ichi.

It was not so with Yoshitsune himself, however. He knew that the death-struggle was still to come and that every sword he could muster would find work to do before the issue was decided. The Heike had retreated to a part of Japan which had been peopled by their liegemen for years back, and if rumour might be even half credited, their past defeats by no means deterred the knights and barons of the south from flocking to their standard. Moreover whether by coercion or choice the young Emperor was still with them, so that in the eyes of the nation at large they represented the legitimate faction, and this alone would have been an imperative reason for not suffering them to remain unmolested.

In the fall of the year therefore Noriyori was despatched southward with an army of thirty thousand men. The point of attack was the Island of the Four Provinces which lies on the south-east coast of Japan, but Noriyori's orders were to bear away to the opposite shore routes, and hold steadily on until he reached the province of Nagato. Yoshitsune himself with a similar force marched by the shortest roads from the capital to the coast, and encamped at Daninotsu beside the reach of the River Yodo. It will thus be seen that the plan of campaign was to throw the assailing columns into the island from the east and west simultaneously; the ultimate destination of both armies to be the castle of Yoshima, where it was expected that the Taira men would make their final stand.

Of this castle's condition the Genji chiefs had scarcely any reliable information, beyond the fact that it stood on a precipitous little island, separated from the coast of the Four Provinces by a narrow channel, and that the enemy had spared no pains to render it impregnable. The channel was said to be deep and its bed rocky, while for the rest, its waters as well as those that washed the three remaining

sides of the isle were crowded with war junks, of which the Heike men were reported to have assembled some two thousand.

To assault such a position was like grappling with the tiger in his own den, but the attempt was nevertheless justified by two considerations, either of which would have sufficed: the first was that the young Emperor was known to be imprisoned, or at any rate residing in the castle; the second that with such a force of ships at their command, any digression on the part of their foes might enable the Heike captains to make a sudden and irresistible descent upon the capital itself. So far as natural obstacles were concerned the valley of Ichi had enjoyed even a more deterrent reputation, and Yoshitsune was not alone in the reflection that the confidence strength inspires sometimes makes the strong most vulnerable.

Before leaving the capital he waited on the ex-emperor, and having tendered his thanks for the confidence hitherto reposed in him, solemnly declared his determination never to revisit Kiyo until he had exterminated the chiefs of the clan and made the imperial authority supreme from sea to sea. There was no undue assurance in this undertaking. It was simply intended as a public record of his resolve, and was in great part dictated by a dread that among those associated with him in the campaign there might be found some secretly disposed to plead the enemy's cause. The followers of the white pennon were not all Genji. A few were governed by expediency rather than fealty, and it is not impossible that even then Yoshitsune had some prescience of the unhappy future, else why on the eve of the march should he have ordered, nay entreated all to remain behind who had any reluctance to cross swords with old friends or any doubts as to the policy of the campaign.

So soon as the troops reached the sea a council of war was held as to the best method of conducting the attack. Probably Yoshitsune had already formed his own resolution in the matter, but he was politic enough to feign uncertainty with the view of ascertaining his followers' sentiments no less than of seeming to seek their advice.

The question submitted for consideration was whether a disembarkation should be effected at some point eastward of the castle and the assault delivered on the land face, or whether a direct advance by sea was more advisable.

Among the assembled knights was Kajiwara Kageotoki, the same man who had saved Yoritomo's life when he lay concealed behind the fallen pine tree after the battle of the Stone Bridge. Kajiwara found himself now for the first time an associate of the young general whose name was on everybody's lips. He had come southward with his three sons a few months after the affair of the Valley of Ichi, and though he enjoyed the reputation of a brave captain and an astute strategist, that very incident in his career which gave him so large a claim upon the Genji's gratitude was little calculated to secure the confidence of his new allies. It may be that he himself divined something of this, for the advice he tendered at the council was a combination of courage and craft, modelled no doubt upon the public interpretation of Yoshitsune's own strategy.

He suggested a direct advance upon the castle of Yashima from the sea side, but at the same time proposed that the boats should be propelled stern foremost, half the oars to be reversed for that purpose, while the other half should be shipped in the usual fashion but only employed in the event of retreat.

Astonished at this strange scheme and little relishing the alternative it evidently contemplated, Yoshitsune was nevertheless careful not to condemn it too hastily. He asked Kajiwara to explain himself more fully, pleading that his own ignorance of nautical matters made it difficult for him to understand the details of such a proceeding.

"It is a very simple device," explained the knight, "and not by any means without precedent of success. In affairs by sea the trouble is that between advance and retreat there is necessarily an interval during which neither defence nor retaliation is possible. My proposal aims at nothing more than the removal of that interval."

"Then in brief the gist of your plan, so far as I can comprehend it, is to provide a facile means of retreat. Is not that so?" inquired Yoshitsune.

"It is even as you say," Kajiwara replied, not a whit disconcerted by this unflattering interpretation of his pro-

ject. "Men who are wont to be carried to the battle by horses that obey a word as readily as a blow, do not conceive the difficulties of manœuvring an unwieldy boat, and many a disaster has been induced by the evils of that inexperience."

"So then our chief thought on the eve of battle should be to prepare the way for flight," returned Yoshitsune with an irrepressible sneer. "Surely that were a novel fashion of fighting! Not far removed from the plan of going backwards into the mellay that one may be able to run out of it the quicker."

Kajiwara's face flushed crimson at these words. They were apparently not spoken with the design of humiliating him, but the merriment they excited amongst the surrounding knights was bitterer than the most pointed insult.

"I have always been taught," he retorted angrily, "that the preservation of his soldiers' lives is a not less cardinal part of a general's duty than the destruction of his foes. The impetuous warrior that knows only how to advance and thinks nothing of retreat, can scarcely be counted better than a wild-hog or a tiger's cub. To you indeed whose eyes are still dazzled by the fire of youthful ardour all this may be unintelligible, but it is none the less a lesson you must needs learn sooner or later."

It was now Yoshitsune's turn to change colour. "For my part," he said and his hearers were not surprised to observe that his voice trembled slightly, "from the moment I take the field I have no thought save the desire to close with my foe and overcome him or die in the effort. If a soldier must needs set so much store by his own safety, it were better that he should hang up his sword and busy himself with the mattock and the seed-jar. I doubt not you will one day have an opportunity of testing the benefits of your method, Kajiwara, and when you find yourself chief in command, there will be nothing to prevent you from reversing your oars in a hundred, nay a thousand boats, but meanwhile you will permit me to reject a device that would ever afterwards be a memory of shame."

Again the assembled nobles broke into a shout of merriment at Kajiwara's expense, but those that knew Yoshitsune best waited in anxious silence for his next words. It must have been indeed a sharp stroke that had pierced his almost invulnerable mail of self-control, and the wound was not likely to be easily healed. "However these things may be, Kajiwara," he presently resumed "whether you be wise and I foolish, whether this be incapacity and that, experience, I were certainly not fitted to command this army if I suffered my captains openly to compare me to a wild-hog, or a tiger's cub. Of that at least there can be no doubt. Soldiers," he added, turning to his guards, "let Kajiwara be arrested. He shall have an opportunity of justifying himself before more impartial judges."

Benkei and Saburo were standing behind Yoshitsune. Themselves enraged beyond measure at Kajiwara's insolent speech they stepped forward with all promptitude to execute their chief's orders, but Kajiwara was seated at some distance from the dais, so that before they could reach him, he had sprung to his feet and fitted an arrow to his bow. At the same time his three sons grasped their swords and ranged themselves at their father's side in an attitude that left no doubt of their intentions.

Yoshitsune had in all probability anticipated this. He rose very deliberately from his seat, and laying his hand on the hilt of his sword advanced slowly towards Kajiwara. There was not perhaps another man in Japan who would have shown himself so unconcerned in the presence of such a peril, for at a distance of half a dozen paces any bow-man, however much his skill fell short of Kajiwara's, could not have missed his mark. On the other hand neither Benkei nor Saburo made any attempt to interfere. From the moment Yoshitsune rose to his feet they disposed themselves merely to support him, knowing full well that let Kajiwara's aim be never so true and his motions never so quick, his ears would be deaf to all sound before the bowstring he held twanged.

Would that it might have been so! This is the wish that posterity, made wise by the sad sequel, has echoed over and over again and which we in our turn repeat. It might not have been altogether just that Kajiwara should have fallen by the hand of the man whose brother's life he had saved, but if the fitness of things be any degree ruled

by their issues, it would have been better, a thousand times better, that he had died then and there than that living he should have wrought the evil it will presently be our task to record.

Unfortunately, however, there were others present who, partly influenced by solicitude for Yoshitsune's safety, partly prompted by a sense of duty, felt themselves obliged to interfere. A score of strong arms were thrown about the disputants and some of the older noblemen entreated Yoshitsune to think twice before he engaged in a quarrel which at best would be an evil omen for the success of the expedition they were about to undertake. Words might be recalled but deeds never, and if Kajiware had spoken inadvisedly on this occasion, he had established a claim to no common consideration on another. Moreover a story of wrangling and bloodshed almost in the presence of the enemy would sound ill in Yoritomo's ears, while on the other hand an example of forbearance and magnanimity could not fail to increase the army's confidence in a leader they all sought to imitate.

Yoshitsune easily suffered himself to be persuaded. The prospect of a combat had restored all his wonted calm, and he said with a merry laugh as he resumed his seat:—"In truth I had not thought myself so easily moved. Men might have said that there was some truth in Kajiware's simile but for your interference, my lords, and I owe you no light thanks. Let this foolish business end here. To-morrow at dawn of day we shall embark for Shikoku, and though I may not adopt Kajiware's suggestion, I think I can promise him that we shall not be over long before we close with our foes."

(To be continued.)

#### DOUBLE ACROSTIC.

'Tis poetical, doubtless, to sigh  
For "a cradle that's rocked by the deep,"  
But a bed that's moored tightly, say I,  
Is a better incentive to sleep:  
Don't believe all the stories and stuff  
'Bout the waves and the breezes so free,"  
For if Neptune's inclined to be rough  
You'll get heartily sick of the sea!

1.

A trusty weapon, highly prized in stern duello's strife,  
As exquisitely fitted to let out a rival's life.

2.

The name of a remarkable (perhaps fictitious) bird;  
Within the poultry-yard, at least, I fancy 'tis unheard.

3.

Be slow to wrath, or certainly some evil will betide;  
For anger's oft with greatest difficulty pacified.

4.

An interesting spot am I, and dear to any man  
Who loves to scan the relics of the days of 'Old Japan.'

5.

A staple article of trade in this you may behold;  
And yet as you perhaps are tired, I'll let it rest untold.

HOODLUM.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, FEBRUARY 20TH, 1880.  
Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
.....represents velocity of wind  
.....percentage of humidity  
Max. velocity of wind 28 miles per hour on Friday, at 5 a.m.  
The barometer is reduced to the fixing point and to the level of the sea.  
The highest reading of the barometer was 30.539 inches on Thursday, at 7 a.m. This is the greatest recorded barometrical height for a period of more than one year. The lowest reading was 29.752 inches on Saturday, at 10 p.m., from which time there was a steady rise until the maximum for the week was reached. The rise in the barometer, it will be observed, was accompanied by a considerable and continuous fall in the temperature. During the week there was a total fall of 1.533 inches of rain, and on Sunday morning there was a trace of snow and hail.

## SHIPPING INTELLIGENCE.

## INWARDS.

Feb. 22, Russian corvette *Djigit*, de Livron, 1,334, 8 guns, 250 H. P., from Kobe.  
Feb. 23, Japanese steamer *Wakanoura Maru*, Christensen, 1343, from Hakodate, General, to M. B. Co.  
Feb. 23, Japanese steamer *Chitose Maru*, Pyne, 295, from Yokkaichi, General, to M. B. Co.  
Feb. 24, Japanese steamer *Hiogo Maru*, Moore, 896, from Kobe, Mails and General, to M. B. Co.  
Feb. 25, German 3-masted schooner *Johann Heinrich*, Oestmann, 411, from Takao, Sugar, to Jardine, Matheson & Co.  
Feb. 25, British barque *Coldstream*, Morgan, 545, from Antwerp, General, to L. Kniffler & Co.  
Feb. 25, Japanese steamer *Genkai Maru*, Conner, 1,260, from Shanghai and ports, Mails and General, to M. B. Co.  
Feb. 26, British barque *Vicid*, Peterson, 238, from Melbourne, Coals, Wool &c., to Okura.  
Feb. 26, French steamer *Volga*, Guiraud, 1,502, from Hongkong, Mails and General, to M. B. Co.  
Feb. 26, Japanese barque *Somanoura Maru*, Speigenthal, 925, from Nagasaki, General, to M. B. Co.

Feb. 27, German barque *Anna Bertha*, Krause, 462, from Takao, Sugar, to Chinese.  
Feb. 28, German brig *Gustav*, Johannsen, 240, from Takao, 1st instant, 5,700 piculs Sugar, to Mitsui Bussan Kaisha.  
Feb. 28, German brig *Peter*, Holm, 241, from Takao, 4th instant, 5,900 piculs Sugar, to Walsh, Hall & Co.

## PASSENGERS.

Per Japanese steamer *Wakanoura Maru* from Hakodate:—12 Japanese in cabin, and 77 Japanese in steerage.  
Per Japanese steamer *Chitose Maru* from Yokkaichi:—193 Japanese in steerage.  
Per Japanese steamer *Hiogo Maru* from Kobe:—Captain Frask, and 120 Japanese in steerage.  
Per Japanese steamer *Genkai Maru* from Shanghai and ports:—Rev. Mr. Amerman, Messrs. Reynolds, Sagel, Rhode, and Colomb, General Miyoshi, General and Mrs. Ida, Mr. and Mrs. Ide, Mrs. Kawada, Messrs. Ogata, Mikami, Kawada, Matsumoto, Koyama, Akashi, Iwakura Mamiya, Kawano Tanabashi, Kitajima, Kiyogoku, and child, Kawase, Yamada, Bando, Nakagawa, Fujii, Katayama, Hirota, and Mayeda in cabin, and 225 Japanese in steerage.  
Per French steamer *Volga* from Hongkong:—Mr. and Mrs. Lewis, Messrs. Scribe, (Belgian Consul), E. Dubois, Disae, A. Bertrand, Ch. Dubois, Austen, Kishimoto, and Finger in cabin, and Messrs. Delton, Rion, Tessier, Coopman, Bocher, Enault, Blanguemon, Delille, Uguen, Komen, Meunier, Le Grignon, Le Lay, Gautier and Le Boulon, in steerage.

## OUTWARDS.

Feb. 22, Japanese steamer *Shinagawa Maru*, Kilgour, 908, for Kobe, Mails and General, despatched by M. B. Co.  
Feb. 22, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, for Hakodate, Mails and General, despatched by M. B. Co.  
Feb. 22, British barque *Nimrod*, Clark, 696, for Moulemein.  
Feb. 23, British schooner *Ching-too*, Baikie, 304, for Takao, despatched by N. Trading Co.  
Feb. 23, American ship *Oakland*, Purington, 1,237, for Manila, despatched by Pearson, Low & Co.  
Feb. 23, French steamer *Tibre*, Reynier, 1,726, for Hongkong, Mails and General, despatched by M. M. Co.  
Feb. 23, American ship, *Highland Light*, Reynolds, 1,315, for Kobe, original cargo, despatched by China and Japan Trading Co.  
Feb. 24, American ship *Kate Davenport*, Mallot, 1,248, for Philippines, Ballast, despatched by Fraser & Co.  
Feb. 25, Japanese steamer *Takasago Maru*, Young, 1,230, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
Feb. 26, German schooner *Caroline*, Michelson, 274, for Chefoo, despatched by Walsh, Hall & Co.  
Feb. 26, German brig *Hermann*, Lembke, 210, for Chefoo, despatched by Jardine, Matheson & Co.  
Feb. 26, Japanese steamer *Kinshiu Maru*, Davidson, 690, for Kobe, Mails and General, despatched by M. B. Co.  
Feb. 28, British steamer *Malacca*, Reeves, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.

## PASSENGERS.

Per French steamer *Tibre* for Hongkong:—Major D. McNeil, and Messrs. F. Souhart, J. Creach, Fenardant, Darcel, Maldines, A. Mow, and Hipkeo.  
Per Japanese steamer *Takasago Maru* for Shanghai and way ports:—Mr. and Mrs. Tanaka, Messrs. A. E. Olarovsky (Russian Consul, Nagasaki), Ishikawa, Niwa, Ashizawa, Kato, Aramaki, Kisho, Takenouchi, Mitsui, Fujino, Wada, Etakura, Shimamoto, and Murakami.  
Per British steamer *Malacca* for Hongkong:—Messrs. A. Nielson, Lemon, Pearson and servant in cabin; 1 European, 5 Chinese and 1 child in steerage.

## CARGOES.

Per French steamer *Tibre*, for Hongkong:—  
Silk for Franco... 174 Bales  
" " London ... 32 "  
Total ... 206 Bales  
Per Japanese steamer *Takasago Maru* for Shanghai and ports:—  
Treasure ... \$ 9,300.00  
" ... Yen 8,000.00  
Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—  
Treasure ... \$ 57,541.37  
Per French steamer *Volga*, from Hongkong:—  
From Europe ... 2,572 bales.  
" Hongkong ... 161 "  
" Sugar ... 1,017 pkgs.  
Per British steamer *Malacca* for Hongkong:—  
Silk for London ... 14 Bales.  
" France ... 1 "  
Total, ... 15 Bales.

## REPORTS.

The Japanese steamer *Wakanoura Maru* from Hakodate reports: Left Hakodate 4 p.m. 21st February. Experienced light N.W. winds and fine weather throughout. Arrived at 7 p.m. 23rd.  
The Japanese steamer *Hiogo Maru* reports: Left Kobe at 6.30 p.m. 22nd instant. Experienced strong N.W. winds to Rock

Islands: thence to port moderate N.E. winds with clear weather. Arrived at 8 a.m. 21th instant.

The German barque *Anna Bertha* reports: Left Takao 8th Feb. Experienced very bad weather throughout the entire passage, anchored 7 p.m. last evening, after being two days in the Bay. The German brigs *Prier* and *Gustave* are both in the Bay from same port.

## THE GREATEST

**WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1878. tf.

## The "Japan Mail,"

## THE RECENT MINISTERIAL CHANGES.

ALTHOUGH it has been known for some time that the subject of a constitutional change in the mode of governing this country was under consideration in the Supreme Council of State, yet the rumour in Tokio, on Saturday evening last, that such change had been accomplished, was at first received with incredulity. A special issue of the *Nichi Nichi Shimbun* on Sunday morning, however, which gave the offices and names of the individuals affected by the change, soon set all doubts on the subject at rest. And, in truth, large as are the individual interests concerned, the practical effect on the constitution is still greater. As in most other civilized countries, the men who composed what is called the Cabinet, or *Nai Kaku* as it is the custom to name it in Japan, were those who were also responsible for the administration of the chief departments of state. While having complete freedom in all matters of detail within his own office, a single Minister could take no important step without consulting with, and obtaining the consent of, his colleagues in the Cabinet. This was virtually the condition of affairs from the time of the restoration up to Sunday last, although, as in every other assemblage of men, personal or other considerations obtained for individuals a power and ascendancy over their colleagues which was not originally contemplated. The direct connection between the Cabinet and the Executive is now so far swept away as to show that a complete severance between the legislative and deliberative assemblies on the one side, and the executive or administrative on the other, is to be an elementary principle in the system of the Japanese Government. A supreme Council of State, which somewhat resembles the Council of Ten in Venice is established. It is composed of the former heads of departments, who resign their administrative appointments, and are

succeeded by men who, in many cases, held subordinate positions heretofore. The present ministers (for so we may call them) will therefore be instrumental, in their respective offices, in carrying out the decisions of the Council of State. This measure agrees in some respects with the views of men who some years ago advocated the complete separation of the legislative and executive offices. Any speculations as to the ultimate effect, or the wisdom of this change, would evidently be misplaced. The most that can be said is, that the subject was brought five years ago to the notice of the nation; that it has caused much discussion; and that now those who are responsible for the government of the country, and who are better acquainted with its necessities than any other men can possibly be, have decided to adopt the system, after careful consideration, although its adoption entails the relinquishment of a large amount of power and patronage. Under these circumstances, the chances are greatly in favour of the alteration being beneficial and satisfactory to all moderate men.

With respect to the movements among the leading officials, although foreigners cannot in most cases judge of their wisdom, or of the capacity of the new men appointed to superintend the working of various departments, yet native opinion may be taken as a fairly accurate guide. The departments of Foreign Affairs and of Colonization are the only ones which still retain their former heads. Of the wisdom of this step, in the former case, there cannot be a doubt. If, in pursuance of a general system Mr. Inouye now left his department, it would be all but impossible to obtain a suitable successor; more especially at a time when the treaties with foreign nations are about to be revised. Apart from this, it is doubtful whether the minister in charge of foreign relations can ever be removed with advantage from the Council of State. Prince Arisugawa, the commander in chief of the army, becomes one of the assistants to the Prime Minister, a post which has been vacant since Shimadzu Saburo resigned nearly five years ago. In the Finance Department, the successor to Mr. Okuma will labour under the disadvantage of obvious comparison with the late minister, whose industry, grasp of detail, and knowledge of his subject were unrivalled. But Mr. Sano has had a long and honourable service in the past, in Europe as well as in Japan, and much confidence is said to be felt in his ability to deal with the many and important questions that will doubtless arise in his department. As commissioner for Japan at the Vienna Exhibition, as Minister to Austria and Italy, as well as in his recent post in the Senate, he seems to have won golden opinions from all men. That he may obtain as much in his present post as he did in his past positions, is to be cordially wished. Mr. Matsukata, who succeeds to the Home Department, was until recently Vice-Minister of Finance, and is reported to possess much resolution and vigour—qualities greatly needed in dealing with the internal affairs of a centralised empire such as Japan. The Judicial Department is placed under the control of Mr. Tanaka, whose conduct of educational affairs has gained him a deservedly high reputation as an administrator; while

Mr. Yamao, for many years Vice-Minister of Public Works, now obtains entire control of the ministry. Admiral Enomoto, well known at the time of the restoration as Idzumi no Kami, and the last and staunchest supporter of the Shōgun, whose fleet (such as it was) he commanded, is made Minister of Marine. It is needless to refer to the minor appointments, as foreigners take but a feeble interest in them.

What the ultimate results of all or any of these changes may be, it is impossible to predict; but of this we may feel assured, that the selection of the men was a subject of anxious consideration to the Government, and that all that merely human skill and foresight could do to prevent improper appointments has been done.

#### HONGKONG CHAMBER OF COMMERCE AND THE JAPANESE SILVER YEN.

AT the close of a lengthy discussion in the Hongkong Chamber of Commerce, it was resolved "that this Chamber memorialize the Government to take action with a view to making Japanese yen current in this colony." Mr. Jackson, manager of the Hongkong and Shanghai Banking Corporation's branch was the proposer of this motion, which found a seconder in Mr. McEwen, and was carried in the face of an amendment proposed by Mr. Nelson, of the Chartered Mercantile Bank, who found a lukewarm supporter in Mr. Granville Sharp. The counter-proposal, which was put first to the meeting, and was only voted for by the two gentlemen just named, was couched as follows: "That the Committee of the Chamber endeavour to ascertain what steps, if any, have been taken by the Government with a view to legalising the Japanese yen in this Colony, and what guarantees, if any, are offered by the Japanese Government to keep up the present currency to standard." The debate on the question was highly interesting, and shews the favor with which the silver dollar of this empire will be received by the commercial community in the dependency. Mr. McEwen, in opening the subject, remarked that the trade between the port and Japan had largely increased of late, and would probably augment still further. The only real ap-  
pointment to the adoption of the coin was Mr. Nelson, and his objections were, if not foolishly prejudiced, derived from insufficient acquaintance with the matter. He evidently confounded the present yen with the former trade dollar and was ignorant, or professed to be so, that the question was not a new one, and had already been discussed by the Chamber. What seems of importance to us is that the most influential and wealthiest merchants of Victoria are of the same opinion as the two hundred and more Chinese gentlemen, who are said to have anticipated them in approaching the head of the executive with a view to obtain the realization of a common desire. Here, in Japan, we all are aware how frivolous are any objections to the yen, either on the score of its present standard of purity, or the chance of that standard being lowered. This was well demonstrated by the Honorable P. Ryrie, who averred that he believed that the most perfect and reliable assurances could be given by the Japanese government that the excellence of the token would be maintained. Further than this went Mr. Jackson, whose experience derived from residence in Japan imparts authority to his statements. He said, in reply to a suggestion from Mr. Sharp, that the Tokio authorities should be requested to furnish such guarantees as the "bankers and merchants" of the colony should deem advisable: "I don't think it would be desirable to force the Japanese Government in any such way. I think it would be almost an insult to the Government. They gave us the very best

guarantee they possibly can, that is, that quantities of the coin are sent to the mint in San Francisco and to the Royal mint in Calcutta, either annually or six-monthly, for assay. I don't think it would be practicable to put the question to the Japanese in that way. They would say, 'What do you mean? You insult us.' I think we have the best guarantee we could have." Of course Mr. Jackson is in the right here, as he took care to be throughout the discussion, which he practically led, and in the course of which he not only gave some interesting information about the circulation of the yen in ports of China and elsewhere, but showed that if it paid the republic of Mexico to keep up the reputation of its coinage for purity, similar reasons, to take no higher ground, would be likely to operate in the same way upon the Japanese Government. No apology is needed for quoting Mr. Jackson's exposition:—

"The yen are preferred to anything else at Amoy and Foochow. They are taken readily and in any quantity. That is our experience within the last few weeks, and last year they took all the yen that we sent up. It is also taken in the Straits Settlements and Penang. Within the last ten days the Hongkong and Shanghai Bank has received a telegram stating that Chinese prefer it to the Mexican dollar, and there the currency is clean Mexican dollars, not chopped dollars. I think the experience at the coast ports is in favour of it; and they would prefer it if it were made current in Hongkong. Mr. McEwen referred to the trade with Japan being larger than it was some time ago, and I have no doubt it will go on increasing. Communication with Osaka has been opened by the Mitsui Bishi steamers, and already direct shipments have been made on a large scale. Now it would be a great boon to this trade route if we had the yen current here. It would facilitate merchants drawing against their shipments if banks knew that they could have the proceeds of their bills sent here in the event of their not having use for the money in Japan, and trade would be greatly benefited thereby. I am sure this is a very important question: As to the reliability of the coin, I think it is now beyond all doubt, no matter what the experience of the past may have been. The Japanese are now possessed of one of the best mints in the world: they regularly send their coins for assay to the Mints in Calcutta and San Francisco, and they have the strongest motive, that of self-interest, to induce them to maintain the purity of the coinage, as they are seeking to circulate it beyond their own shores. We might say, what guarantee have we with regard to the Mexican dollars? We have no guarantee under the sun. We know nothing about the people who manufacture them, but we do know this, that they have hit upon a very profitable industry, that the coins are always marketable because of their purity, and that it is therefore to their interest to maintain that purity. And this is plain reason. But I think we do the Japanese an injustice in doubting them on a matter of this kind. I think they would be about the last nation to do anything dishonourable, after pledging themselves to the whole world. But it may be said they tampered with their currency before, and what guarantee have we that they will not do so again? The cases are not the same. The coins they tampered with were not the silver yen, but the old currency of Japan, which was not intended for circulation outside their own shores, and the Government was then barely established. But in this matter of the silver yen they are not making a coin simply for circulation in Japan, but are seeking for circulation in China and the Straits. For the reasons I have mentioned I think it would be a desirable thing to make the yen current here, and I think this Chamber ought to take action."

Mr. Jackson's address was received with all but unanimous applause. Mr. Ryrie remarked that, after hearing the speech, the Chamber might support the legalization of the coin. He added, it is true, that it would be preferable for Hongkong to make its own dollars; but that there seemed no possibility of that event being realized. In fine, the action taken by the colonial Chamber of Commerce may be held to be the virtual admission of the Japanese silver yen to

equality of currency with the Mexican dollar. The subsequent and necessary legislative proceedings are mere matter of time and detail. Japan is certainly to be congratulated upon the result; but the British colony will none the less benefit. Trade between the two countries will be aided by the measure, and exchange will be more settled. In fact, the arrangement is one of those so unfrequently arrived at—one which is agreeable and advantageous to all parties concerned in it.

#### SEISMOLOGICAL SCIENCE.

THE writer of an article published in the *Japan Herald* on the third of March endeavoured to show that great advantages would accrue to the residents in Japan, and to the world in general, by the establishment of a Society for the study of Earthquakes. The arguments which were used in favour of such a scheme were broadly as follows,—

- 1.—In Japan there are many workers in seismic science; and if a society were formed the number of these workers would in every probability be increased.
- 2.—There is nowhere in the world a society existing which is suitable for the reception and collecting together of papers such as those which have and will be written by these workers.
- 3.—A Seismological Society would command the attention of the scientific world, and obtain in consequence assistance, which individual workers could never hope to attain.

And finally it was suggested that, if such a society were formed, because in Japan we have so seldom the means of exchanging ideas, papers on any scientific subjects might on suitable occasions be read, a note published of the same; and the contributions would then be handed back to their authors to be published if expedient in other quarters.

Accepting all that has been said as urgent reasons for the formation of a Seismological Society, we will endeavour to shew the necessity for carrying out such a scheme, from a new and totally different standpoint, namely, the vast range of subjects over which seismic science extends; and therefore, in order that it should be thoroughly investigated, that the number of workers it calls to its service is indefinite.

To found a society for the study of what to many must at first sight appear nothing more than a mere shaking which can not be obviated, must appear like summoning toilers to a field where there is no chance of either fruit or harvest. If, however, we consider how much a fly which, when it sits upon a horse's back and is roughly shaken off, might have obviated, if it had only the powers of thought and observation of a human being, we may be led to different conclusions. Suppose for instance that the fly when he first settled down had watched the horse's ears, had noticed a vicious turning in the eye, an impatient pawing with the hoofs, a twitching of the skin, in very many cases it might have prognosticated the violent shaking which was at hand, and if unpleasant, although perhaps not possible to avert, was at least possible to avoid. Similarly we, instead of simply taking observations on the shakings when they come, may watch the premonitory signs, and perhaps yet provide ourselves with suitable means of escape.

How to foretell earthquakes and how to escape from them are by no means the only problems which these shakings put before us. To a geologist there is perhaps no phenomenon of nature more interesting than earthquakes. Coming, as a shock often will, from a region of volcanoes, in order to understand the origin and cause of an earthquake, he must study the nature and working of a volcano. Then, as an earthquake wave travels along from strata to strata, he observes its reflections and changing velocities in transit, and oftentimes by a reverse method of pro-

ceeding,—by studying the reflections and velocities,—he may be led to inferences about the existence of certain rocky structures buried deep beneath his view, and about which without the help of earthquakes it would be hopeless ever to attain any knowledge. Of earthquakes, whether looked at only as dynamical agencies producing changes in the earth's crust, or considered from the point of view here indicated, we shall see that they are intimately bound up with the work of the physical geologist. Just as the study of earthquakes affords food for geologists, so if we continue our examination we shall find the same subjects finding sustenance for physicists. It is by studying researches of physicists that we are led to understand the manner in which an earthquake wave is transmitted. From their researches into the elastic *moduli* of different rocks we can draw conclusions as to what the velocity of propagation of a wave should be, the motion of an earth particle, and generally be led to the proper understanding of many phenomena which at present are beyond our ken. By following the sequence in the motion of earth particles we may yet learn something more definite about the originating cause. In this branch of the study we have before us labour which will occupy the attention of students of seismology for a long period before it is satisfactorily mastered.

What are the connections between the earth's magnetism, such as the Japanese affirm to exist, and earthquakes, or the connection between them and the current they appear to induce in the wires of our electric telegraphs? These and a hundred other questions, all of which have a direct bearing upon earthquakes, fall within the domain of the physicist; and to study earthquakes without the aid of the physicist and understand their meaning, would be as difficult a task as it is for many Eastern merchants to transact business without a *banto*, or for an algebraist to determine the values of a multitude of unknown quantities from a single equation. The meteorologist must tell us what the connections are between earthquakes and the fluctuations of his barometer, the changes in his thermometer, the quantity of rainfall, and the kindred phenomena which he makes his speciality. Some may say that these connections, or this want of connection, as the case may be, have been investigated, and that we are only indicating for our exploration roads which have been traversed by the workers in other countries. In most cases, it is needless to say, the connections which have been sought between earthquakes and meteorological phenomena have been failures; but by them it remains for us to profit, and instead of seeking for a relation between earthquakes, and say, for instance, the rise and fall of a barometer, might we not branch off in a new direction and look for earth tremors. We must remember that each time the barometer rises one inch, the effect is equivalent to placing on every square foot of Yokohama a weight of seventy-two pounds, or upon every square mile something more than two thousand million pounds. Although the crust of the earth is probably as strong in Yokohama as it is in any other part of the world, is it not within the realm of reason to see whether loads like these may not possibly produce a *crackle*? Should we calculate what the load is which is put upon the bottom of the harbour every time the tide rises to a height of four feet, we shall find that the numbers we have obtained must be multiplied by three, and that the pressure tending to produce a breakage or a giving way is increased in like proportion. Connections have been sought between earthquakes and the movements of the heavenly bodies, and have been attended with more or less success. Would not these also have been more perfect if, instead of seeking *periodicity in earthquakes*, a periodicity had been looked for in earth cracklings; and have we not here, with our microphones and modern refinements in our physical instruments, a new and almost untried

ruine from which it seems reasonable to think we may extract a rich reward?

Next, we will turn to the more practical portions of our subject, and ask ourselves what are the effects of earthquakes upon our buildings, and how are our buildings to withstand them? Here we are face to face with problems which demand the most serious attention of engineers and builders. To attain what we desire, observation, common sense, and subtle reasoning must be brought to bear upon this most important subject. Lately we have had brought before us an opportunity for investigation which it is certain all those who have to erect buildings in the future will endeavour to take advantage of. Are we to put up houses like wicker baskets, which, shake them as you will, will only bend and yield? Or are we to build our houses like steel boxes, which, even if they were rolled from the highest peak of Fujiyama to its base, would still resist the jolts and shakes they had received? When we know more about the actual nature of an earthquake movement, perhaps we may be more scientific, and build our houses on principles of relative vibrations. In a subject like this we are brought in presence with the architect, who very rightly tells us that in constructing a building there are a hundred other points besides those of earthquakes to be considered. After an earthquake has once rendered a building unsightly by cracking it, it seems as if it should become more flexible under succeeding shocks. This proposition might be investigated, and if its truth were firmly established we might ask architects to design our houses with artistically formed cracks, and thus save ourselves that aggravation which we feel when we gaze upon buildings disfigured by unsightly fissures.

In all our investigations we need the aid of the mathematician, who by means of his powerful instruments for reasoning, will bring us to conclusions which mere words would always fail to reach. We need him to investigate the principles on which instruments record; we need him to analyse the results they give; we need him in all problems connected with astronomy, with physics, with buildings. To the perfect working out of seismology he is as essential as strings are to a violin.

At this point it might seem that the demands of seismology were ended, but then he who reflects will see problems still branching out, and for their satisfactory solution asking aid even from domains like those of natural history, medicine, literature and moral culture. All of us know how the pheasants in Japan will scream before we feel an earthquake as if they were sensible to some slight tremors to which man had been insensible. Not only pheasants but many other animals are affected by earthquakes, the reasons for which fact we are at present quite ignorant of. Why should we not study the connection between earthquakes and the human species? Why do earthquakes produce feelings of nausea and sickness such as many felt during the last earthquake? Is it an effect upon the nerves or what is it,—nature? Further,—might we not enter upon a broader question and consider what general effects have been produced upon the inhabitants of an earthquake country. People are familiar with the effect of a severe beating upon a dog,—it often renders it timid for life. We know the effect of a sudden fright upon a child, or even upon a grown person,—it may shake the nerves for the remainder of the lifetime. What was the action of the last earthquake upon us? Were not many of us seized with a sudden fear lest we might be buried in our houses? When we retired to rest upon the following night, did we do so without the reflection that perhaps a similar shaking might take place and be even more severe than the first? Upon many the effects were probably something such as these. A mental shock was experienced by Yokohama which in some form or

other has produced a result. If vibrations like the last were experienced every month and with varying and uncertain intensity, the feeling of insecurity which would be awakened would produce a most powerful effect upon the mental system. Living under such conditions we might perhaps grow reckless; and drinking, gambling and other vices might consequently be a characteristic of the residents in Japan. Perhaps imbecility might become prevalent; and by inductive reasoning such as this, it would be a legitimate research for our physicians to investigate the madness, and for students in ethics to investigate the morality, of earthquake shaken countries.

Buckle shews how phenomena such as earthquakes have worked upon the imagination of those who dwell in countries like Spain and Italy, and have given a cast to the character of the people. Superstition has been engendered; and the imaginative, to the detriment of the reasoning, faculties have become paramount. It is possible that students of Japanese literature may shew us that similar agencies have been at work in this country. That volcanic activity has to a great extent been the originator of mountain worship seems to be indicated in the eruptions of many of its volcanoes; and no doubt seismic energy, the intimate relation of volcanic action, has played an important part in giving a tone to the religion of the people.

We have here only indicated in the most meagre manner the number of branches of research that seismology throws out to them who wish to study them. For any individual, even should he make seismology a speciality, will continually be forced to seek aid from various branches of science and literature which he himself has never been able to master sufficiently in all their intricacies and detail. We hope that we have now shewn that the study of seismology is not so narrow as might at first sight be anticipated; that it is a branch of science which has had, as yet, but comparatively few workers; and that it is one from which some valuable results yet remain to be gathered.

#### ELECTRIC LIGHT ON STEAMERS.

THE enterprise of the proprietors of the Inman line of Atlantic Mail steamers, in trying the experiment of illuminating their magnificent vessel the *City of Berlin* by means of the electric light, appears to have been a most unqualified success, and proves the suitability of the new agent for some of the purposes to which we alluded in an article in the *Weekly Mail* of the 14th of February.

Some ten years since, we believe, an attempt was made to utilize electric light on shipboard. The experiment was a failure, principally because a battery was then used instead of the present magneto-electric apparatus. The contents of the battery were, of course, liable to spill from the motion of the vessel; and the light was, under the most favourable circumstances, unreliable. The experience of the *City of Berlin* may therefore be looked upon as the first successful attempt to use the light on board an ocean steamer. We read that the effect on board was very brilliant, and that the lamps burned with a steadiness far in advance of the flickering flame which we are accustomed to associate with the electric light as generally employed. The passengers by the *City of Berlin* were quite enthusiastic in their praise, and signed the following document, testifying the complete success of the experiment and their appreciation of the value of the illuminating agent which had served them so well:—

"Steamship *City of Berlin*, New York, Dec. 13.—The undersigned cabin passengers, per steamship *City of Berlin*, Captain James Kennedy, from Liverpool, December 4, 1879, to New York, would hereby express their hearty and grateful appreciation of the progressive enterprise of the Inman Steamship Company in utilizing for the comfort and pleasure of

patrons of the line that marvel of modern science, the electric lighting system. From the time of leaving Liverpool, throughout the voyage, with but slight and unimportant interruptions, the splendid saloon of the *City of Berlin* has been illuminated, whenever artificial light was required, by four large electric burners, the effect of which has been to turn night into day, and render lustrous with light (superior even to that of day) one of the finest floating parlours in the world. The immense saloon, 45ft. square—an area of nearly 2,500 square feet—has blazed with light, so that reading, writing, and even sewing have been possible in every part of the room, and this, too, under circumstances of ease and comfort heretofore unattainable through any process of illumination on shipboard. Although undertaken as an experiment, under the inspiration, perhaps, of hope rather than faith—an experiment too, obstructed by unavoidable obstacles, as well as subjected to the antagonism of angry waves during a wintry voyage—the electric light has proved a great success, and, apart from fulfilling its peculiar mission as an illuminator, has thrown its cheering and enlivening influence over the entire voyage, thus not only justifying the faith of Messrs. Siemens Brothers in their system, but contributing to reduce to the minimum those discomforts which are inseparable from a sea voyage even on the best appointed vessel. And that which has so delighted us as cabin passengers has been an infinitely greater boon in the 'steerage' of the steamer, where two of these electric lights have continuously shed a brilliancy hitherto unknown in the steerage part of any vessel. It appears to us that the experiment as performed by Mr. George Schultz, representing Messrs. Siemens, has completely demonstrated the adaptability of the electric system to vessel lighting and justifies the expectation that this novelty may soon assert itself as a necessity upon ocean steamers. Therefore, with entire unanimity, we tender thanks to the Inman Company for such a brilliant addition to the pleasures of our voyage, and would put on record this their latest title to recognition and credit as pioneers in whatever enterprise will tend to popularize their own line and at the same time contribute to diminish the discomforts and dangers of an ocean trip."

The unqualified success of this attempt will probably lead to the adoption of the system upon passenger steamers on the ocean, so that not many years may elapse before steamers plying to and from Yokohama will enable their passengers to enjoy the comfort of perfect illumination so eloquently referred to by the sojourners on the *City of Berlin*. The apparatus appears to be simple; a special engine of about three and a half horse power is used, fed, however, from the regular boilers of the steamer. This drives the magneto-electric machine which produces the light. We read that each of the lights on board the *City of Berlin* is equal to 400 sperm candles; and as eight similar lights can be supplied from one machine, about 3,200 candle-power is produced by a three and a half horse-power engine.

There is, nevertheless, one consideration forced upon us in connection with this subject, that is to what extent the apparatus may be depended upon to continue to furnish light during the trying scenes so frequently experienced at sea. The slightest interference with the continuity of the electric current, and the vessel would be plunged into darkness. Nor is this idea far-fetched. In the *Arizona*, which lately ran against an iceberg, all the electric bells were rendered useless in consequence of the current being interrupted by the shock. Now suppose that the *Arizona* had been dependent upon the new light. The collision of the vessel—rushing through the water at the rate of sixteen knots an hour—with the iceberg, was in itself alarming enough, in all conscience, without utter darkness being added to the horrors of the situation. Any one who has witnessed the effects of a fire-panic in a crowded theatre with insufficient means of exit, can form some slight conception of what might have been expected in the cabins of the *Arizona*, if her four hundred and fifty passengers after being aroused from sleep by the shock of collision, had found themselves, without light, and expecting every instant to be drowned in the darkness of their cabins.

#### SMALL-POX ON BOARD THE CITY OF PEKING.

THE arrival in the harbour of San Francisco of the Pacific Mail Company's steamer, the *City of Peking*, flying the yellow flag at the peak, as a warning that the vessel carried disease and for no one to come on board, excited no small amount of alarm, more especially when it became bruited abroad that the much-dreaded small-pox was the particular form of malady with which the ship was infected. Under ordinary circumstances, the fact of a pest-stricken vessel arriving at her port of destination would evoke no comment; but since there have been so many rumours, many of them entirely without foundation, on the subject of the *City of Peking* and the few patients on board, it may be as well to briefly detail the actual facts as related by one of the local journals:—

"The publication in the *Call*, of the statement by the Quarantine Officer, Dr. W. F. McAllister, that Captain Berry, of the *City of Peking*, and his first officer were privy to the fact of there being cases of small-pox on board the ship when she came up to the dock, created considerable sensation in circles where the commander of the *Peking* was known. During the day, a *Call* reporter visited Captain Berry at his residence on Webster street, and interrogated him as to the truth of the statement. Captain Berry emphatically denied having any knowledge of there being any sickness on board of the ship when she was relieved from quarantine, or that he concealed any one on board after she came to the dock. The ship came to the dock on Friday, and on the morning of the following Monday the mess-room waiter came to him and said he believed that he had an attack of varioloid. The Captain replied at once that he must go to the hospital, to which the man made no objection. He was unable to find Dr. McAllister at the time, as he says his visits to the ship were few and far between, but that evening reported the matter to the agent, and the next morning the Quarantine Officer sent the man to the hospital. Captain Berry says that when he came into the harbor he had the yellow flag flying, and reported that he had small-pox on board. He had made up his mind to submit to a vigorous quarantine, and had prepared a letter to be sent to his wife, telling her of his situation. The following day, however, the Quarantine Officer told him he could go ashore, and he did so. As long as the ship was in quarantine of course he did not consider that it was his province to interfere with the business of the officer whom the law placed in charge. At the time the cabin passengers were released, Dr. McAllister was on board, and allowed the two steerage passengers, who had eaten at the cabin table, to go ashore. The others, however, he ordered back below. This is not in accordance with the statement made by the Doctor to a representative of the *Call* on Tuesday evening last, when he stated that he was not aware that there were any steerage passengers on board of the ship until she reached the dock. Captain Berry says very truly that the Quarantine Officer should have known full well of the presence on board of the nine steerage passengers from consulting the ship's way-bills. The surgeon of the ship, Dr. Haskell, he says, was kept on the go between the hulks and the steamer, and really was hardly responsible for what took place on the latter vessel. Captain Berry says that men could not be expected to stay on board of the vessel when she was lying alongside of the dock; she was not in quarantine, and any one leaving her would not have broken the quarantine law. As to any intention on his part to violate the quarantine laws, Captain Berry says it is ridiculous to make any such charge, and his long service as a commander and reputation as a man ought to be sufficient answer to any such charge. As to the presence of ladies on board, Captain Berry said there was nothing to prevent them going on board when the ship was at the dock, and if they wished to remain with their husbands in quarantine no one should object. Yesterday afternoon, P. J. Hogan, lute butcher on the *City of Peking*, and who has been reported as being afflicted with small-pox, came to the *Call* office and exhibited a certificate signed by Dr. C. G. Strong, stating that he had examined him and found no symptom of the disease. Hogan said that he had not endeavored to conceal himself in any way, but had left the

ship, as he did not care to spend a month in quarantine. Hogan stated that he believed the Quarantine Officer was guilty of making a misstatement when he charged the officers with being cognizant of sickness on board when the ship came to the dock, as he was positive there was none there. It appears that at the time "thorough fumigation," according to the Quarantine Officer, was going on on board of the *Peking*, she was lying quietly at anchor, and the fumigation did not, in fact, commence under Thursday last.

H. B. Williams, the agent of the Mail Company, said yesterday that he did not think Captain Berry intended violating the quarantine laws, and that he had assured him (Williams) that the published statement of his having knowledge of sickness on board when the ship came to the dock was a falsehood. He believed him, and he added that the company had no better officer in their employ than Captain Berry. It is now reported that the steamer will be released from quarantine and return to the dock this morning. The general impression is that the Quarantine Officer has been guilty of gross negligence."

This matter of the *City of Peking* has brought prominently forward the fact that there is absolutely no Quarantine station connected with San Francisco, and that the passengers and crew of the infected vessel were actually detained in an old hulk belonging to the Pacific Mail Company in a state of discomfort that, to use the words of one of the officers, "the state prison would have been a far more desirable place to pass an enforced season of seclusion." When it is once thoroughly realized that San Francisco possesses no Quarantine accommodation, it will cease to excite wonder that the enforcement of Quarantine is left to the unaided exertions of "one officer, a small boat and four men"; but it is, under the circumstances, very wonderful that the City which permits the existence of such a condition of affairs, in the face of the warnings constantly occurring in every quarter of the globe, America not excepted, has not been visited with a succession of disastrous epidemics of foreign origin, which would most effectually impress upon the citizens the generally acknowledged axiom, that ill-judged economy is, in the long run, the most expensive course to adopt.

The experience of San Francisco will be valuable here in Japan, if occasion arises to again enforce the Quarantine regulations. With the numerous examples of other countries to fortify their action, and indorsed by the recent episode in which the *City of Peking* and her officers occupied so unpleasantly prominent a position, it remains to be seen if the Japanese authorities will again permit their reasonable sanitary regulations for preserving the health of the community, to be treated with contemptuous indifference.

THE Ministerial changes mentioned in the early part of the week have, with slight alterations, been since officially announced. The government is now composed as follows:—

#### COUNCIL OF STATE.

His Excellency Sanjo, *Daijo Daijin*.

H. I. H. Prince Arisugawa, *Sa-Daijin*.

His Excellency Iwakura, *U-Daijin*.

Their Excellencies Oki, Okuma, Ito, Terashima, Inouye, Generals Yamagata, Kuroda, Seigo, Yamada and Admiral Kawamura, Privy Counsellors.

#### MINISTERS.

His Excellency Oki, President of the Senate.

His Excellency Sasaki, Vice-President of the Senate.

His Excellency Inouye, Minister for Foreign Affairs.

His Excellency Wooyeno, Vice-Minister for Foreign Affairs.

His Excellency Yoshikawa, Assist. Vice-Minister for Foreign Affairs.

His Excellency General Kuroda, Colonization Minister.

His Excellency General Yamagata, Chief of the Staff.

His Excellency Matsukata, Minister of the Interior.

His Excellency Mayesima, Vice-Minister of the Interior.

His Excellency Shinagawa, Assist. Vice-Minister of the Interior.

His Excellency Sano, Minister of Finance.

His Excellency Yoshiwara, Assist. Vice-Minister of Finance.  
His Excellency Admiral Enomoto, Minister of the Navy.  
His Excellency General Oyama, Minister for War.  
His Excellency Kawano, Minister of Education.  
His Excellency Kuki, Assist. Vice-Minister of Education.  
His Excellency Yamao, Minister for Public Works.  
His Excellency Tanaka, Minister of Justice.

MR. J. Lescasse, Member of the Society of Civil Engineers in France, and at present resident in Tokio, where he is architect of, and contractor for, some extensive buildings, has sent us a copy of his memoir upon "Japanese structures, and structures in general, considered in connection with earthquake shocks; and a description of a system intended to give great security to buildings of masonry." This paper was read on the 6th of April in Paris at the meeting of the institute of which Mr. Lescasse is an associate. The original manuscript was, we think, about simultaneously with its arrival in Europe, translated in the columns of the *Japan Gazette*. Mr. Lescasse's system has now, in more than one building of considerable extent, stood the test of very severe earthquake trials. The German Hospital in this port, and the edifices erected expressly for occupancy by the German Legation in Tokio, have both been built upon his plans, on his system, and under his control and supervision. In both instances no damage has been wrought by two startling shocks, the later and more trying of which is still very fresh in the memory of all residents in this neighbourhood. The principle adopted by the architect is a very simple one. He formulates it thus:—"A number of bricks—a miniature wall—are placed upon a table dry and unmortared. If the base on which they rest is shaken, they will tumble in all directions. But if the whole mass is compactly bound together with a string or an iron band it will be held together, and if it fall, will fall inward or outward in one piece." Mr. Lescasse applies this principle to the various sections of walls which comprise a house. Each parcel of masonry in stone or brick is strongly bound: and all the different parts are again firmly interlaced. Thus his formula is "to bind masonry in masses or parcels, which themselves are firmly bound one to the other, in such fashion that neither can the separate bricks or stones be disjoined or the walls rent." The method by which Mr. Lescasse's plan can be carried into effect consists of details which he himself explains at some length, and which would, no doubt, when once the principle is grasped, be comprehended by any practical builder without the help of ample explanation. We have before said that the scheme has already, in the buildings of the German Hospital in this settlement, and the German Legation in the capital, withstood a crucial ordeal. That his professional brethren in Europe have faith in the notion is evidenced by the favour with which they have received it; and that persons in Japan who are not wholly theoretical believe in it, is demonstrated by the fact that the erection of the new buildings of the Mitsui Bishi Company in Yokohama, has been confided to Mr. Lescasse, with instructions to apply his method, in all its details, in the construction.

WE learn that since Dr. Anderson's departure for England the announcement of his appointment to the post of assistant-surgeon at St Thomas' Hospital, London, has reached Tokio by telegraph. The large section of the community who enjoyed the benefit of Dr. Anderson's professional services while he resided here, and who may truly be classed with his personal friends, will, we are sure, join us heartily in congratulating him upon his good-fortune. However well it was deserved, and upon this point there cannot possibly be a second opinion, it rarely happens that the memory of merit survives the effacing influences of time, separation and that wealth of new achievements with which the scientific world of England is constantly enriched. That it has

survived in this case, will not, we think, surprise those who have had an opportunity of estimating Dr. Anderson's high attainments. It is pleasant also to observe that his services were fully appreciated by the Japanese Government—we use the word in its widest sense for it would be difficult to name any Department with which Dr. Anderson was not directly or indirectly connected—and that he received at his departure such expressions of gratitude and approval as have seldom fallen to the lot of any foreigner employed here. Special allusion was, we understand, made by the Minister of Marine to the fact that Dr. Anderson's treatment of *hakke*, had been the means of saving a large number of lives; and, indeed, it is difficult to over-estimate the value of his services in this matter alone. His work upon the treatment and pathology of that disease, hitherto so little understood and so largely fatal, was translated into Japanese by order of the authorities. It has now reached a second edition and is, we understand, in the hands of almost every regular practitioner in Japan. Dr. Anderson, before his departure, had the honor of a special audience with His Majesty the Emperor, while farewell entertainments were given in his honor by the Admiralty, the Naval Hospital, the Board of Public Works, the Home office, the President of the Sanitary Committee and Her Majesty's *Chargé d'Affaires*. We, though the last to bid him 'god speed' are by no means the least sincere. We do not wish him success, for that, we believe he is sure to achieve, but we hope that he may always find friends who will think of him with as much affection and esteem, as those he has left behind him in Japan.

MR. Luther Whiting Mason, of Boston, arrived in Yokohama on board the *City of Peking*. He has accepted a position with the Japanese Government, in the Tokio normal schools, as a Professor of music, a post created specially for Mr. Mason, with a view to introducing the culture of the musical art into the primary schools of Japan. Mr. Mason has, for the past fifteen years; been in charge of the primary musical education of the public schools of Boston, and is the originator of the elementary system which bears his name. He has met with considerable success in the instruction of several Japanese students in the United States, and it is their progress which has induced the Government to solicit the services of the professor. This gentleman has already set to foreign music several of the Japanese national songs, and has devoted some time during the last two years to the study of the sounds of the Japanese language, and their adaptability to the foreign scale of music. The proposed experiment is a new one; and many may doubt its success; but in the opinion of the professor, and those Japanese with whom he has been intimately associated, there is no question whatever that the creation of a national school of music is simply a matter of time. It is, they think, necessary to commence early with the youngest pupils in the public schools. The system consists of a series of musical books with charts attached, adapted to the ages of the pupils, between the years of five and eighteen. The method is now prevalent throughout the United States, Germany, and Switzerland, and has made great advance in England. Such foreign songs as may be found suitable will be translated into Japanese, and the native repertory will also be drawn upon, and its best songs set to music on the European scale. The first work will be to find how many pure melodies exist in Japan, founded upon the five tone scale (for Mr. Mason has discovered that the Japanese scale contains five tones only, being deficient of the fourth and seventh of the Italian gamut). Such of these melodies as exist can

be preserved and the proper accompaniment will be written for them. The Educational department has already prepared a building in the old Kaga yashiki, consisting of ten rooms for study and practice, and each containing a "Knabe" piano. There is also a hall for lectures. Mr. Mason will be assisted in the Japanese literary branch of his work by one of his most successful pupils, Mr. Isawa, who is devoted to his profession and has the greatest hopes of its eventual progress in Japan. Music being a recreation, and it being a matter of importance that children shall not be tired in the schools, occasional singing exercises give relief in their studies; they will also promote a better pronunciation of the language, be conducive to health, and, indirectly, effect a good and beneficial influence on society. Most educators admit the numerous advantages of the study of music. In Boston it was introduced into the schools in 1859; but the methods of instruction and the knowledge of the teachers were ill devised. A classical standard was fixed far too high to be grasped by young children. In 1864, Mr. Mason was engaged. He had been at work in Cincinnati and elsewhere, and in all places good results of his teachings were apparent. Boston has now the most perfect system of musical instruction, and the Boston system is that of Mr. Mason. He has introduced a method of charts and elementary instruction, in which, on an original plan the songs and music of the various countries of Europe, are arranged. The study of music in the schools of the United States is of comparatively recent date; but the beneficial influence which it is capable of exerting is already profoundly felt. It is fortunate for Japan that the gentleman who has been mainly instrumental in bringing it into favor there, should have been selected for the adjustment of a system which shall make it equally popular and productive of felicitous results in the seminaries of Japan. We subjoin a couple of extracts from American papers, which may serve to shew the estimation in which Mr. Mason is held in the United States.—

"Professor Luther W. Mason, of Boston, who has recently been appointed by the Government of Japan to a position in the Normal School at Tokio, in that Empire, while stopping over in the city on his way to that distant country, met the teachers of the city at the Central School building yesterday afternoon (Jan. 17th) and delivered a lecture on the method of teaching vocal music in our public schools, and it has probably never been the good fortune of the teachers of the city to be more highly favored. Professor Mason began his exercise about two o'clock, and so well pleased were the teachers, that they held him until near nightfall. There was so much in his lecture, or rather, in his instruction, that the teachers kept him answering questions, and telling how to get over difficulties, during the entire evening. To give the good points of what was said, would be to commence with the first and follow him to the close. He introduced a class from the primary department of the Humboldt school and showed how the work was done. This was especially instructive and interesting, and the teachers showed their attention. The most unique thing presented was the hand movement. It was highly appreciated by the teachers, and it had one grand advantage over everything else in running the scale or reading music. It is sure to obtain the most perfect attention. The exercise was of great value to the teachers, and they were willing to do their part by showing their high appreciation in close and critical attention. At the close of the exercises the thanks of all present were tendered Professor Mason, accompanied with the wish that his life might be as useful and his lines full in as pleasant places on the Eastern hemisphere as they have on the Western, and that he might return to us at the expiration of its term of service in Japan, again to bless his native land with his valuable services. Professor Mason is one of the most eminent musical authorities in the United States, if not in the world. His works, which have recently been adopted in our public schools, have been adopted in many of the cities of both America and Europe, and in the entire empire of Japan. He commenced in the schools of Louisville twenty-seven years ago, and left on an increase of salary and located in Cincinnati, where he spent five years. Boston then secured his services, which she has had fourteen years, and now the Empire of Japan has him for an engagement of five years. He will leave the city to-day for the scenes of his new field of labor, remembered by all who have met him here. Many citizens, not connected with the schools, availed themselves of the opportunity of seeing and hearing him yesterday evening. The *Times*, with the teachers, joins in good

wishes for a prosperous voyage, pleasant fields of labor and safe return."

"Prof. L. W. Mason, formerly teacher of music in our public schools, and now on his way to Japan, spent Sunday and yesterday visiting old friends in this city, many of whom remember his untiring devotion to the graded system of teaching from charts, of which he is the author. For the past fifteen years he has been in charge of the primary musical education in the public schools of Boston, and has been awarded the highest prize medals at three of the world fairs. His system has been adopted in many of the large cities of the Union. But the most substantial testimonial he has received is given in his appointment by the Educational Department at Tokio, Japan, to establish a system of notation and musical culture, from the elementary to a complete conservatory of music, as a national enterprise. He has already sent on six organs and sixteen pianos, and is empowered to select teachers and professors as they may be needed in the growth of the institutions to be established, and at such salaries as will command the talent and skill to insure success. One building for instruction and study will be ready for occupancy on the 13th of March, and another for the residence of teachers is nearly completed. Plans have been matured that will require five years for their execution, out of which he hopes to bring thorough musical culture to all parts of the empire, with a central institution at Tokio. Mr. Mason has been studying the language the past two years, under the instruction of Japanese youths, who were sent to this country for education and to learn the methods employed for the general diffusion of knowledge. These young men have made such attainments in music as to be able to assist in the difficult work Mr. Mason has undertaken."

WE have received from the Chinese Imperial Maritime Customs, the forty-fifth number of their Gazette, being for the period from October to December 1879. This volume is one of the statistical series of publications now being compiled, and deals with the trade of the various open ports of China for last year.

#### REVIEW. \*

ONE of the questions which we may be allowed to ask ourselves, in perusing a paper, such as Mr. Atkinson's, printed among the transactions of the Asiatic Society, is, surely, what substantial contribution to knowledge does it convey? If it be intended as an aid to future travellers, then we think that, eliminating the author's references to personal commonplaces, the same amount of information, in a far more practicable shape, may be obtained from the numerous cheap and tolerably reliable guide books and maps of the country. When a traveller, with proper qualifications for the purpose, visits some place of historical, religious or architectural interest, his descriptions and observations are always valuable. In the paper before us, however, we are at a loss to find any addition whatever to our knowledge of the monuments, history, or landmarks of Japan. The days are gone when a journey to the top of Fuji or into the province of Musashi could find a place in the Transactions of the Royal Geographical Society.† It is well known that foreigners now travel over all parts of the country with facility, and though diaries of such little journeyings, with notes on diet and feeble outbursts of weak sentiment on scenery, may be very good material for letters to anxious relatives at home, they are scarcely sufficiently important or romantic to send to a society intended for the increase of knowledge of the countries of Asia. One naturally reads such a production as this with the most wearisome feeling of being bored by continual repetition of puerile remarks. Dreary truisms and egotistic commonplaces occur on every page. "A short distance from the shrine down the side of the slope there was a little water which we were glad to drink as we learnt that for the next two and a half *ri* we should come across none." Such a sentence as this would probably convey to a fond parent at home the idea that her "good dear boy" was crossing some fearful wild or desert, to be prepared for which it was necessary camel-like—to lay in a supply of water beforehand. To any one at all conversant with Japan, it gives an impression that

the author is of a very peculiar turn of mind, since, not being thirsty at the time, he drinks all the water he can find, because he fancies he may want to drink before he reaches water again. This is a new notion, and if Mr. Atkinson can apply it generally, and take in, on an August morning, his supply of liquid for the day, thereby preventing the necessity of refreshing himself again, he will have made a singular discovery. The writer in another place enters into long discourses upon boots and foot-gear generally, giving to little matters, that most men would settle for themselves with scarcely a thought, almost the importance that would be bestowed upon the equipment for an Arctic expedition. Many similar and equally aggravating commonplaces of the same kind might be alluded to, such as the shape of his portfolios, the gentlemen's houses which he stopped at, the time he got up in the morning, and we might almost say his night thoughts. The descriptions of scenery bring to our minds no force of imagery, nor any of the inspiring thrills of sympathy with the beauties of nature which render pardonable in some writings references to simple surroundings. An artist's touch is required to give life and interest to scenes, which dryly and mildly described are tedious and wearisome. The only portions of the paper likely to be of any value to inquirers are those devoted to remarks on botany and barometrical observations. From remarks on these subjects those seeking information might certainly find some small amount. The money of the Society is literally thrown away upon the map, which conveys no information whatever. The author makes a rough sketch in his note book from an old map which he finds in a certain tea-house, and he transfers his scrawlings to a copper plate at the expense of the Society. We cannot, indeed, protest too strongly against the freedom given to such itinerant journalists as this, to write, print, correct the proof sheets, and then send out into the world within the covers of the transactions of a learned society, such empty and valueless material, as in this number takes up one-fourth of its pages.

The remaining papers, however, are of a different calibre. Respecting Mr. Aston's proposal for an arrangement of the Korean alphabet we shall say nothing, because, with the exception of Mr. Aston himself, no foreigner in this country, as far as we are aware, is capable of discussing the subject. But we may take this opportunity of mentioning a paper, by the same author, read, during his stay in Europe, before the Royal Asiatic Society of London, entitled "A Comparative Study of the Japanese and Korean languages," in which he considers the phonetic systems of the two languages, the functions of their grammar, and the character of their grammatical procedures.

Mr. Milne's paper on stone implements found in Yezo is another instance of the attention devoted to prehistoric times in Japan, which seems to have derived its first great impetus from the labours of Professor Morse. Besides the ordinary remnants of the stone age, such as arrow-heads, chisels, &c., the objects described in the paper are, inscriptions, grindstones, and cave dwellings. Many of these are well illustrated by photographs; but the most noticeable point is the apparent identity of the Yezo pottery and shell-heaps with those found in various parts of the main island. A second part of the contribution is intended as a supplement to a paper on the "Stone Age in Japan," read last year before the British Association. The same arguments are used in the endeavour to ascertain the makers of these shell-heaps, but new evidence, collected during travels in Yezo, is adduced. One new and striking argument used by the author to determine the age of the celebrated heap at Omori, is geological, and is based on the rate of Delta formation. The general conclusion arrived at seems to be that wave after wave of race has swept over Japan, each wave being pushed on by its successor; and the order which the writer thinks most probable is, Aleuts or Kamtschadales, Ainos, and Japanese. A very curious map of the capital, to illustrate the rapidity with which a Delta increases in this region, is appended.

Mr. Gubbins's paper on the practical subjugation of the Satsuma clan by Hideyoshi, in the sixteenth century, will attract very general interest, not only on account of its intrinsic merits in point of style and arrangement, but also because it is the first attempt to shew that Japanese history may be written, by one possessing the necessary qualifications, in such a manner as to be attractive to ordinary readers.

\* Transactions of the Asiatic Society Vol. VIII., Part 1.

† Least this should be considered an exaggeration, the reader is referred to the volume of the Transactions of the Royal Geographical Society for 1873.

That common Japanese histories never can be so will be evident to any one who has read them either in original or translation. To take but one instance: some years ago there appeared in these columns portions of a translation of the well-known *Nihon Gwaishi*, which, it is no secret, came from the pen of an eminent scholar; but the public got utterly weary and disgusted with it before the work was half done, and it was deemed well to stop the publication. Japanese historians seem to be able to give—or to think it their duty to give—only the dry bones of history; and under their hands, history is, in truth, nothing more than an old almanac.

In this article we have merely criticised each paper on its own merits, but on another occasion we may discuss the Society, as a whole—its aims, its past and its probable future. This subject arises naturally from the pan of congratulation which the late president, Dr. Sytle, utters in his valodictory address.

Incidentally, we may refer to the last publication of the German Asiatic Society, which is a complete index to the first ten numbers of the transactions, and is an invaluable aid to the student of any particular subject.

#### REUTER'S TELEGRAMS.

LONDON, 1st March, 1880.

Rigorous measures are being taken in Russia to repress disorder, as fears are entertained of a Nihilist outbreak.

LONDON, 4th March, 1880.

The Emperor of Germany has written a letter to the Emperor of Russia, assuring him of his life-long friendship. Gothard tunnel completed.

#### NOTES OF THE WEEK.

We have received two home mails during the past week, one by the P. & O. steamer *China*, the other by the *City of Peking*: both vessels arrived on Monday last. Homeward despatches went forward by the P. & O. steamer *Malacca*, on the 28th ultimo.

The M. B. Co.'s steamer *Sumida Maru*, had very heavy weather during her last trip hither. The vessel left Hongkong on the 21st of February, and immediately experienced a strong north-east monsoon with a high sea. On the 24th and 25th there was a tremendous gale from the east-north-east accompanied by much rain, lightning and high confused sea, the ship labouring very heavily and the decks being constantly flooded with water. On the 26th, at 2 a.m., the wind shifted round to the eastward, and frightful weather came on at 4 a.m. and lasted until 10.30 a.m.; the ship was now hove-to, labouring heavily and shipping much water, carrying away the poop ladders, &c. On the 27th, at 4 a.m., the wind changed to the northward and continued blowing very hard until arrival in Kobe on Sunday morning, 29th February. The *Sumida* left Kobe on the same day at 10.30 p.m. and arrived here yesterday, having met head and strong winds all the passage. Off Vries Island there was a heavy fog and snow.

As the *City of Peking* was leaving San Francisco, the U. S. S. *Ranger*, from Japan, was steaming into the harbour.

H. I. R. M. corvette *Cruyzer* has sailed for San Francisco.

The *Loudoun Castle* left New York on the 12th January, the *Guy Manner* on the 17th, and the *Oxfordshire* on the 22nd, all homeward bound.

The O. & O. steamer *Gaelic*, left San Francisco for this port, on Saturday last, the 28th February, and may be expected here about the 22nd instant.

A slight, but very distinct shock of earthquake, was felt yesterday morning, at about twenty minutes to five o'clock.

A telegram was received in town on Monday last, announcing that the American ship *St. Charles*, just arrived from New York after a rapid passage of one hundred and forty-two days, had caught fire, and no hopes were entertained of saving either vessel or cargo. The ill-fated craft was commanded by Captain Gates, and sailed from New York on the tenth of last October. The cargo consisted of 47,000 cases of kerosene oil. The ship is irrecoverably lost; but it is thought that much of the oil may be recovered.

The Ocean Company's steamer *Nestor*, left Singapore for Hongkong on the 19th of February.

The French flag-ship *Thémis*, with Admiral Duperré on board, left Singapore for Saigon, on the 4th of February.

H. M. S. *Hart* arrived in Singapore on the 6th of February and found there the *Encounter*, *Egeria*, and *Foxhound*. H. M. S. *Vigilant*, with Admiral Cécile, has left Singapore for a cruise in the Straits of Malacca.

The dead body of a child was found on the fore-shore at the bund on Monday, at about six o'clock. The infant was newly born and it is supposed died from exposure.

A new line of steamers, to be named the Union Line, is advertised for China and Japan, under the auspices of the China and Japan Shippers' Association. It is to provide tonnage to the Association at fair current rates, and, we need hardly mention, has been promoted as a consequence of the Conference of Shipowners. The line at present comprises ten steamers, all more or less known in the trade of the Far East.

The following regulations have been issued by the Post Master General, for the exchange of money orders with Australia and the Straits Settlements:—

1. The Post Office of Yokohama issues Money Orders on New South Wales; New Zealand; Queensland; South Australia and Port Darwin; Western Australia; and the Straits Settlements.
2. The exchange of Money Orders between Yokohama and Hongkong etc., continues as heretofore, subject to the rates laid down in the next paragraph.
3. The Commission to be charged on all Money Orders named above is as follows:—For a sum not exceeding £5 or \$25, 25 cents. From £5 to £10 or \$25 to \$50, 50 cents.
4. No Order must exceed £10 or \$50, nor will more than two such Orders be issued to the same person, in favour of the same payee, by the same mail.

In an undefended case heard in the British Consular Court on Wednesday last, judgment was given against D. Blackie, at the suit of Osaka Senjiro, for 39.52 yen and \$3.00 costs.

The U. S. steamer *Ranger*, when a few days out from Japan, met with a heavy cyclone, lost all her boats, and was badly damaged aft. She put into Honolulu for temporary repairs, after which she proceeded to San Francisco.

The ship *St. Charles*, of New York, loaded with kerosene, took fire yesterday morning and burnt to the water's edge. The ship arrived in the bay on Friday afternoon, but on account of strong winds she had not entered the harbour. Smoke, which made it evident that she was on fire, was first discovered at 1.30 a.m. yesterday. Assistance was at once asked from H.B.M.S. *Sylvia* and H.I.G.M.S. *Prinz Adalbert*, and both ships promptly responded. The *St. Charles* was four or five miles from shore, and the men-of-war boats were used as tugs to bring her into shallow water, so that if the fire could not be mastered, she might be scuttled. Flames burst out at 10.30 a.m. and just abaft the foremast on the starboard side, and so quickly did they progress that there was no opportunity to save anything beyond the sailors' clothes and bedding. Holes were at once bored, and one a few inches square was cut under the main chains. She soon filled, but upon sinking it was found she was in shallow water, as she sank only 12 or 13 inches and then took bottom. The

lead had been kept going, but the man using it had miscalculated, so that when the anchors were let go to the call of four fathoms it turned out there were only three fathoms. On discovering the appearance of fire at 1.30 one of the hatches was opened, for the purpose of seeing where the fire was, but the smoke was so thick that it was impossible to breathe or see anything. The hatches were at once battened down, holes were bored and water was pumped in, which kept the fire down for some time. Some explosions took place at about 10 a.m., which caused nearly everyone to leave the burning ship, some jumping overboard. From this time nothing could be done to save the ship or cargo. At 3 p.m. the fore-top and top-gallant masts, with yards, fell. At 4.10 the jib-boom fell, and at 4.45 the main-mast, with all the gear, carrying with it the mizzen-royal-mast. At about 3.50 some men went on board and cut the lanyards of the mizzen rigging, and for some few minutes they cut away at the mast, but to no purpose, for soon after it was enveloped in a mass of flames.

The ship is eleven years old and is on her first letter. She had new sails and was newly coppered for this voyage. She had a small miscellaneous cargo and 10,000 cases kerosene oil for Messrs. Smith, Baker & Co., and 30,000 cases for Messrs. Fearon, Low & Co. The kerosene was insured, and the bulk of it will probably be recovered. The ship was uninsured.—*Hiogo News*.

There is, I believe, no reason to doubt the truth of the statement current in society last week, to the effect that the two sons of the Prince of Wales, now serving on board the *Bacchante*, have been induced by some foolish companion to allow themselves each to be tattooed on the nose with an anchor-embellish. The Prince and Princess are said to be in despair about the affair; and all the medical science of London has been consulted as to the possibility of obliterating the marks. 'Boys will be boys,' however; and perhaps, after all, an anchor is not an inappropriate symbol for the future ruler of a maritime Power; and as the defects and ailments of Royalty have not unfrequently been aped by their admiring subjects, a day may dawn when, in order to show that they are 'in the swim,' it will be fashionable for all the young bloods in the kingdom to be marked with an anchor.—"Atlas" in the *World*.

A correspondent of the *World* is responsible for the following:

'It is astonishing to me how little men who might reasonably be expected to keep abreast of the times know of contemporary social history. In *Vanity Fair*, of 3d instant, I read, in all pride of place of its first column, a story about the relations between the Emperor and Empress of Russia. It is put forth that he and she are separated through a *liaison* he contracted some years ago with "a princess of a well-known name." This connection, the story proceeds, had been known for several years; but during last summer it first attained public notoriety. At last the Empress met the Emperor driving with two children, and demanded an explanation, with the result that the Empress has gone abroad with the expressed intention not to return to Russia. "Report runs," so your contemporary proceeds, "that the princess has told her *entourage* that the Emperor has promised to marry her on the death of the Empress," and will abdicate that he may do so the more easily.

'What of truth there is in this connection is as well known in Russia as is the existence of Nihilism; and this being so, there can be no infraction of delicacy in narrating the real facts. Many years ago the Emperor contracted certain relations with a Princess of the Dolgorouki family, and was deeply attached to her. She died about eight years ago, and the Emperor transferred his affections to her younger sister, with whom for some time he lived in the same relations as he had done with her sister. Having for her a sincere affection, and she having borne him a child, he desired to legitimate her by a morganatic marriage, and after some negotiation procured to this measure the consent of the clergy. The union took place there according to the laws of the Greek Church; but the Empress, who had closed her eyes to the connection while as yet illicit, felt herself aggrieved by the consummation of the closer tie, and retired to the Crimea, vowing she would never comply with the Emperor's desire that she should receive the Princess Dolgorouki at Court. After a time she relented, returned to the capital, and received the morganatic lady, who

ever since has been within the Imperial pale. I have seen her at the Russian Court myself, and have met her at the receptions of the Foreign Ambassadors (including Lord Augustus Loftus,) who complied with the known wishes of the Czar. The Princess is universally known in St. Petersburg society by the *sobriquet* of "La Grande Demoiselle;" and I may add that her favourable influence is recognised as all-important by those desiring favours of his Imperial Majesty.'

The friends of Mrs. Ayrton will be glad to learn that she has received the degree of doctor of medicine from the Faculty of Medicine in Paris. It will be remembered that Mrs. Ayrton, after successfully pursuing her medical studies at Edinburgh, was refused a degree. She recommenced her labours in Paris after leaving Japan, and has at last succeeded in obtaining the object of her ambition. We understand that Mrs. Ayrton passed an extremely creditable examination and was highly complimented by the Faculty. The thesis which she presented before obtaining her degree was entitled "Researches into the size and development of the body among the Japanese."

We observe a remarkable falling off in the direct shipments of kerosene for China and Japan, during the month of January last. The *Alice Duck* cleared for Hiogo on the 9th January, with 100 bxs. soap, 100 kegs nails, 100 bbls. rosin, 100 cs. canned goods, 100 oars, 25 pkgs. blacking, 8 bales waste, 50 lbs. pitch, 30 do. pork, 22 pkgs. earthenware, 5 bales domestics, 37 pkgs. mfd. iron, and 47,000 cases of kerosene. One vessel left for China during the same period and, when the mail left, there were only two vessels ostensibly on the berth, one for Hongkong and one for this port. It is however worthy of remark that the clearances to Amoy for orders during January have been abnormally great. They are as follows:—

January 9th, <i>Coryphene</i> , ...	27,160 cases kerosene.
" 13th, <i>City of Liverpool</i> , ...	43,331 " "
" 13th, <i>Barbadian</i> , ...	26,000 " "
" 15th, <i>Troubridge</i> , ...	46,236 " "
1,008 lbs. tobacco and sundries.	
" 17th, <i>Hermann Lehmkuhl</i> , ...	45,500 " "
" 17th, <i>Kilkerran</i> , ...	44,600 " "
" 19th, <i>Mystery</i> , ...	13,781 " "
" 22nd, <i>J. G. Pendleton</i> , ...	30,500 " "
" 23rd, <i>Wealthy Pendleton</i> , ...	27,841 " "
" 30th, <i>Ella</i> , ...	32,910 " "
" 30th, <i>Andrea Wilhelmina</i> , ...	28,100 " "
and 113 cases of perfumery.	
Total...	365,959 cases "

EDWIN WHEELER, M.D.

#### PARIS LETTER.

JANUARY 17TH, 1880.

The distinctive characteristic of the political situation is the unanimous desire for action; the ministry, no matter how it may be composed, will not live the life of the rose if it does not grapple with the reforms now for nine years awaiting solution. No promise will be accepted; no expediency considered; the measure of a cabinet's fitness will be tested by its capacity for work. Good intentions are of no avail. Since the commencement of the century, the tendency of all monarchical legislation has been to cripple the republican idea; hence the determination of republicans to abolish barriers and favor their principles. The de Freycinet cabinet understands these necessities, and if its programme be executed, if ministers do not faint by the way, there is no reason why it ought not to enjoy length of

days. Hitherto, cabinets when not actually hostile to the existing constitution, indulged in hide-and-seek, or battledore and shuttle-cock with questions of vital importance to the Republic, and hence, why no further deception will be tolerated.

The opposition journals commence to perceive that no capital can be made out of the fact of M. Gambetta being re-elected by a smaller number—48 votes, President of the Chamber. There is neither a political nor moral clock in the matter; it merely expresses the opinion of several, that Gambetta would be better either as prime minister or an independent member; that his place is the tribune, not the presidential arm-chair. But the fate of the Republic, and he has himself avowed it frequently, is not bound up in the life of any individual. Democracy recognises no necessary men, no saviours of society. It is the nation rules and governs. France is rapidly curing herself of individualities. It is because he is influential, that the monarchists demand that Gambetta become minister, the quicker to be used up, and distort an election into a grave check. It is complimentary, but futile. Louis XIV. said, "I am the State;" but no republican is so idiotic as to exclaim, "I am France." The Republic was to expire with Thiers, Mac-Mahon, Dufaure, Decazes, and Waddington, and yet it smiles over all their tombs.

The new ministers have so far responded to public opinion, by superseding those unjust stewards up to the present maintained in the service of the Republic they detest, by the feebleness of preceding cabinets. In the provinces, elevated functionaries made it almost a duty to snub the constitution by abstaining from appearing at its official ceremonies, while attending meetings of a private nature, directly opposed to the government of the day. Generals received in plain clothes instead of in uniform, and judges smirked sarcasms from the Bench. This is now suddenly changed; the Republicans insist on guarding the constitution, and they would be niuncies to leave that duty in the hands of declared enemies.

The Bonapartists had a little field-day on the occasion of the annual mortuary mass for the repose of the soul of Napoleon III. The ceremony contradicts the assertions of the enemies of his ex-majesty, that he is past praying for. The attendance was limited to those imperialists too compromised to change; there were no new recruits, which fact Prince Napoleon—who is evidently becoming religious, would do well to note. The annoying practice was largely resorted to, of printing the names of persons as present, who were not, to place them in the awkward position of correcting the error. Paul de Cassagnac as usual was ovated, and was escorted by four hundred enthusiasts to his residence, a proof of the weakness of the Bonapartists, and of the strength of the Republic to tolerate the manifestation.

Rochefort continues to brighten up a little in his "Star" contribution to the *Rapport*. Occasionally he gives proof that the light of other days is not faded; but his articles have no more importance than a column in *Charivari*, so much has France changed. He has become reconciled to the Hugo party. He is longing to be able to enter France, not to become a deputy or an idol, or a spectre, but to settle a few duels, notably with Paul de Cassagnac, whose superior he is, either in cunning fence or pistols. Clemenceau, the terrible Radical can alone match Rochefort in these accomplishments. No man possesses a greater stock of *sang froid* than Doctor Clemenceau, the leader of the extreme *Gauche*, and now the proprietor of a journal, *La Justice*, which is more determined than Red, and cruelly logical for all republican ministers who have the will to do, but not the soul to dare.

The reception of M. Saine at the Academy, has proved a happy break in the monotony of snow and frost life, of coughs that stick to one like the shirt of Nessus; of the abnormal price of food and fuel, and of the efforts to relieve the great misery abroad. Naturally shy and retiring, these traits only bring out the celebrated critic more strongly to view. To escape being interviewed, he had at one time the intention to have tan and straw laid down in the street before his door, and give out he was down with gout, cholera, or diphtheria. Dumas père, in order to get rid of duns, circulated that he was in a dangerous fever, to which the creditors became accustomed, as they encountered the malady frequently on the stairs in the form of a scarlet lady or woman in white. Timothée Trim freed himself from a tailor, who vowed he would not leave till paid, by calmly proceeding to stop every nook and cranny in his room; pinning a notice on the door, that they voluntarily destroyed themselves and no one was to be accused of their deaths, then he lit a charcoal fire and next his pipe with the bill. He never saw the bolting tailor afterwards. M. Saine is 52 years of age, tall, grey-bearded, very little hair; he detests crowds and publicity, and has steadily refused to be photographed or drawn. As a materialist—he maintains that thought is only a secretion of the brain; he did not receive a "yes," from the lady he proposed for, till he promised to be married according to all the rights of the church, and he had to consent to his little daughter being baptised. His reception at the Academy—the official residence of the Republic of Letters, was as great an event as that of Dumas fils. Places were occupied hours in advance, but somehow room is found for every

ticket holder, the ladies were in force as well as the college professors: the Princess Gortschakoff, daughter of the chancellor was well ogled, and also the Princess Mathilde, the friend of all literary talent. Saine is one of the three or four Academicians who "draw;" he is a man of world-wide fame, and his works, on every subject, are better known in Russia, England and America, than in France. He is a plain, outspoken writer; subscribes to no school's rules, sees nothing very extraordinary in man, and regards talent or genius as the product of circumstances, like pine trees or Dutch cheese. He was at one time regarded as a veritable Anti-Christ, but is viewed as a converted sinner, since he has somewhat attacked the Revolution—the least successful of his works, for he forgets that great movement is not finished, but is actually pursuing its way at this very moment, after being interrupted by Napoleon I. Saine read this admirable address slowly; it was a little long and monotonous; it repays better to be read than listened to. Although he wears spectacles, he seemed to be uneasy under the batteries of opera glasses levelled at him: he speaks like an Englishman having a perfect knowledge of French, and it is one of his *dadas*, to express himself in that language whenever he can. The peg on which the ceremony hung was to eulogize the defunct and Mediocre Loménie J. B. Dumas the eminent chemist, gave the reply to Saine, in a sort of sermon; courteously castigated him for his criticism on Pope, and, as a scientist, cut him up for stating that man was only a superior kind of animal, who produced poetry and philosophy nearly about the same way as silk-worms do cocoons, and bees, hives.

Society is becoming active, and if the forecast of the weather would only indicate, "no more snow till December next," the capital would be gay indeed. Storms of snow came unexpectedly, and then showers of verglas or rime, so as to prevent all locomotion, save for wise people with felt stockings kept in advance in coat pockets, or cab-men capable of frosting their horses themselves in two minutes—the time necessary to print 100 visiting cards—an accomplishment not to be despised at the present juncture when the farriers are on strike. Mme. Grévy will give her first ball in about a week, and Mme. Adam, one of the leading republican ladies who keeps a *Salon*, gives her fancy ball, and curiosity is on tip-toe to know how ministers and leading politicians will be "disguised." There is no reason why, if the reactionists be virtuous, the republicans are not to have their cakes and ale. The first masked Opera ball revealed a character—a "coal man," a public functionary about as popular just now as Bazaine: he gave occasion for more sport than he anticipated, and was very witty till he became cross. Near the coal depots in and around the city, poor persons wait the exit of the carts to pick up any morsels that fall, and somehow they do, very plentifully—of course known to the drivers. Trade is a little brisker, only small dealers complain, but then much of their ill-luck is due to themselves, having no fixed prices, and fleeing when they can all round. Not many philanthropists incline to pay three francs for an article at a small house, where the same can be had for one franc at the monster houses. It's the struggle where the fittest survives.

As the best people in the world may inadvertently come to grief once in their life-time, visitors to Paris will be glad to hear, that if they get into trouble, and are invited by a Bobby to accompany him to the station house, the dispute will be heard out immediately, instead of being held over till morning, and the accused compelled to share a night's lodging on the cold ground, in company with the choicest specimens of the "dangerous classes."

The Prince de Wagram has an odd way of paying his debts: when his private secretary demanded a settlement of salary for work and labor during the 1877 elections, the Prince committed an assault and battery on his confidential serviteur, for which he was fined.

M. de Grandsegue is a passionate admirer of Donizetti's music, so when the *Favorite* was announced at the grand opera, he took a box in the third gallery. Judge of his feelings when he perceived the artistes had skipped an important scene in the first act; he at once protested, and the manager had to represent the opera in its integrity, to give the complainant the same box to witness it, plus 1,600 francs damages, to compensate his disappointment.

The young and handsome wife of a travelling druggist and the mother of three pretty children, has been sent to prison for 15 months; she committed adultery with her husband's brother, one of whom helped her to rob him in addition of his strong-box; this scoundrel has been sentenced to two years' imprisonment.

There is a story current of Dr. Clemenceau. This political notoriety gives gratuitous medical advice to his poor constituents, at his dispensary in this city; one appeared, whom he ordered to strip, to examine his lungs, and made out a prescription; another patient entered, who was ordered also to undress, while his predecessor was dressing; which lung? asked the Dr, placing his ear to the man's ribs. I'm not ill at all Monsieur; I only came to thank you for obtaining me the situation of letter-carrier."

A house porter is wanted, capable of giving the proprietor's son occasional lessons on the piano.

Some journals discuss the question: "Is the Empress of Russia

really ill—or is her absence from Russia politically compulsory?"

Since the new Minister of War has entered on duty, the Duc d'Aumale is simply styled "General d'Aumale."

"Is that your infant Mlle?" Non Monsieur, I am not married." "I thought it might have been, as so many young ladies have of late gone wrong."

Husband to wife, "I do not say you are the wickedest woman in the world, but the wickedest that ever I heard of."

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### GOVERNMENT NOTIFICATION.

##### NOTIFICATION NO. 6.

It is hereby notified that the Prefecture of Tokushima has been established, with jurisdiction over the whole Province of Awa.

SANJA SANETOMI,  
PRIME MINISTER.

2nd March, 1880.

#### COURT, POLITICAL AND OFFICIAL.

Mr. Ishi-i, Vice Assistant Police Inspector, has been promoted to be Assistant Police Inspector. He will have to superintend all details connected with the working of the police force.

His Excellency Okuma, the ex-Minister of Finance, will not visit the Osaka Exhibition as originally intended. He will go to Kiushiu in company with General Yamada, the former Minister of Public Works, in the early part of the present month.

The Governor of Tokio is about to summon the members of the local Assembly to another session.

Some of the local Governors have been ordered to remain in the capital.

Governor Matsuda, of Tokio *Fu*, proposes to entertain the Foreign Representatives and Consuls at the *Enryo-kan*, on the 8th instant. The palace has been lent for the occasion.

The new civil and criminal codes are it is said, to come into force during the current month.

Chief Secretary Yegi Takato, of the Japanese Legation at Washington, and Mr. Yegawa Kumpei, who has been appointed Consul for New York, will leave Japan by the *Belgic* on the 9th of March instant. His Excellency Yoshida, sails by the *City of Peking* at the end of the month. Messrs. Yegi, and Yegawa, had a farewell audience with His Majesty the Emperor on Wednesday, the 3rd instant.

The newly appointed Ministers attended at their respective Departments, yesterday, and the Prime Ministers and Privy Counsellors were present at a meeting of the Cabinet.

The Foreign Office is to be removed from Takarada-cho to the premises at Kasumiga-seki, formerly occupied by the Department. The vacant buildings will, it is reported, be used as a Bureau connected with the National Assembly.

It is currently reported that there will shortly be an increase in the salaries of the *Choku-nin* officers.

General Oyama, Minister of War, proceeded to the Police Bureau the day before yesterday, and handed over charge to Assistant Police Inspector Ishi-i.

Prince Nabeshima, who attended His Royal Highness the Duke of Genoa during his visit to Osaka and Kioto, returned to Tokio in the *Sumida Maru* on the 2nd instant.

Mr. Kitagaki, Governor of the prefecture of Kochi, has been appointed Acting Governor of the new prefecture of Tokushima, at the same time retaining his former post.

The members of the Local Governors' Assembly were entertained at the *Seiyokoku Hotel*, on Monday evening, by the former and new Ministers and Vice Ministers of the Home and Finance Departments. The local representatives were entertained by His Excellency Matsukata, the new Minister of the Interior, at his private residence, on the 5th instant.

His Excellency Shinagawa, Assistant Vice-Minister for the Interior, has been ordered to act as Superintendent of the Agricultural Bureau.

His Excellency Matsukata, Minister for the Interior, visited the Post Office on the 2nd instant. His Excellency Kawano, Minister for Education, proceeds to Atami on account of illness.

The local Governors and Secretaries who are now in Tokio, will shortly visit the Quarantine ground at Naga-ura, in the prefecture of Kanagawa.

The *Mainichi Shinbun* hears that His Imperial Highness Prince Arisugawa, has declined to accept the office of *Sa-daijin* lately offered to him.

Mr. Nakajima, a member of the Senate, has sent in his resignation.

The Chinese Minister will visit the Tokio Library, on the 15th instant, to worship the image of Confucius.

The 17th instant being the birth day of Her Majesty the Empress, the Princes of the Blood, the Prime Ministers and the Privy Counsellors, will visit the Imperial Palace to offer their congratulations.

The grounds for archery and equitation which have been established within the precincts of the Akasaka palace, will be opened on the 23rd instant.

Mr. Hayashi, Chief Secretary of Public Works, has been appointed Superintendent of the Secretaries' Office, and Mr. Ishi-i, Under Secretary of the same Department, Superintendent of the Telegraph Office.

Mr. Justice Kishira, who has been sojourning at Atami has now returned to Tokio.

#### NAVAL AND MILITARY.

The men of the second army reserve, residing in Tokio *Fu*, are to be called out for inspection on the 28th instant.

Sub-Lieutenant Uchiyama, who was imprisoned at Akasaka after the last Takebashi mutiny, went mad recently, and has been removed to another gaol where he is now kept under a strong guard.

The military inspection of the empire was completed at the end of last month, and the meeting of commanding officers will take place in a few days.

The Japanese man-of-war *Tsukuba Kan* will sail for America early next month.

Lieutenant-General Prince Higashi Fushimi, has been promoted to the rank of General. General Toriwo was relieved from his office as Commander of the Imperial Guard on the 1st instant, having been superseded by General H. L. H. Prince Higashi-Fushimi.

The Staff Office has despatched Lieutenant Kaitsu and two other officers, to survey the coasts of China.

The *Setsu Kan* has been selected as a training ship under the care of the Naval College, and is now undergoing repairs.

The Navy Department is reported to contemplate selling the *Taka-o Kan*.

There will be a special festival at the *Yasukuni-shinsha* (formerly known as the *Shokon-sha*) at Kudan, Tokio, during the current month, to commemorate the 13th anniversary of the death of those who fell in the wars of the Restoration.

#### INDUSTRIES, TRADE, AND FINANCE.

The Cotton and Sugar Exhibition at Osaka, has attracted a great many visitors. There are 12,062 specimens of cotton shown by 8,231 exhibitors, and about 3,000 different samples of sugar contributed by 930 persons. A statistical report has been prepared and distributed, shewing the quantities of cotton and sugar produced in various countries in Europe and America and also in Japan. The document states that in 1877, this empire grew 30,642,333 pounds of cotton and 25,933,409 pounds of sugar, while the quantity consumed during the same period was 65,826,107 pounds of cotton and 78,776,259 pounds of sugar. A large deficiency had therefore to be supplied by importation and the framers of the report giving the information, point out that it would be very advantageous to the country if all the demand for these necessary articles was locally furnished, thus materially reducing foreign importations and rendering the community more self-supporting.

The following is a return of exports and imports at all the open ports of Japan, for the six months ending the 31st December 1879:—

Imports .....	yen	18,256,582.84.
Exports .....	"	17,334,716.53.
Excess of imports over exports...	yen	921,866.31.
Duties on exports and imports, and miscellaneous revenue at Customs	yen	1,487,802.69.
Houses .....		
Export of bullion .....	"	5,135,264.26.
Import " " .....	"	1,711,625.52.
Excess of export.....	yen	3,423,639.44.

A native paper states that the number of ships owned by the Mitsui Bishi Company, is thirty-seven steamers and seven sailing vessels, and that various persons in the different provinces possess one hundred and thirty-one steamers, and one hundred and thirty-nine sailing vessels.

A correspondent in Fusan of the *Nichi Nichi Shimbun*, in a letter dated the 23rd of February, says:—"Trade in our port is very brisk, and the imports and exports are increasing rapidly. One of the steamers of the Mitsui Bishi Company runs regularly to Japan once a month, and there are always five or six Japanese sailing-vessels and fourteen or fifteen junks in harbour here. The cargo offering is so great, that some has always to be left behind when a vessel is leaving. The principal articles of export are, rice, bonas, hides, gold and silver, &c. The Koreans are much pleased at the way trade has developed, as they never expected it to be so prosperous. It is rumored that the Korean Government are about to despatch an embassy to Japan for the purpose of arranging a commercial tariff, and also that Russia and France contemplate concluding treaties of amity and commerce with Corea, the ambassadors of those nations travelling overland by permission of the Chinese Government. It is also said that demands will be made by Russia and France upon Corea for having fired upon ships sailing under the flags of those countries, but this, I think, is only idle talk, at any rate I know of no foundation for it.

"In the sea contiguous to Corea are large numbers of whales, but as the Koreans have no experience in whaling no attempts have been made to capture any. If the industry were once initiated, it would certainly prove very successful, and I understand some capitalists of Chisaki, in Yamaguchi ken, obtained permission from our Consul here to establish a whaling station. I am informed that they have employed two experienced whale fishers, who arrived here by the *Kompira Maru* on the 19th of January, and immediately set to work to put the station in working order. The vessel employed by the company as a whaler has already left Fusan; the capital invested in the venture is, I believe, some thirty thousand yen."

The number of visitors to the Osaka Exhibition during the week ending the 28th ultimo was 1,264, and the tickets sold were 466 season tickets and 789 ordinary tickets, realizing 15.78 yen.

#### MISCELLANEOUS.

His Royal Highness Prince Heinrich of Germany, is going to visit various celebrated places in the province of Banahui. The Hiogo Ken authorities have despatched a number of police sergeants and constables to escort him, so as to prevent the possibility of another disagreeable *contretemps*.

A fire took place at Yodo-cho, Nagasaki, at 3.30 a.m. on the 28th ultimo. Thirty houses were destroyed and several persons injured before the conflagration was extinguished.

The *Nichi Nichi Shimbun* contains the following, relative to a fire in the Otsu gaol:—"A telegram has been received at the Central Telegraph Department announcing that 'a fire took place at the prison yard at Otsu, in the prefecture of Shiga, shortly after 8 p.m. on the 28th ultimo, and destroyed six buildings. The fire was got under at half-past 10 p.m.'" A further message addressed to another office mentions that "on the occasion of the fire twenty-six prisoners effected their escape from the prison yard, and their whereabouts is not yet ascertained. It is not known whether the prisoners set the gaol on fire for the purpose of effecting their escape, or merely availed themselves of the opportunity offered." The correspondent of the *Nichi Nichi Shimbun* telegraphed to the office stating that "a fire occurred at the Otsu prison-yard, at 8 p.m., on the 27th ultimo, and destroyed six houses. All the prisoners escaped, but through the activity of the officers and assistants, they were re-captured with the exception of eight, for whom strict search is now being made."

According to the *Choya Shimbun* the volcanic indications at Amama-yama are daily becoming more threatening, and dense volumes of black smoke are continually ascending from the crater. The same paper notes that the inhabitants in the vicinity of the mountain are in great anxiety for fear of an active eruption taking place, and are removing from their homes.

The City of Peking brought from San Francisco a horse, as

a present from General Grant to General Kuroda, Chief of the Colonization Department.

The number of vessels which arrived in Yokohama during the past month was,—78 Japanese and 23 foreign. The clearances were 71 Japanese and 21 foreign vessels.

H. R. H. Prince Heinrich of Germany, will pay a visit to the Exhibition in Kioto, about the middle of this month.

A new telegraph line, connecting Chibamachi and Sakura in the province of Shimosa, having now been completed, will be opened for business in a few days.

A telegram announces that a fire broke out in the prison in Fukuoka, at 7 p.m. on the 2nd instant, and destroyed some fourteen houses before it was extinguished at about 12 o'clock. It is not known whether or not the fire was the work of an incendiary. A report from Okuyama says that the prisoners there took advantage of the stormy weather on the night of the 23rd ultimo, and broke out of the prison. About twenty effected their escape, and are now being searched for vigorously. Six prisoners escaped from the prison at Hiogo, on the 28th ultimo, and one of them has been recaptured.

There has been another fall of earth, &c., in the Osaka-yama tunnel on the Kioto-Otsu line. About sixteen fathoms of the tunnel have given way, and in consequence it is expected the work will not be completed before next May, instead of April as previously thought.

The *Mainichi Shimbun* says that the value of the money of different denominations, coined at the San Francisco Mint during the past year, amounted to \$28,065,750.

The passengers who travelled by the steamers running between Yokohama and Yokosuka during the past month, numbered 13,592 persons.

#### A LETTER ADDRESSED BY THE KIYOSONDOSHU OF JAPAN TO THE PUBLIC OF EUROPE AND AMERICA WHICH HAVE AT PRESENT TREATIES WITH JAPAN.

We, the members of the Kiyosondoshu, moved by the spirit of public opinion in Japan, with the object of recovering her legitimate right, submit to the impartial judgment of the European and America people the following letter:—

The reason why we, with one accord, send this letter is that there are circumstances which compel us to bring forth the subject of treaty revision between our country and other powers. But before we enter into this important subject, we will explain briefly the political condition of our people when those treaties were made. The people of our country—now amounting to over 30,000,000 and having a history of nearly 3,000 years—were accustomed to be governed by free and liberal institutions and inclined to be a commercial nation, but at the time when those treaties were concluded, we were subjected to the feudal system which existed generally in Asiatic countries. Thus the liberty of our people was some-

what restrained by this government and their policy was to make us a peaceful nation. The principal course which they resorted to, was to abolish the construction of large ships so that the people might be prevented from holding foreign intercourse. Although this may have been the cause of our enjoying peace for 300 years, yet it subsequently became a fetter and impediment to the progress of our people. We were left in entire ignorance of the state of foreign countries. Even the statesmen of that time had very little experience of the affairs of foreign nations and very seldom came into contact with the people of other countries.

It may easily be seen that we were under a very disadvantageous position as regards foreign intercourse. Thus the statesmen themselves did not quite understand the nature of the international intercourse between European and American nations, and we, the People of Japan, were utterly unaware of what was going on in the Central Government as well as abroad. The position of the Japanese people was like that of a helpless child without mother or father, who was compelled to make a contract with some experienced people. While the treaties were thus signed and ratified by the Shogun, or Tycoon as he was called by Europeans, there came, in 1868, the restoration of the Japanese Emperor to his original power and legitimate throne and the overthrow of the Shogun's power. Since this great event, many reforms have been carried out with the object of giving the Japanese people the political liberty which they did not possess under the Shogun's government. Thus we have now the means of understanding what is going on in our government. But looking back at the conduct of the last government, and seeing the nature of the treaties signed by them, we are utterly astonished. As we said before, we were kept in ignorance of the affairs of the Central Government, and consequently we did not know what sort of a treaty existed between Japanese and Europeans. Although we felt vaguely that the foreign intercourse between Japanese and foreigners was not founded on a perfectly equitable footing, yet we did not imagine that there was such an injustice as we now find in certain clauses of those treaties.

Speaking of an international treaty from a general point of view, we maintain it to be a contract between nations. If so, when an inexperienced infant suffers a loss from the contract which he made with an experienced man, it is void according to the law of nearly all civilized nations. Therefore we think that no one, whether an individual or a nation, ought to be bound by a treaty which was made through the want of knowledge and experience. In fact our position was like that of the infant above mentioned, and therefore we think we ought not to be subjected to a treaty made by inexperienced statesmen with foreigners, even when there are no injurious clauses such as those of the treaties in question. As these treaties contain clauses which produce serious injuries to the Japanese people, we cannot submit to it, especially, as the term of revision is already passed. Although we are dissatisfied with the treaties, yet we do not write this letter in order to bring charges against the statesmen of the Shogun's government and foreign diplomats. The only thing which we complain of is, that the treaties themselves are founded on unjust principles. And the feeling of injury and dissatisfaction is not confined to the small circle of this Society, but extends throughout the whole nation. Therefore we speak as a nation on this subject, and ask for the speedy revision of these unsatisfactory treaties. Under these circumstances, it may easily be seen what sort of feeling we have, with regard to the international intercourse between Japanese and foreign nations.

As 1873 was the expiration of the term of the present treaties, we understand that our government proposed to some foreign governments to revise these treaties. We, however, have not yet heard any result from it. We believe that the treaties may be very shortly revised; yet impressed by the serious disadvantages of the subjects of the tariff and extra-territorial jurisdiction, we cannot wait any longer without speaking about this necessity, and rest with implicit reliance upon the government authorities. At present, the public opinion of our country speaks with one voice, and asks why our government is prevented from revising them, and why the treaty powers do not make a new treaty on the principles of mutual justice and equality. Every Japanese with a grain of patriotism deeply regrets this delay and urges the revision. The popular feeling on this subject compels us, the members of the Kiyoosondobu, to speak of the subjects in question.

As we have said, the present treaties produce serious injuries to Japan in the matter of the tariff and jurisdiction.

It is not necessary to mention that we, the Japanese people, pay direct taxes, as well as indirect ones, just as people do in other countries; but before we opened the intercourse with foreigners, the expenditure of our government was comparatively moderate, and consequently we were not heavily taxed. But since the last twenty years, many reforms have been carried out for internal improvement, and some public works, such as railways, lighthouses, &c., of which the foreigners too in Japan enjoy the advantages. Thus the expenditure is increased tenfold compared with that of the government of 20 years

ago. The effect of this increasing burden might have been mitigated, if the regulation of the tariff had been within the power of our government.

According to the present treaty, we are deprived of the legitimate right of an independent nation to make such changes in the tariff as the exigency of the country may require, that is to say, no rate of tariff can be altered without the consent of the foreign diplomatic agents, and besides, this tariff regulation cannot be revised or changed independently of the main treaty, as it is appended to the latter and to be considered as forming a part of the same. Thus the most heavy duties are borne by the producers of Japanese articles, and unduly small amounts are imposed on foreign articles.

Besides these inconveniences, there are many foreign products introduced into our country without any duty whatever. Some kinds of clothes, &c., were first introduced only for the private use of foreigners without any duty, but now they are being used by the Japanese people, and have become articles of commerce: still they are imported without any duty just as when they were used only by the foreign residents in Japan. Under these circumstances the income raised by the import-tariff is not above one-thirtieth part of the whole revenue and the balance is contributed by the Japanese people.

This produces serious injury and discouragement to the productive power of the country, and makes the future state of the internal resources almost hopeless. Therefore, we sincerely hope that the time has now come, when the power of regulating the tariff should be restored, and that our government should be able to impose all duties in due proportion, thus avoiding the evils which exist at present, importing more foreign products and at the same time exporting home articles as much as possible. And we shall be able to take away unfairly heavy taxes upon our products so as to increase the productive power of the country.

We repeat, we hope that the revision of the treaties shall be carried out also regarding the subject of legal jurisdiction. It is admitted by all civilized nations that every independent nation has a right to have the jurisdiction over all those, who enter within their territory, both in civil and criminal matters. This is the legitimate right which every independent nation ought to have according to the principles of international law.

But a European or an American coming to our country is not subject to the laws of Japan, under the clause of extra-territorial jurisdiction. This is what seriously affects our nationality as it shows the want of respect due to an independent nation. Therefore this extra-territoriality which is against the principle of equality should be taken away in revising the existing treaties. We freely express our opinion on the subject of the tariff and extra-territorial jurisdiction in accordance with the public opinion of our nation, and we claim the control of them to be the legitimate right of an independent nation. Although the feeling of the public is equally strong on these two subjects, yet we call the attention of the European and American people more earnestly to the question of tariff than the other, simply because the former has a more direct effect on the material progress of the Japanese nation. If this claim, which we consider just and right, is not admitted by European and American authorities, we fear that the people of Japan may possibly be obliged to resort to a course, which will seriously affect the mutual intercourse and commercial relation between Japan and foreign countries.

Therefore we hope that the treaty made in 1858 will be thoroughly altered, the tariff regulations separated from the main treaty, and a new treaty established between the Japanese nation and foreign powers on the footing of perfect equality and the principle of justice and equity. Such is the principal object of writing this letter.

But it may be said by some foreigners that if we have full power over the tariff, heavy duties may be arbitrarily imposed upon European and American articles by the Japanese government so as to exclude foreign imports from Japan. We may, however, guarantee that such a course of imposing a tariff will never be tolerated in this country, and their prudence in introducing the western civilization and the respect which they pay to foreign guests to this country should be quite sufficient evidence against such an allegation. We think, it is quite clear that our government under such circumstances will be able to put a fair and reasonable rate of duty on all products, both Japanese and foreign. We might enumerate all the works which our government has been able to do, since the restoration of the Emperor to his original power, as the proof of their sincerity in the advancement of commercial interests, and also of the friendly sentiment toward foreign people. Even within this year, the feeling of hospitality has been shown by the inhabitants of Tokio to the distinguished visitors from England, America, Germany and Italy.

Thus, we appeal to the public opinion of Europe and America by describing the circumstances under which these treaties were made, the injury arising thence to the Japanese people, and their public sentiments against them. We sincerely believe

\* Great Britain, Yedo Treaty, XX Art.; France, Yedo Treaty, IX Art.; United States, Yedo Treaty, XI Art.

that the foreign public will sympathise with what we said, and seeing the injustice and disadvantage embodied in the existing treaty, will support us in hastening the revision which is now pending.

We think it possible that the European and American public may hitherto have been misinformed in respect to some affairs by foreign residents in Japan, who have some prejudices against Japanese habits and customs. If what we so earnestly desire, should be prevented or hindered by the prejudices conveyed by them, we may reasonably conclude that the enlightened public opinion abroad is the same as that which is entertained by a small circle of foreign residents in Japan. If so, we must deeply regret it, and the civilized Europeans and Americans will lose our confidence and the reputation which they have, in promoting the welfare as well as the honour of their countries.

Looking at this subject from the general point of view, no one can object to an independent nation insisting on the right of governing every one within its own territory, and regulating its tariff at will. But we make a concession in not claiming these two rights at once; we only claim at present the right over the tariff, as it is indispensable to promote the material progress of our country. Under this pressing necessity, if the revision of the treaty is not carried out this time, we doubt whether the friendly intercourse between foreigners and Japanese may be continued for a much longer time, because every Japanese subject throughout the whole nation looks upon the treaties with the sentiment of dissatisfaction. We maintain that we ought not to be bound by a treaty, whose term of contract has already expired seven years ago, and whose nature is against the principles of justice and equality.

If the public opinion of Europe and America does not help us in hastening the revision of the treaty, and if it fails on this occasion, we fear that the discussion between Japan and foreign powers about this question may become serious and injurious to the interests of all the nations concerned. We are determined to do everything we can, for the interest of our country even to the extreme. But if this should become so serious, we should not only deeply regret it for the interests of our own country, but also for those of foreigners. Therefore we trust the public of Europe and America will help us in carrying out the pending revision by their unanimous avowal of friendly sentiment to the Japanese nation and by their love of justice and equity.

The members of this Society consist of the liberal minded people having friendly feeling toward the foreigners, many of whom are those who have spent some years either in Europe or in America. The efforts of this Society have been to introduce many European and American institutions into Japan, and to cultivate a friendly feeling amongst the Japanese people in general towards the foreigners. We believe that the Japanese people in these respects are not narrow minded, and they are willing to adopt many things advantageous to them. Therefore, we think that it will not be long before Japanese and foreigners in Japan will be brought into a much closer and more friendly contact with each other. While the public sentiment towards the western civilization is thus advanced, if European and American governments refuse us the only legitimate claim which we make, those parties in Japan who incline to be conservative and are opposed to us in their principles, will be justified in saying that those foreigners whose civilization we are adopting, are promoting their own interests alone, and disregarding the injuries which they inflict on the Japanese nation, and acting against the principles of international law. Therefore they may say that we ought not to continue the friendly relations with Europeans and Americans. We should deeply regret it, if the circumstances were to give the conservative parties such a strong ground for maintaining their principle. The consequence will be that all the public opinion in Japan may be led into the same way, and the people in general may begin to take a prejudiced view of the foreigners and their civilization. Our future hope to bring foreign people into a closer contact with the Japanese will vanish into air. This will produce serious results in the relation between Japan and foreign nations. Indeed, we know not how serious this will be for the interests of our country as well as those of the foreigners. Therefore we, the members of the Kiyosondohu, consider the present as a critical moment and look upon this as the most important question affecting the very nationality of the Japanese Empire, and such is the reason why we address this letter to the European and American public.

#### ARRIVAL OF THE ENGLISH MAIL.

London, 2nd February.—A memorial has been forwarded to Lord Beaconsfield, asking for an inquiry respecting the execution at Kabul of persons not implicated in the massacre at the Residency. *The Times* publishes a telegram from India stating that the report that the Viceroy is desirous of resigning is untrue.

St. Petersburg, 2nd February.—A conflict between the Police and Nihilists took place here to-day. Several arrests were made. A revolutionary proclamation has been

issued by the Russian students in which they declare that they will continue the struggle to the death against the Russian Government.

New York, 2nd February.—The New York press condemn generally the policy of Mr. Paruell.

St. Petersburg, 2nd February.—The Russian press deprecate the occupation of Herat by Persia under the auspices of England.

London, 3rd February.—Experiments have proved that it was double loading which caused the bursting of the *Thunderer's* gun.

Obituary.—Colonel Munro, 93rd Highlanders,

Washington, 3rd February.—A special sitting of the House of Representatives has been called to hear Mr. Parnell make a speech on the Irish land question.

Calcutta, 21st January.—All is quiet in the Khyber, and on the Mohmund border there have been occasional meetings of the border tribes, but the frontier is generally tranquil. Active intrigues continue around Ghuzni in the Logar Valley, where excitement and disorder still prevail. Among the tribes generally in that direction the feeling is said to be one of suspense and anxiety. The Shinwaris still hold aloof from the solicitations of the *moolahs*, and a gathering in Lughman has been dissolved by the Governor, who is supported by our Jellalabad troops. The sons of the Mustaufi have come in to Cabul, and have visited General Roberts. General Gough's brigade is getting comfortably housed in the Bala Hissar. The defences on the hill above are being rapidly strengthened. An excellent bridge has been thrown across the Cabul river by the 23rd Pioneers, on the direct road from Sherpur to Sial Sang. The construction of roads in different directions is progressing satisfactorily. The convoy of ammunition and warm clothing reached General Roberts on the 18th.

Calcutta, 26th January.—A small party escorting coolies from Zamba to Samaguting were attacked by the Nagas near Depajani. One sepoy of the 44th and one policeman were severely wounded. The Nagas rushed to get their arms and ammunition, but one man of the 42nd and two men of the Frontier Police placed the wounded men under a tree, and used their rifles with such effect, that the Nagas were kept off until the arrival of reinforcements from Zamba, where the firing was heard. Their names have been sent up to General Nation for favourable notice.

Calcutta, 27th January.—From Cabul; further reports of the gathering at Ghuzni reach Cabul of disbanded soldiery to the number of 500 who are said to have joined it from Logar. All quiet in the Khyber. Mulla Khalil is reported to have gone to Bajour. Rumours of disturbances among the tribes near Kelati Gilzai state that they are contemplating an attack on it.

Bombay, 28th January.—Men have been telegraphed for to take charge of the stores of Kandahar that cannot be carried forward. It is believed here that General Stewart takes the Bengal troops to Ghuzni, General Phayre marching with the Bombay troops to Herat.

Calcutta, 28th January.—Cabul 27th.—General Roberts visited the Latibund on the 26th. Orders have been issued for every post to be provisioned for a month and to have always three weeks' supplies in hand. Wheeled Artillery can now go to Jugdulluck. The road will soon be made practicable throughout to Cabul. The Sappers are improving a bad bit between Seti Baba and Latibund, supplies being brought in sufficient to meet any demands. No change in position during the last few days either at Ghuzni or other places.

Allahabad, 28th January.—Mahomed Jan is said to have issued a general order to the tribes saying that February the 24th is the day fixed to renew an attack upon the British. Seditious placards have been posted on the city walls. Several sepoys of the Ardal regiment have been seen in Kabul. Gholam Hyder, the Governor of Turkistan, has sent six horses as a present to Mahomed Jan, Mir Butcha and Surwan Khan, thus showing his sympathy with their movements. Mahomed Jan was last reported to be making for Bamian, probably expecting to meet there reinforcements from Turkistan. Armed men are gathering at Kalangar in Logar. We are making a small-arm magazine in the Bala Hissar. All the officers absent from the Cabul division, on recruiting or remount duty, have been ordered to rejoin by the 15th March. This looks like renewed military activity in Spring.

Bombay, 29th January.—The Bombay papers announce by authority that Sir Frederick Haines will assume the command of the troops in Afghanistan shortly. It is understood that a regiment of Madras Cavalry comes to Bombay to take the place of those sent to the front. Sir R. Temple and Sir R. Sandeman leave this evening. Additional to troops already wired: 2-11, 2-15, 1st Sind Horse, regiment of cavalry to be named hereafter. The 3rd Native Infantry, 23rd, and 24th, have been detailed from Reserve division for service. Bombay troops on service are held in readiness; two batteries horse, two field artillery one mountain train battery, four regiments British Infantry, six Native Cavalry, thirteen Native Infantry.

At the preliminary meeting last night for Irish Distress, it was decided that subscriptions be received and expended without reference to politics or creed. There was a lively discussion. It is understood that Sir R. Temple, who presides at the public meeting this afternoon, wishes the funds to be sent to the Duchess of Marlborough, not to the Lord Mayor.

From Silchar information has been received that on the night of the 27th, a raid was made on Caladhun tea garden, by the Nagas or Kubis. The buildings were all burnt. The manager, Mr. P. Blyth, was killed. The district superintendent of the police has proceeded to the place with a party of thirty police. With reference to the raid on the Baladhun tea garden reported to-day, there is nearly a full regiment in Cachar and a detachment will be sent out at once to support the police in the direction of the raiders.

Calcutta, 29th January.—From Silchar, it is stated that the District Superintendent of Police has found two more bodies of coolies at Baladhun and one is wounded. No further details are known. The Deputy Commissioner of Cachar will reach Baladhun on the 30th. He has arranged with the military for outposts at the gardens west of Baladhun, and considers that additional troops are not necessary. The military and police under Mr. Savi are moving towards our frontier from Naga hills. The Political Agent is requested to expedite matters.

Calcutta, 30th January.—Last reports from Silchar state the raiders in Baladhun were Nagas, but it is doubtful what Nagas. Nine coolies were killed besides the manager. All the house was destroyed. Mr. Savi, with 120 men of 34th and Cachar police, left Kohima, on the 24th, and should reach Asaloo on 31st; and if the raiders are Nagas, should take them in rear. Mr. Savi's party and a party under Lieut. Macgregor, which has gone to Raplongmai and Kuteha Naga country, should make the retreat of the raiders difficult. Sir Stewart Bayley will reach Cachar on the 2nd February.

As a proof of our clemency Doctor Owen is now treating in a charitable dispensary that has been established at Cabul, the Afghans and the men wounded in action against us. Messages were sent round the villages of the district to the effect that wounded men will be attended if brought in and will not be molested in any way. The city people are greatly pleased at this generous treatment accorded to the late insurgents, and the dispensary is largely resorted to by all classes of men and women. The average daily number of cases is 200.

#### ARRIVAL OF THE AMERICAN MAIL.

London, February 1st.—The week's political interest is divided between the Liverpool election and the opening of Parliament. Every preparation is being made to enhance the interest and add to the splendor of next Thursday's ceremonies. The Queen's appearance is due to Lord Beaconsfield's personal entreaties, and is intended to emphasize her known approval of the ministerial foreign policy. The Lord Chamberlain is overwhelmed with applications for places in the House of Lords. Besides the Queen, the Prince and Princess of Wales, Prince Leopold, the Duke and Duchess of Connaught, the Princess Beatrice, and perhaps the Duke and Duchess of Edinburgh, now in Paris, will be present at the ceremonies. The Queen proceeds in state from Buckingham Palace to Parliament House, but drives there direct by the park route, having refused to pass through the streets, remembering her last unfriendly reception. She remains in London one night, and returns to Osborne on Friday.

The Queen's speech is expected to recommend several

important measures, Lord Beaconsfield desiring to persuade the country he is sincerely desirous to make the session fruitful. The proposal to abolish primogeniture and to facilitate the sale of lands, with a bill to permit life tenants to dispose of their interests, will undoubtedly be brought forward, relying on the Peers to eject the bills. Relief measures are to be promised to Ireland. The criminal code will receive a prominent place in the ministerial programme. An announcement is expected that British forces will retire from Afghanistan after crushing the military resistance and recognizing some native ruler, but retaining a sufficient frontier. Sundry measures dealing with English local government are expected, including country boards, valuation of the metropolitan water supply, and perhaps a redistribution of vacant seats in the House of Commons. The Irish members threaten obstruction from the start, proclaiming their intention to oppose the address in reply to the Queen's speech. The Ministers hope to counteract this by sympathetic declarations regarding the Irish distress, accompanied by promises of substantial relief. The liberal leaders intimate that the Government must henceforth fight obstruction without liberal help.

Although Lord Beaconsfield is ill with gout, he attended the Cabinet council to-day. Lord Salisbury was absent. He is suffering from bronchitis, and is unable to leave Hatfield.

The Liverpool election is appointed for next Friday, the Tories having hastened the day from alarm at the improving chances of the Liberals since Lord Ramsay secured the Irish vote. Few Liberals believe it possible to overcome the Tory majority. Many persons object to Lord Ramsay's compromise with the Home Rulers. Lady Ramsay, who is young and pretty, is energetically canvassing for her husband. The Earl of Derby having authorized the statement that he hopes for Ramsay's success, is bitterly attacked by the Tory organs.

The Liberals expect to win the seat at Southwark, which has been rendered vacant by Mr. Locker's death.

The land question—Irish and English—is daily increasing in importance. It is understood that Mr. Bright's colleagues accept, substantially, his scheme to aid tenants in purchasing farms by treasury loans. The question is discussed in speeches, pamphlets, journals and books, including a varied treatise by Arthur Arnold, in "A Free Land Appeal."

A fresh quarrel has broken out between M. Gambetta and M. Jules Simon. There will probably be a coalition in the French Senate between lukewarm Republicans and reactionary members. President Grévy and M. Gambetta remain friends.

Minister Lowell is expected in a fortnight. He will present his letters and have an audience with the Queen at Osborne. He will then return to Madrid and fetch his wife, whose health, after eight months' severe illness, is daily mending. As she will probably be unable to bear the London climate, Mr. Lowell intends to find a suitable seaside place for her, perhaps the Isle of Wight, while he temporarily takes a house in London himself. Society is preparing to give Mr. Lowell a brilliant welcome. A letter to-day from an important country house says: "Much eagerness is expressed to know both Lowell and his works." Tom Hughes is giving readings to guests from Lowell's poems. His diplomatic colleagues will send congratulations. The German Ambassador declares he is most desirous to give Mr. Lowell a friendly reception, thereby carrying out the Emperor's and Prince Bismarck's well-known wish to cultivate good relations with America. The McMillans announce a new edition of Lowell's poems, in three volumes, with the author's approval and editorship.

Attacks continue in the Press on the Postal Telegraph management. Numerous letters are published daily. Mr. Preece's—the Postal electrician—attempted defence is pronounced unsatisfactory, and a Parliamentary inquiry is urged.

The Duchess of Edinburgh, although several days in Paris, omitted to call on Madame Grévy. This the French consider a mark of discourtesy, and intended to discredit the Republic socially. The Duchess excuses herself on the ground of her mother's illness, but she appears in rank Bonapartist houses.

The Queen's request that Sir Evelyn Wood should ac-

company the ex-Empress Eugénie to Zululand is similarly interpreted in France.

Two fresh volumes of a series of conversations contain damaging disclosures regarding the late Emperor. General Changarnier bluntly accuses him of cowardice. He says he found him hiding at Strasburg in abject terror under a carriage. At Boulogne he landed while drunk, and was never under fire at Magenta or Solferino. Extraordinary accounts are given from other authorities of the corruption of his upholders, and they confirm the worst previous accusations.

In commenting upon the unsatisfactory relations still existing between Russia and Germany, the *Cologne Gazette*, contending that the Austro-German alliance was not prompted by hostile or aggressive designs against Russia, says that if this latter Power will only honestly respect the Berlin Treaty, there need be no further complication arising out of the Eastern question in the future. "But," continues the writer, "we (in Germany) are in a state of uncertainty as to the course Russian policy may pursue. In many circles, particularly those connected with the army, hatred of the Germans continues, as proved by the event which recently occurred at Kalisch. We do not desire to attach any exaggerated importance to this, but it is not without significance as the sign of sentiments prevailing in the Russian army. Since the Moscow attempt and the return of the Czar to St. Petersburg great confusion has been manifest in the highest regions of the capital, and it is not yet known what directions Russian policy may take as regards home and foreign affairs." In Russia there exists neither national representation nor an influential press. It was, therefore, with great interest that the appointments to the highest offices in the State were watched, as, from the nature of these, it was believed that a conclusion might be drawn in reference to the sentiments prevailing at Court. A good impression was created in Germany by the nomination to the Presidency of the Ministerial Committee of M. Walujeff, who, at any rate, does not belong to the Pan Slavists, and who, since 1861, as Minister of the Interior, has been largely engaged in the reforms that have been effected. M. Walujeff is also known to consider it desirable that the home and foreign policy should be both under the united direction of the Premier Minister. Meanwhile, other appointments have followed, among which, more especially noticeable, is that of Prince Lieven, and these do not afford the same guaranty for a peaceful and amicable policy on the part of Russia. Prince Lieven is a typical Russian, born and brought up in Moscow, and his elevation to the post of successor to M. Walujeff appears highly characteristic of the want of system prevailing in the Government circles of St. Petersburg. Prince Lieven is ambitious, and is not a man to play a political rôle in the narrower sphere of the word. He will, as soon as the thing is possible, make the attempt to play the part of a party leader, and if he is left free to act as he pleases, will endeavor to advance the objects of the National and Slav Parties.

The *Pull Mall Gazette* has a strong article, entitled "English Parties and Irish Revolution," in which it is said that the country has the right to demand, on the meeting of Parliament, that all political parties represented in the House of Commons shall be forced to declare, through their leaders, their relation to Mr. Parnell and his agitation. "It cannot be questioned," the *Gazette* goes on to say, "that the movement led by Mr. Parnell has now assumed proportions of public danger. His enterprise is daily growing more dangerous. It is accompanied by systematic resistance to law, and is carried by appeals to a foreign country thought by him to be hostile to the British Empire, and the object for which is nothing less than a revolutionary transformation of society by the destruction of the accepted forms on which society is based."

The Lord Mayor of Dublin writes to the effect that the English people fail to realize the gravity of the Irish crisis, and that except prompt assistance be forthcoming, tens of thousands of Irish people must surely die of starvation. He complains that England has contributed less to the Mansion House fund than Melbourne. There is, in fact, general complaint respecting the paucity of English subscriptions. It is believed that this is occasioned by serious disturbances that have occurred in Ireland, and the agitation set on foot by Parnell. Lord Godolphin, in Osborne, reports that the distress is vastly underrated. It is un-

fortunate that quarrels have arisen in the management of the different Irish relief funds, and it is hoped that the Government will devise some method of concentrating the various charities under one general head. The Baroness Burdett Courts has sent £5,000 to Ireland by the hands of a special agent, to insure the proper distribution of her munificent contribution.

Paris, February 2nd.—Of the estimates for the expenditure of the French Government for 1881, the War Department absorbs 574,000,000 francs, being an increase of 6,500,000 francs, and the Navy Department 168,000,000 francs, an increase of 4,500,000 francs.

The Senate adopted all the clauses of the educational bill. *Le Globe* announces as positive the establishment of diplomatic relations between France and Mexico.

Rome, February 2nd.—The *Diritto* published a Ministerial communication, denying certain statements contained in Vienna dispatches. The document says it is untrue that the representative of a power friendly to Austria has made a communication to the Cabinet of Rome in regard to pretended hostilities of Italy toward Austria: that it is untrue that the Cabinet of Rome has alleged as an extenuating circumstance that in the public opinion of Italy there existed an anti-Austrian current; untrue that the consequence of a possible war against Austria have ever been laid before the eyes of the Italian Government; and untrue that in the Oriental question Italy has acted as "my other self" of Russia.

Rome, February 2nd.—A decree has been promulgated, fixing the date of the opening of the new session of Parliament on the 17th inst.

Berlin, February 2nd.—The *North German Gazette* asserts that Prince Frederick William has gone to Pegil, simply to visit his wife, and that all conjectures to the contrary are erroneous.

London, February 2nd.—A Berlin correspondent reports: Rumors are afloat of impending changes in the Prussian Ministry. The Minister of Finance has been defeated on one of the proposed new tax bills, and the Minister of worship is said to have taken too many measures on his own responsibility, without consulting his colleagues. Such divisions seem to herald the approach of a ministerial crisis, but there is reason to hope an understanding may be reached.

Madrid, February 2nd.—The Ministry has decided to examine into the scheme for placing bonds on European markets, by aid of certain French societies, on account of the Cuban deficit.

New York, February 2nd.—The *Herald's* Dublin dispatch says: Mr. Parnell's unwarranted attacks upon the Mansion House Committee for the relief of the distress, as telegraphed, are regarded as utterly inexplicable. They cause great consternation among Parnell's own friends. It is believed that the excitement connected with his American tour has proved too great a mental strain for him, and he is becoming insane. The Mansion House Committee is entirely non-political in its character. Each of its 300 local committees consist of Protestant and Catholic clergy, the most respectable inhabitants of the neighborhood, and in many cases some of Mr. Parnell's personal friends are connected with them.

London, February 2nd.—Davitt, Killen, Daly and Brennan have been served with the customary four days' notice to come in and plead to indictments found against them.

London, February 2nd.—Prince Lobanoff, the new Ambassador has arrived.

St. Petersburg, February 2nd.—A letter to the *Golos* from Susdal, in the Province of Vladimir, reports that an Archbishop and two Bishops of the faith, or old believers, are confined in the fortress there on account of their creed. The Archbishop has been there twenty-six years, and the Bishops twenty-two and seventeen years respectively. The *Golos*, in a leader on the subject, supposes they had been forgotten by the authorities.

St. Petersburg, February 2nd.—Although the police seized many copies of the *Will of the People*, in the house where Deutsche shot himself, the same issue of the paper had already been circulated in St. Petersburg. It contains the programme of the Executive committee, stating the only way to gain the reforms they seek is to overthrow the Government by forcible revolution or conspiracy. The Socialists would then transfer the Government to an assemblage

elected by the Russians, irrespective of class. This is the general policy of the Socialists, by which they cast their lot with all oppressed Russians. But when the Assembly is elected Socialists will recommence a programme in favor of permanent popular representation, with full power over all general state questions; a wide liberty of local self-government; independence of the rural community; the principle that land is the property of the people; the transfer of works and factories to workingmen; complete liberty of speech, conscience, the Press, public meetings and associations and electoral agitation, and the replacement of the standing army by a territorial army.

St. Petersburg, February 2nd.—The Minister of the Interior has deprived the *Colos* of the right of inserting advertisements during the present month, for publishing an article suggesting that three Bishops, incarcerated at Susdal, had been forgotten by the Government.

St. Petersburg, February 2nd. The Minister of Finance favors the redemption of a portion of the paper currency, the issue of which has become enormous.

St. Petersburg, February 2nd.—A well-informed Teflis correspondent says it is proposed to appoint General Skobloff Commander-in-Chief of the Tekke expedition.

St. Petersburg, February 2nd.—Several new measures will be announced on the twenty-fifth anniversary of the Czar's accession to the throne. Among these, proposals placing Jews upon the same footing as other Russians, and extending to Poland all the regulations existing in the rest of Russia, have been settled in principle.

London, February 2nd.—A correspondent of the *Times* at Candahar, after mentioning the disastrous results of the strife between the Ghilzas and Hazaras without the British lines, adds that similar tales of internecine war come from the direction of Farah.

An expedition sent by Ayoub Khan to Farah has been defeated by Ibrahim Khan of Chaknasar, who is putting the country under contribution. Ayoub Khan is reported to have sent two regiments, six guns and two hundred horse against Ibrahim Khan. Other accounts, however, say these troops of Ayoub Khan refused to march.

Cabul, February 2nd.—The prophecies of impending defeat and disaster published in some English newspapers have been read here with astonishment. The dates of the writers are as inaccurate as their deductions are gloomy. Mahomed Jan was not a soldier of great repute in the wars of Turkistan. Until lately he was an unknown subordinate officer of artillery. General Charles Gough never was in danger during his march to the relief of Cabul. General Roberts was right when he reckoned on his ability to bring up the reinforcements. He never had to fight his way around the city to Shipur. He had in December enough firewood for four months and forage for fifty-four days. The idea of a forced retreat upon Jellalabad never suggested itself here.

Paris, February 2nd.—In the Chamber of Deputies, to-day, Gambetta, after reading a letter addressed to Paul De Cassagnac, announcing the death of his father, expressed, in the name of the Chamber, and regardless of party feeling, regret at the death of such a distinguished man.

Debate on the customs tariff was resumed. The report of the Commerce said the protective system had produced good results in the country. The Committee was willing to agree to a system of commercial treaties. It had discarded prohibitive duties and abolished export dues. The report concluded by saying: "Our national industry is far from flourishing. We have been for some time outstripped by foreign competition."

London, February 3rd.—The *Standard* states that among the measures promised by the Government, to be presented at the opening of Parliament, is a bill regarding the distress in Ireland.

Dublin, February 3rd.—The Irish Court of Queen's Bench granted Davitt, Daly, Killen, and Breunen, an extension of time to plead and orders have been given to furnish the accused with copies of indictments against them. It is believed their trials will be held in March.

Clonmel, February 3rd.—A large number of unemployed people to-day made a demonstration before the Mayor's office, demanding work or bread, accompanying their demand with threats to sack the bakers' shops.

Dublin, February 3rd.—At the annual meeting of the Home Rule League to-day, William Shaw disclaimed any

pretensions to be considered a leader of the Irish people.

Dublin, February 3rd.—At a meeting of the Irish National Land League to-day, it was resolved that Michael Davitt should be deputed to wait upon the editors of French and other continental newspapers to enlist their support in efforts for the relief of distress in Ireland.

London, February 3rd.—The steamer *Strathleven*, with a cargo of fresh meat in cases and live stock, from Australia for London, has arrived. The meat in the cases is perfectly fresh.

Paris, February 3rd.—De Freycinet, President of the Council and Minister of Foreign Affairs, replying to a deputation from the St. Etienne Chamber of Commerce, said he appreciated the importance of a treaty of commerce with America, and would take the subject into consideration as soon as Tirard, Minister of Commerce, placed it before him.

Dublin, February 3rd.—At a meeting of the Mansion House Relief Committee, to-day, Lord Mayor Grey presiding, it was announced that £41,115 had been received by the Committee to date, and £15,400 distributed.

Replies to inquiries from the Lord Mayor have been received from thirty bishops, including three Catholic archbishops and one Protestant archbishop, repudiating Parnell's charges of discriminating against rent defaulters, expressing entire confidence in the Committee.

Vienno, February 3rd.—Trustworthy accounts represent the internal condition of Russia as becoming daily more critical. A number of officers high in command have become disaffected, while those not promoted after the late war with Turkey have, with few exceptions, joined the Revolutionists.

Madrid, February 3rd.—In the Chamber of Deputies to-day, the Minister of Colonies, replying to an interpellation, said the Government would accept any proposal for financial or commercial reforms which would ameliorate the condition of the Cubans.

Athens, February 3rd.—The Chamber of Deputies voted the bill granting the Government authority to make a loan for the defrayal of current expenses. It was the refusal of this grant which caused the recent ministerial crisis.

Rome, February 3rd.—The *Avenire d'Italia* announces that General Bonelli, Minister of War, has resigned from the Cabinet in consequence of the attitude of those Generals of the army having seats in the Senate during the discussion on the Grist Tax bill.

Rome, February 3rd.—The condition of the Pope's health is unsatisfactory, owing to recent worry and anxiety.

Berlin, February 3rd.—Bismarck yesterday held a long conference with the Emperor on the Army bill and new taxes.

Lahore, February 3rd.—Mahomed Jan has established a chain of armed posts on the Turkistan and Ghuznee roads, where his officers search people passing to and from Cabul.

Havana, February 3rd.—General Grant and party visited the Vento Water Works, near Havana, yesterday. To-night a great tea party, followed by a ball, was given at the Palace, in honor of the distinguished visitor. The principal families of the city, and all official persons, were invited. The Vice Governor-General issued invitations in the name of Captain-General Blanco. Thursday the party will go to Matanzas, and visit some plantations in that vicinity.

On the 1st instant another earthquake occurred at Candelarin, in the District Vuolta Abajo. Three oscillations were felt, the direction being east-southeast and west-north-west.

Chief Lunbano Sanchez has been defeated in the jurisdiction of Baracoa, and 600 huts belonging to the insurgents were burned.

Dublin, February 4th.—The daily, hourly cry of distress in Ireland becomes more and more urgent and widespread. Every day reveals new horrors in the catalogue of suffering. The outlook for the coming months is gloomier than any prediction has yet painted. No language can describe the appalling privations, the utter destitution which prevails. It is impossible to overdraw the situation, so rapidly do matters become worse. What might have been an exaggeration yesterday will to-morrow be an under-estimate. Three hundred thousand people are slowly starving, and can only be kept alive by superhuman efforts on the part of their fellow-creatures. Some of them are living on one meal daily, of turnips or of meal. Thousands more are

consuming their last potatoes. Local efforts are becoming feeble.

Berlin, February 4th.—The *National Zeitung's* Vienna letter asserts that Austria is firmly resolved to increase the defences of that Empire. The military authorities consider it desirable that Buda-Pesth be fortified, instead of Vienna. The necessity for immediate construction of new fortifications is unanimously recognized.

London, February 4th.—The American demand for iron is causing unprecedented activity in Great Britain. Four vessels, loaded with over 5,000 tons of pig iron and rails, sailed from Leith for New York to-day, and thirteen are at present chartered to load iron for American ports.

London, February 4th.—The *Times*, in a leader, on the Queen's speech, says: Foreign affairs will probably be briefly dismissed. Anxious attention will have to be paid to affairs in Afghanistan. Great importance, also, will be attached to any announcement respecting south Africa. The Queen cannot fail to refer with sympathy to the distress in Ireland, but the feeling which may find expression in the royal speech will be independent of any passing phase of Irish political discontent. There is no reason to suppose that the present agitation will have any different fate from preceding ones.

London, February 4th.—At a meeting of the Dublin Mansion House Committee yesterday, Lord Mayor Gray stated that at the rate at which they had been expending it, the fund on hand would not last more than four weeks.

London, February 4th.—Owing to the death of his sister, Gladstone will not attend the earlier part of the session of Parliament, unless public business requires his presence.

Madrid, February 4th.—The Chamber of Deputies to-day renewed the debate on Cuban measures. Senor Elduager, Minister of Colonies, reiterated that he would execute all reforms possible, but Deputy Portuando insisted upon developing his interpellation, and demanded the introduction of a series of measures favoring agriculture, commerce and manufactures.

Madrid, February 4th.—Five Kabyles chiefs arrived at Malaga from Morocco, to present a petition on the part of several thousand Moors, asking to be placed under the allegiance of Spain. It is expected that they will come to Madrid to confer with the Ministry. They declare if Spain declines to extend a protectorate over them, they will ask protection from France or England.

Vienna, February 4th.—A St. Petersburg correspondent writes that General Skobeloff will only command the Tekke expedition if the force be fixed at 100,000, which the Minister of War has hitherto refused to accede. It is possible that General Gonrko will be appointed.

London, February 4th.—The Empress of Russia has arrived at St. Petersburg.

Berlin, February 4th.—It cannot be denied that a Conservative majority no longer exists. The Government will soon have to rely upon the support of the National Liberals, which fact will certainly have some influence on the development of the Church question.

Berlin, February 4th.—The Bavarian Parliament is decidedly against the Army bill.

Paris, February 4th.—The Bishop of Angers has issued an appeal to parish priests to collect subscriptions, to be applied in aid of the distress in Ireland.

Bombay, February 4th.—A subscription has been opened here in aid of Irish distress. One native banking firm subscribed £1,000. The Committee consists of both Europeans and natives.

Lahore, February 4th.—Six leading Kohistan chiefs have collected a force to oppose the British nominee for the Governorship of that district.

Thyetmyo, February 4th.—The Burmese Government has empowered its Embassy to negotiate a new treaty with England.

Havana, February 4th.—The reception to General Grant at the Viceroyal Palace last night was a splendidly arranged affair. The elite of Havana society and many transient and resident Americans were present. The Palace was elegantly decorated with flowers, and illuminated.

London, February 5th.—In the House of Commons, Northcote gave notice that he would move to-morrow the adoption of a bill sanctioning the measures of relief for Ireland already taken, and for further relief.

Alexander M. Sullivan, Home Rule member for Louth,

gave notice that he would to-morrow move for leave to introduce a bill for the better protection of life and property in Ireland by suspending the serving of writs of ejectment for non-payment of rent.

Charles Newdegate, Conservative member for Warwickshire, gave notice of his intention to offer resolutions providing for suspension of members as a penalty for obstruction of legislation.

William Shaw, Home Ruler from Cork, gave notice of an amendment to the address, censuring the Government for failure to take efficient measures for the relief of the distress in Ireland, and calling upon them to act in that direction. The amendment concludes with the statement that it is essential for the peace and prosperity of Ireland to legislate immediately and comprehensively on the question relative to land tenure, the neglect of which duty is the cause of constantly recurring distress in that part of the country.

John Robert Mowbray (Conservative), member for Oxford University, moved the address in answer to the speech from the throne.

Corry, in seconding the motion, stated the distress in Ireland was not so general as has been represented. He conceded that any interference with the land question should be conducted with all due safeguards.

The Marquis of Hartington said the Greek question ought to be taken up and settled as speedily as possible. He criticised the recent intervention of the Government in Turkish matters as likely to lead to future complications, and pointed out that reforms in Asiatic Turkey were still in abeyance. Speaking of Austro-German alliance, he said he thought it would be well for England to look to her own security. He criticised the annexation of Transvaal, and argued that the population of Afghanistan is now in a worse position than before, and asked for explanations regarding the military executions in Cabul. He hoped the Government would, at the earliest moment, state definitely what steps had been taken to relieve the distress in Ireland, and contended the Government had a prolonged opportunity for obstruction by unnecessarily continuing the existence of Parliament.

Northcote regretted that the Marquis of Hartington had not given any explanations touching the attitude of the Liberals in regard to the Home Rule question. There was nothing in the state of the country rendering a dissolution necessary. The Opposition must bear its share of the blame attached to the toleration of obstruction, as they had not supported the endeavours of the Government to terminate the obstruction. The great question, he said, is still under consideration—the financial difficulties of the Porte, added to difficulties in dealing with the question of Asiatic reforms. The Austro-German alliance gave great pleasure to the Government, as it is likely to be conducive to the peace of the world. Her Majesty's Government had no wish for the annexation of Afghanistan. The Government had not been remiss in taking what steps in Ireland they thought necessary upon the information received. The Government would ask for a bill of indemnity for loans granted. If the object of Shaw's amendment was to register a vote against the Government, it would not be right that he should offer it while he was ignorant of the Government's proposals regarding Ireland.

Shaw then moved an adjournment of the debate, which was agreed to, after a desultory discussion, in which several Irish members participated, as to whether Shaw should move his amendment before or after the Government's proposal had been made known.

In the House of Lords, the Earl of Onslow moved, and the Earl of Rosse, (Conservative,) seconded the address in answer to the speech from the throne. Both referred to the distress in Ireland.

Earl Granville deprecated the strong language of Parnell. He said he was utterly opposed to Home Rule, but reform in local government, he thought, might do much toward satisfying Irishmen.

Lord Bencousfield maintained the Balkans were an intoligible frontier for Turkey, and said the Government had made a proposition which there was every reason to hope would bring the Greek affair to a conclusion. A telegram just received from Sir Bartle Frere gave promise of carrying out the scheme of confederation in South Africa. The Government was opposed to annexation in Afghanistan,

and the charges of cruelty against General Roberts were unsupported by the documentary testimony. Home Rule he defined to be a dismemberment of the United Kingdom.

The Duke of Argyll followed, and attacked General Roberts and the Anglo-Turkish Convention.

Lord Craubrook replied to the Duke of Argyll, and defended the Government.

The address was then agreed to, and the House adjourned.

Dublin, February 5th.—The Mansion House Committee reports the amount received to date at £42,373, and its total grants at £16,889. A letter was read before the Committee from Dr. Nulty, Bishop of Meath, saying the Committee enjoys the confidence and is entitled to the gratitude of the country.

Paris, February 5th.—The calamity, which occurred on the Circular Railroad at Clichy, Tuesday night, is even more horrible than estimated from first reports. Eleven persons have already died, the most notable among them being Count De Puyferrat. The number wounded is computed at sixty, and of these some are likely to die. Dieudonne, engineer of the train of the Circular Railroad, died yesterday. In his auto-mortem statement, he gave his version of the particulars of the disaster. He was within a few yards of the Argenteuil train before he observed the red lights on the rear car, and before he had time to do anything the crash came and he knew no more. Two causes are mentioned as tending to explain the collision. One is the reprehensible practice of dispatching a fast express train a few minutes after the departure of the slow train, and the other the utter insufficiency of the fog signals on the line. At the time of the collision the express train was running at full speed. M. Maret, of Place Vendome, who was among the killed, was an eminent architect, and had been in the service of ex-Queen Isabella, of Spain. He seemed to have a presentiment of his fate, as he insured his life for \$30,000 a few hours before he took the train. M. Hayme, stage manager, and M. Jolly, comedian, of the Bouffes Parisiennes, are dangerously injured, and in a very critical condition. M. de Milleville, another of the wounded, is the husband of Emilie Broisat, of the Theatre Francaise.

Paris, February 5th.—Dr. Paul Broca, nominee of the Extreme Left, has been elected life Senator to succeed Count De Montalivet, deceased, defeating Bertoland by eight votes.

London, February 5th.—A Paris dispatch says: The Budget Committee proposes to vote a credit of eight million francs for the construction of subterranean telegraph lines.

Berlin, February 5th.—In a debate in the Lower House of the Landtag, to-day on public worship estimates, Herr Windthorst regretted that Herr Von Puttkammer, Minister of Worship, had laid stress on continuing the principles of Dr. Falk, and demanded a complete severance therefrom. He did not feel any extraordinary confidence in the success of negotiations with the Vatican, but said the Ultramontanes would refrain from introducing any definite motion, so as not to interfere with these negotiations, and would acquiesce with any agreement that might be concluded. Herr Von Puttkammer expressed the high esteem for the Catholic Church entertained by the Government, and said although compelled to protect her rights, the State had never relinquished a hope of restoring peace with the Church. He gladly noted the inclination of Catholics toward a compromise, which, however, could only be effected on a basis of existing legislation, and added that he must inflexibly maintain the interests and rights of the monarchy. To obtain peace, he said, all parties must observe great moderation. During the course of the debate, Herr Hemmerstein stated that the Conservatives would await the result of the negotiations with the Vatican, and simply accept the result, whatever that might be. Herr Stengel, on behalf of the Free Conservatives, expressed a willingness to assist in bringing about a *modus vivendi*, on condition that the inviolable rights of the State be maintained. Dr. Falk spoke in refutation of charges made against him by members of the Centre.

Berlin, February 5th.—A Radical journal, the *Berliner Zeitung*, has been confiscated for publishing a sharp attack upon the Government. This is the first instance, for many years of a non-socialistic paper being suppressed.

Berlin, February 5th.—From the fact that Archduke Albrecht is to represent Austria at the twenty-fifth

anniversary of the Czar's accession to his throne, the German Press concludes that the *rapprochement* between Austria and Russia is going on. The Archduke is a recognized friend of Russia.

It is now certain the Count De St. Vallier will retain his post at Berlin.

Madrid, February 6th.—The *Politica* announces that the Paris Societe Generale has offered the Spanish Government a loan of sixty pinsters at six per cent, guaranteed primarily on the revenues of Cuba, and secondarily on those of Spain.

City of Mexico, January 30th, via New York, February 5th.—Shocks of earthquakes were felt at Cardoba, Orizaba, Tehuacan and Vera Cruz January 22nd, the same date they were felt in Cuba. No damage done.

London, February 6th.—In the House of Commons to-day, Stanhope, Under Secretary of Secretary of State for India, replying to a question, stated that he could produce a dispatch in which the Duke of Argyll, telegraphing to Shere Ali in 1859, when he was Indian Secretary, had styled Queen Victoria "Empress of India." Stanhope confirmed the report that certain correspondence between the Ameer of Afghanistan and the Russian Government had been discovered in Cabul, but said it was not in the interest of the public service to publish it.

Sir Michael Hicks Beach, Colonial Secretary, confirmed the report published January 10th, that England had secured from the King of Agbosomes, on the gold coast of Africa, the cession of a strip of his sea-board extending two miles inland, as a measure of preventing the smuggling of spirits into the British possessions on the gold coast by American traders.

The debate on the Home Rule amendment to the address was then begun.

Win. A. Redmond, Home Rule member for Wexford, moved, and F. O'Gorman Mahon, Home Rule member for Clare, seconded, the amendment to the address.

William Shaw, in a speech in support of the amendment, said he did not wish to condemn the Government for what they were going to do in the future, but for what they had done in the past. If the Government had offered to make advances to Irish farmers in the first instance at the rate of one per cent, they might have done much to avert the calamity which is now upon Ireland. The Government ought also to have given greater powers to the Boards of Guardians. He said a gradual process of starvation has been going on in Ireland for some time. He did not wish the Government to lavish too much money on public works, because the people were demoralized by the manner in which money had been wasted in 1847. It was discreditable to England's greatness that in Ireland three-fourths of the people should be reduced to a condition barely removed from actual famine by two or three bad harvests. He acknowledged that the problem to be solved was a difficult one, but the difficulty was not insuperable.

Northcote next spoke. He found no fault with Irish members for taking this early opportunity for drawing attention to so important a matter, but they would be going beside the question of distress by occupying themselves with such points as those dealt with in the amendment. He distinctly denied that the Government had allowed the matter to sleep. The report of the Registrar-General for the past year, just received, disclosed a very unsatisfactory state of things. The extent of land under crops in Ireland was less than during any preceding ten years. The total value of the principal crops for 1879 was estimated at £23,000,000 against £33,000,000 for the preceding year. The potato crop of 1878 was estimated at 50,500,000 hundred weight, whereas it is expected the yield for 1879 will be only 22,000,000 hundred-weight—a most alarming decrease. Toward the end of last October the Irish Government forwarded to the Cabinet information which the Government took into serious consideration, inviting the Lord-Lieutenant and others to attend in London. The Government found there was considerable apprehension of famine in some parts of Ireland. They thereupon took the precautions necessary until the meeting of Parliament. The Chancellor said, that in a bill which he intended at a later period to introduce, there would be provisions authorizing the local Government Board, to authorize Boards of Guardians to issue food and fuel by way

of out-door relief. It would also be proposed to allow Boards of Guardians to borrow money in exceptional cases. The question of stimulating the employment of labor was one full of difficulty, but the Government was desirous of doing something in that direction, and they thought it best to give some encouragement to persons to borrow money to be used in improvement of their land; therefore, they propose to advance loans on exceedingly easy terms to landlords, to be used for that purpose. The Baronial Sessions would also be asked to make presentments.

The O'Donoghue, Liberal, said the proper course was to lend money to farmers, not to landlords.

The debate was continued by the following Home Rule members: Colonel Colthurst, Arthur Moore, Dr. Michael Ward, Major Francis O'Beirne, Charles Joseph Fay, Patrick Martin and John George MacCarthy, all of whom condemned the Government's plans as inadequate.

Right Honorable D. Plunket, Conservative from Dublin University, said Parnell's utterances would only be received with loathing, and their result might be an agitation which would end in bloody resistance to the law.

F. H. O'Donnell, Home Rule, from Durgaroon, rose to a point of order to this expression.

The Speaker ruled that Plunket's language was unparliamentary.

Plunket submitted to the ruling of the Speaker, and qualified his language slightly.

Alex. Martin Sullivan, Home Rule, energetically defended Parnell.

Rt. Hon. James Lowther, Chief Secretary to the Lord Lieutenant of Ireland, stated that no case of death from starvation had occurred in Ireland.

Mitchell Henry, Home Rule, moved an adjournment of debate, which was agreed to.

Sir Stafford Northcote then obtained leave to bring in a bill to render valid proceedings for the relief of Irish distress, and to make further provisions therefor. He explained that advances would come out of the fund at the disposal of the Irish Church Temporalities Commission.

Northcote's bill was then brought in, and read the first time.

Liverpool, February 6th.—The interest in the contest for the seat in Parliament made vacant by the death of John Torr, arises from the fact that Lord Ramsay, the Liberal candidate, had made a bid for the Home-Rule vote by pledging his support to an inquiry into the question of home rule. The remarkably heavy vote was as follows: For Lord Ramsay, 23,885; for Edward Whitley (Conservative), 26,106; Whitley's majority, 2,221.

Dublin, February 6th.—A dispatch from Galway states that a large body of tenantry in the town of Athy, headed by Father McWhillan, beat off a number of process servers, who were under the protection of a small detachment of constabulary. Great excitement prevailed among the populace, and some shots were fired, but no serious damage was done. The constabulary acted with moderation, confining themselves to defensive measures. The process servers were thoroughly frightened and withdrew, carrying their papers with them.

London, February 6th.—Walters, one of the principals in the great turf frauds, in connection with which Benson, Kerr and three detectives—Micklejohn, Drusoovitch and Palmer—were convicted in 1878, has been arrested.

Liverpool, February 6th.—The Court of Inquiry on the *Borussia* disaster has exonerated the owners, captain and officers of the vessel, but is not prepared to say whether the vessel was perfectly seaworthy.

Berlin, February 6th.—The Budget of the German Empire has been submitted to the Bundesrath. The amount of revenue and expenditure are fixed at 544,888,184 marks. The items of permanent expenditure amount to 467,409,487 marks, and temporary expenditure to 77,478,657 marks.

Vienna, February 6th.—The Austrian Delegation has adopted the army and navy estimates of the Government without amendment. Relative to rumored intention of the Government to fortify Vienna, the Minister of War said to the Delegation that the question of the defence of the whole Monarchy had been disposed of two years ago, and had not since been re-opened.

Paris, February 6th.—The *Ganlos* asserts positively that twenty-two dead and 116 wounded are the total casualties at the recent railway accident at Clichy.

## THE JAPANESE PRESS.

### THE INFLUENCE OF COMMERCE.

(Translated from the *Hochi Shimbun*.)

(Continued from last Saturday.)

ENGLAND has from very early times devoted great attention to the development of commercial enterprise. This has resulted in a vast expansion of all industries, agriculture, mining, the fisheries, have all rapidly increased, roads, railways, and telegraph lines envelop the land as with a network; navigation has been brought to great perfection and communication with far distant countries facilitated. At first, great difficulties existed, but by the steady perseverance and unyielding firmness so characteristic of the British nation, all obstacles have been swept from the path of progress until the country has at length attained the unrivalled position of a Queen among the nations of the world. Let us briefly sum up the wonderful strides made by this powerful state. To use the words of one of her leading men, the wealth of England has advanced by "leaps and bounds." From 1763 to 1870 the population increased three-fold notwithstanding the swarms which annually left the parent hive to people other lands and spread the name and fame of England. During the same period, imports increased thirty-fold and exports twenty-fold; the tonnage of vessels sailing under the meteor flag rose from 500,000 tons to 7,100,000 tons! while during the past fifteen years the trade of the country has actually doubled! From this we can easily conceive the enormous increase in the material wealth of the country and the improvement in the position of the inhabitants. The imports of Great Britain are chiefly raw material which is manufactured and re-exported. Commercial intercourse is carried on with all countries:—France, Italy, Holland, Turkey, North and South America, Japan, China, India, Hongkong, Australia, &c., &c., so that there is not in all the universe a single spot which the wide-circling arms of British commerce does not enfold. Must we not regard with envious admiration a state which enjoys this proud preëminence? And yet England has not attained her exalted position through the possession of great natural advantages or mineral wealth, but simply by the indomitable perseverance of her people and the avoidance of frivolous wars.

The increase of luxury, however, is generally fatal to the supremacy of a nation and the vast wealth of England is gradually producing the inevitable result. In bygone ages Babylon, Assyria, Carthage and Rome, each in turn, ruled the world, but accumulated wealth proved the ruin of them all. How long then may England hope to continue her present haughty position? "Trade," says John Stuart Mill,\* "has taught the lesson to every country—how to carry on friendly relations with other states. In former days patriots desired other countries but their own all to be poor and powerless; such, however, is not the case at present, and we recognize in the progress and prosperity of another country an increased source of progress and prosperity for ourselves." The same writer also remarks, "War exercises a prejudicial effect upon the interests of every individual; therefore, when commerce attains a high state of development, unprovoked wars cease. International commerce is the foundation of universal peace. It may truly be said that the improvement of the inhabitants of the world depends upon the salutary influence exercised by commercial transactions." This is the opinion of a great political economist upon the true character of commerce, and in giving it he has explained the secret of England's commercial supremacy. We cannot admit that in our day this great nation either refrains from engaging in aggressive warfare, or looks upon the interests of other countries as identical with her own. Observe the manner in which England treats Eastern States: the sword in the right hand and commerce in the left! Her policy is to aggrandize herself at the expense of others, and she treats with contempt weak countries like India and China, whose interests are entirely subjected to the will of England. How long can this wicked, wanton policy continue?

In the not distant future when China becomes powerful, India independent, the other nations of the East advance in

\* The native paper is responsible for this and following quotations—Translator.

civilization, and the mighty Orient is relieved from the necessity of depending upon foreign importations, how can England then retain her present supremacy? What country will take up her position as "Mistress of the Seas?" The answer is obvious—the nation which occupies the same relative position to the East as England does to the West—the Empire of the Rising Sun!

Japan is blessed with unrivalled facilities for water transport, a fertile territory, great mineral wealth and a surpassingly beautiful climate. Thus we have been exceptionally favoured by Divine Providence and may reasonably ask:—how comes it then that the natural resources and commerce of the nation have not attained a higher degree of development? The fault lies with the feudal system which formerly obtained in the country. Under it, the military class alone was encouraged, while commerce was looked down upon with contempt. The farmers and mercantile portion of the community constituted the lower orders, the former being treated with the most consideration. It was usual among the mercantile community, for one man or association to become possessed of a monopoly, this custom was productive of great evil and did much to impede the growth of healthy commercial enterprise. Japan, however, is not the only country which has experienced similar evils. Contempt of commerce precluded the fall of mighty Rome, and it is only of comparatively late years that mercantile enterprise has taken up its proper position. Some excuse may therefore be found for the abuses which existed under our old feudal system. It is recognized that in ancient days, Japan possessed a considerable foreign commerce before the policy of the Tokugawa Government secluded the country, and destroyed mercantile enterprise. However, the records of these olden times are rather hazy and we shall not refer to them any further. It is well known that when the ports of Japan were opened to foreign trade, the shipping of the country was wholly inadequate to its requirements, and navigation entirely unknown. There were no roads or bridges worthy of the name, and as we were entirely ignorant of the condition of foreign lands, we were constantly falling into the snares set by designing strangers. As a result, this country was in a short time despoiled of its wealth. Formerly Japan was known as a very rich state, and for a long period many of the European nations were desirous of entering into commercial relations with us. This is clearly evidenced by the writings of foreign authors. We will here give two or three extracts for the benefit of our readers in proof of our assertion. Marco Polo, writing in 1298 says, "The Japanese possess enormous accumulations of gold and never-ending supplies of the precious metals," and another writer in 1588 says, "The Portuguese send large ships every year to Japan and obtain annually \$500,000 worth of gold and Holland secures 1,400 boxes every year, each containing 1,000 rics in gold." Another author states that "From 1616 to 1706, 6,190,000 gold *loban* and 112,260,000 silver *coin* were exported from Japan," and also "The palace in Yedo is ornamented with gold." Thus it will be seen that foreigners have for a very long time been yearning after the enormous wealth of this country. But what is the present condition of Japan, once so envied for its riches? From the very first opening of the ports a constant draining of specie has been going on, until at length the nation is reduced to the existing state of poverty. What is to be the future of Japan? Nothing is more essential in order to restore the prosperity of the country than the encouragement of commerce and production. We have the great empire of China and also Corea in our neighborhood as markets for our produce. By constant communication with them we can improve our knowledge of navigation and with the aid of our wealthy capitalists can thus prevent English merchants from absorbing all the benefits of our trade. Therefore we repeat, that the encouragement of commercial enterprise is absolutely necessary, and on some future occasion we will give our views as to the best means of effecting so desirable an object.

#### LAW REPORTS.

IN H. B. M.'s COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Thursday, March 4th, 1880.

ANDREW JAFFRAY *versus* ALEXANDER CLARK.

The plaintiff, Andrew Jaffray, alleged in his petition

that the defendant, Alexander Clark on the 27th of January, 1880, while acting as the agent for and on behalf of the plaintiff, purchased for the plaintiff from the executors of E. S. Benson, deceased, the property known as number 123 Settlement, and that the defendant obtained a transfer to himself of the property so purchased and refused to convey it to the plaintiff. The plaintiff therefore prayed that the defendant should be ordered to transfer lot number 123 to plaintiff, and that plaintiff should have such further relief as to the Court should seem just.

The defendant in his answer denied that he was acting as agent for the plaintiff in the purchase, and put in issue all the material allegations contained in the petition.

Mr. Lowder appeared for the plaintiff, and Mr. Kirkwood for the defendant.

Mr. Lowder opened the plaintiff's case by reading the petition, the three first paragraphs of which he observed were admitted by defendant's answer.

Mr. Kirkwood applied for permission to make a slight verbal amendment in the answer, which was granted by consent.

Mr. Lowder continued:—The pleadings raise a simple issue, one of fact, whether or not the defendant was acting as the agent of the plaintiff in the purchase of the property mentioned in the pleadings, and to the evidence on this point I shall confine myself. If it is once established, as I think it will be, that defendant was the agent of the plaintiff, then I shall call your Honour's attention to certain cases which will incontestably prove that the plaintiff is entitled to the relief prayed for.

Plaintiff sworn and examined by Mr. Lowder.—I am a livery stable keeper residing at Number 123, which I hold under a lease having about two years to run. My landlord died, and I heard in the latter end of December that the premises were for sale. I called upon Mr. E. R. Smith, who was one of the executors of deceased, and asked if they could sell me the place. He told me that the executors (Mr. Drake and himself) were waiting for instructions from America, but he thought they would be open to receive offers about the 15th of January. I said I was anxious to know then as the new year was approaching and I would have to make arrangements about the money. He said he would let me know as soon as they heard from America. He did not do so, however. I met Mr. Smith subsequently on the 23rd of January, and again mentioned the matter. He said that he and Mr. Drake were waiting for me to make them an offer. I called on Mr. Smith, the same afternoon, and offered \$2,600 for the property. Mr. Drake said it was worth more than \$4,000 to me, seeing I had all my buildings on it, and therefore he could not entertain my offer of \$2,600. I saw the executors expected I would pay a high figure, so I made up my mind to withdraw from direct negotiations and deal through an agent. On the 27th of the same month Mr. Smith called at my place on some business. I asked to be given the refusal of the property. He said he would let me know more about it. I waited for some time and hearing nothing from him I went in search of defendant. I met him in Main Street, in front of Mr. Bourne's, and asked him to become my agent and go and purchase number 123. He said "certainly." I asked him to come to my house and we would talk the matter over and I would give him further instructions. I asked him if he knew of any person likely to oppose me in purchasing the property. He said, "no, except perhaps the Chinaman formerly in the employment of Messrs Sitwell, Shoyer & Co." I said "do you think there is anyone likely to offer for it besides the Chinaman and myself?" He replied, "no, I do not." I asked him what he candidly thought was the value of the property? He said \$3,000, or a few hundred more if I made up my mind to remain in Japan. I told him to go and secure it for me. I said if it can be bought for \$3,000 or \$3,400, or thereabouts, you need not refer to me again, secure it at once. If it is much above that sum come back immediately and let me know what amount will purchase it and I will instruct you further. He replied, "very well, I will do the best I can for you." Before he left I told him my idea was that he should tell the executors that he knew of my offer and then offer \$3,000 at first, but without disclosing his principal, as it was likely they would charge me more than anyone else. He left again, saying, "I will do the best I can for you." It was then about twenty minutes after

eleven in the forenoon of the 27th of January. Defendant returned a few minutes after twelve and said, "I'm your landlord," and afterwards told me he had purchased the property for \$3,500. I said "Well, I suppose you have done the best for me you could. I'll allow you a handsome commission—I suppose \$100 will be satisfactory: we had better get the matter settled as soon as possible, the transfer made out and so on, as you know the money is lying idle." He replied, "I will attend to it to-morrow." The next evening defendant called at my place just before the evening meal and I asked him to have a beefsteak with me, and we would talk business afterwards. That was the evening of the ball at the Hongkong and Shanghai bank, and as I had carriages to attend to, I went out after dinner, defendant promising to remain until I returned. When I got back he was gone, leaving a chit for me which I tore up and burned: the following was the effect of it:—"This is to let you know that I have made up my mind to keep the property for myself."

Cross-examined by Mr. Kirkwood—Mr. Smith came to me on the 27th of January and asked me to send him some horse manure for his garden. This was about ten o'clock in the forenoon. He did not tell me the property was sold; he promised to send me further particulars. I did not meet defendant in Mr. Cope's auction room on the morning of the 27th, I met him in Main street. I had not seen defendant on the 28th, before he came to my house. I did not offer to purchase the property from him at \$3,600. The chit he wrote was not a refusal to sell me the property, it was only to let me know he was going to keep it himself. He had not told me before that he was going to keep it. I might have been twenty minutes away after dinner. I drove up to Mr. Cope's with a pair of horses and back again. I was so angry when I got the chit that I tore it up. It was very disappointing indeed. The document produced I have read before. I read it at the corner of my own place on the evening of the 27th of January, when defendant called. He pulled it out of his pocket and gave it to me to read in the street. (This document is as follows:—

Yokohama, January 27th, 1880.

Received from Mr. Alexander Clark five hundred dollars on account of thirty-five hundred dollars to be paid by him for premises (land only) No. 123 Foreign Concession. Balance of purchase money to be paid by the 17th of next month. Premises sold subject to the lease now held by Mr. A. Jaffray. Rent from February 1st to be collected by Mr. Clark, and ground rent from the 1st of February to be paid by him.

CHARLES DRAKE,

Executor of Estate of E. S. Benson, deceased.)

I put no question to defendant after I read this paper. I did not ask him why he had fixed a particular date for the completion of the purchase. I was willing to increase my offer from \$2,600 to \$3,400 because I was anxious to secure the property. It was worth \$4,000 to me. I could not ascertain if any offers had been made above mine. I was groping in the dark as it were. I was guided to some extent by defendant's valuation. I saw Mr. Drake on the 27th, after I saw Mr. Smith. I asked him if the property was sold. He said "Yea." I asked, "who was the purchaser?" He replied "Mr. Clark."—"The price?" "\$3,500." I did not say in reply I would sooner have Mr. Clark for my landlord than a Chinaman. After defendant intimated he intended to keep the property, I suspected he was cheating me, and I took every means in my power to get the property without litigation. I did not notify the executors that defendant was my agent in the purchase and therefore not to transfer the property to him. I did not notify them because I never thought of doing so. I did not notify the American Consul either. Neither myself nor anyone on my behalf ever claimed the property in writing before the 18th of February. On the 29th of January, in the morning, I met defendant and asked him why he had left my house, and again renewed my offer to pay him his commission. He said he would keep the property for himself. From that time to the 18th of February, I made no other claim upon him. During this time I was aware the transfer was to be completed on the 17th of February. I have tried to purchase the property from defendant since the 28th of January. I instructed Mr. Winstanley to purchase the property from defendant for me and to go as high as \$4,000, as it would avoid

litigation. Mr. Winstanley was the only person I employed to purchase from defendant for me. I may have told Mr. Drake that business was bad and I did not care about the property if I had to give more than \$2,600 for it. I was buyer and he was seller. It was my business to get it as cheap as possible. I would be very much surprised to learn that the property was sold to defendant on the 26th of January, because Mr. Drake told me on the 27th he had just sold it. I would also be surprised to learn that defendant had made a standing offer of \$3,500 in December. I never made an offer through Mr. Peacock. He said he thought he could settle the matter amicably.

Re-examined:—When I instructed defendant to purchase the property for me he did not tell me that he was the owner, he led me to believe the contrary by saying that he knew of no one who would oppose me but the Chinaman.

By the Court:—I had often employed defendant previously as my agent in the purchase of horses. The seller always paid the commission and, I believe, a handsome one.

George Shirras, sworn:—I am a British subject, residing at 113. I am a horse-shoeing blacksmith. I am on good terms with both parties to this action. I had a conversation with defendant one Sunday afternoon, early in February, concerning the dispute. Defendant told me he bought the property. It was the first I heard of it and I asked him "what property?" He replied "did not Mr. Jaffray tell you?" I said "no." He then said he had bought No. 123—Jaffray's place. I asked him how he came to buy it and why Mr. Jaffray did not buy it. He said "Mr. Jaffray asked me to buy it for him at a certain price." I then asked how it was that he did not buy the place for plaintiff, and he replied "Jaffray would not give the price for it."

Cross-examined by Mr. Kirkwood:—No one asked me to see defendant. I often go to see him. Defendant did not tell me that when plaintiff asked him to buy the place for him it was too late. Plaintiff has never asked me to see defendant in the matter. No price was ever mentioned, as the negotiations never went so far. Plaintiff paid my passage out from Scotland. I came out under two years engagement to him, and I now shoe his horses.

By the Court:—I do not know what defendant meant. He used the words I have repeated.

Resumed at 1 o'clock.

Peter Peacock examined by Mr. Lowder:—Am a British subject and Inspector of the Guard at Her Majesty's Legation. I am particularly friendly with both parties to the suit. The defendant has called me. About the 14th of February I had a conversation with defendant. I met him on the bund. I said "I have not seen our friend Jaffray lately. Is the rumor true that you and he have had some disagreement?" He replied "I will tell you all about it. A short time ago the property 123 was for sale and Mr. Jaffray asked me to buy it for him and consulted me as to its value which I said was about \$3,400, or a little more if he intended to stay long in Japan. Mr. Jaffray said the price appeared high but that his own bid of \$2,600 had been refused, and requested me to go and buy it for him as cheap as I could. I went to the agents and offered them \$3,000 for the land on Mr. Jaffray's account, but they would not take it, so I concluded to purchase for myself for \$3,500, and went back to Mr. Jaffray and told him that I was his landlord." Our conversation was then interrupted. I saw defendant again on the following day at his residence on the Bluff and I said "I have called out of friendship as a mediator on behalf of Mr. Jaffray and I am prepared to give you a handsome present for your trouble if you will give up your claim to the lot of land at No. 123." Mr. Clark replied "friendship is friendship but business is business, I bought the land for myself and I am going to stick to it, for I heard two days ago that a third party offered more for the land than I offered on Mr. Jaffray's account, so if I had not got it myself Mr. Jaffray would not have got it. He then reiterated what he said on the previous day and added that "the bid I made for Mr. Jaffray was refused and the bid I made for myself was accepted," and also that when he went back and told Mr. Jaffray he was his landlord he stared back to him as if he could not believe him, but afterwards said:—"You will let me have it won't you? I replied I would consider about it and I afterwards left a note at his house saying I would not

part with the property. On the next occasion we met, Mr. Jaffray said, "let me have the land and I will give you \$100 for your trouble." I told him I would not part with it nor do I intend to do so now, I bought the land for myself and I am resolved to keep it, for if it had been a bad bargain no one would have wanted it." I reported the conversation to plaintiff on the same afternoon.

Cross-examined by Mr. Kirkwood.—Plaintiff was in Yokohama the same afternoon. I wrote the note produced. I wrote down what Clark said a day or so afterwards, as soon as I heard there was going to be litigation. I told Clark I should do so when we had the conversation. Defendant did not say he was authorised by plaintiff to buy the property after he had bought it himself. I offered defendant \$300 for his trouble or \$3,800 if he had paid for the property. Plaintiff said he would rather pay \$4,000 than resort to litigation if it could possibly be avoided. Plaintiff did not tell me that he had offered defendant \$100 for his trouble. I did not know when first I spoke to defendant about the matter what land it was. I was surprised to learn it was number 123. I said plaintiff wanted to get the property as cheap as possible, defendant said plaintiff wanted to get it for nothing, but he took care he did not. Defendant did not tell me plaintiff's limit for the place, nor did he say when he was authorized to buy. I was not requested by plaintiff to see defendant. Defendant took credit to himself in our conversation for being smarter than plaintiff.

This closed plaintiff's case.

Mr. Kirkwood in opening the defendant's case remarked that he had a few witnesses whom he would call and on whose evidence he would rely. Setting on one side the veracity of the witnesses, he would prove that the property was purchased by the defendant some time before the plaintiff stated he asked the defendant to buy it for him. In other words, the defendant after several months of negotiation bought the property on the 26th of January and paid \$500 deposit between 9 and 10 o'clock on the morning of the day on which plaintiff said he commissioned defendant to buy for him.

Alexander Clark, examined by Mr. Kirkwood:—I am a British subject and the defendant. I own several houses on the Bluff and in the Settlement. My occupation is that of a landed proprietor and I live on my rents. In the early part of 1879, I saw Mr. Benson and asked him if he would sell number 123, and he said he would, at a price. He asked me \$5,000 for it. I said it was too much, but if I could get it at a reasonable price I would like to buy. Mr. Benson said he would let me know his lowest price either direct from Kobe, or through his agents. I never received any communication from him. He died on the passage from Kobe to Yokohama. About fifteen days after Mr. Benson's death, which was in the early part of last year, I called upon his agents Messrs. Smith, Baker & Co. I saw Mr. Smith and asked if the property 123 was for sale, and mentioned that I had seen Mr. Benson about it. Mr. Smith said the property would be for sale after instructions came out from America. He told me to call and see him again and he would let me know. From then until October, I called at the office two or three times every month. The last time I called Mr. Smith said "We have made up our minds to close the estate at the end of the year." He also said "call in December, what would your offer likely be?" I said I would like to get the property for \$3,000. He laughed and said "it will not be sold for any price like that; at any rate call in December." After the 20th of December, about the 24th, I called again and was introduced to Mr. Drake. He said "what is your offer for the property?" I said \$3,000. He said "the place is worth more you had better take time and consider." I replied, "very well I will call back in two days and make you my best offer." I returned in the two days and made an offer of \$3,300; both Mr. Smith and Mr. Drake were present. They said it was too low. I said, very well, I'll make you my last offer that is \$3,500. Mr. Drake said "will you make that a standing offer so that in case we accept you will not retract it?" I said yes. Mr. Drake said, "We have got to do the best we can with the estate and will give you the refusal, anyhow we cannot sell until January." I called on them about the 14th of January. Mr. Drake said they were waiting for another offer, and they would like to get it

as it might be better than mine. I said I would call back in a day two. He replied, very well. I next called on the 26th of January in the afternoon between 3 and 4 o'clock. Mr. Drake said "Look here will you make your offer \$250 more; make it \$3,750?" I told him "no, \$3,500 is the uttermost limit I will give for the property." Mr. Drake said "Very well the property is yours." He said you will have to make a deposit, I said I would guarantee to pay him a deposit before ten o'clock next morning. He said that would do. The next morning about a quarter or half-past nine I went to Mr. Drake's private office. Mr. Drake was not there but Mr. Smith was. I paid him a deposit of \$500, while I was writing the cheque Mr. Drake came in and wrote out the receipt and handed it to me. The document produced is that receipt (put in and marked A). I asked Mr. Drake to fix the 17th of February for the completion as that time would be more convenient for me, and he agreed to it. As a fact I paid the balance on the 16th of February and received the title deeds from Mr. Drake. After I left Mr. Drake's on the morning of the 27th, after paying the deposit, I went towards the hatoba, walked along the Bund and turned up into Main Street. I eventually went into Cope's auction room. There I met plaintiff, he came up very excited and said "Smith has told me that my property No. 123 is sold. I believe it's a G—d—lie. Will you run down and offer thirty-one or thirty-two hundred dollars for me." I said no it's no use the property is sold and I am the purchaser. He said "it's a b—lie." I took this paper (exhibit A) out of my pocket and showing it to him said "Will this convince you?" He said he would go and see Mr. Drake and see what they meant by selling the property without letting him know. We both walked together towards Mr. Jaffray's. On the way he said "you must have more money than brains to buy the property for any such price. I would never buy any property in Japan, unless I could get it for three or four years purchase." When we reached plaintiff's he asked me to go in and have a cocktail, I did so. He seemed very much annoyed with Messrs. Smith and Drake and called them "smart Yankoes" or something of that sort. He said nothing about my buying the property for him. He never asked me to buy it until the day after I did so for myself. I met plaintiff at Cope's the same afternoon (27th). He said he had seen Mr. Drake who told him I was the purchaser. He then said, "Look here we have been very good friends, will you sell me the property at \$3,600 and then you will make a handsome profit on your bargain?" I said I did not think I would; anyhow I would give him a positive answer next day. Next evening, I called and plaintiff asked me to have some whisky hot. I said I did not care for any before dinner. Plaintiff has very good whisky and pressed me to take some. I consented if he would have some also, and he did. During dinner, at which plaintiff tried to get me to drink beer, Mr. Helm came in. We were all talking and a betto came in and said to plaintiff "the carriage is ready." Plaintiff got up and said "Gentlemen you will have to excuse me. I have to go up to Mr. Cope's with my brougham to take Mr. and Mrs. Cope to the fancy ball. Here is a bottle of whisky, make yourselves comfortable during my absence which will be as short as possible." Not long after plaintiff went out, Mr. Helm said he had business to attend to and he left also. I waited for half an hour and as plaintiff did not come back I then left, but before leaving I wrote plaintiff a note to this effect:—"Yokohama, February 28th, 1880; Mr. Jaffray, My dear Sir, In reply to your offer of yesterday, I beg to let you know that I have made up my mind not to dispose of the property number 123, Yours truly, A. Clark." Next morning I met plaintiff who complained of my going away so early. I asked him if he got my note. He said yes. He also said "I thought you would have sold me the property as we have been friends." I said, "friendship is friendship and business is business I have other property and I will neither sell this nor any other." That was the last conversation we had on the subject. The first claim ever made upon me in the matter was when I received the letter produced (exhibit B) from Mr. Lowder. I never heard before that I had been commissioned to purchase the property by plaintiff. I wrote and delivered the reply produced (exhibit C.) stating that I repudiated any claim. I never bought anything for

plaintiff in my life except one China pony, *Gled*. The witness Shirras came to me the first Sunday after I bought the property. I told him I had bought 123 and paid \$3,500 for it. He said, did Mr. Jaffray know the property was for sale? I said yes, and he offered \$2,600 for it which was not accepted and I also said how disappointed plaintiff was, and how he had asked me to buy the property after I had bought it myself. Shirras came to see me on last Sunday and Monday. He told me that if I would sell the property to plaintiff for two or three hundred dollars profit plaintiff would pay all expenses and withdraw the suit. I said I would not sell the property for \$10,000 and refused to receive a letter he brought me from plaintiff. The first time I met the witness Peacock was on a Saturday forenoon, about the 17th of February. He was driving in one of plaintiff's carriages. He said "I heard you and Jaffray have had a fall out because you would not sell the property," that was all that then passed. Next day when I went home I found the note produced (exhibit D) it is addressed to 'Alister MacAlister' which is the "sititious" name I ran a horse under. 'The Baron' is the "sititious" name of the plaintiff. When Peacock came, he said plaintiff had authorised him to make me an offer for the property. He said "Jaffray tells me he offered you \$3,600 but you would not sell, I am now prepared to offer you \$3,700 or \$3,800 if you will sell." I refused to do so. I also told Peacock I had other property and if I went into business and failed I would have the property to fall back upon. Peacock said he did not know until lately that the property was the same as that in which Jaffray lived. I told Peacock I was surprised he would come about plaintiff's business on a Sunday and he said "I and the 'Baron' are in with each other in racing and when he asks me to do a thing for him I cannot refuse."

Cross-examined by Mr. Lowder:—I am not and never was a commission agent. I remember an action brought against me in this Court by a Japanese in August last. If I then swore I was a commission agent I made a mistake. I think it likely I made a mistake. If I called myself a commission agent I had no object in doing so. I have been very intimate with plaintiff. He never told me, except at Mr. Cope's, that he wished to purchase the property. When Mr. Benson was in Yokohama in the early part of 1879, plaintiff asked me what I thought the place would fetch if sold, and I replied \$3,000 or over. I know plaintiff offered \$2,600 because either Mr. Smith or Mr. Drake told me so after I concluded the purchase. Plaintiff never told me. Notwithstanding our intimacy we never spoke about the place. We spoke about general subjects such as how he did the Yokohama Jockey Club, an enterprise in which I assisted him on several occasions. I never bought *Admiral Rous*, *Othello*, or *Moor* for plaintiff. I may mention that those ponies never belonged to plaintiff, they were owned by Mr. John Robertson of the Oriental Bank. Mr. John Robertson told me so himself. I paid the purchase money by a cheque on the Bank. I did not stay to tiffin with plaintiff on the day I showed him my receipt for the \$500, part purchase money. I do not remember plaintiff leaving me that day during tiffin. The next day plaintiff asked me to dinner, when I called to give him a decided answer. I think the witness Peacock is making a mistake about our first conversation as it could not have lasted as long. I consider Mr. Peacock is a truthful, careful man, who would not make an intentional misstatement. The writing on the envelope shown me is in my handwriting. I gave it with the enclosure to Mr. Moss to collect the rent from plaintiff. Moss returned it to me saying he could not get the rent. I did not send the letter direct to plaintiff before the 26th of February. (Document put in and marked as exhibit E, being a notice from C. Drake, as executor, &c., to plaintiff, that defendant had purchased the property Number 123, and that the rent was to be paid to defendant in future.)

Charles Drake examined by Mr. Kirkwood:—Am a citizen of the United States. I am one of the executors of the will of the late E. S. Benson, who died in the early part of last year. The sale of number 123 to defendant was completed by me on the afternoon of the 26th of last January. No money was then paid, but \$500 was paid next morning at about 10 o'clock. Exhibit A is in my handwriting. Defendant was several times to see me about the purchase before the 26th of January. About two weeks

before the purchase was completed, defendant left an offer open of \$3,500 for the property. Plaintiff offered \$2,600 for the place about the middle of January, but did not appear anxious about it. He called to see me after the property was sold, and I told him who had bought it and the price. He expressed satisfaction at having defendant for a landlord and not a Chinaman.

Cross-examined by Mr. Lowder:—About the middle of January I notified plaintiff that if he wanted the property we were ready to sell and to make an offer. He said business was very bad and he should only make a small offer.

Elliot Robert Smith examined by Mr. Kirkwood:—Am a citizen of the United States and one of the executors of Mr. Benson. Previous to the commencement of this year, going back as far as August, defendant has been in communication respecting the property number 123. I was present on the 26th of January during the first part of the conversation between defendant and last witness. Mr. Drake and myself had already agreed to let defendant have the place at his offer. Next morning I called at plaintiff's on my way to the office, say about nine o'clock, and he asked me if the property had been sold. I said I thought it was, but I was not quite sure. He asked me, if it was not sold if I would give him another chance, which I promised to do. Between ten and twelve on the 27th, defendant came in to pay the deposit. Mr. Drake was out at the time but came in shortly after and gave the receipt. I had no idea defendant was buying for anyone but himself.

Cross-examined by Mr. Lowder:—Plaintiff mentioned the property several times but generally in answer to my suggestions.

James Winstanley examined by Mr. Kirkwood:—Plaintiff instructed me to see what defendant would take for lot 123 and limited me to \$4,000. This was some time in February. My commission was arranged at 1 per cent but I could not effect the transaction.

Cross-examined by Mr. Lowder:—I had heard of the dispute between the parties before I was instructed by plaintiff. In conversation with me the plaintiff expressed a certain amount of annoyance at defendant's action in buying the property over his head.

This closed the case for the defendant, and Mr. Kirkwood addressed the Court at length, reviewing the evidence and pointing out that plaintiff must fail upon the testimony given by several independent witnesses that the sale to defendant had been actually completed before, the time plaintiff stated he had commissioned the defendant to effect a purchase as his agent.

Mr. Lowder replied on behalf of the plaintiff.

His Honour in delivering judgment stated that it was clear plaintiff must fail, as his petition was based on a misconception of facts. It was proved beyond doubt that the purchase of the property was not effected when, even taking the plaintiff's version of what had occurred as correct, the relationship of principal and agent existed between the parties, and therefore the prayer of the petition cannot be granted. The Court was convinced that the deposit on the purchase money was made in the morning, and although the defendant had not given his evidence in a very satisfactory manner, still in that particular he was borne out by Messrs. Drake and Smith. No doubt it was difficult to account for defendant's conduct and his extraordinary statements to the witnesses Peacock and Shirras. It may have been that defendant did not disclose the fact of his having purchased the property as soon as he ought, but after the evidence which had been adduced, a verdict would have to be given for the defendant with costs.

#### EQUINE MARTYRDOM.

In the *Courrier du Centre* of the Haute-Vienne there appeared in April of last year a terrible account of a frightful martyrdom of horses in France, a country which has been very well termed by Frenchmen themselves "*l'enfer des chevaux*." According to this journal, which gives an official account of the facts from a M. Sapin, member of the Limoges Society for the Protection of Animals, it appears that some speculators at Bordeaux have thought it well to try and make their fortunes out of that very disgusting object of natural history, the leech. To this end they have made artificial swamps on the banks of the Garonne, and filled the swamps with leeches. To be profitable these leeches must multiply themselves by millions; to do this they must be liberally supplied with food;

to thus supply them the Bordelais speculators buy up all the old and worn-out horses of the province, and drive or drag these horses into the swamps, which are subdivided by wooden compartments, so placed that when these unhappy animals have been forced into the mud there is no escape for them. The leeches fasten on them instantly by thousands; the horse is in a few moments black with crawling creatures; the bloodsuckers fix themselves most of all on the open wounds and galls that these poor horses have incurred in their many years of service. An eye-witness describes in terms of horrible vividness the vain struggles of the animals, drawn downward into the mud, bleeding at every pore, striving in frantic terror to shake off the leeches which hang on their eyes, their nostrils, all their most sensitive parts, and at last, exhausted by loss of blood, sucked down into the noxious slime, and seen no more. He adds that all these poor martyrs are bought when they are aged, infirm, weak with over-work, with hunger, and with fatigue, and in this piteous state are devoured alive by the annelides! From eighteen to twenty thousand horses are annually sacrificed in this manner at Bordeaux.

France must cease to be classed amidst civilised nations if such torture as this be permitted when once it has been exposed to the light of publicity. It would be probably useless in the land which has the school of Alfort, with its frightful operations and experiments, to urge the agonies of the horse as a reason to stop the barbarities of the greedy speculators, human leeches who thus draw blood to make them gold. But the argument which may be heard, and this may indirectly save the horses, is the medical statement made by many doctors of eminence that serious consequences to the human body, of inflammation, ulcers, and other affections, frequently follow on the application of leeches; and that there can be no reasonable doubt that leeches thus nourished on agonising and often diseased horses, most frequently if not always affected by glanders or some other malady, must be dangerous in the extreme to many, and liable to transmit to man the taint of scrofulous and other contagious torments.

Perhaps the egotism of human nature, taking fright at the peril to itself, may insist on this martyrdom of the horse being put an end to in the west of France, and it would be well if the vile speculators who thus trade on torture could receive some condign punishment from the law, and expiate in prison the misery they have caused. I fear these accounts have escaped the sight of the English public writers, for I have never seen any English relation of this frightful cruelty, nor have I seen it noticed by the Paris press.

I often think that the treatment of the horse all the world over is one of the most degrading instances of the ingratitude and the meanness of man. Despite all the enjoyment that they give us and all we owe to them, I sometimes wish that horses had never been tamed to servitude, and that we had been left to our own puny and contemptible powers of locomotion. This generous and loyal animal has become at its best a mere die for men to cast in gambling, at its worst a victim on which they can wreak their most brutal violence. With the exception of the few people who really love the horse for itself, the vast majority treat the animal precisely as though it were a mere machine without nerves or brain. The horse has enough in all conscience to endure from the servitudes inevitable to his preparation for his life of servitude, without having his subsequent career subject to the countless, and often quite wanton, tortures that are inflicted on him. A great deal of the suffering of the horse, such sufferings for instance as those endured in the leech swamps of Bordeaux, would be spared to them if it were not for the avarice of men. If those whose horses fall incurably lame, or become too slow from increasing years for the labour that is required of them, would only kill them mercifully, and as instantaneously as possible, instead of making small sums of money by selling them to livery stable keepers, cabmen, or carters, the gain to the horse would be immense, and the gain to the public no less, for if these cabmen and carters could not buy weak carriage horses and riding-hacks they would be obliged to buy stout roadsters, and horse dealers would find it profitable to breed strong, stout-limbed beasts with the *Pretcheron* or the Flemish strain in them. As it is now, the career of the horse is a *descentus Averni* from no fault of his own; he is broken in too early, harnessed too early; he becomes a carriage horse (luxuriously housed and fed), only at the first approach of age or weakness to be dismissed to the hard work of the livery stable, thence to the bitter exposure and ceaseless toll of the cabstand, thence to the carter's shafts in hideous night-work, where his wounds are unseen and the blows unheard that are rained on him, thence to the long drawn out death of the knacker's yard, or to the still greater agony of the vivisectioner's torture-chamber. Remembering all that the world owes to the horse—the world of pleasure and the world of business alike—nothing ever so utterly condemned the egotism and the brutality of human nature as this destiny that it allots to its faithful servant and companion. Men and women do not think about it because they are so used to it; but none the less is it one of the vilest spectacles of a false civilisation.

Much of this anguish would be spared if owners of horses would not sell them when in a feeble or aged state. Innumerable sprains and strains would be cured if the owner would have the patience and the liberality to keep the animal out of work for awhile. Instead, the master says that he "can't keep an animal eating its head off;" and it goes to the first buyer who will take it for omnibus or tramway, cart or wagon. Quantities of horses are thus sold by men to whom the few pounds thus gained are no object, or ought to be none. Rest would cure half the accidents that horses receive, but people will not give it them because it costs money. A pet horse of mine had a very bad strain consequent on a groom's disobedience; his leg was almost as useless as though it were broken; I was advised to sell him or kill him: I did neither; I had his plates taken off, put him into the largest loose box I have—one 18 ft. by 13 ft.—with straw up to his knees, and then, giving him no treat-

ment except cold water bandages, kept him doing nothing for a year; gently walked about on the soft paths of my woods when it was fine weather. He recovered entirely after twelve months' rest; and now he is ready to jump over the moon, and the only hard task is—to make him not gallop. Now I am aware that what is possible with one favourite horse is not possible with many; but there are thousands of people to whom a horse's keep for a year would be no very great burden, and it is only his keep that costs anything when you have other horses in your stable and men to attend on them. I wish men and women would think of this and not sell their horses to cabmen and carters that they may have guineas to blazon their names with on the books of public charities. If they will not spend time and money in curing the maladies incurred in their own service they might at least relinquish the small gain to be obtained by the sale of an infirm horse and, as I say, give him the last and mercy of a swift death. To shoot a horse is cruel work; nine times out of ten the best shot fails of immediate effect; the much-vaunted bag of chloroform is a still more terrible torture. There is only one merciful way—that of the tube inserted in the vein behind the ear and blown into, when the horse drops instantly. But this is little understood, and as little practised; though an English hunting-man devoted to horses told me he had never known it fail when properly done by a competent person. Even the old-fashioned method of bandaging his eyes and shooting him would be kindness itself compared with the long drawn out torments of a carriage horse or a park-hack when sold to fall into the piteous state of a galled and spavined cabhorse. But the majority of horse-owners—I mean among gentry—have a sort of mock emotion, which allows them to sell the horse into a slavery that they do not see and have not imagination enough to conjecture, and makes them shrink from the real mercy of giving the animal, which they can no longer keep, a death warrant which shall save him from servitude. Even the kindest people are apt to be (to me quite unaccountably) indifferent to the fate of horses they no longer want. They say, "Oh, he has gone to a very good master," and dismiss his subsequent career from their minds, forgetful that even the change of locality and owner is an extreme pain to the animal. Horses grow ardently attached to their stables; they are like cats in their affection for places. Not long ago I took my carriage horses by easy stages to the Ligurian Riviera; they fretted at their new stables and were not in either their usual health or spirits while we were there. When they returned and got, on the fourth day of their homeward journey, on to a well-known bridge about three miles from their home they snorted, tossed their heads, and were with difficulty kept from taking their bits between their teeth and rushing headlong to their beloved habitation. They were really homesick whilst they were away. What, then, must be the pain endured by the poor animals who constantly, through their owner's caprice or avarice, change hands twenty times in a dozen years?

In nothing I think does the cynical selfishness of human nature display itself more cruelly than in the manner in which horses are tossed about from buyer to buyer all the world over, as if the creatures were sacks of wool or blocks of wood. I have heard a French horse-breeder say that it paid him to breed horses rapidly, work them at one year old, and use them up in four years; he avowed that you got more labour out of them so; and so it is the cheapest way in the long run. When one thinks of the beautiful, alert, spirited, yet docile, creature that a *happy* horse is, one could say that no more odiously cynical cruelty ever issued from the lips of man. But horses were this dealer's stock-in-trade, just as negroes used to be a slave dealer's, and they were nothing to him, except articles in which he traded. If it were only dealers that felt in this manner it could be understood; but what is worse, it fairly represents the view of horses that nine out of ten horse-owners take. Here and there a man flatters himself vastly on his benevolence, because he turns out a faithful horse to grass for the remainder of its years—*i.e.*, exposes it to heat, cold, rain, sun, hunger, and the gadfly, without mercy. That a horse thoroughly enjoys straying loose about a field in fine weather is certain; it is equally certain that being turned into a field to live, to get its food off short, weedy grass, to be without corn and hay, grooming and shelter, and to be abandoned to an empty stomach and a sun-scorched or rain-drenched coat, is exceeding misery to an animal that has been accustomed to have all its wants supplied, and a warm stall or a cool one provided for it according to the season. Let men fully realise all that this pet phrase "turn him out to grass for the rest of his days" really means, and they will see that shallow sentiment, that inconsiderate egotism has made it popular.

Another gross cruelty to horses, of which the remedy lies with the legislature and the public, is the way in which, if a horse fall through a fit, or an accident, he is left to lie in a dying state upon the stones or the road where he has dropped. All cities and all countries sin alike in this respect. It is the same in Paris and in London as in Florence and Rome, or Vienna and Madrid. The other day, in Paris, a horse had one leg cut literally off by the shock of an omnibus that it came in collision with, and it was left in a hopeless state, bathed in its own blood for hours; a similar thing is to be seen continually in all the finest cities of the world. Surely this would be easily remedied; there ought to be a hospital for horses (where no experiments should be allowed) in every town of note, and whenever an accident happens to an animal in cart or carriage the ambulance of the hospital ought to be obtainable for him at once, and a grievous spectacle of intolerable suffering thus spared the passers-by. It is exquisitely painful to see a horse lying bleeding to death with wounds made by the pole or the wheel of some other vehicle, and, after perhaps half a day's torture, tormented further by being hauled into the slaughterer's cart and jolted barbarously to some distant slaughter-house. Men and women are quite capable of inflicting an immense amount of pain who do not like to think about the infliction of it; and perhaps this sort of refined selfishness is more often productive of animal pain than the absolute hardness of temper which inflicts it ruthlessly. If

it were possible to induce a man or a woman who is of ordinary humanity to follow out seriously in thought the various stages of degradation and labour by which a horse, once the pride of a stable, drops down through age and infirmity to this last use as a living prey for the leeches or the vivisectioners. I believe that there are few who would have the heartlessness to consign a beast that had served them well to such a fate. But they do not think, chiefly because they wish not to think; people have grown into the way of keeping horses solely for convenience sake, and get rid of them as they get rid of a dinner-service when it is chipped and cracked, or a wall-hanging when it is no longer the fashion. The horse is a sensitive, affectionate, highly intelligent living creature, but he is very rarely treated as such; he is usually dealt with as though he were a piece of mechanism, and when the mechanism gets rusty with age or over-work none care how it is broken up and thrown away. To minister to the pleasures of a brilliant woman or a high spirited man, to be caressed, petted, admired, ridden down the tangle to show perfect paces, or depended on for matchless strength and unflinching courage in the hunting-field, and then in old age to toll in the shafts of the nightcab or the brick-cart, and die at length stretched out on a hospital table, while the nerves are laid bare and his muscles sawn and cut and burnt by medical students: this is a fate to make Manichæism seem the only logical religion. In nothing that the world holds does man's ingratitude show in more vivid colours than in this treatment of the companion of his happiest hours. And it is all preventable enough. The hack speculators of Bordeaux could not drive their unholy trade unless there were thousands of horse-owners bad enough to sell their animals for such a purpose when they have reached the extremity of old age, of weakness, or of disease. So if the millions of people all the world over who own horses for their amusement would refuse to sell them when they become invalided or are aged, and would have them mercifully slain, the knackers' yards would be robbed of half their horrors, and thorough-breds all akin and bone, galled and bleeding, in the shafts of public vehicles and loaded waggon, would no longer be the scandalous picture of misery they are now in the streets of all cities and towns. It is one of the lopsided equities of law when the carter is fined or imprisoned for overloading his horse and the gentleman who originally owned the horse in its youth cannot be touched or even known, though his own greed and callousness first sent it into that piteous servitude. We execrate the wretched traders who throw the live horses to the bloodsuckers of the swamps; but as guilty as they are all the owners who sell them to the torture. We owe a duty to our horses not less than to our fellow-men—nay, *pace* the philanthropists, perhaps we owe a greater, because our horses have done us nothing but good, given us nothing but honest services. Yet how do we deal with them for the most part? Let the millions of martyrs of tramway and omnibus work, of dissecting-boards and slaughter-yards, answer that question with the eloquence of an unspit agony.

I should like to see the words of Condorcet graven on the minds of men:

"Ne rends point malheureux les animaux qui t'appartiennent; ne dédaigne point de t'occuper de leur bien-être; ne sois pas insensible à leur mal et sinistre reconnaissance; ne cause à aucun des douleurs inutiles; c'est une véritable injustice; c'est un outrage à la nature, dont elle punit par la dureté du cœur que l'habitude de cette cruauté ne peut manquer de produire."

The horse is a slave; the most innocent, the most forgiving, the most useful, and the most generous slave that earth has ever seen. In the vast clamour for liberty that is thundering through the various tribunes of Europe at this epoch I wish that mankind would remember the thralldom of this noblest of all serfs.—"*Ouida*" in *Whitehall Review*.

Nevertheless Yoshitsune ordered the boats to be immediately prepared for sea, declaring his determination to embark without an hour's delay. If their first misfortune had seemed an evil omen this was a more than compensatory occasion, since it enabled the troops to cross at a moment when their coming would be least of all expected.

But the sailors one and all refused to put out. It was impossible for the boats to live in such a sea, they said, while the storm was so violent that to hoist a sail was out of the question. Were it even daylight some effort might be made to avoid the weight of the waves, but at midnight with a starless sky, not one craft in a hundred could hope to survive.

Yoshitsune overcame this difficulty very simply. He said that so far as others were concerned he would not attempt to enforce his orders, but that whatever peril the passage presented he himself would make the attempt, leaving the rest to follow or not as they pleased. The crew of his barge had therefore to choose between the chance of death by drowning and the certainty of immediate execution if they persisted in their refusal.

In this dilemma the unfortunate sailors had no alternative. In all their experience they had never encountered, nor even contemplated the possibility of encountering, such weather, but at the same time they showed by their compliance that they had more faith in the mercy of the waves than in the chance of Yoshitsune's relenting. Within the river's estuary there was a little cove sheltered by high banks, and giving no evidence of the tempest's tumult save in the disordered rocking of its deep waters. Here Yoshitsune's barge was prepared, and in it his own immediate followers, headed by Benkei and Saburo, took their places to the number of forty men. These with their horses, servitors and the sailors, though not by any means completely filling the galley, were yet a burden very much greater than prudence would have suggested under such circumstances.

The whole army had assembled to witness the embarkation, but in spite of their chiefs' example, these men who would have faced death in any other form without a semblance of hesitation, found something so terrible in the howling of the gale and the thunder of the surf at the river's mouth, that only four captains dared to share in the enterprise. They were however all knights of tried prowess, and though the five boats only transported a century and a half of warriors, they formed a band no host, however strong, could afford to despise.

Yoshitsune ordered that no light should be shown in any boat except in his own. This was done ostensibly with the object of keeping the garrison of the castle in ignorance of their assailants' force as well as of preventing, if possible, the separation of the little fleet, but it may also have been designed to hide the disasters too probably awaiting the transports from the eyes of the multitude congregated on the beach. The worst fate that could befall himself seemed a matter of less moment to Yoshitsune than the disheartening effect his death must have upon the troops he commanded.

Probably there was not one either of those actually engaged in this perilous adventure or of those that witnessed it, who credited the possibility of the boats making the offing safely, and as the light of the pine torches carried in the leading galley passed out into the darkness beyond the estuary, each mountain of water that hid it from the watchers on shore seemed to have achieved its inevitable destruction. But it happened by good fortune that the tide had begun to ebb just as the boats put off, otherwise the seas at the mouth of the river would have been more than any craft could have endured. As it was, however, the wind, current and tide, all acting in the same direction swept the boats out seaward with incredible velocity, and a voyage which under ordinary circumstances must have occupied fully two days was prosperously achieved before the following noon.

The landing was effected at a place called Amako some distance eastward of the point of attack. Incredible as it appeared, the whole five boats had escaped without injury, and when the little band of knights assembled on the beach, any dangers the future might have in store seemed utterly insignificant in comparison with those they had just encountered.

Nevertheless, their situation was well high desperate. Yoshitsune's hope in attempting the passage had been that the main part of his knights would have followed his example unhesitatingly, whereas he now found himself in the enemy's country with a mere handful of men and no reasonable prospect of receiving reinforcements before two days at soonest.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXXIX.

#### THE SACRED FAN

The memory of this quarrel between Yoshitsune and Kajiwara scarcely survived until the following morning. Men's minds were entirely engrossed by the excitement of preparation, and the tumult of departure, while those who had leisure to think found a more interesting subject in the prospects of the expedition. The season was not propitious for a sea voyage, though at the same time the bitter chillness of the February winds was scarcely of so much moment as their propitious direction. If only the northerly breeze held, two or at most three days would suffice for the passage, and this reflection consoled the knights as they marched down to the seashore in the frosty twilight.

But the boats had scarcely reached the offing when the wind veered to the south, and gradually increasing to a hurricane drove the fleet back to Daimotsu with a loss of some seventy or eighty transports and not a few lives. For two days and nights, the gale seemed to grow if possible more violent, after which it fell suddenly calm and then went round to the north, becoming favorable indeed as far as direction was concerned, but scarcely showing any signs of abating.

Thus the extraordinary celerity of the voyage was after all a very questionable gain, since if it had brought them within striking distance of their foes at a moment the latter could never have anticipated, it had also made the arrival of aid a proportionately distant prospect.

Of these things, however, they either took no thought or refrained from discussing them through dread of discovering a cause of caution. To conceal their weakness by the vigour of their action seemed the only hopeful, as it certainly was the most congenial, course and so soon as they had fed their horses and buckled on their harness, they rode boldly forward choosing the routes that seemed to lead most directly westward.

A few furlongs inland they discovered the gleam of a red pennoncelle, and a hurried reconnaissance revealed what seemed to be a considerable force of Heike troops encamped at the base of a hill. They had not expected to encounter the enemy so soon, but they prepared immediately to attack, Yoshitsune addressing to his followers the only warning he deemed necessary under the circumstances; a caution against shooting a single shaft at random, or holding their hands to make a prisoner.

The Taira men were taken completely by surprise. An outlying picket of scarcely a hundred soldiers, they could not, in any case, have offered a serious resistance, but as it was, they were so bewildered by the mysterious appearance of an enemy they had fancied more than four-score leagues away, that their only idea was to make their escape as quickly as possibly. Their leader was taken alive by the victors, and from him Yoshitsune learned that no obstruction existed on the road to the castle of Yashima except an outpost of fifty men stationed a little further on.

This post was found equally unprepared. Its defenders fled without making almost any resistance, so that the Genji knights were able to be sure their real force was as yet undiscovered.

They knew now that they were within an hour's ride of the castle, yet they had formed no definite plan of action beyond that which was comprised in a resolution to advance at all hazards. To this course they were in a manner committed, since their presence in the island was now known to the garrison of the castle, or would presently be so, and it was certain that their only chance of success—a very infinitesimal chance at best—lay in taking the initiative.

For the moment they found nothing more embarrassing than their utter ignorance as to the nature of the castle defences. It was much more probable that, proceeding in this blind fashion, they would ultimately find themselves arrested by some impossible obstacle and exposed to an attack they could not hope to repel, than that fortune should lead them directly to the weak point of a fortress, reported for the rest to be everywhere impregnable. Chance is however sometimes not unkind to those that trust her implicitly, and Yoshitsune's experiences in the valley of Ichi were not calculated to make him diffident. Riding at the head of his little troop his keen eye took in every feature of the country through which they passed, and he never for a moment doubted that whether by stratagem or daring the knowledge they needed would be acquired before its want became fatal.

Hitherto they had purposely advanced by routes which, though leading in the right direction, were little more than by-paths, but about a mile beyond the place of their last encounter they emerged upon the main road, and were presently overtaken by a man riding at full speed and carrying a letter-box slung across his shoulders. Yoshitsune called to him as he was about to pass, and asked whence he came and whither he was bound, to which the other, never for a moment fancying that he had to do with a Minamoto knight, replied readily that he had come from Kiyoto and was on his way to Yashima.

"Surely he that sent you must have deemed the errand a very pressing one," remarked Yoshitsune, "else had he not commissioned you to cross the channel in such a tempest as we have just had."

"As for my errand, master," replied the other, "I neither know what it is nor might tell if I did, but I am very sure that I should never have lived to perform it, had I trusted myself to sea during the last three days."

"Yet if you crossed before the storm, you must have fared but slowly on your way since."

"The more reason why I should not loiter now," was the somewhat impatient reply. "I pray you let me pass on at once lest the cause of my delay be misjudged."

"In truth I have no desire to hinder you," said Yoshitsune, all the while however keeping his horse in such a position that it was impossible for the messenger to proceed. "I myself am bound for Yashima whither I am leading this handful of men to join Munemori's pennon, and I would fain have learned from you whether the rumours that reach us from beyond the water be true. 'Tis said here that Yoshitsune, the Genji leader, has assembled an army at the mouth of the Yodo, and that we may expect him to make a descent upon Yashima at any moment. If so, his preparations must have been in progress when you left the capital, and you cannot have failed to hear of them."

"The rumour is true enough master, for to be brief I am commissioned with a verbal message to that effect for my Lord, Munemori. Yoshitsune only awaits a quieter sea, and the very moment a boat can live he is sure to put off. He is, they say, a very fiend in the fight. Even Yoshinaka, the 'Morning Sun' could not withstand him for a moment, and those that sent me bade me warn the garrison of the fortress not to put their faith in any common defence."

"A warning from a friend is never to be despised," remarked Yoshitsune with a smile. "Yet methinks such a castle as Yashima can afford to despise even this Yoshitsune you speak of."

"There you err, master, with all due respect," returned the other. "Those that know the place best could tell you another story."

"Impossible!" cried Yoshitsune with assumed incredulity. "One need not have taken part in many assaults to know that a fortress with water on four faces has a stout ally in nature."

"That may be, master, but see you yonder pine trees whose tops are just visible at the head of the valley? They look insignificant enough from here, but for all that they stand on the margin of no mean forest, with a many roofed village at its northern extremity. If any man desired to reach the castle unopposed he need only set fire to the trees and the houses they shelter, and then following the line of the hill, ride boldly across the channel at ebb tide. The water would not wet his saddle-girths, nor the smoke suffer a man in the fortress to observe his approach. None have a better knowledge of the position's weakness than the garrison themselves, and in the event of an attack from this quarter, it is their intention immediately to embark the main part of the army, and only hold the castle so long as may be convenient to themselves and irksome to the enemy."

Quite persuaded that he was addressing an ally, the man had volunteered this information unhesitatingly, yet as he drew to the close of his explanation something in his questioner's demeanour made him falter in his speech and strike his stirrups against his horse's flanks with an instinctive anxiety to resume his way. Yoshitsune's bearing had indeed undergone a curious change. Turning towards Kiyoto a face radiant with strong joy, he joined his hands and earnestly thanked Hachiman, the God of Battles, for the guardianship to which alone this happy encounter could be referred. Almost at the same moment Benkei urged his horse to the messenger's side, and stretching out a hand crushed the man down upon his saddle as though he had been a bamboo sapling.

"Take his despatch-box from him," said Yoshitsune, "and bind him to a tree in the grove in such a fashion that he shall not be able to tell his story to every passer by. As for the letter, I charge myself with its delivery. It were a sin to entrust so important a document to such an untrustworthy carrier."

After this the hundred and fifty knights resumed their journey with a confidence that nothing could shake. It was scarcely strange that some of them should attribute an event so incredibly opportune to supernatural interference, or at any rate to their leader's limitless good fortune, for the times when the gods found a home not incomparable with their own paradise in this fair land of Japan, were not then so very many centuries old.

Turning away once more from the main road, they followed a somewhat devious path among the inland hills, taking as their guide the line of the sombre pine forest from which the rays of the setting sun were struggling vainly to disentangle themselves. Behind the tree tops in the distance they could see a thin column of smoke marking the position of the doomed village, and the northerly wind brought to their ears the dull thunder of the breakers now tumbling with their wonted

monotony against the base of the battlemented islet. The sea was once more calm and the moon being in her first quarter, everything was favourable for their enterprise with one important exception: the tide was just beginning to flow so that the passage of the channel might not be attempted until three or four hours after midnight.

Nothing remained therefore but to choose a convenient position and encamp for the night. It would of course have been much wiser as well as more in accordance with the wishes of the whole party to continue the advance without delay. Intelligence of their presence could scarcely fail to reach the garrison before daybreak, and unless the men of Hei were utterly pusillanimous, they would never let slip such an opportunity of crushing their foes before reinforcements came up. On the other hand, Yoshitsune's followers were wearied out by the hardships of their stormy voyage, no less than by the battles they had fought since landing. For the moment nothing seemed to them of such importance as a few hours' rest, and when they threw themselves down in their harness under the shadow of the pine trees, Yoshitsune found nobody capable of sharing his vigil except the never-tiring Saburo.

Meanwhile, as may be supposed, those in the fortress were not left in ignorance of their enemies' movements. Information of Yoshitsune's landing and of his successful attacks upon the two outposts reached Munemori before sunset, accompanied however by almost incredible exaggerations of the invader's force. Not only were the thirty thousand men Yoshitsune had actually assembled at the mouth of the Yodo multiplied to double that number, but the whole of this army was said to have accompanied its chief in his marvellous voyage through the storm. Still for all the alarm these statements excited there was nothing to justify the garrison in anticipating defeat. Their numbers were largely in excess even of the Genji's supposed force, and they possessed besides an immense fleet of galleys, by the aid of which they could at any moment retreat to the mainland or change the front of the battle at pleasure.

Nevertheless the knowledge of a vulnerable point in his armour cramped the stoutest warrior's action. What the letter-bearer had told Yoshitsune was in all respects accurately true. At low water the fortress might not only be reached by wading at a particular point, but also rendered well nigh untenable by the smoke of the village on its northerly face. It is difficult to conceive why the Taira chiefs neglected to provide against either of these contingencies, except on the supposition that they deemed it wiser to trust their enemy's ignorance than their own ability to hold him at bay. At any rate they seem to have been so constantly harassed by the consciousness of their weakness, that no sooner was the morning twilight illumined by the flames of the burning forest and of the homesteads on its verge, than they determined at once to embark their main army and leave in the fortress a force only just sufficient to prevent the Genji from seizing it unopposed.

This manoeuvre was carried out with such celerity that as Yoshitsune and his knights rode cautiously across the channel they could see the Heike galleys creeping out in long divisions from the shadow of the hill. Naturally it did not occur to them to suppose that the enemy had commenced to retreat without even crossing blades. It seemed much more probable that he contemplated a flank attack, or possibly that having gained intelligence of his assailants' weakness the object of his movement was to cut off their retreat, and thus it happened that their very timidity was for a time useful to the Taira knights, for they obliged Yoshitsune to detach a portion of his small force to watch the proceedings of the galleys.

The battle began as was usual with an interchange of arrows. Yoshitsune's original design had been to storm the fortress at once, but at sunrise the wind veered round to the north-west and blew with such violence that the conflagration threatened to spread every moment from the mainland to the castle. If this happened the garrison would be compelled to evacuate the place, and any attempt to anticipate so probable a contingency seemed unnecessarily rash. The defenders of the fortress understood all this themselves, but it did not in any degree disturb their aim, for they fought within arms' length of the galleys that were lying ready to take them off.

So for a time the shafts hurtled to and fro, now ringing on mail or shield, now biting into flesh and bone, until at

last that which Yoshitsune had foreseen took place. A little column of smoke began to curl along the roof of the western barbican, and a ringing cheer rose from the assailants as the light of the flames shone through the oaken crenelle. In a few moments the fire spread from the outworks to the main building, and as the smoke rolled seaward in dense clouds, the last of the Taira boats rowed out to join the fleet in the bay.

This however represented, after all, but a small gain to Yoshitsune and his party. So far, the loss they had inflicted on their enemies was very trifling—scarcely more indeed than they had suffered themselves—and they were now obliged to carry on a desultory sort of warfare particularly ill-suited to their small numbers. For no sooner had the flames subsided a little, than the Heike galleys began to row in one by one and engage the knights upon the island. The occupants of the boats did not attempt to disembark or come within sword's length of their foes, but lying half a bow-shot of the shore, kept up an incessant flight of arrows to which the Genji were constrained to reply, though weariness had already begun to tell on their aim and their quivers were well-nigh exhausted. In vain the stoutest of Yoshitsune's followers forced their horses into the water till the waves washed their saddle-trees, and with shouts of invective or derision challenged their cautious opponents to try conclusions on the shore. The Taira men for once seemed to appreciate their advantage, and only answered their enemies' defiance by showers of arrows often too well aimed.

This had gone on for some time with varying results, when the Genji Knights became conscious of a novel movement among the galleys, which has hitherto taken no part in the combat. One of them, a large and handsomely decorated barge, separated itself from its comrades, and rowed slowly shoreward, pausing at a distance of about fifteen fathoms from the island. For a moment Yoshitsune hoped that this portended a challenge to some single combat, for such things were common in the times of which we write, but looking more closely he saw that the barge belonged to the Imperial household, and that beside its crew, it was occupied only by women. One of these, a girl whose singular beauty was unmistakable even at that distance, rose from her place so soon as the boat's motion had ceased, and fastened a fan to the top of the mast-rest in the stern. On the face of this fan the Imperial arms of Japan,—a lurid sun just climbing above the horizon—were emblazoned among a mass of rich embroidery, and as it swayed to and fro in the breeze, it glittered so brightly that one might scarcely endure to gaze upon it without winking.

Yoshitsune watched this performance with unbounded astonishment. It was not difficult to understand that the fan was offered as a mark for the Genji archers, but to what end? Was it a mere mockery, or had the enemy some subtle design in proposing so strange a trial of skill?

"Can any man read me this riddle?" he turned to his followers. "It can scarcely be that the Taira men deem our shafts worthy of no better mark."

"The thing is soon explained," replied one of the knights, a man who in point of size and thwars might have compared not unfavourably with even Benkei himself. "The girl with the fan is Tamamushi, the Empress Dowager's chief lady in waiting, and as comely a lass as ever wore a kirtle. The fan is one that was presented many a year ago by the Emperor Takakura to the shrine of Itakushima from whose abbot Munemori received it when he left the capital. Those that carry it are, they say, better guarded from their enemies' arrows than they were though all the pavises in Japan were set up around them, and if any shoot at it, the shaft will turn and pierce his own body."

"Is it then to test its virtue that the Heike men have set it up before us?" asked Yoshitsune.

"Even so," Hatakeyama answered ruefully. "And if we fail to bring it down, we shall have strengthened their hands more, I trow, than any victory they are likely to gain themselves."

The Genji knights looked at each other in consternation. There were among their number archers as skilful as any in the empire, but not a man could trust himself to hit such a mark as a fan swaying in the wind at thirty paces.

"If that be so, Hatakeyama," said Yoshitsune after a pause, "surely none here has any right to draw a bow before yourself in this case. Let us see whether the sacred fan is proof against one of those long shafts of yours."

"Right glad were I to try my skill," returned the knight. "but an unlucky strain I have given my left hand prevents me from holding a bow steadily. I doubt not however there are others here who will outdo anything I might have done."

Now Hatakeyama was counted not only the strongest man in the army next to Benkei, but also the most expert bow-man in Japan. His refusal to make this essay was therefore regarded as an indisputable proof of its impossibility, and for the moment it seemed as though the virtue of the Heike talisman was destined to remain undisputed.

But Yoshitsune had no intention of suffering this. Whatever his own opinion may have been about the fan and its supernatural attributes, he knew that if it was permitted to remain suspended in the Imperial barge, every man in the Heike host would be inspired with that confidence which is the certain precursor of victory.

"Since Hatakeyama's hand is unsteady," he said with a laugh as he unlaced his casque, "I must even try what I can do myself. The credit of our cause might easily be in better keeping, but if there be a god that guards the fan, there is another, I trow, that watches over the white flag."

So saying, he chose a straight, well-feathered shaft from his quiver and turning his horse's head seaward, rode out some three fathoms into the tide. Up to that time his unrivalled fame of fence had so eclipsed all his other feats of arms that he had scarcely thought of him as an archer, yet was there something so prophetic of invincibility in his graceful bearing and in the quiet confidence of his comely face, that as he advanced towards the boat with the sunlight sparkling on his gold-damasked armour or making rainbows in the foam his horse's hoofs scattered about, not one of the knights watching him from the shore doubted his ability to achieve what he had undertaken. The ladies in the barge too, taught either by instinct or by the descriptions they had heard of the hero's appearance, at once recognized the horseman in the gorgeous harness, and forgetting everything but their curiosity, crowded to the boat's side and scanned all his movements with dilated eyes.

When, however, Yoshitsune, seeing that he might not advance any further, drew bridle and would have adjusted his arrow, he found the task he had set himself so beset with difficulties that for one instant he was overwhelmed with despair. For not only was the fan tossed hither and thither by the breeze and rocked to and fro by the motion of the barge as it rose and fell with the waves, but the sunshine reflected from its golden woof made it almost impossible to regard it steadily, and at the same time his horse, frightened by the breakers that rolled in about his feet, grew more and more restless and showed a disposition to swerve round the moment his rider slackened the reins.

Yoshitsune therefore, feeling that he had need of more than common aid, closed his eyes and prayed as he had never before done in his life: "Nasu Daimiyojin, God of bowmen and the bow, guide my shaft but this once truly to the mark, and if the favour of heaven is no longer with my cause, grant that the waves may flow over my head before I fit my arrow to the string."

He had scarcely uttered these words in his heart when his horse stood perfectly still under him, and opening his eyes he saw that the wind had flattened the fan against the stanchion of the mast-rest so that its fluttering motion was for the moment stayed. Quick as thought his arrow was adjusted, poised, drawn up to the barb and discharged. In the moment of aiming he had been seized with an irresistible repugnance to shoot directly at the Imperial coat of arms, and had therefore raised his hand so that the golden sun was just hidden as he loosed the string. Even to this little difference of direction the arrow was implicitly obedient. Striking the frail framework of the fan, it shattered the ribs just below the point of suspension, and the rising sun with its embroidered environment was carried tenderly away by the breeze and dropped into the sea almost at Yoshitsune's feet amid an uproar of applause in which the Heike soldiers themselves could not refrain from joining.

(To be continued.)

#### YOKOSUKA STEAMERS TIME TABLE.

LEAVE YOKOHAMA.

DAILY:—8.50, and 9.45 A.M.; 12.15, 1.30, and 4 P.M.

LEAVE YOKOSUKA.

DAILY:—7.0 and 9.45 A.M. and 12 noon; 1.30 and 4 P.M.

#### DOUBLE ACROSTIC.

My first's as free, as free as air,  
Though foolish, it be reckon'd;  
Your gay costume, I'll boldly swear,  
Can help you with my second:  
My whole's a magic pow'r, you'll see,  
A wondrous transformation,—  
That changes dukes to beggars free,  
And raises men of low degree  
To lords of lofty station.

1.  
Here's a whimsical crotchet:—'tis past all belief  
How it oft brings a person to trouble and grief.

2.  
Though applied to both sexes, I'll plainly affirm  
That this light is a most unprofessional term.

3.  
I can not hit this light:—what a bore! what a sell!  
What a fraud! what a — something, but that I can't tell.

4.  
We are dear to the 'globe-trotter' (fortunate man!)  
With the time and the dollars to spend in Japan.

5.  
What a kind little word this, and how sweet to the ear,  
Of the swain who is wooing his lady-love dear.

HOODLUM.

ANSWER TO DOUBLE ACROSTIC, OF FEB. 28TH, BY "HOODLUM."

Briny		Ocean.
B	ilb	O

I	r	E
N	ar	A
Y	ar	N

Correct answers received from Zulu, Nap, and Ellis. Others incorrect.

#### CHESS PROBLEM,

By J. A. CAMPBELL.

BLACK.

WHITE.

White to play and mate in three moves.

SOLUTION OF CHESS PROBLEM, OF FEB. 28TH, BY S. A. HARRISON.

White.	Black.
1—R. to Q. sq.	1—P. moves:
2—Q. to Q. 5.	2—Any.
3—Q. moves.	1—Kt. takes Kt.
2—B. takes Kt.	1—Kt. takes B.
3—B. to Q., 8 mate.	1—Kt. to K. 4.
2—K. to Q. 6 ch.	
3—Q. to B. 5 mate.	
2—Q. takes Kt.	
3—mate.	

V.d.P. and Q. have sent the following answers:  
 1—Kt. to Q. B. 8. 1—Kt. K. 2.  
 2 (K. Q. B. 4 ch. 2—Kt. takes R.  
 or B. takes Kt.  
 3—mate.

This position appeared in the *Field* some years ago, and the following was the author's solution:

1—R. to Q. sq.	1—P. moves.
2—Q. to Q. 5.	2—Any.
3—mate.	

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, FEBRUARY 27TH, 1880.

Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

-----represents velocity of wind

.....percentage of humidity

Max. velocity of wind 37 miles per hour on Saturday, at 5 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer was 30.385 inches on Friday, at 7 a.m., and the lowest was 29.649 inches on Saturday, at 7 a.m. This sudden fall in the barometer was followed by a sudden rise on Sunday, which was also accompanied by a marked fall in the temperature. This was succeeded by the heavy fall of snow on Monday night and Tuesday. The amount of snow—melted—was 1.386 inches, and the depth on a land surface was near 12 inches. The total amount of snow and rain for the week was 2.85 inches, some having fallen on everyday of the week, except Thursday.

## SHIPPING INTELLIGENCE.

## INWARDS.

Feb. 29, Japanese steamer *Shinagawa Maru*, Kilgour, 908, from Kobe, General, to M. B. Co.

April 6, 1878.

**KEATING'S COUGH LOZENGES,**  
COUGHS,  
ASTHMA,  
BRONCHITIS,  
ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

## MEDICAL TESTIMONY.

July 25th, 1877. 23, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.  
Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary. H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS.** It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS

Proprietor, THOMAS KEATING, London,

## THE GREATEST

**WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in eradicating and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1873. tf.

## The "Japan Mail,"

A Daily, Weekly, and Fortnightly Journal,  
ESTABLISHED, 1865.

## TERMS OF SUBSCRIPTION.

WEEKLY EDITION. The "Japan Weekly Mail," a Weekly Review of Japanese Commerce, Politics, Literature and Art:—Per annum, \$24: Six months, \$13: Three months, \$7.

FORTNIGHTLY EDITION, being a Summary of the foregoing, is published for transmission by the American Mail Steamers via San Francisco. Per annum, \$12; Six months, \$7; Three months, \$4.

THE JAPAN DAILY MAIL is published every morning (Sundays excepted) and contains the Arrivals and Departures of all Shipping, Passenger lists, Cargoes, Vessels on the Berth and in Harbour &c. &c. Also the latest Telegrams, Japanese news, Reports of Trials in the Courts of Law, Meetings of public bodies, and all matters of interest to the Community. Special attention is called to this Journal as a medium for circulating local advertisements. It has a large and constantly increasing circulation, its low price bringing it within the means of all classes of the community. It therefore affords exceptional advertising advantages, and secures to all announcements the utmost publicity, the object aimed at by advertisers.

SUBSCRIPTION PER MONTH—ONE DOLLAR.

## JAPANESE CARVING.

A WRITER in a recent number of *The World*, says:—  
“Carving is little better than a dead art; compared with painting or even with sculpture it finds few patrons; it has no place of exhibition, and no academical status. It has, however, some brilliant, if ill-appreciated, votaries; and among the number I hear of a common artisan who, in a slum near to the Euston Station, has done wonderful things in wood. He was discovered through the medium of a working-man's exhibition—a satisfactory sign that these institutions are fulfilling their legitimate aim. The excellence of a specimen of his handiwork obtained for him a commission for a huge oaken sideboard, containing twenty carved panels, from Landseer's and other appropriate pictures. This work, which is nearly as large as the room in which it has been almost carried to completion, is of remarkable merit; and arrangements are likely to be made for its public exhibition.” Reading this one naturally calls to mind the exceptional position that Japan must hold outside such a generalism. In this land, carving is one of the principal forms in which the artists of the country have always embodied their thoughts and talents. The fastidious niceness of the people in little things of use and adornment, as well as the delicate skill and patient industry of the artisan, has given miniature carving a high place among their objects of *virtu*. Statuary, as the term is generally understood by us, can be scarcely said to exist, its only type being the roughly hewn Buddhist images that sit and sue for a passing prayer from the peasant as he plods along the country roadside. Bronze images, some of fine execution, abound, but these are castings, and

belong to the trade of the metal-worker. Numerous cleverly worked images in wood are enshrined reverently in the temples, some being of extreme age and of surpassing merit. Idols—some western fanatics would call them, but the native priest, a man often of profound learning, holding a creed and moral code which, however, it may be transgressed by the laity, is of striking purity and sublimity, calls them commemorators and reminders of the pious lives and examples of the deceased. They, in fact, as nearly as possible correspond with the effigies in stone and bronze that adorn the tombs of the illustrious dead in our own Cathedrals; there, recumbent with hands in prayer; here, seated like the author of their salvation, absorbed in profound peace and with hands palm upwards. They are exhibited at long intervals for popular edification. As instances, may be mentioned three notable images at Nikko; namely, representations of Nobunaga, Hideyoshi, and Iyeyasu; one life-like image of great antiquity in the shrine of the second Shogun at Shiba, only to be seen as a special favour; and an image of Shinran Shonin, the founder of Shinshin, at the temple of Nishi Honganji at Saikio, said to have been carved by himself. There are also effigies of the founders of sects, and their disciples, in many other temples. At the Seido temple, at Surugadai, are wooden statuettes of Confucius and his ten principle followers, for with this belief they are revered, though a story runs that, though brought from Corea as simblances of these illustrious teachers, they have since been discovered to be images of Corean dignitaries of no religious importance. What's in a name? In this case, if our story be true, to a name and even a misnomer are due the erection of a unique temple and one of the loveliest temple groves on a fine spot in Yedo, perhaps the soothing of numberless troubled souls through several centuries, and certainly the pleasures of many a gay holiday crowd in feast-day attire. In the temple enclosure of Sengakuji at Takanawa, where the forty-seven ronins sacrificed their lives, are preserved striking images of each one of the heroes. To foreigners perhaps such things may have merely the sensational attractions of the redoubtable Chamber of Horrors of Madame Tussand; but to the Japanese pilgrim and sightseer they impart patriotic thrills of admiration and reverence for acts of true fidelity, undaunted perseverance, and self-sacrifice in working out a just retribution.

In addition to this perpetuation of the form of heroes in sanctified wooden images, there are many other places in which carvings in wood and ivory or even lacquer have become noteworthy in the country. The wooden buildings naturally depend for much of their enrichment upon carvings of various kinds. The Japanese worker in wood recognises three general divisions of the art, namely, shallow, deep and pierced carving. It is not our intention to dilate upon the exquisite effect and execution of the wood carving to fences, gateways, walls and ceilings of many important erections. Among the Arabs we find,

carried to perfection in geometrical forms, what in Japan we have in natural forms; namely, the rich effect and display of pierced panels and screens, cut so as to be seen alternately against the light and the deep shade of space. As examples of this pierced work may be noted the representations of birds in flight amidst clouds and tree tops, often adorning the *ramma*, or ventilating spaces left at the top of the walls dividing one room from another, in the larger dwellings and monasteries. In all there is that careful truth to nature, combined with a knowledge of material and results in light and shade, which distinguishes an artist's carving from that of mere wood cutting. Last, but not least, is the employment of the art upon little objects of every day use, in which some of their most *naïve* and original ideas and their greatest delicacy and skill are shown. The millions of little bone, ivory, and wooden carvings that find a choice place among the collections of the wealthy in all countries, owe their existence to the necessity of a knob or counterpoise to balance the tobacco-pouch when threaded through the belt. Oh! ravers against the vices of the smoker, how many *what-nots*, well furnished with quaint ivories, do you owe to the prevalence of this deadly drug! Among these *netsukes* still to be purchased the inferior ones have been made chiefly to supply the demands of the poorer classes or the undiscriminating foreign lounge.

The number of such trinkets adorning the person of a gentleman were few, and the wearer gave full value to good workmanship and originality of design in each, whether it were his sword hilt, his pipe case, or his *netsuke*. Mary-Jane, too, out for a holiday at Sydenham, with her buckles and bracelets, her necklaces, earrings and brooches, showing it is true, good weight of metal for the money, might take a lesson or two, well enough, from Miss Wave-of-the-sea or Miss Cherry-blossom in her pleasure attire with her two modest hair pins and comb, simple and artistic. If the last named young lady will condescend to lend you her hair trinket, which serves two other uses besides its display in the head gear, you may hunt all Yokohama round before you will find another of exactly the same design in its knob or tinkling pendants, though its form be simple in its prettiness.

Carving is essentially an industrial art, and one which has not attained in modern times academical exaltation, because it is not independent enough to stand alone. It is an art of the creeper type, and must have its support to cling to; and so it must be content to be the ally of such industries as that of the jeweller and cabinet-maker. Sculpture, its prouder brother, hewn first in the marble of the monuments whose proportions its duty was to embellish, now boasts its portable freedom, and ends in finding homes amidst the incongruous proportions of loudly furnished mansions. There is no merit in a miniature for the reason that it is a miniature. We would not regret to see the yearly exhibits of finely stippled copies in enamel of larger pictures which fill one room at Burlington House, swept out from the Academy forever. Feeble finicking copying, without idea or motive, that any slave could do! Japanese miniature carving has excelled because it has been applied with a view to render pleasing, objects of necessity or comfort, and because its workers have laboured fondly and well for new thoughts and expressions in their touch.

#### THE WORK OF THE CENTRAL SANITARY BOARD.

WE have received from Mr. Nagayo Sensai, Director of the Central Sanitary Bureau, two pamphlets, one being the first and second annual reports of the work

of the Board, embracing the period between July 1875 and June 1877: the other a report by the director, on choleraic diseases in Japan, during the year 1877.

The annual reports are prefaced by a brief sketch of the history of the Bureau. In the spring of 1873 a Board of Medical Affairs was established in connection with the Educational Department. Its first duty was to draw up a preliminary sanitary code, which was almost identical with such regulations in Europe and America. At the time, it was rightly decided that it was difficult if not impracticable, in the then condition of medical practitioners in the country districts, to apply the new provisions in their full rigour; but that only such measures as were applicable to the large cities, and such of the other rules as were urgently needed, should be enforced at once, and that the entire scheme should in other respects be gradually introduced throughout the whole country, as the advancing civilization and altering circumstances of the nation should permit or render desirable. This course has been generally followed and with good results; and the Bureau has apparently lost no opportunity of improving the sanitation of the various parts of the empire. Foreign directors have been appointed to newly founded Government laboratories. In June, 1874, a central office for collecting and keeping pure and effective vaccine lymph was established in Tokio, whence the matter is distributed to all the local authorities in the cities and provinces and to any medical practitioner who may ask for it. Schools of medicine are now in existence, and candidates for professional diplomas have to pass a strict examination. In 1875 the control of the office was transferred from the Educational to the Home department. The work of reform was still continued. Regulations for the importation, manufacture, and sale of medicines were prepared and put into operation; information on the western practice of medicine and surgery was widely and liberally diffused; and now in sanitary arrangements this nation is, at least in the chief centres of population, not far behind the nations from which it has derived its knowledge. The writer of the report before us, however, evidently thinks that still more might have been effected. He seems to complain that western science has not made greater way in medical matters; and, while deprecating undue legislative interference, he deplores that out of the whole number of physicians throughout the empire, at the period when he wrote, only about twenty-one per cent followed the European system for the treatment of diseases; and, even among this small number, those who had received a regular medical education were only two or three out of ten, while all the rest were still adhering to the old-Chinese and Japanese systems. He remarks also that, with the apothecaries, "the situation is even less favorable. They buy drugs and chemicals from foreign and native wholesale stores, and retail them to native physicians and others. They are ignorant of the science of pharmacy, and sometimes even of the art of formulary, leaving the dispensing of prescriptions entirely to the physicians themselves. In such a state of affairs would it have been possible to follow the proper course and rigidly enforce complete restrictive legislation? No other means could be adopted than to prescribe a proper course of professional study and make examination compulsory in the future, in order to induce physicians to free themselves from the trammels of the old obsolete system, and acquire true scientific and practical knowledge; and also to make apothecaries renounce their old associations as mere shop-keepers and enter the ranks of educated scientific men." We trust that the past three years have effected some improvement in this respect, and that Mr. Nagayo has reason to be content with the progress made.

The ultimate result that he desires, however, can only be the work of time, as the experience of centuries in other countries will demonstrate.

We have on a previous occasion alluded to the almost entire disappearance of small-pox, owing to the favor with which vaccination is now regarded, and the efficient means adopted by the authorities to enforce its practice, and render it universal. The wonderful preventive of a dire and disfiguring scourge does not appear to have met with full respect in the early days of its introduction, Japanese in this respect evincing a prejudice which they have shared with Europeans. A Dutch practitioner at Nagasaki was the first to make the method known in this country, and we are told that, afterwards, the Tokugawa Shogun and many daimios established vaccinating offices in their respective jurisdictions, and actively promoted this important work in the most praiseworthy manner. "Unhappily the results of those early efforts were not very satisfactory, either in consequence of the want of a regular supply of pure lymph, and its deterioration or through the imperfect manner in which the operation was performed." In June, 1874, the Bureau established a central office for the purpose of collecting pure fresh vaccine lymph from vaccinated calves, and of distributing it to the different local authorities, regularly, in the Spring and Autumn, and whenever small-pox should be prevalent, or a further supply of the pus be required. In December, regulations were established and promulgated respecting compulsory vaccination, the form of the certificates of vaccination to be used, and of the statistical returns to be rendered, stating the number of successful and unsuccessful vaccinations and number of revaccinations. Here, again, we have reason to know that marked advance has been made in the time which has elapsed since 1877. We believe that the course which is now adopted is steadily tending towards that final disappearance of small-pox which the Director hopes for; or rather that the disease may only be known in rarely sporadic cases. The pamphlet contains very full and valuable tables, and a great deal of other matter of interest; and is another and permanent tribute to the remarkable and praiseworthy advance which Japan has made in the higher paths of civilization. Thus, the first hospital erected in the empire was founded in 1861; but was for long more of a medical boarding house than a refuge. It did not provide for the accommodation of the poor. Many physicians, who were practising medicine according to the western system, went there for improvement, and a large number of patients, especially of the higher classes residing in the neighbourhood, resorted there for advice and treatment. What a contrast the present condition of affairs offers to the past. "The total number of hospitals in 1877, was 106, of which 64 were public, 7 General Government Institutions, and 35 private. If we added the branch hospitals, lock hospitals, charitable hospitals for the poor, &c., the grand total would amount to 159."

Mr. Nagoya's other pamphlet is instructive as giving the history of the epidemic in 1877. There is no doubt that that disease was the parent of the comparatively mild one of the following year, which again left those germs that fructified in the wide-spread and terrible disaster of last summer and autumn. The records of earlier epidemics is briefly summarized, from the outbreak of 1822, when the pestilence which had already ravaged the main land of Asia, crossed to these islands, over which they rapidly spread with largely fatal effects. The next great visitation did not occur until 1858; but the recollection of the two disasters was still vivid three years ago, and prompted the initiation of those measures of precaution which were

thwarted by the action of the foreign representatives.

The author thus refers to that event:—

"These regulations were solely aimed at the prevention of the ingress of the plague into this country, and were therefore desirable and necessary both for Japanese and foreigners alike; it was not expected that, after the agreement of the 6th year of Meiji (1872) upon this matter, there would be any impediment in the way of enforcing these regulations, only for a certain time, upon all vessels coming from China to our ports. Nevertheless, on the 31st of July, 1877, the following reply was received from the Foreign Office:—'It is not necessary to establish, at present, quarantine hospitals at Yokohama and other open ports of Japan, for a telegram from H.E. the Governor of Hongkong, sent in reply to the inquiry of H. E. the British Minister at Tokio, says, that there seems to be no fear of a further spread of the disease at Amoy, according to the latest despatch received here from that port. Accordingly the establishment of medical inspection or quarantine is not needed in Japan, under the present circumstances.' When this letter was received, the Central Sanitary Bureau was obliged to issue immediately an order to the Governors of the three *ken* of Kanagawa, Hiogo and Nagasaki, to *postpone* the execution of the regulations for the medical inspection of ships, coming from Chinese ports."

In the first year of its arrival the calamity was sufficiently disastrous, and the extent of its descendant in 1879 resulted in the death of about one hundred thousand persons. The perusal of Mr. Nagoya's contribution to the literature of the subject certainly tends to harden the impression that the invasion might have been prevented by the adoption of precautions which were denied to Japan by foreign interference. If quarantine had been established and enforced, it is more than possible that cholera would have been kept away from the country. Thus, a momentous responsibility rests with those who may have been indirectly responsible for the inroad. There is a point to be derived from the stern lesson. No earthly consideration should cause the Government of this country to hesitate as to the proper course to pursue, in future, with regard to communication with epidemically infected districts.

#### PUBLISHING IN JAPAN.

THE forms of procedure in book-publishing seem to be nearly the same in Japan as in most other countries. Before putting a work into the bookseller's hands, the author must send in an application to the department of the Interior, through the local authorities, for permission to publish. The petition must contain a statement of the number of volumes, the name of the work and the proposed price: it must also be accompanied by two copies of the work for examination. On permission being granted, the book can be placed on the market. Occasionally copyright is granted for a period of ten years, and, in the case of government publications, a further period of twenty years may be allowed. The published price of a book must be clearly stated; but, as in other countries, this is merely the highest nominal price, it being usually sold for much less. The price is frequently much reduced by the rivalry of booksellers. The ordinary trade discount—that is the discount given to booksellers—varies from twenty to thirty per cent, but it often attains a much higher rate. The retail price is usually from ten to twenty per cent above the wholesale price. Thus, a book, the published price of which is one *yen*, would be sold to the bookseller for from sixty to eighty *sen*, and he in his turn would sell it for between seventy and ninety *sen*, except to those who being unacquainted with the tricks of the trade, would be forced to pay the full published price.

A well-known publisher and bookseller in the capital, has furnished us with the following figures, which may be of interest to some readers. The expenses of publishing a small book of eighty Japanese pages, rather smaller than 32 mo, are as follows:—

	Yen.
Copying manuscript for the press ... ..	4.00
Cost of copper plates ... ..	14.00
„ „ cutting copper plates ... ..	30.00
Fee to scholar for writing preface ... ..	5.00
Cost of wrapper ... ..	0.90
Total ... Yen	53.90

All that remains is the printing and binding. The cost of these items, including the price of paper, was seven yen for every hundred copies of the work. Five hundred copies were printed at first, and the total cost was thus brought up to yen 88.90, or nearly eighteen sen per copy. The published price was thirty yen, and the book was put on the market at twenty-three and a half sen, thus giving the author a profit of about six sen for each volume. As a matter of fact, on a sale of one thousand copies, the author, we were informed, received eighty yen—by no means an encouragement to him to re-enter the thorny paths of literature. One noticeable item in the foregoing account is that of payment to a scholar for writing the preface. It is almost a universal custom in Japan to employ some person of reputation, generally as a scholar, to commend a work to readers; and with some scholars, this has become a regular trade. It is not always, nor even generally, necessary that the writer of the preface should have any special knowledge of the subject of the volume which he praises. When we find Shimadzu Saburo writing a few prefatory remarks to a book against Christianity, we feel quite sure that his name was selected for some reason other than the Satsuma chieftain's possession of theological knowledge.

A few more items of information from the same source may not be devoid of interest. Ten thousand copies is considered an excellent circulation for an ordinary work, but some elementary school books have a sale of a quarter of a million. Certain books, such as the *Nihon Gwaishi* and the *Jinkashiraku*—both histories—are always in demand, for they are classical works. Books on style, as well as translations or abridgments of foreign works, sell best at present, though the demand for the latter is said to have decreased greatly during the last two years. The property in some works is very valuable. Thus, the right to issue a single edition of the *Nihon Gwaishi* costs three thousand yen, and this does not give the purchaser the exclusive right in the book even for a limited period. In recent years, the work having the largest circulation has been one by the well-known scholar Fukusawa. It is a kind of encyclopædia of foreign countries, and was published in the early years of the present reign. The reason for its popularity is that thirst for knowledge of foreign countries which was, and is, potent among the reading classes. The introduction of moveable type and paper of foreign manufacture is gradually working a revolution in the printing establishments of old Japan. The vast majority of new books are now printed on foreign paper,—on both sides of the page,—and bound in boards; but it is doubtful whether the old system can ever be entirely displaced by its modern rival.

Modern changes have not been in all respects advantageous to the literary classes—or rather to the purveyors of literature. In old days, daimios and other wealthy or influential men in Japan contributed munificently to the support of men of arts and letters, as well as to the issue

of their works; but we fear there are few Mæcenas of this description now remaining. It is, therefore, to be wished that the facilities and encouragements to literary men to publish their researches could be rendered greater by better chances of emolument. There are numbers of learned men of the old school whom modern advance and changes have put on the shelf, who would be doing the country a service, and supporting becomingly their former positions, by recording their personal and traditional experiences of the arts and events of the past. Men of this class are employed on a small pittance by the few foreigners who attempt to acquire even a moderate knowledge of the Japanese language. Certain trades and arts being hereditary, and there being hitherto no treatises on many interesting skilled employments, which are now fast passing away, there is still plenty of work for those old scholars to do in transmitting to future generations exact records of the arts, sciences, sports, &c., of an ancient and erudite civilization.

To take an instance to illustrate our meaning: it is well known that on the occasion of the revival of the *Jaw-omono* before General Grant, the ancient etiquette and form of the sport was so transgressed, that a request was made by a distinguished Japanese to be permitted to show the Emperor the proper style. Attempts to ascertain dramatic and elocutionary principles, as well as other forms and rules of the stage, are baffled by the reply that such things are hereditary, and are mysteries not generally known. The same is the case with the ancient arts of architecture, gold lacquering, and several other employments of a similar kind, the secrets of which are jealously guarded by the initiated and their successors. Labourers in this field could doubtless be found, if the prospect of a fair reward were a good one. It will be some time before the older men, who under the former régime would have found patrons to support and encourage them in their labours as students, but who take small interest in current politics or in the learning which is now the rage, can be wholly displaced by the ardent students of western arts and sciences. In fact, for the old *littérateurs* of Japan, literature is in the same position now that it was in England when Dr. Johnson first went to London. The days of individual patrons have passed away, that of the public as patrons, so far as the literary wares of Japan are concerned, has not yet come.

THE recent appointments to Japanese diplomatic missions abroad have doubtless been made with a view to the pending revision of the treaties with foreign powers. Although it is, we believe, arranged that this revision is to take place in Tokio, yet the necessity of having agents on the spot, who can ascertain and report the feelings of the various Governments on this important question, is obvious. Mr. Yanagisawa, who succeeds Mr. Enomoto at the Court of Russia, is an ex-Kugé, and a relation of the Emperor. He was the colleague of Okubo in that embassy to China which settled the Formosan difficulty, and, at the outbreak of the Satsuma rebellion, was sent as Imperial messenger to Shimadzu, to detach that powerful irreconcilable from the insurgents, and succeeded in so doing. He is, therefore, no tyro in state affairs; and probably in this, more than in any of the other appointments, ability and merit were sought for. Nagaoka, the envoy to Holland, Denmark, Sweden and Norway, is a noble, and brother of the ex-Daimio of Higo. He succeeds Mr. Same-shima also at Brussels. He has resided for many years in England, and is a Barrister-at-law, as well as a Fellow of the Royal Geographical Society. The ex-prince of Hizen, Nabeshima, who goes to Rome, has also resided for five

or six years in England, and his appointment is probably due to the fact that he was the entertainer of the Duke of Genoa. He is well known to be very wealthy, and to have deeply at heart the welfare of his former retainers. General Ida, the new minister to Vienna, served as Consul at Foochow during the Formosan expedition, his military knowledge being doubtless considered valuable at that particular time and place.

**I**N the course of the discussion by the friends of the Yokohama General Hospital, at their recent meeting, Mr. Wilkin called attention to the fact that though English and other sailors, serving on board American vessels, could be discharged without provision for their maintenance, yet no applicant was ever refused admission. Mr. Wilkin's statement is so far correct, that any man shipped on a United States craft in a port other than one pertaining to the territory possessed by the republic, may be discharged in this or any other harbour with the consent of the master. In that case he has no subsequent claim upon his consular officers, but is in the same civil position as any other citizen of his nationality, and, if he becomes an inmate of the General Hospital, does so under the same conditions as any other patient. As it happens, however, this circumstance makes no perceptible difference in the expenses of the hospital. The Consul General is particularly careful to avoid involving the community in unnecessary outlay, and never authorizes the "discharge" of a sailor, who at the time needs hospital care.

**I**F we understand aright the tenor of Mr. Dunlop's remarks at the meeting of subscribers to, and friends of, the General Hospital, he desired the demise of the institution. Common sailors could be provided for in the Japanese Refuge at Nogé. Now, although we have personal knowledge of the admirable manner in which the latter establishment has been arranged, and is conducted, we are also aware that it has no accommodation for persons other than Japanese. A "common" foreign sailor would no doubt meet with every possible attention and kindness there. He would be waited on and tended at least as assiduously at Nogé as he would be in the foreign hospice on the Bluff. But a "common" European or American seaman, especially if injured or sick, might find the style of accommodation of even the best conducted Japanese tea-house a trifle inconvenient in view of his ignorant prejudices in favour of bedsteads—of some kind or other—and such inconsiderable articles of furniture as an occasional table and chair. We think, with all deference to Mr. Dunlop and his possible benevolence, that his cynical proposal met with the contempt it merited.

**I**T is possible that even "the better class" of English, French, American, Swedish, Danish, and Dutch patients in Yokohama might prefer to be lodged in a "general" or cosmopolitan hospital rather than in one of a distinctly national, not to say nationally naval, or navally national, character. The German, British, and American Naval Hospitals in this port are, no doubt, admirably efficient and necessary institutions in their way; but it is decidedly better and more creditable for the community to maintain an international "general" hospital, than to call upon the resources of establishments,—which are primarily and principally, if not solely, intended for service purposes—for the care of even "the better class" of promiscuous patients. "Mr. Dunlop had heard that the German residents intended to withhold their subscriptions to the General Hospital this year." Mr. Wilkin briefly said that this "was not the case." We have a great respect for the exemplary German community in this settlement; and have not the slightest hesitancy in believing Mr.

Wilkin. In fact, we should be grieved if we thought that there was any necessity to attach credence to Mr. Dunlop's assertion.

**Q**UERY: "Is the General Hospital in a 'bad financial position'?" It has a credit balance of over six hundred dollars; and no appeal is ever made in vain on its behalf to the sympathy and pockets of the foreign community. It is also probable that, with a little less occasional favour shown in its management, it would be even more self-supporting than it is. What, for instance, has to be said about the item, \$1,098.59 considered not recoverable from patients on outstanding accounts? If an inmate of the hospital is a charity patient, by all means let him be included in that class, and obtain the tenderest service, the best attention, and the most suitable diet, that the resources of the establishment can supply; but let us not have supercilious hypochondriacs, with fastidious and frivolously expensive tastes, and absurdly exigent notions about attendance, housed for months as first-class patients in the first-class apartments, putting the charitable commonwealth to an expense of three or four dollars per day, without hope or intention of paying anything. Mr. Macpherson goes too far in saying that there should be no charity patients at all. Let the hospital continue its happy and benevolent tradition of refusing admission to none; but let the patients, and if necessary the public, understand the conditions under which shelter, and attendance, and nourishment are obtained.

**A**N excellent idea is that of Mr. Macpherson's that residents should, as far as lies in their power, make gifts of books, periodicals and newspapers to the hospital. Donations of still serviceable cast off clothing would no doubt also be thankfully received by the management for bestowal upon necessitous patients on their discharge.

**W**HAT appears to be really required to maintain the Yokohama General Hospital is, at the outside, a subscription fund of about three thousand dollars per annum. We have sufficient faith in the liberality of the foreign community to believe that this sum may always be depended upon for so good a purpose as that which is now once again before the public. As Mr. Bingham well remarked:—"For over ten years this child of Christianity, the General Hospital, has been in existence, affording relief alike to rich and poor, the stranger and the needy; and what appears to me the most remarkable feature is, that during all this period of ten years, the organization has been supported by the voluntary subscriptions of a community, not exceeding two thousand persons." The same public or the successors of those who at present constitute it, are likely to act up to former traditions in this respect at least. It is even immaterial whether or not the authorities of the Kencho reconsider their decision as to the remission of the ground rent.

**A**LONDON newspaper scoffs at what it terms the "intolerable folly" of the British Government in lending its officers and men to the Governments of China and Japan to assist in organizing their navies, and in training the natives of these countries in the direction and use of their young fleets. It complains that the result of this policy has been that the Japanese certainly, and the Chinese probably, now have navies which could give England plenty of trouble if they pleased. This seems a very narrow view to take of the question. Apart from the fact that the strength and stability of both these countries would be the pledge of peaceful progress, and assimilation with western civilization in the Far East, the practice of permitting British officers

and subjects to serve, either temporarily or permanently, under foreign governments has been almost universal, and it is hard to see why Japan or China should be made an exception. Sir de Lacy Evans was permitted to organize an army corps in Spain. Mr. Reed builds vessels for many foreign powers; and the services of Turkey, Egypt, Austria and even of Germany herself, contain British subjects, many of whom still bear, or have borne, Her Majesty's commission. To extend the principle invoked, we might ask: Is it not "intolerable folly" to permit Russian, Turkish, Brazilian and Chilean vessels of war to be designed, built, launched and equipped in English ports, as they "may be able to give us plenty of trouble if it should please them?" The proposition that the weakness of other powers constitutes England's strength is one that has never been maintained; least of all will it find favour at the present time, or with respect to China and Japan.

ON last Thursday, the 11th instant, was inaugurated at Tokio, the nucleus of a society for the study of earthquake phenomena, taking to itself the name of the Seismological Society of Japan. General Van Buren, who shewed his interest in this branch of science by his attendance from Yokohama, presided at the meeting, and through the aid of his businesslike tact the forms were gone through and dry matters of routine quickly disposed of. Some discussion ensued as to the kind of President that should be elected for the Society. There were those who thought that the patronage and name of a Diplomatic Minister or some gentleman of eminent social position should be obtained, regardless of his scientific bent, whilst others were in favour of some active leader in scientific work, whether he be influential or not, outside the pale of seismology. The election declared His Excellency Yamao Yoso, Minister of Public Works, President, subject to his acceptance of the position, and of Mr. John Milne, as Vice-President. The other offices received the appointments of several gentlemen engaged in scientific researches in Tokio and one builder. It remains to be seen what the Society will accomplish. It has now a habitation and a name, and we are sure that we wish it every success in the results of its labours. We hear that many papers upon different subjects connected with earthquakes and volcanoes are already promised; and if the various investigations, records and reasoning can be reduced at all to harmony and lead to definite and indisputable conclusions, no doubt much good may be done.

WRITING to the Chairman of the Hongkong Chamber of Commerce, Mr. H. L. Dalrymple, a member of the body, draws attention to the desirability of the English community in the Far East being directly represented in London. He says that the want of a representative body of merchants connected with and interested in the China and Japan trade in London has made itself much felt of late, and the formation of a "China and Japan Association" started for a specific purpose last autumn, "opens the way, in the opinion of some of the Chambers of Commerce in the east, to attain this end." The idea is that by enlisting the services of an influential body in London, a status, and power of appeal in case of need to the Home Government, and Colonial or Foreign Office, and in fact in any quarter which they are not in a position at present to approach direct, will be given to foreign merchants in these regions. With this object it is suggested that the Hongkong Chamber shall at once place itself in communication with the Chambers of Commerce at the treaty ports of China and Japan, and in conjunction with them address the Chairman of the China and Japan Association,

at the same time placing the services of the Chambers at the disposal of that Association with regard to furnishing any information in connection with the China trade at the disposal of any of such bodies. We shall be glad of any information as to the *personnel* of the "China and Japan Association."

REFERRING to the accident which has recently happened, and been attended with considerable loss of life and personal injury, to a small Japanese steamer plying between Niigata and Nagaoka, we are reminded that the formation of the company, to which the vessel belongs and which is a very profitable and in the main nationally beneficial concern, was due to Mr. Kusamoto, now a member of the Senate, but formerly the Governor of Niigata Ken. He is said to have in a measure compelled some of the more influential merchants living under his jurisdiction to float the enterprise, which is now said to bring to the investors an annual profit of ten thousand yen. The recent calamity is ascribed, by the *Nichi Nichi Shimbun*, to culpable carelessness on the part of the engineer in charge, who is reported to have worked the vessel when he knew that the boilers and machinery urgently needed repair. The vernacular writer compares him to the ignorant driver of impotent horses, and suggests that it should be made imperative on the owners of coasting craft to submit them to competent inspection, under, say, the direction of the Post Office, as it is remarked is the practice on Lake Biwa. We trust that the matter will receive the consideration which it merits at the hands of the Government.

THE *Indépendant de Saigon*, comments on the alleged schemes of French annexation in Cochin China. It says:—

We avow that, as far as we are concerned, and though we desire the development of the country, we can scarcely understand a policy which would consist, while we are at peace with the empire of Annam, in invading its provinces without pretext or reason. It would perhaps be very clever to do so; but, although some people might call it a transcendental stroke of policy, we think that in private life it would be called armed robbery: in public law it would be deemed a violation of the rights of nations; and in any case it appears to us a proceeding of doubtful honesty. It is true that there are many examples of such a course of action; and in frequent instances civilized nations have taken advantage, in regard to less progressive peoples, of the motto "might is right;" but if there is one nation which should be the last to apply the maxim it is France, which is yet bleeding from its application to herself. To invade Tonquin in a time of perfect peace . . . . . would be to legitimize and justify the atrocities perpetrated by Germany in Alsace and Lorraine. Would we oppose an honorable struggle, entered into with sufficient motive? Certainly not; but, in our way of thinking, the mission of the *Thémis* to Hué can only be of a diplomatic character. France may bring remonstrances, make demands, and support them by demonstrations; but it is impossible to commence a causeless aggression. We are told that the Annamite government, and its representative in Saigon, are troubled by rumours of invasion . . . . . and that they have asked our Governor for explanations. They may compose themselves, believe us. France will not now falsify the loyal policy which has characterised her for centuries. She will state her grievances, and formulate her wishes; but if the Annamite authorities will be as reasonable with her as they were with Spain, the whole affair will be settled without a blow being struck, an invasion made, or territory transferred. This is what we hope and what events will shortly demonstrate."

WE propose to publish a series of memoirs of prominent Japanese personages. The first number appears in our issue of this week, and is devoted to a short sketch of Prince Higashi Fushimi.

## JAPANESE PERSONAGES.

## I.

## PRINCE HIGASHI FUSHIMI.

**H**IS Imperial Highness, Prince Higashi Fushimi Yoshi-aki, is the third son of His Imperial Highness, Prince Fushimi Kuni-ye. He was made Prince Imperial by Emperor Ninko, and became a priest\* in 1858 when he adopted the name of Ninnaji-no-Miya. The subject of this memoir is gifted with great energy, a high order of intellect and an equable temperament. He was one of the prime movers in the restoration of the Imperial authority to its original and legitimate preëminence, and at the time of the last war of the restoration, abandoned the priesthood by imperial command, and was appointed a member of the Legislative Council of the Empire. Shortly afterwards Prince Higashi was placed in command of the expedition against the rebels in the eastern provinces. At the same time he was presented by the Emperor with an imperial standard and a sword of honour.

Hearing that the royal forces had been severely handled by their opponents at Yodo and Toba, the Prince-Marshal at once proceeded to the scene of operations, and restored the fortune of the war by inflicting a decisive defeat upon the rebels. He then marched to Osaka, and using it as a base of operations, sent columns to Yamato, the central provinces and Shikoku, reducing these localities to subordination.

In March, 1868, Prince Hiyashi was appointed Minister of War, and three months afterwards commander-in-chief at Yechigo. He then invaded Aizu, capturing the daimio of that district, after which he returned to Tokio in November of the same year, when his important services to the imperial cause were rewarded by the grant of a pension of one thousand five hundred koku of rice.

His Highness now resigned all his appointments and turned his attention to the study of moral science and art. He applied for and obtained permission to visit Europe, and in the winter of 1870 went to England, where he remained for three years, ardently devoting himself to the study of western civilization. Shortly after his return to Japan he applied for permission to revisit Europe with the object of acquiring a further knowledge of military science, but the rising of Eto Shimpei, at Saga, occurring, His Royal Highness was placed in command of the army operating against the rebels. Before his arrival at Saga the outbreak was crushed and he then, in conjunction with the late Okubo Toshimichi, at that time Home Minister, tranquillized the disturbed districts, rewarding the loyal and punishing the disaffected. On his return from this service His Highness was appointed a Lieutenant-General in the imperial army.

In 1877 the rebellion in the south-west broke out, and Prince Hiyashi was placed in command of the troops armed and disciplined on the western model. The deeds performed in this rebellion belong to the history of Japan; and His Highness greatly distinguished himself both by his wise counsels and bravery in the field, receiving, on the suppression of this formidable rising, as recognition of his brilliant services, the Order of the Rising Sun of the first-class.

The recent change in the Ministry has again brought His Highness's name prominently before the public as he has been appointed a General and intrusted with the command of the Imperial Guard, the *corps d'élite* of the Japanese army.

## CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

## TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—I have had my attention called to a leading article (?) in your contemporary the *Herald*, giving an account of a meteor which appeared "above the new swamp," on the evening of Thursday last;—but why the new swamp, wherever that may be, should alone have been distinguished by the appearance in question is left an unexplained mystery by your energetic

\* Until the restoration it was customary in Japan for all the sons of the reigning Emperor, with the exception of the heir apparent, to become priests. This was done to avoid the possibility of any disputes arising about the succession to the throne after the death of the occupant.

friend. We shall soon be having an account of the moon appearing above No. 73, Bluff; or of several stars honoring the locality known as 28, Water street.

Your obediently,  
JUPITER.

Tokio, 12th March, 1880.

## REUTER'S TELEGRAMS.

LONDON, March 8th, 1880.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL, must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 13TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 3RD MONTH, 13TH DAY,  
DO-YO-BI.

## NOTES OF THE WEEK.

The M.M. steamer *Tanis* left for Hongkong with home despatches on Monday morning last. During the afternoon of the same day, the O. & O. steamer *Belgie* arrived from the south, and left on Wednesday afternoon for San Francisco. The M.M. steamer *Tibre* steamed into harbour to-day, at two o'clock, with European dates to the 25th of January last.

We publish in our present issue the first of a series of Japanese parables. These short sketches form excellent guides to the peculiar humour of the quick-witted people of this empire. We may mention that these parables have been translated into English by a native gentleman, without the slightest assistance.

On Thursday evening, about half-past seven o'clock, a meteor of singular brilliancy was visible in the heavens. Its course was from north east to south west.

A local amateur, Mr. Smedley, has opened an exhibition of oil paintings and water colours, in a room at No. 78, Main Street. Some of the pictures are for sale and are interesting as *souvenirs* and objects of interest more than as works of high art.

H.M.S. *Vigilant*, with Admiral Coote on board, left Singapore for Borneo and Hongkong on the 17th of February.

The U.S. flagship *Ticonderoga*, which is on a commercial and scientific tour, was to leave Singapore for Labuan and Borneo, on the 23rd of February and subsequently visit Hongkong and probably Japan.

The French Post Master, Mr. Degron, has issued a notice stating that, from the 31st instant, the establishment under his charge will be closed and the duties assumed by the Imperial Japanese postal authorities. When this change is effected, all the correspondence, &c., to and from this country, will be under the control of the Imperial Post Office, whose action will doubtless be closely and jealously scrutinised. We may remark that the delivery of letters is one of the most important duties attaching to a postal department, and any failure is sure to evoke much unfavourable comment. We trust, therefore, that in future the monthly list of unclaimed correspondence will be free from the names of well-known residents, whose addresses the slightest inquiry would disclose.

The O. & O. Company's fine steamer, the *Oceanic*, will probably leave London to-day, to resume her place on the

line where the vessel has been so great and well-deserved a favourite. We understand that extensive alterations have been made in the interior arrangements of the steamer, the size of the saloon being reduced, and the space allotted to cargo largely increased. In all other respects the vessel is the same *Oceanic* which has made the fastest passages on record across the Pacific.

The Italian Consul having noticed in the Nagasaki paper, a statement that several cases of cholera had recently occurred in that locality, telegraphed to the Italian Consul at that port on the subject, who replied under date of half-past twelve of the 8th instant, that there have been no cases of cholera or other epidemic disease in Nagasaki.

We regret to have to announce the death of Mr. Plichon, French Consul at Hongkong, who formerly occupied the position of student-Consul in Yokohama. During his residence in Japan Mr. Plichon's amiability won for him the esteem and affection of all who enjoyed the pleasure of his acquaintance. At Hongkong, also, he numbered numerous friends. France has lost in Mr. Plichon a devoted servant, who rendered his country many important services in the Far East, with which he was intimately acquainted.

The *Courrier* states that the lamented gentleman's death was caused by an overdose of chlorodyne which he was taking medicinally.

The dead body of a half-caste child was recovered from the creek near the Mayedabashi, yesterday morning. It is supposed that the deceased—a girl of about four years of age—fell from the unprotected portion of the temporary bridge and was thus drowned. It would be interesting to know how long the rickety structures across the creek are likely to remain where they are, because we might then be able to form some opinion as to the probability of a "Tay bridge" accident, on a small scale, occurring among us. Why light iron bridges are not thrown across the creek to replace the unsightly and dangerous wooden wonders of engineering formerly used, is a mystery to everyone who bestows a thought on the subject.

We are informed that the *Sarah Scott*, Captain Estall, on her passage from Kobe to Nagasaki, met with a typhoon the day after leaving, the 19th ultimo. The vessel was at one time in considerable danger as the ballast on board shifted, luckily however, she escaped with the loss of one boat, davit, and gear.

Sunday, the 14th instant, being the birth-day of King Humbert, of Italy, the royal standard will be hoisted at the Italian Consulate.

The annual departure of the otter hunting fleet is evidently approaching, to judge from the signs of activity on board the schooners.

The very reprehensible practice of shooting gulls from the bund, was indulged in yesterday forenoon by some person who, if he knew no better, certainly deserved to be taught. A severe penalty should be incurred by anyone firing in the harbour, and in all cases be strictly enforced.

On the evening of the 11th instant, Mr. D. H. Marshall gave a lecture before the Tokio Christian Association. The subject was the conduction of heat. He commenced by stating that conduction is one of the two distinct ways in which heat is diffused, the other being radiation. Conduction may be divided into conduction proper and convection. The lecture explained by illustrative examples that, whilst solid bodies are heated by conduction proper, fluids are principally heated by convection. He then explained a delicate way of showing the conduction of heat through substances by means of a thermopile and reflecting galvanometer, and showed therewith how different substances differed in their powers of conducting heat: that silver conducts better than tin; that quartz conducts better in the direction of the principal axis than in any direction at right angles thereto; that wood acts like most crystals in conducting differently in different directions. He then demonstrated that mercury conducts heat very well, whilst water, which ranks next to mercury amongst liquids, conducts very badly. After saying a few words on the conductivity of gases he concluded by a few practical applications of our knowledge of the subject lectured upon: to

the construction of the Davy lamp: the use of the Norwegian cooking-box (which he suggested would be a useful companion to travellers in the interior): and finally as to the best kind of clothing and building material. The lecturer regretted that time would not permit him to give a few of the grand examples of convection which are presented in the ocean currents and in winds.

The *Hiogo News* states the second officer of the *St. Charles* was murdered on the morning of the 3rd instant while in bed in the "Kobe Hotel," situated between Main-street and Sakaya-machi and kept by a Japanese. The crew of the *St. Charles* have been quartered there, and it appears there were high words last night between a sailor named O'Neill and the deceased. This morning the sailor entered the room occupied by the murdered man and stabbed him three or four times in the neck. Death must have been almost instantaneous. O'Neill is in charge of the police, and the body of deceased remains at the hotel. Both are U.S. citizens, and an inquest will be held, at the U.S. Consulate.

The man O'Neil, alias James Rodgers, was removed in custody of the Municipal police immediately after the verdict was given in the inquest held yesterday, and is now lying in the Municipal gaol. The usual warrant has been issued by the U. S. Consul, and the prisoner will shortly have to stand his trial for wilful murder. The prisoner has since been tried, convicted of manslaughter, and sentenced to twenty years' imprisonment in the Consular gaol at Yokohama.

The *St. Charles* continued burning all day on the 3rd instant as vigorously as ever. The scuttling operations were apparently performed very indifferently, and although there was a stiffish breeze yesterday, and the ship was awash in places, she showed no signs of settling down. The burning wreck and cargo were sold yesterday evening by Mr. J. J. Cann. The hull was first submitted to competition, and after some spirited bidding was knocked down to Mr. E. C. Kirby for Mex. \$3,700. The cargo was then offered, the first bid being \$2,500; it finally fell to the same buyer for \$4,000. There was a large attendance of foreigners and Japanese.

The Italian corvette *Vettor Pisani*, Captain H.R.H. the Duke of Genoa, left Kobe for Nagasaki, via the Inland Sea, on the morning of the 4th, after a stay of a little over a fortnight during which time H.R.H. has visited Osaka, Kyoto, Nara, and other places of interest in the neighbourhood. The *Vettor Pisani* will call at several places on the way, touching first at the port of Kasukabe, Shodoshima. She will then proceed to Mihara, Bingo, calling at Mitarai-shima on the way. Then on to Shimonoseki, and thence to Hirado. She will then proceed to her destination by way of Spex Straits. She will be in charge of the same pilot who took the *Prinz Adalbert* a somewhat similar course at the end of last year.

The *Hiogo News* contains a horrible account of the killing (under circumstances of exceptional barbarity) and eating of a young girl by a party of woodcutters. A native paper is our contemporary's only authority, and native papers often abound in those sort of stories, none of which have the slightest foundation in fact. If the *Hiogo News* wishes its readers "to sup full of horrors" the inferior class of native journals, supplemented by the *Newgate Calendar*, will furnish an unfailing supply.

The *Nagasaki Express* of March 6th states that what proved to be the most serious conflagration that has occurred in Nagasaki since the memorable one of March last, broke out about three o'clock on Saturday morning last in one of the most thriving business quarters of the native town known as Yedo-machi (at the rear of Decima). The fire is reported to have originated in the house of Yoshimiya, from which, owing to the strong breeze prevailing at the time, it rapidly spread in both directions, and to the houses situated opposite. Fire brigades were quickly on the spot, but as is always the case with fires in the native town, little could be done to stay its progress so long as the wind lasted. Fortunately the wind quickly subsided, but not before thirty-one houses (principally stores stocked with foreign goods) had been entirely devoured by the flames. Although

the space devastated was not extensive, still the loss was considerable. Very little was really saved, except what happened to be stored in the godowns, of which two or three remained standing. Most of what was snatched from the fire was, in the hurry and excitement of the moment, thrown into the creek. The office of the Mitsui Bussan Co. was amongst the unfortunate ones. Six other houses were either partially burnt or demolished in the endeavours to overcome the fire. Two policemen and two firemen were seriously injured, but fortunately no lives were lost. The progress of the fire was stayed about half-past five, but the fire engines continued their labours until evening.

Ship-building at the Patent Slip is probably brisker now than it has ever been at any previous period. There are no less than four vessels on the stocks, and one on the slip. The vessels building are one large steamer and one small ditto, one large launch and one small ditto. The vessel repairing is H.M.S. *Scinger*, and is the first instance of a British man-of-war being taken on the slip. The repairs to the *Asajishima Maru* being completed, she was launched from the slip on Monday.

At the auction of the British barque *Clifton*, on Monday last, the attendance was not so good as might have been expected, considering the fine vessel that was offered: consequently competition did not run very high. She was purchased by Captain Mason, for \$9,000.

The wreck of the British schooner *Mary* was put up for public auction on Wednesday morning last before a good assemblage of European, Chinese, and Japanese speculators, amongst the latter of whom she attracted considerable attention and competition. The hull, with masts and one unit of sails and rigging complete, was first brought under the hammer; the bidding commenced with a speculating offer of \$500, and rapidly advanced to the extraordinarily high figure of \$3,800, for which sum she was eventually knocked down to Mr. F. Ringer. The spare sails, anchors, chains, and hawsers realised similar high prices: two anchors, and 165 fathoms of chain alone were sold for \$510. The aggregate amount realised was about \$4,500. We hear that Mr. Ringer was acting for Captain Cubbins, in which case she reverts to her former owner.

From the *Indpendant de Saigon*, we learn that the suicide of Mr. de Rangoume, the treasurer of Mytbo, was caused through the impossibility of his being able longer to conceal a deficiency of \$8,000 in his accounts.

The *Thémis* with Admiral Duperré on board arrived at Saigon on the 11th of February. The Admiral's action with regard to Tonquin is anxiously looked forward to.

A Colonial Council, consisting of six European and six native members (elective), two delegates from the Chamber of Commerce and two members nominated by the Government, has been established. The local journals are very jubilant over the termination of the military régime, but express dissatisfaction with the composition of the Council, and entertain some doubts as to the possibility of finding six natives competent to fulfil the important functions devolving upon members of the new governing body.

The Spanish Ambassador to the Annamite Court has returned to Hué, having succeeded in arranged a treaty of friendship and commerce. Special provision has been made in this compact for the emigration of Annamite subjects to the Spanish colonies, Cuba in particular, and also for the introduction of the products of the Philippines into Annam.

#### YOKOHAMA GENERAL HOSPITAL MEETING.

The annual general meeting of the subscribers and friends of the Yokohama General Hospital, was held on Thursday afternoon, at half-past two o'clock, in the rooms of the Chamber of Commerce.

About thirty gentlemen attended, and the Hon. J. A. Bingham presided.

The Honorary Secretary, Mr. Wilkin, read the minutes of the last meeting, which were approved.

The Honorary Secretary then read the following report of the committee for the last year:—

The committee of the Yokohama General Hospital have the pleasure to present to the subscribers and friends of the institution, their annual report for the year 1879: and attached thereto, the surgeons' report, and the statement of accounts.

From this latter it will be seen that the cash balance to credit of the hospital in the Hongkong Bank is only \$598.97, as against \$1,833.94 last year on the previous December; and that allowing for bills due, and amounts owing by patients, the assets are only \$633.93, as against \$2,320.49, or a difference in the wrong direction of nearly \$1,700.

In analysing further the returns, it will be observed that the number of patients who passed through the hospital, i.e. calculated by days,—shows a considerable falling off, viz.—4,894 days against 6,266: the reduction being most in 1st, 2nd and 4th class and charity patients.

The subscriptions and donations are only \$2,566.63 as against \$3,905.70.

On the other hand, more than \$2,900 has been expended upon repairs to the General Hospital, and completion of the infectious wards at Nakamura: and besides the surgeons' fees have been at the increased rate which was commenced only in September, 1878.

There is then, at least, some matter for congratulation that with reduced resources and increased extraordinary expenditure, the financial standing is not worse than it is, and your committee think that this testifies somewhat to care in the ordinary expenditure. The cost per head per diem has been \$1.73 as against \$1.61 in 1878, and \$1.97 in 1877.

Among the receipts must be noticed the handsome sum of \$339.55 being proceeds of an excellent entertainment given by the Vernon troupe in August, for which the hospital is largely indebted to Mr. Griffin, and to the success of which also several amateurs and the band of the U. S. S. *Richmond* greatly contributed.

An amount of \$51.50 was further received from the passengers of S. S. *City of Peking*, proceeds of a performance given on board.

Acknowledgments are also due to the Ladies' Benevolent Society, for sundry articles of night clothing and wraps provided by them.

Your committee cannot, however, let this subject pass without appealing urgently to their townsmen, to make the subscription list more like what it has been heretofore; and at the same time they would put in a word for the monthly collection of small amounts made by Mr. Townley.

The large hut for the infectious wards was duly completed early in the year.

It is to be regretted that no progress has been made in the matter of approaches to those buildings, and the subject has again been brought to the notice of the consular board. Happily, thus far, this class of hospital accommodation has not been much needed, but it is necessary to be ready for any emergency which may arise.

At the General Hospital, the kitchens and servants' quarters have been thoroughly remodelled. It must be added that the main buildings have suffered a good deal by the earthquake of the 22nd ultimo.

Dr. Wheeler was elected on the 1st of July to the post of surgeon (in conjunction with Dr. Eldridge) in place of Dr. Goerts, who had left the country.

The hospital lost by death in June Mr. Nicolayson, who for many years has filled the office of steward ably and faithfully.

Mr. J. L. Thompson has been appointed in his place.

The application made to the prefect of Kanagawa for a remission of the ground rent on the hospital lots, was by him referred to the central government, and a reply has recently been received to the effect that the request cannot be entertained.

The diet sheets in use have been somewhat changed, and some reductions made so as to bring them more into accord with those of military and naval hospitals.

The committee have had under their consideration a suggestion to receive Japanese patients at a reduced rate, providing them mainly with native food and accommodation, but as yet no decision has been come to.

In thanking the proprietors of some of our newspapers and the local committee of the Religious Tract Society, for their papers and magazines, the opportunity is again taken to remind residents that spare papers and periodicals will be gratefully received.

It remains only for the committee to tender their resignation, and to express a hope that the report of the year's work will be satisfactory to subscribers.

March 8th, 1880.

#### YOKOHAMA GENERAL HOSPITAL.

##### STATEMENT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1879.

###### RECEIPTS.

1 Jan.	Cash on hand .....	\$ 1,833.94
1 July	Interest from H. & S. Bank on daily balances ...	3.85

## YOKOHAMA GENERAL HOSPITAL.

## PATIENTS IN HOSPITAL FROM JANUARY 1ST TO DECEMBER

## 31st, 1879, WERE AS FOLLOWS :

	1st	2nd	3rd	4th	Charity	Total.
Remained from 1878.....	—	2	29	—	4	35
Admitted during 1879 .....	7	12	82	7	16	124
	7	14	111	7	20	159
Number of days of 1st class.....						212 days.
" " 2nd do. ....						370 "
" " 3rd do. ....						3,324 "
" " 4th do. ....						105 "
" " Charity .....						883 "
" " Total .....						4,894 "

YOKOHAMA, March 10th, 1880.

## TO THE COMMITTEE OF THE GENERAL HOSPITAL.

GENTLEMEN :—We have the honour to submit herewith the usual statistical report of the medical supervision of the General Hospital, for the year ending December 31st, 1879.

The number of patients of the several classes under treatment during this time was as follows :

	1st.	2nd.	3rd.	4th.	Charity.	Total.
Remaining Jan. 1, 1879.....	0	2	29	0	4	35
Admitted during 1879.....	7	12	82	7	16	124
Total treated 1879.....	7	14	111	7	20	159
Remaining Jan. 1, 1880.....	0	0	4	0	2	6

It will be noticed that the total admissions number less than any year since 1873, while the mortality, which amounts to but 7.25 per cent of all admitted, though greater than in 1878, when the death rate was 4.50 per cent is still far below the average of the seven years anterior to 1875, and less even than that of 1875, 1876 and 1877.

The cholera epidemic of 1879 did not seriously affect the foreign community, but one admission for this disease was recorded and the malady in this case was of the mildest type. The small-pox cases noted were without exception derived from abroad ; in fact,

it is probable that not a single case of this disease originated in Yokohama during the past two years, even among the natives with whom it is, very erroneously, supposed to be a constant guest.

The present affords a proper opportunity for the medical officers of the hospital to offer a tribute of respect to the memory of Mr. Nicolayson, for so long a time the active, efficient and courteous steward of the institution. Whatever of success has been attained in the internal administration of the hospital is largely due to his intelligent and devoted labour, a labour continued, despite of suffering and infirmity, almost to the hour of his death.

In concluding we beg to reiterate the recommendation made in the report of the surgeons of the hospital for 1878, that some place for the assemblage of the lower classes of patients be provided at the earliest opportunity. It is certainly an unnecessary and injudicious addition to the sufferings of those convalescent or but slightly ill, to be confined through 24 hours to the same room with the bedridden or those afflicted with loathsome diseases. We must also call attention to the fact that no practicable approach to the new pest house as yet exists, although the expense of constructing a sufficient road could not be very great.

We are, gentlemen, very respectfully,

STUART ELDRIDGE, M.D.

EDWIN WHEELER, M.D.

Surgeons to the General Hospital.

## OCCURRENCE OF CERTAIN IMPORTANT DISEASES WITH REFERENCE TO RESIDENCE OR NON-RESIDENCE.

	Resident.	Non-Resident.	Total.

" " organs of motion .....	3	—
Alcoholism .....	8	—
Injuries .....	11	1
Total.....	124	9

The Chairman said:—You have now heard the report and balance sheet read and it is open to the meeting to adopt, amend or reject. This hospital charity belongs to our modern civilization and accompanies it wherever it goes to all parts of the world. The report we have just heard read, gives evidence of great care and attention on the part of the outgoing committee, who may be said in this matter to have been standing between the living and the dead. There appears to me only one thing to find fault with in the report, and that is no fault of the committee, viz—that the institution is \$1,700 in a worse position than last year.

Mr. Wilkin mentioned that the revenue was \$1,700 less. The report and balance sheet were then unanimously adopted on the motion of Mr. Rickott seconded by Mr. Kirkwood.

Mr. Dunlop asked if the German hospital was not open to receive general patients; and whether, as the general hospital was getting into a bad financial state, it would not be desirable to effect an amalgamation with the Japanese hospital?

Mr. Wilkin explained that the only way the question had come before the committee was with reference to charging Japanese patients less than Europeans.

Mr. Dunlop thought seamen could be well enough attended to in the Noge hospital, while the better class of patients could go to the German hospital.

Mr. Wilkin remarked that most people liked to be among their own countrymen.

Mr. Dunlop had heard that the German residents intended to withhold their subscriptions to the general hospital this year.

Mr. Wilkin said such was not the case.

Mr. Keswick moved "that the members of the outgoing committee who had not intimated their intention of withdrawing, be re-elected for the current year." Seconded and carried.

Mr. Macpherson wished to know what probability there was of the hospital being self-supporting; that is, the receipts from patients equalling the expenditure on patients?

Mr. Wilkin thought that this could not occur unless there were as many patients as formerly.

Mr. Macpherson asked what the deficiency to be made up by donations would amount to?

Mr. Wilkin.—About \$3,000, which will include the cost of repairs, &c.

Mr. Macpherson asked for information on the subject of charity patients, remarking that in a place like Yokohama it seemed to him there ought to be no charity patients at all, as the towns-people, could pay and no seamen were discharged without some provision being made for them.

Mr. Wilkin mentioned that English and other sailors on board American vessels could be discharged without any provision and no person was ever refused admission to the hospital, which drew from the chairman the remark,—“that is the best feature of the whole affair.”

Mr. Wilkin drew attention to the great benefit of donations of papers and periodicals to the inmates of the hospital and urged that gifts of the kind be liberally made.

Mr. Macpherson suggested that a box be erected at the gate of the hospital into which papers could be dropped.

There being no further business before the meeting, a vote of thanks was tendered to the chairman for his kindness in coming from Tokio to preside.

In acknowledging the vote of thanks Mr. Bingham said:—Before adjourning this meeting I desire to tender my sincere thanks to the gentlemen composing this association, its patrons and friends, for the honour they have done me in asking me to preside over this meeting to-day. You are all of you probably well aware that during my sojourn in Japan I have not often mingled in public matters, in fact my instructions from the officials who guide my conduct and whom I am obliged to defer to may be summed up in one word given me for my control—"mum," so as not to give cause of offence to anyone. I am sure that during the time I have been in Japan nothing has seemed to me more satisfactory or given me more cause for self-congratulation than to sit here to-day and listen to the report and returns of this association. For over ten years this child of Christianity, the general hospital, has been in existence, affording relief alike to rich and poor, the stranger and the needy; and what appears to me the most remarkable feature is, that during all this period of ten years, the organization has been supported by the voluntary subscriptions of a community, not exceeding two thousand persons. This hospital is the offspring of the same feeling of charity which established similar institutions in Constantinople, eleven centuries ago; in Rome, nine centuries ago; in Great Britain under the elder branch of the English speaking people, and in France, and which we now find represented here as well as elsewhere, nobly and faithfully, receiving men of every country and creed. This outcome of our civilization is the latest and brightest example of the brotherhood of man. Here in this hospital, English, French, Americans, Russians, all receive succour, relief and shelter at the expense of the whole

community. I thank you for the opportunity you have afforded me to hear and know what I did not know before; and I can conscientiously say that you are to be complimented in having appointed a committee who have shown themselves so faithful and capable in the discharge of their onerous duties. (Applause).

Mr. Kirkwood moved a vote of thanks to the outgoing committee, which was carried by acclamation, and the meeting then terminated.

#### THE YOKOHAMA CRICKET CLUB.

The annual general meeting of the members of the Yokohama Cricket Club, was held at the Grand Hotel on Thursday evening at five o'clock.

Mr. Barlow occupied the chair and the following gentlemen were also present:—Messrs. Hamilton, Dodds, Cope, A. Milne, Stevens, Wood, C. D. Moss, Hearne, Hutchison, Litchfield, Maxwell, Herbert and Sutter.

The Honorary Secretary and Treasurer (Mr. Milne), read the minutes of the last annual meeting, and commented upon the various subjects mentioned therein. He also stated that all the scrip had been paid off and as the area of the ground was now greater, a increased expenditure would be incurred for rent.

Mr. Moss proposed "that the minutes as read be adopted." Seconded by Mr. Dodds and carried.

The Honorary Secretary and Treasurer then read the following statement of accounts:—

THE YOKOHAMA CRICKET CLUB, in account with ALEXANDER MILNE, Treasurer.

#### RECEIPTS:—

Balance from last account...	215.79
Subscriptions, 1879 ... ..	493.00
Entrance fees ... ..	130.00
Base Ball Club for use of ground ... ..	75.00
Foot Ball Association " " ... ..	45.00
Interest from Bank ... ..	5.00

#### DISBURSEMENTS:—

Mouban, coolies, new turf, match expenses, &c., &c. ... ..	266.60
Advertising and printing ... ..	5.60
New fence ... ..	220.00
Ground rent to 31st December, 1880... ..	230.66
Old indebtedness on turf scrip ... ..	139.00
Remittance for gear, £30 @ 5/9½ ... ..	159.11
Insurance on pavilion ... ..	12.00
Balance ... ..	12.18
	\$992.97 992.97

1880.

March 11th. To balance due Hon. Treasurer \$29.18

E. & O. E.

Yokohama, 11th March, 1880,

(Signed) ALEX. MILNE,  
Hon. Treasurer.

Examined and found correct.

(Signed) G. C. WOOD.  
" E. D. MURRAY.

The Chairman mentioned that the expenses of the New Pavilion that had been erected on the ground, had not gone into the General Accounts as they had been met by private subscription. The accounts were now in a very flourishing condition, and the subscriptions shewed an increase over the previous year.

Mr. Cope proposed "that the accounts be approved and passed." Seconded by Mr. Dodds and carried.

A desultory discussion followed in reference to the Amateur Athletic Association joining, and contributing to the expenses of the ground.

The Chairman deprecated joint occupation, as it had already failed; hence the giving up of the ground on two days in the week to the Base Ball Club.

Mr. Cope said the Amateur Athletic Association would only require a few feet for a running path along the railing, and that most of their members would train in the early morning.

The Chairman recommended that the question of joint occupation be left to the new committee, and in reply to Mr. Hamilton said there was nothing to prevent members of the Amateur Athletic Association joining the Cricket Club.

Mr. Dodds proposed that a committee be now elected, which resulted in Messrs. Milne, Barlow, Wheeler, Hutchison and Cope, being chosen by the meeting.

Mr. Hamilton proposed "that the Committee be empowered, provided the funds of the Club admit, to form a running path round the Cricket Ground, either by taking in extra space or by taking up a portion of the present ground next the rails." Seconded by Mr. Wood.

Mr. Dodds proposed as an amendment, "that the words 'If the committee deem it expedient' be inserted after the word 'admit' in the original motion." Seconded by Mr. Hutchison.

The amendment was carried.

Mr. Litchfield proposed and Mr. Dodds seconded a vote of thanks to the retiring committee, and Mr. Hamilton proposed and Mr. Hutchison seconded a vote of thanks to the chairman; both propositions were carried by acclamation and the meeting terminated.

#### PARIS LETTER.

(On Scientific Subjects.)

JANUARY 17TH, 1880.

The intensely severe winter which reigns, naturally draws attention to the bearing of cold on health, and the subject is extremely interesting, and not the less so, because eminently personal. Inert bodies acquire, very easily, the temperature which surrounds them; becoming warm, if it be warm, and cold, if it be cold. A bar of iron when exposed a long time to the sun in summer, burns the hand when touched; in glacial climates, the same metal will become as cold as the surrounding atmosphere, producing veritable burns when touched by the hand. Thus the iron passes through all the variations of temperature, from extreme cold to extreme heat. But it is not the same for man, in good health, and the superior animals; if a thermometer bulb be placed in the mouth of a man, no matter in what part of the world, it will mark invariably about 100 degrees, blood heat; even in the most glacial regions or in the most tropical zones there will not be more than some three degrees in the oscillations of vital heat one way or the other. The heat or caloric that the external cold carries off from our system, is produced in our body, which may roughly be viewed as a fire manufacturing machine. Lavoisier was the first to rationally explain the theory of animal heat, and to compare its source to that of a furnace. The air penetrating our body, burns our tissues as fuel is burned in a grate; giving from this veritable combustion the same products, carbonic acid and watery vapor, and when we employ the phrase "life is extinct," it is not a poetical truth, so much as a scientific fact, that is expressed.

The only modification that time has wrought in Lavoisier's theory is, that the seat of the combustion or fire-place, that he limited to the lungs, is now proven to take place in all the body, and especially in the tiny blood or capillary vessels, spread profusely in the layer of the skin, where they form such a net work, that no part of the skin can be pricked with the finest pointed needle, without the blood commencing at once to flow. It is in these little vessels that the blood, driven from the heart through the arteries, brings the oxygen of the air which it has received from the lungs, and with which the globules are impregnated like so many sponges. It is in these capillary vessels that the globules abandon the oxygen so necessary for combustion, taking up in exchange the carbonic acid, the product of that combustion, to carry it to the lung-organs charged to get rid of that useless and noxious gas, as the smoke of fire passes away through the chimney. The lungs are then as it were a chimney, by which air enters and smoke goes away.

But if our body be a fire-making machine it is more perfect by far than any inanimate apparatus, because it uses up, destroys itself, consumes its own substance, as well as the fuel supplied. However, it has the property of being able to repair what is destroyed, if supplied with the necessary materials for doing so. The good working of the machine depends on this, and the more its functions are vigorous, the more ought the materials for repair to be considerable. When the weather is very cold, the machine constantly loses an enormous quantity of caloric, and is forced to fabricate from its own substance the necessary provision to maintain the normal animal warmth, for when the latter diminishes, life is compromised. Hence in winter, alimentation must be more abundant than in summer, which explains why in warm countries people have proverbially moderate appetites, while in cold climates they are remarkable for their voracity. In Greenland an inhabitant will consume from ten to fifteen lbs. of seal's flesh daily: two Esquimaux will devour between them, during a morning, the hind-quarter of a musk ox, cutting the flesh in eel-like morsels, introducing as much of the strip into the mouth as can be contained, then severing it and passing it on to a companion. Occasionally

these northerners allow the ribbons of flesh to trail along the ground, devouring them somewhat after the manner of a boar-constrictor. It has thus been remarked, that before his meal, an Esquimaux is thin, but after it fat. But the meal often lasts an entire day.

More civilised people proceed differently, but have to conform to the same end—keeping up the heat of the system by a large consumption of food; the Hudson's Bay Company, allows each employé 8 lbs. of meat or 12 lbs. of fish daily; the Greenlander has his seal flesh the Esquimaux his rancid train oil: the Cossack his legendary candle. We have fatty matters of a different nature; the fat of beef and veal is palatable, so is that of mutton if eaten hot; the fluid fat of the horse melted down with goose grease, enters enormously into the food of the French, and few but have a weakness for a well-cooked and savoury goose; the flesh, the fat, and the lard of the pig, are essentials not only in rural, but in urban dietaries; the cow supplies butter, an article of food in universal demand. Alcohol is not bad if used with discretion; travellers, sportsmen, and soldiers testify to the benefits of an occasional "nip," when the weather bites, but it is not the less true, that repeated doses of spirits engender not heat, but cold. Alcohol is not food, but a stimulant, hence why it acts best when taken after a meal; then it augments the sensation of warmth by stimulating the circulation. Alcohol is more efficacious when taken as a warm, than a cold preparation; hence the advantage of adding it to tea, coffee, &c. These drinks pass rapidly into the blood, and the caloric they contain arriving at the surface of the body check the cold air which surrounds the skin. Heat can be generated from exercise as well as food, and movement is one of the best means for resisting cold; to remain exposed to the latter without stirring, may result in death, and this explains why ordinary travellers on the roof of busses frequently die *en route*. An eminent physician was in the habit of recommending his patients not to pass the day in putting wood on the fire, but to devote a few hours to sawing and splitting it. It is above all in the layer of the skin, that combustion, or the production of heat, chiefly takes place. Now, Foucault has shown, by his experiments on dogs, rabbits, sheep and horses, that in stopping this combustion by coating the skin with varnish, cold ensued and the animal perished after seven hours. The organic combinations were stopped; the venous blood was red from the presence of oxygen, instead of black from carbonic acid; the air entered by the lungs, but the tissues ceased to burn, the fire was out, and life extinct. Hence the importance of frictions of the skin, to combat the effects of cold. The Russians after a hot bath take a cold douche or rub themselves for a few minutes with snow, to be followed by a friction to provoke reaction. Often when hands and feet are numb from cold, rubbing them for a second with ice or snow, then friction, and next exercise, will enable these members to be kept warm for the whole day.

Attention is being directed to the physical degeneracy of civilised man, and the increased desire of nations for enormous armies—*militarisme* in a word—is set down as the chief cause. To augment the permanent army, the healthiest and most robust young men are selected for conscripts: the more a man is vigorous and well-formed, the better he is suited for the effects of improved fire-arms; in a word, his normal excellencies increase his chances of being killed. On the other hand, the weak, sickly, and otioled, or those suffering from deformed organs, can live peaceably during war, marry and found a family. The consequence is, as Haeckel has laid down, that corporal and intellectual debility, which are inseparable, increase and multiply. It is no secret that the number of hereditary infirmities are on the increase. Medical science, advanced though it be, cannot radically cure many affections; but it can retard, that is to say, prolong, their inevitable issue. This favors their extension. The Spartans, like the Red Indians, made a selection among the new-born infants: only those physically sound were allowed to live; we cannot keep up the vigor of the human race in this manner, but we could materially do so by not killing off the picked specimens of manhood. Luxury and licence also enervate the rich, while misery and privation deteriorate the poor; in the middle classes the custom is extending of men only marrying when disgusted with a dissolute life—they are old without being aged, and the progeny reflects the worn out system of the parent. It is at the same time curious, that, while the human race is physically degenerating, it progresses intellectually. Strength and physical beauty, as justly remarked by Clémence Royer, tend more and more to be ranked as only secondary advantages in modern society, whilst intelligence, tact, activity, the spirit of enterprise, industry and commerce are of the highest importance. Why? Because the struggle for life is more and more one of intellect; the ideal man of the period is he whose brain is the most active—for it is he who produces most.

Surgeons Gosselin and Bergeron have studied the action of antiseptics—carbolic acid, camphorated brandy, &c., on blood and pus. The former, no matter how the external air may be imperfectly excluded, decomposes after three or six days, according to the temperature; whereas pus will not be affected before thirteen or eighteen days. It is by their action on the blood

flowing from the vessel, that antiseptics act usefully in the case of operations, by suppressing the principal agent of suppuration, lessening its effects, while favoring the *réunion*, either in whole or part, of the wounds: thus reducing the chances of fever.

Dr. Cuzenlure has conducted a series of experiments upon the dog and cat, to test the toxic effects of phosphorus. Doses of the latter have, for effect, to augment the urea, sulphuric and phosphoric acids, nitrogen and iron. It is the abnormal excretion of these substances that provokes the destruction of the blood globules, so peculiar to phosphoric poisonings.

The Messrs. Becquerel have taken advantage of the recent weather to determine the effects of snow on the soil as a protection against cold; the layer of earth tested, was some two inches. Before and ponding the snow, grassland never, though varying in temperature, descended below zero—hence, the vegetation acted like a felt carpet; in the case of naked soil, the cold penetrated very markedly before the snow, but when the latter arrived, it acted as a screen. But if the external air prevented fluctuations of temperature, these were felt on the immediate surface of the soil in contact with the snow, but not in the mass of the soil. Also the efficacy of a sheet of snow and its relation with the soil, depend not on the exclusion of the external cold, but to preventing the radiation of the soil's own warmth.

Mr. Edison's reported triumph is followed with the keenest interest by scientists here. I tried to see Mr. Jablockhoff a few days ago to ascertain his opinion, but he is out of town. The impression is, that Mr. Edison has practically failed to solve the problem of illumination by electricity, and he is now expected to turn his genius to electricity as a motive power. Gas can not become a superfluity; it will always have a large field before it as a heating agent, and in this sense its use is rapidly extending in France. Mr. Edison has been invited to test his discovery alongside the rival electric lighting companies of this capital, and the ameliorated system of gas illumination.

#### SYLVAN SOUNDS. (From the Japanese.)

##### I.

##### THE WATERFALL.

Downward from the dripping rock,  
Comes with sudden leap and shock,  
By its distant roaring tracked,  
White with foam, the cataract,—  
Into sinuous rapid sliding,  
Swiftly darting, smoothly gliding  
On its way,  
With the spray  
Tangled, curled,  
Tossed and whirled  
Into coils of snowy thread.  
Ah! I'd steal these airy treasures  
By the seething torrent shed,  
And I'd weave them gracefully  
In a mountain-robe for me!

F. B. H.

Tokio, 6th March, 1880.

#### JAPANESE PARABLES.

##### I.

A few evenings since, I visited a "Yosé" in Tokio, when one of the *raconteurs* entertained us with the following short story, which may be of some interest to you foreign readers:—

The *Kabayaki* (or fried cel) is, as your know, one of the daintiest dishes of Japan and has a strong and most delicious smell. Now there lived, in the neighbourhood of a shop where this article of food was cooked and sold, a poor tradesman whose income was only just sufficient to furnish his livelihood and he could not, of course, afford to constantly buy such a luxury. Nevertheless, he was so fond of the *Kabayaki* that he could not refrain for any length of time from enjoying it. So, one day, he took his rice in a small bowl, and, coming to the front of the cel shop, took his meal while inhaling the delicious *noir* of the *Kabayaki* that was being cooked inside. Finding this to be the best way of satisfying his craving for the delicacy without expense, he continued the practice day after day, but on the expiry of about a month, a bill was brought to him, charging him—30 cents for smelling the *Kabayaki* for a month." Nothing could have been a greater surprise to him than the receipt of the bill, for he had fully

appreciated his economical mode of living. He therefore promptly refused to pay, on the ground that his "smelling" could not have cost the shopkeeper anything. Not satisfied with this, the proprietor of the establishment brought an action against the tradesman in a Court of Law to recover the amount of the bill. After hearing the contentions of both parties, the presiding Judge addressing the plaintiff said:—"You claim, then, remuneration from this tradesman for 'smelling' your *Kabayaki*? However, as the defendant appears to be very poor and unable to satisfy your demand the Court will make the necessary payment."

Then the learned Judge ordered thirty cents to be brought to him, and putting the coins into a box, he shook it before the plaintiff saying:—"Here is the money you claim. You must give me a receipt;" and he then sent the box away.

Wondering what the Judge meant, the plaintiff asked:—"But, where is the money Your Honour?"

Then the Judge answered:—"Why, you have charged the defendant for 'smelling.' You ought therefore to be content with the 'sound' only of the money you claim."

M.

#### ARRIVAL OF THE FRENCH MAIL.

##### TELEGRAMS.

London, 7th February.

The House of Commons last night resumed the debate on the Address in reply to the Royal Speech. Mr. Redmond, "Home Rule," member for Wexford, brought forward an amendment condemning the neglect by Government of the present distress in Ireland. Other Home Rule members during the debate which followed, urged that Government should make advances to tenants. Sir Stafford Northcote detailed the measures which have been adopted and stated the future intentions of Government in respect to relieving distress. The debate was then adjourned.

The electoral address of Sir Richard Temple to the East Worcestershire electors has been issued.

London, 7th February.

The Secretary of State for India, in reply to a deputation from the Manchester Chamber of Commerce, said the Government has no information confirming the rumour that it is intended to re-impose the cotton import duties in India. He was of opinion that such a course would be most unjust and gave assurances that the Viceroy and Sir John Strachey were both very favourable to the abolition of the duties.

London, 9th February.

Sir Stafford Northcote, in replying to a question in the House of Commons, said that Government propose a renewal of the Ballot Act for a year only, leaving the decision to the new Parliament.

London, 10th February.

In the House of Commons this evening, Sir Stafford Northcote, in reply to the question respecting a statement made by the *Times* that England had released Persia from her Treaty engagements of 1857, said that Persia's communications on the subject of Herat were still under the consideration of the Government, and that as we had not yet come to an understanding in the matter it was inexpedient to make any statement to the House.

Lord Beaconsfield in the House of Lords, replying to a question on the same subject, said there was no foundation for the assertion that England had released Persia from her Treaty Engagements of 1857. His Lordship said negotiations with Persia still continue, that nothing was yet concluded, and he promised to produce papers when completed.

London, 12th February.

In the House of Commons last night, Sir Stafford Northcote, replying to Mr. Fawcett, pledged himself to submit to the House any decision as to whether the renewed Afghan war expenses are to be borne by India. The South African House of Assembly has been prorogued. The Colonial Secretary announced a series of resolutions in connection with the establishment of a new Confederation.

London, 12th February.

The House of Commons have negatived Mr. O'Donnell's amendment to the address, censuring the Government for neglect of Irish affairs, by 127 against 12 votes.

The House of Commons read for the second time the Bill for the relief of the distress in Ireland.

It is stated that Colonel Colthurst, member for Cork and a Home Ruler, has been refused admission to the Reform Club.

Reuter's Special Correspondent at Teheran telegraphed reporting that it is generally current there that the Persian Government proposes a European Commission to define the frontiers of Persia in the North and East. The policy of the action contemplated in the spring is that the Persian troops occupy Seistan and eventually Herat. These rumours require confirmation. The British Government, however, has been informed of the intentions of the Persian Government, whose proposals, it is believed, have been assented to.

Lord Lymington, Liberal candidate for Barnstaple, has defeated Sir Robert Carden, Conservative.

Paris, 12th February.

The French Chamber of Deputies has refused to discuss the amnesty proposition.

Aden, 13th February.

The *Venetia* with the mails of 30th ultimo left here this morning at 4, and the *Khedive* for Galle and Calcutta at midnight last night.

Berlin, 12th February.

Emperor William opened the German Parliament to-day. His Majesty in a speech from the throne referred to the proposed increase in the German army, which he stated was justified by the armaments in neighbouring countries, and was no indication of a departure from a pacific policy.

London, 14th February.

In the Commons the Under Secretary of State for India, read a letter from General Roberts in which he denies that Afghan prisoners were treated with undue severity. Mr. Wedderburn's motion came on for discussion, he urged that natives should be represented in the Legislative Council. The Under Secretary for India said he was afraid it would be impossible for a long time to extend the representative system to India. The Indian authorities endeavoured as far as possible to elicit native opinion on the different Bills.

The House of Commons have negatived by 75 against 6 votes, a motion brought forward by Mr. Weelhouse member for Leeds, for a Select Committee to enquire into the effects of Free Trade.

London, 14th February.

Colonel Clarke, the Conservative candidate, has been elected member for Southwark in room of the deceased member, by a majority of 853, defeating Dunn, Liberal, and Shipton, Radical, candidates.

London, 16th February.

Major Wood of the 4th battalion Rifle Brigade, succeeds Major Clerk of the 3rd battalion, same regiment.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

His Majesty the Emperor, will shortly visit the Woollen Manufactory at Senji.

The two Privy Councillors, General Saigo, and Admiral Kawamura, proceeded to the Atami hot springs on Saturday last, by the *Nisshin Kan*.

A meeting of the Senate was held on Friday, the 5th instant, and presided over by Mr. Yanagiwara, the Kanji, owing to the absence of President Oki. The subject under debate was the first resolutions passed in the recent Local Governors' Assembly.

The Minister for the Interior requested the Minister of Finance, on Friday the 5th instant, to appropriate the sum of 292,400 yen to defray the expense of the local police in the different cities and prefectures, from April until June this year.

General Yamagata, a member of the Privy Council, entertained Governor Sekiguchi of Yamaguchi, and the *Shizoku* of that prefecture (who are now the *Choku-nin* and *Sonin* officers) on Friday last week, at his private residence in Fujimicho, Tokio.

Mr. Sakai, the Chief Secretary of Shiga *Ken*, received telegraphic instructions on the 5th instant, to come up to Tokio. It is probable he will be transferred to some other office.

His Excellency Matsukata, Minister for the Interior, is to leave Tokio for Osaka about the 20th instant, to take part in

the distribution of medals to the successful exhibitors at the Cotton and Sugar Competitive Exhibition. He will return to Tokio overland, along the Tokaido.

The new Cabinet is, for administrative purposes, divided into six sections namely:—the foreign section composed of Their Excellencies Okuma, Admiral Kawamura, and Inouye; Home Affairs, Their Excellencies Ito, Generals Kuroda and Saigo; War, Generals Yamagata, Saigo, and Admiral Kawamura; Finance, Their Excellencies Okuma, Terashima, and Ito; Legislative, Their Excellencies Oki, and General Yamada; and Justice, Their Excellencies Terashima, and General Yamada.

Mr. Kondo, the Consul for Fusan, Corea, has left for his post.

The native papers state that "the Japanese Consulate and Consular Court will be established in Gensan, Corea, in very magnificent style."

His Majesty the Emperor will shortly entertain the new members of the Cabinet, and the newly appointed Ministers and Assistant Ministers of the different Departments.

A sum of money has been handed over to the prefecture of Yamaguchi by the Finance Department, to be expended in road-making.

Mr. Matauda, the new Governor of Tokio, entertained the Foreign Representatives and their ladies at the Shiba palace on the 8th instant.

His Excellency Shiungawa, Assistant Vice-Minister of the Interior, has been appointed Acting Superintendent of the Bureau of Woods and Forests.

It is said that the budget of the Department of Foreign Affairs, which is now 600,000 yen, is to be increased to one million yen.

On the 8th instant, Prince Yanagiwara, the *Kanji* of the Senate, and the Princes Nabeshima and Nagaoka, attachés of the Foreign Department, and Lieut-General Ida, were appointed Envoys Extraordinary and Ministers Plenipotentiary. Mr. Hosokawa, a Senator, was appointed *Kanji*; Governor Shibahara of the prefecture of Chiba, and Governor Yasuba of Aichi, were nominated Senators. Mr. Funakoshi, Secretary of the Interior, was appointed Governor of Chiba and Judge Seki, Governor of Aichi. Governor Iwamura of Ehime, was nominated Chief Secretary of the Interior, and Governor K. Nomura of Ibaraki, *Kanji* (Judge of the Criminal Court.)

Governors Osaka of Shizuoka, and Makimura of Kioto, and Secretaries Yoshida of Sakai, Iwano of Chiba, and Fujikawa of Tochigi, all left Tokio on the 8th instant for their respective offices.

Mr. Under Secretary Ikeda, of the Finance Department, has been appointed Superintendent of the Nagasaki Custom House, and left for that port on the 12th instant.

The Representatives who attended the recent Local Governors' Assembly, have inspected the Quarantine ground of Nagura in the prefecture of Kanagawa and were accompanied by the *Kenrei*.

Mr. Iwamura, Chief Secretary of the Home Department, has been appointed Chief Superintendent of the Statistical Bureau.

Information has been received that the Sydney Exhibition will close on the 16th instant, and that Mr. Sakata, the Japanese Commissioner, will leave on the 14th of next month.

Mr. Hanabusa, *Chargé d'Affaires*, will again shortly proceed to Coren.

His Excellency Yanagiwara, Envoy Extraordinary and Minister Plenipotentiary to the Court of St. Petersburg, will leave for his post at the beginning of next month.

Of the Envoys Extraordinary and Ministers Plenipotentiary lately appointed, Prince Nabeshima was ordered to the Court of Rome, Lieutenant-General Ida to that of Vienna, and Prince Nagaoka to that of Holland.

We (*Mainichi Shinbun*) are in receipt of information that at one of the recent meetings of the Senate, President Oki attended in person and addressed the members to the following effect, "I am a new President, and as I am not altogether conversant with the rules of this Senate, I feel much difficulty in deciding the various questions that arise in the course of your debates. I trust therefore that you will excuse me." This speech, as may be imagined, excited much surprise and the audience remarked to each other:—"indeed Mr. Oki is a newly appointed President, and it may be very difficult for him to get

thoroughly acquainted with the duties of his office all at once, but if the President says these things to the meeting, it is like a judge stating to the plaintiff and defendant in an action 'I am ignorant of the principles of law, and therefore it is very difficult for me to pass a proper judgment.' We are therefore greatly perplexed to ascertain the meaning of the President's speech."

Two letters have lately been addressed to His Excellency Kawano, the new Minister of Education, by some unknown persons. One is as follows:—"You are known to be an able statesman, but you are appointed Minister of Education. The reason why you received this appointment, may be owing to the Government wishing to keep you from actively interfering in affairs of state. If this is so, I advise you not to yearn after official employment, but resign office at once, &c., &c." The other is to a somewhat similar effect and concludes thus:—"If you loiter in your position, and do not resign, you show yourself one of the Government party; then you must not be surprised if a sharp sword falls upon your head."

Governor Takasaki of the prefecture of Okayama, and Governor Yamayoshi of Fukushima, returned to their respective posts on Tuesday, the 9th instant.

The Government Museum, situated inside the Yamashita gate, is to be opened to the public, from the 15th instant.

The sum of 8,733 yen is shortly to be handed over to the prefecture of Kumamoto, to furnish funds for improving the harbours, rivers, roads, bridges, and embankments in that district.

Her Majesty the Empress Dowager is said to be about to visit the provinces of Ise and Yamato.

His Imperial Highness, Field Marshal Prince Arisugawa, entertained the Prime Ministers, the Privy Councillors, and the newly appointed Ministers and Assistant Ministers of the different Departments yesterday, at his private mansion, to celebrate his appointment to the office of *Sadaijin* (Assistant Prime Minister). His Excellency Oki, the Privy Councillor, entertained the members of the Senate yesterday, in honour of his appointment to the office of President of the Senate.

His Excellency Awoki, Envoy Extraordinary and Minister Plenipotentiary to the Court of Berlin, left for Europe on the 10th instant in the *Hiroshima Maru*.

The *Mainichi Shimbun* gives it as a rumour that the Department of the Colonization Commission at Sapporo, Yesso, will shortly be abolished, and that Hakodate will be made into a prefecture.

It is also rumoured that an alteration will be made in the salaries of the Government officials in every prefecture throughout the empire.

Since the recent changes of the ministry, His Majesty the Emperor frequently attends the *Daijo Kwan* (Council of State), in addition to his regular days for attendance.

Mr. Yoshiwara, the new Assistant Vice-Minister of Finance, who visited Kyoto, Osaka, and several prefectures on a tour of inspection, returned to Tokio the day before yesterday.

Mr. Seki Shimpei, the new Governor of the prefecture of Ehime, starts for his post on the 17th instant.

Mr. Tomioka, the Governor of Kumamoto, and Mr. Narasaki, the Governor of Nagano, returned to their respective jurisdictions yesterday.

#### NAVAL AND MILITARY.

His Majesty the Emperor will shortly visit the Military College, to witness a review of the cadets whose term in the institution will be completed during the current month.

His Majesty the Emperor will attend an exhibition of *yabumame* and *inu-o-mono* (shooting at a target and dogs from horseback, with bow and arrows) on the 22nd instant in the gardens connected with the Palace. This representation will take place in compliance with an application made by Ogawara Kiyochika, and others. Okusa Takijiro and several other renowned archers and horsemen are coming to Tokio from the province of Sun-shiu to take part in the proceedings. Prince Matsura is also to give a similar entertainment in the Fukiage Park in the presence of His Majesty the Emperor at an early date.

The *Tsukuba Kan* which is now undergoing repairs at the Yokosuka dockyard, will sail for Hawaii about the middle of next May.

Vice-Admiral Ito has been relieved from the appointment of commander of the Eastern Admiralty, and replaced by Rear-Admiral Hayashi. Admiral Ito has been ordered to be in attendance at the Naval Department in Tokio, and as Rear-Admiral Nirei, the Director of the Naval College, is unwell, Mr. Under Secretary Kawano, was appointed Acting-Director.

General Yamagata, Chief of the Staff, visited the Navy Department on the 8th instant, and had an interview with His Excellency Admiral Enomoto, the newly appointed Naval Minister.

The *Mainichi Shimbun* mentions a rumour that "Lieutenant-General Takashima, who is now on the way back from France, will be appointed Chief of Police on his return."

The man-of-war *Kaimon Kan*, which is now in course of construction in the Yokosuka Dockyard, will be launched early next month in the presence of His Excellency Iwakura, *Udaijin*, and Admiral Enomoto, Minister of the Navy.

Another large dock is to be constructed at Yokosuka.

The Staff Office despatched three officers to China a few days ago.

A meeting of the commanding officers in the army is to be held about the 25th instant.

Rear Admiral Hayashi, the new commander of the Eastern Admiralty, inspected the *Kongo Kan*, on the 10th instant, and the *Itegi kan*, *Moshun kan*, *Hosko kan*, and *Teibo kan*, now in harbour, the day before yesterday.

The following is the composition of the reserve force which is to be called out for inspection in Tokio on the 28th instant:—for the first brigade of infantry of the Tokio garrison, 162 men from Tokio *Fu*, 273 from Kanagawa *Ken*, 63 from Saitama *Ken*, 162 from Shizuoka *Ken*, and 163 from Yamanaishi *Ken*; for the second brigade of infantry in the Sakura barracks, 191 men from Chiba *Ken*, and 315 from Ibaraki *Ken*; for the second brigade of infantry in Utsu-no-Miya, 70 men from Saitama *Ken*, 13 from Ibaraki *Ken*, and 190 from Tochigi *Ken*; for the third brigade of infantry in the Takasaki barracks, 152 men from Saitama *Ken*, 109 from Gamba *Ken*, 172 from Nagano *Ken*, and 99 from Niigata *Ken*; for the first regiment of cavalry, 182 men; for the first battery of field artillery 116 men; for the mountain artillery, 118 men, for the first battalion of the sappers, 118 men, and for the commissariat, 80 men are to be called from the *Fu*s and various *Ken*s.

The *Nichi Nichi Shimbun* is responsible for the following:—As the pay of officers in the supernumerary class is not to be raised, the War Department made application to the authorities that those officers who received ten yen or less per month should be paid in specie, (either in gold or silver) because they would derive a benefit from the difference between *satsu* and specie."

#### INDUSTRIES, TRADE AND FINANCE.

A native paper states:—"An enormous quantity of kerosene oil is to be exported from America, and the foreign merchants in Yokohama, who are the importers, are in difficulties to find out places to store the oil when it arrives. They wanted to hire the kerosene godowns at Ishikawa and Nakamura, but those buildings are already filled with 300,000 cases of kerosene, and are therefore not available. We hear the importers are going to apply to the *Kencho* authorities to spare them some places for putting the expected kerosene. Now the reason why such enormous quantities of oil are to be imported is this, that when the revision of the treaty between our country and the United States is completely negotiated, the duties on oil are to be raised, therefore the Americans wanted to import a large stock of kerosene before the negotiation should take place; thus from September until December last, 991,445 cases were exported from New York to Japan, and in the same proportion, large quantities were exported from other ports. The *St. Charles* that was burnt in Kobe on the 29th ultimo, was one of the ships loaded with the kerosene."

The following is a return of exports and imports at all the open ports of Japan for the month of January last:—

Imports	...	...	...	...	...	Yen	3,089,875.04
Exports	...	...	...	...	...	"	2,071,274.14
Excess of imports	...	...	...	...	...	Yen	1,018,600.90
Duties on exports and imports, and godown rent, harbour dues, &c. &c.	...	...	...	...	...	Yen	226,571.88
Export of bullion	...	...	...	...	...	Yen	1,314,083.54
Import	...	...	...	...	...	"	23,642.20
Excess of export	...	...	...	...	...	Yen	290,441.34

A mercantile firm in Yokohama, being desirous of entering into a direct rice trade with Corea, has obtained samples from that country.

A Chamber of Commerce was opened on the 8th instant, at Takamatsu.

Application has been made to the local Fucho, by several residents in Tokio, for permission to establish a fire and life insurance company.

A native paper states that Mr. Barry, the United States Consul in Shanghai, writing to a resident of Yokohama, mentions that "the cotton crop in the districts surrounding Shanghai is very poor this year, and will not amount to over half that of ordinary years, therefore during this year, China will require a very large supply of cotton from Japan."

An officer of the Agricultural Bureau is about to visit Uji and instruct the local tea-growers in the art of making black tea.

A special meeting was held on the 10th instant by the Chamber of Commerce, in Tokio.

On the 9th instant the *Hiogo Maru* brought from Osaka the sum of 8,000 yen in gold five yen pieces.

The *Chingai Bukka Shimpō* says: "Japanese silk twist has recently greatly improved in value abroad. Tomioka now fetches more than French and Italian silk; and we trust the silk manufacturers will be encouraged by these glad tidings, and toil diligently to preserve their present superiority for all time to come."

#### MISCELLANEOUS.

A native paper states that Mr. Furusawa, the Chief Secretary of the Legislative Bureau, will shortly resign his official position, and take editorial charge of the *Osaka Nippo*.

A meeting of the Aikokusha, or Patriotic Society, is to be held at Osaka to-day, the 13th instant, presided over by Mr. Kataoka Kenkiichi.

The *Nichi Nichi Shimbun* contains a telegram which announces that, on the morning of the 7th instant, the boiler of a steamboat running between Niigata and Nagaoka exploded. About thirty of the passengers were killed, and forty injured.

The leading merchants of Maibashi, in the province of Joshu, have applied for permission to construct a line of railway between Tokio and Maibashi.

His Royal Highness the Duke of Genoa left Kobe for Nagasaki, in the *Vettor Pisani*, on the 4th instant.

The *Akebono Shimbun* states that Chinese robbers, disguised in Japanese clothing, have been plundering the houses of several people in Kobe. Seven of these thieves were caught on the 21st ultimo, having committed a robbery the previous night. This practice of Chinese marauders of adopting Japanese clothing may, perhaps, account for the robberies in the Chinese exchange shops remaining undiscovered.

The *Choya Shimbun* states that after the recent heavy rains at Kugamura, in Chiba ken, a landslip occurred and discovered two caverns, one three, and the other nine ken (fathoms), in diameter, with a number of smaller caves leading from them. Skeletons and ancient weapons and implements have been found in the caves.

Prince Shimadzu left Tokio for Kagoshima, on the 10th instant.

The *Mainichi Shimbun* contains a statistical report made up to the 1st of January last, which gives the total population of Yokohama at 41,556 persons, of whom 21,546 are males and 20,010 females.

The people of Fukushima ken are highly pleased at having purchased the *Takao Maru* from the Navy Department. It is expected that, now the inhabitants of Fukushima having secured the advantage of steam communication, a great increase will take place in the production of that locality.

The *Doraku Sutan*, which was suspended together with the *Choya Shimbun* and the *Akebono Shimbun*, was permitted to resume publication on the 11th instant.

The first meeting of the *Ko-I-Kiei* (Society recently established for the encouragement of the Asiatic community) was held in the Nobles' School at Nishiiki-cho, Kanto, on the afternoon of the 10th instant. Several prominent gentlemen were present.

The Hon. J. A. Bingham, the United States Minister, visited the Shiba palace, by special permission, the day before yesterday.

#### IMPERIAL GOVERNMENT RAILWAYS.

##### TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts for the week ending Sunday, 7th March, 1880.

Merchandise, &c. ....	\$ 1,163.85

Total.....\$11,502.44

Miles open 47.

#### LAW REPORTS.

##### IN H. B. M.'s COURT FOR JAPAN.

Before MARTIN DOHMEN, Esq., Acting Assistant Judge.

Thursday, 11th of March, 1880.

FRANCIS STILLFRIED v. W. H. WAGGOTT.

This action was brought to recover the sum of \$16.00 being the price of two dozen photographs taken by the plaintiff of the wife and child of defendant.

The defendant pleaded *never indebted*.

The parties appeared personally.

Baron Francis Stillfried, sworn stated: I am an Austrian subject, and a photographer residing in Yokohama. I am the plaintiff in this action. Defendant came and asked me to photograph his wife and child. I did so, the wife three times, and the child twice. When I sent defendant the proofs he said he was not satisfied with the colour. I offered to take the pictures over again, but he said he would not agree to this, he was not satisfied, and would go elsewhere and get them done. I produce the pictures, which are not only good photographs technically, but also good likenesses. Since I have been established people often come to try me. They get pictures taken, and then refuse to accept them, thus I lose my time, chemicals and material.

Defendant declined to ask plaintiff any questions.

By the Court: I did not send in any bill, because defendant refused to accept the pictures. I frequently take pictures two and even three times to please people.

Defendant, sworn stated: I am a British subject. My occupation in that of a bill collector. In December last I took the parties to have their portraits taken. Plaintiff said he could not take the pictures properly, as his place was not in order. He afterwards apologised for not taking the likenesses. I afterwards went in January, and he took the pictures. I first got a proof of the child's picture, and said it was not satisfactory in colour. Plaintiff wanted me to keep it for three or four weeks, and the colour would come all right. I refused to do so, and got the likenesses taken by Mr. Andersen. I offered to take half a dozen likenesses from plaintiff, as he had been put to trouble. He refused to supply them, and never sent me any account, until I got the summons in this action. I produce the likenesses taken by Mr. Andersen that your Honour may see their superiority, and the reasonableness of my refusal to accept those made by plaintiff. I produce Mr. Andersen's account to show that if a photograph is not approved of, no charge is made.

The plaintiff here interpolated that in all other places it was usual to pay a deposit before getting a likeness taken.

Defendant called John Douglas, who being sworn stated:

I am an American citizen and a photographer, residing in Yokohama. It is not usual to charge for likenesses which customers refuse. We submit a proof, and if it is accepted we get paid, but not otherwise.

Cross-examined by plaintiff: In all places in which I have been, both in England and America, no such custom has existed as paying for photographs in advance, either in whole or part.

By the Court: There is no charge under any circumstances if photographs are refused. That has always been the custom of our firm. I am not aware of the custom among Japanese. When proofs are submitted, no charge is made when they are not approved. It is otherwise when no proofs are to be submitted. I think the picture produced is objectionable. The "lighting" I do not consider judicious.

His Honour stated that the case hinged upon the question of custom, and as it had been proved that the custom in Yokohama is, that if proofs are rejected no charge is made, judgment would have to be for defendant, with costs.

### THE JAPANESE PRESS.

#### THE LIBERTY OF SILENCE.

(Translated from the *Choya Shimbun*.)

IN a country of free institutions men enjoy the utmost independence and the spirit of liberty pervades all things. Here in Japan, in former days, the nation was in a state of thralldom and remained so until enfranchised by the introduction of the principles dominant in Europe and America. Then indeed we tasted the sweets of freedom and everything became emancipated. Hence learned men and public writers, whenever they opened their mouths or put pen to paper, trumpeted forth the "liberty of speech," "freedom of publication," "unrestrained right of lecturing," "religious liberty," etc., and insisted that in all things the inhabitants of this empire were independent. Now all these ideas were imported from abroad and none of them originated in this country, in fact they were mere imitations. We are now informed that a peculiar sort of liberty has been discovered in Japan and this affords us much gratification because we are always pleased to hear of our countrymen inventing something new. Of late, Government officials have assembled from far and near, and held a meeting. During their anxious deliberations some of them strongly advocated the desirability of the "liberty of silence" which is the converse of, and perhaps greatly superior to, the much vaunted "liberty of speech." Now there are several descriptions of liberty, but this kind we never read or heard of before now. Both in Europe and America, many able writers have published volumes upon freedom and independence but none of them mention the "liberty of silence." Our Government officers, on the other hand, are so sagacious that they have made the discovery and consequently we cannot help regarding them with admiration, not unmingled with awe. We conscientiously believe that if the people of Europe and America only knew that this wonderful kind of freedom—the liberty of silence—obtained in Japan, they would at once adopt it and insert a new phrase in their dictionaries. Truly there are many diversities of freedom, but none so peculiar as the newly invented "liberty of silence," which quite passes our comprehension. How strange it would be if the public was to hear of further discoveries in the same promising direction, such as the "liberty of quietness," the "independence of slavery" and the "freedom of terror." The word liberty appears to be capable of many constructions, and as we were greatly struck with the new invention of the officials, we think it only right to direct attention to it.

#### A DEFINITE FOREIGN POLICY.

(Translated from the *Choya Shimbun*.)

AS this world is now constituted, the strong everywhere exercising dominion over the defenceless, it is almost impossible for a needy and helpless country, surrounded by powerful and unscrupulous states possessed of all the vicious instincts of blood-thirsty tigers and ravening wolves, to preserve its independence through the instrumentality of diplomacy, and avoid sinking into the despicable condition

of a mere tool for other nations to use in furtherance of their own schemes of self-aggrandizement. By skilful diplomacy this pitiful fate may possibly be avoided, and a comparatively weak country may preserve its independent existence. It has frequently happened that in consequence of foreign relations being improperly conducted, wealthy and powerful states have suffered defeat and disaster; how much more likely are similar misfortunes to overtake poor and helpless nations! This conclusively proves the vast influence exercised by diplomacy upon the well-being of every country.

There are no fixed laws regulating diplomatic action, and if a system of policy could only be framed to include every possible eventuality, many complications would be avoided. The nearest approach to this is when a country lays down a definite line of policy and steadfastly follows it out. Thus Prussia for example, adheres closely to the rules laid down by Frederick the Great, and the United States of America to those of Washington. The good results of this persistence in one course of action are seen in the extensive territory acquired by Prussia and her position as the head of Germany, and the vast wealth and influence enjoyed by the United States. If a country is continually altering its foreign policy, no harm may perhaps accrue as long as able ministers are at the head of affairs, but once an inferior man occupies the guiding position, then disaster inevitably follows. It therefore appears a necessity for every state to adopt, and strictly adhere to, some carefully considered scheme of national policy, suited to its particular requirements and capabilities.

We have read that George Washington, the first President of the United States of America, delivered a speech upon the foreign policy of the country, during the course of which he remarked that, "the most important object the citizens of the United States have to keep in view is the extension of commercial relations with other countries to the exclusion of political ties. Let us honestly observe the treaties already entered into but permit no further foreign interference." This advice of Washington has established the permanent policy of the United States, and clearly shews his preëminence as a statesman. His military genius was fully proved in the war of the revolution, but the sage counsel contained in the address we have quoted has been of far greater service to his country than his warlike achievements. The United States are separated by vast oceans from all other countries that could disturb their tranquillity, and have no reason to fear aggression, and consequently, have, no inducement to enter into competition with rival nations. All this the sagacious Washington perceived, and therefore counselled the adoption of a policy of non-interference abroad. Thus, wherever other countries have been embroiled in war, the United States have held aloof and enjoyed the blessings of peace.

General Grant visited this empire recently, and gave good and sound advice, although other foreigners endeavoured to thwart him by their cunning and artful devices. General Grant, however, put these evil councillors to confusion by adhering steadfastly to justice and impartiality. This was not owing alone to the inherent nobleness of the General's nature, but also to the position of his country, which left him wholly unfettered. Europe, for example, is made up of various rival states, all busily engaged in diplomatic struggles: they are therefore differently situated from America; and even if Prince Bismarck or Lord Beaconsfield desired to tender the same advice as General Grant, they would find themselves constrained to remain silent.

We are unaware whether any decided policy has been marked out by the Government of this Empire. It is true that only a short time has elapsed since our foreign intercourse commenced; but as our relations with other nations are rapidly increasing, if some fixed line of conduct is not now laid down, it is impossible to foretell what disasters the future may have in store for us. We feel justified in saying that the adoption of some definite foreign policy has become a positive necessity.

The position of Japan, a small group of islands in the Pacific ocean, is removed from the influences of other countries, Yesso alone being in somewhat close proximity to Russian territory. We have therefore no interest in the affairs of other nations, and can conveniently preserve a strict neutrality. Indeed, in respect of situation, Japan does not materially differ from the United States of America,

and our country can certainly never be placed in the same category as the continent of Europe, with its contiguous nations quarrelling and fighting like tigers or wolves. The rulers of Japan should never lose sight of the natural advantages of segregation enjoyed by this empire, and ought to adopt, in its entirety, the policy initiated and persevered in by the United States with such manifold excellent results. The objects which our national policy should keep steadily in view are, the increase of commercial relations abroad, the avoidance of foreign meddling with our domestic affairs, and the preservation of peace amid the perils of this wicked, warlike world.

The nations of Europe are all anxious to adopt a similar policy, but their natural position precludes them from accomplishing their design. They have become so mixed up in foreign matters that, notwithstanding the desire of their statesmen and Prime Ministers to act with justice and impartiality, it is found impossible to do so and every succeeding year finds the countries of Europe plunged in contention and strife.

Here in Japan we are fortunately circumstanced, and nature has granted us the advantages most conducive to the welfare of a nation. Shall we wantonly ignore these gifts, and blindly tread in the paths of European diplomacy? Surely it will be insanity on our part to discard the lessons taught us by the experience of other lands. Japan must cleave to the principle of non-intervention, and follow the example of the United States of America, a glorious country favoured by Providence with similar advantages to ourselves. Those who have been entrusted with the shaping of the high destinies of this empire should take as their guide the views of the great George Washington. Thus this nation will extend its commerce, avoid the possibility of being dragged into war with all its attendant miseries, and enjoy those blessings which are the fruits of peaceful prosperity.

#### RUSSIA AND CHINA.

(Translated from the *Choya Shimbun*.)

WHEN it became generally known that Chung How, the late Chinese Ambassador to St. Petersburg, had concluded a treaty of alliance with Russia, the public mind was thrown into a state of anxiety. Opinions were uttered in all directions, and great attention was directed toward the question, because the alliance concluded between Russia and China gave rise to an idea among the public that it must have resulted from the Eastern Question, or otherwise from the Loochoo controversy. However, according to various reports received from different directions, it appears that the Chinese Government do not approve of this treaty of alliance with Russia, and that consequently difficulties will arise regarding the Kuldja question, and war will, without fail, then break out between Russia and China. Ah! but a few months ago we much regretted that a secret treaty of friendship had been concluded between Russia and China, but at the present moment, we state war is about to break out between these two countries. How wonderful is it that the change, regarding the position of affairs, is so rapid.

When Chung How was ordered to Russia as Chinese Ambassador, what special powers and instructions were entrusted to him we cannot yet tell, but judging from the fact that he has absolutely concluded a very important treaty, it is then quite clear that the Chinese Government invested him with full powers for that purpose. Then, having once so authorized him, if the Chinese Government should now decline to affirm the treaty he has concluded, we should then feel perplexed at such a movement on the part of the Chinese Government. A report informs us, that Chung How being an influential character in China, is always envied by other dignitaries, and although by the treaty with Russia which he has recently concluded the district of Kuldja has been restored to the Chinese Government, a part of it still remains in possession of Russia. However, Chung How having consented to several treaty clauses regarding the recovery of the above mentioned district, which did not meet with the approval of Sa So To, the Governor General for the new territory, and Li Hung Chow; the majority

of Chinese dignitaries all shared in this opinion. Thus disapproval became the general opinion in the whole Government of China, and the young Emperor was compelled to pass a very heavy sentence upon his late Ambassador. The above reports are confirmed by the following decree which appeared in the *Peking Gazette* of the 2nd instant:—"Chung How, senior Vice-President of the Court of Censors, having been despatched on a mission, has taken upon himself to set forth on his return to the capital without awaiting the Imperial decree authorising his return. As a first step, let him be committed to the Board for the determination of a rigorous penalty, and let him vacate his post pending their decision. Let the Grand Secretaries, the Presidents of the Six Boards, and the nine chief Ministries of State, together with the Imperial Academy and Supervisorate of Instruction, take into careful consideration the Treaty and Regulations negotiated by him as well as the memorials on the subject presented by the Tsung-li Yamen on successive occasions. They will report the result to Us."

From other quarters we hear that Chung How was punished according to a long standing law in China, which holds that any public functionary, who shall lose any part of the district under his charge by war, flood, &c., &c., shall be degraded forthwith. Prince Kwang has been so reduced from his office on four occasions, but in every instance he was restored to his former state after the expiration of a few days. Under these circumstances it is therefore not unreasonable to expect that in Chung How's case the same rule will be followed, and that in a short time, he will be restored to his former rank.

Let us now, for the purposes of argument, take the above-mentioned report as true; then we find that the Chinese Government are now about to take warlike measures, and to decide the question as to Kuldja by a contest with Russia in Central Asia. On the other hand, Russia being a great and powerful nation, will not submit to be hoodwinked by the Chinese Government, and will certainly demand, under force of arms, that the treaty which their Ambassador has concluded should be followed out. Thus Russia is like a fierce tiger which will not recede,—and we opine that the Chinese Government are well aware of this fact—and knowing such, if they do not carry out the treaty, we then see that the members of the Government all insist upon war. Let us now suppose the latter opinion to be true, then it seems likely that the Chinese Government, after punishing Chung How, would approve the treaty, and if such should be the case, the relations between Russia and China, at the present day, are not critical.

However, as we have already said, the reports that are now current among the public are the only two which we have mentioned above, but in our point of view, we see that there is something more beside the above mentioned reports. What is it? It is the interference of England. Now, the treaty which Chung How concluded at St. Petersburg, being a treaty of alliance, it would afford a great advantage to Russia as far as political relations are concerned, but it is quite certain that England, always the opponent of Russia, would suffer damage from it.

Let us now judge the case from what has taken place in the past:—England and Russia, as regards Turkey or Afghanistan, have never been in such active rivalry as of late. Therefore, when the English Government succeeded in gaining the friendship of Turkey, Russia declared war against the latter, and when the Russian Ambassador 'stirred up' Afghanistan, England made war upon that country. Was such not the case? Therefore, the alliance between Russia and China would certainly be much more injurious to England than the fact of the Russian Ambassador having 'stirred up' Afghanistan. This being the case, how can it be possible for the wise Prime Minister of England, Lord Beaconsfield, to remain quietly putting his hands in his pockets without participating in these affairs? Judging then from these circumstances, it would not be entirely inconsistent to believe that the English Government might have instructed its Minister in China to persuade the Chinese Government to cancel the treaty of alliance concluded between Russia and China, and if so, we see the reason why the Chinese Government are punishing Chung How. We therefore cannot yet tell for certain whether the relations between Russia and China will be settled in peace, or result in war.

## MARRIAGE PROPOSALS.

## EVERY MAN HAS HIS OWN WAY OF ASKING THE IMPORTANT QUESTION.

Sir Arthur Helps believed that never since the world began did two lovers make love in exactly the same way as any other two lovers. Whether he was right is equally beyond proof or disproof. Certainly, no question has been put in such a variety of ways as the most momentous one a man can ask or a woman answer; how it is put depending upon time, place, circumstances, and the temperament of the individuals concerned.

A curious marriage proposal was made by a reverend bachelor who entered the matrimonial state on his death-bed. When in his seventy-third year the minister had a severe attack of paralysis, which left him so weak and helpless that, feeling his end was not far distant, he proceeded to set his worldly affairs in order. His parish being an exceedingly small one, and having been always a most liberal man, he had not much money to leave, which circumstance, had it not been for one reason, he would not have minded.

For the last twenty years he had had as housekeeper a steady, sensible woman, who had served him honestly, tended him like a daughter during his illness, and for whom he had quite a fatherly regard. It was on her account that he mourned his poverty. It would have been a matter for thankfulness could he have left her as much as would have supported her comfortably and respectably in her old age—she was now about forty-five. After weighing and considering the matter for some weeks in every possible light, a way out of the difficulty suddenly flashed upon him: and knowing the precarious state of his health, he resolved to execute his purpose at once. He called his housekeeper, and when she entered the room he made her sit down and after telling her how anxious and sorrowful he had been because he had no money to leave her, he continued.

"Of course you are aware that there is a Ministers' Widows' Fund, so that if the husband dies, his wife will have an annuity during her life. Now, supposing you marry me, although I am almost at death's door, you will be amply provided for in the future. Will you consent to this?"

"Master, dear, you must be doting! What would people say?" "I was never more serious in my life, Mary: and I am sure people will say we have both acted wisely in this matter. Take till the evening to think it over, and then bring me your answer."

In the evening, Mary told him she "would take him." So ten days after they were married, and three days later the good old man died; but his widow still enjoys her share of the "Widows' Fund."

A young officer was dancing a set of Lancers in a crowded drawing-room with an extremely pretty girl, to whom he made himself most agreeable. After the dance was over, he took her to a chair, and seating himself beside her, began to mourn his celibacy.

"It is exceedingly easy to remedy that," said she.

"I don't think so at all; in fact I do not know a girl who would marry me."

She laughed, and replied:

"Just go and ask some one here to-night, and I venture to say you will be accepted by the first."

"Ah! I am not so sure about that. But—will—you—take me?"

"With pleasure."

And a few months later they were married.

A big, good-natured doctor was desperately in love with, and had been twice refused by, a fair-haired little woman. But instead of the disappointment curing his love, it only made the passion grow more intense. After the last refusal, he told her that if over she changed her mind to let him know, as his love for her was unchangeable, and he would be proud to be her husband. Some months later he was driving home from seeing a patient, when he saw his lady-love riding in his direction. Supposing she would merely bow and pass on, as she had often done before, he did not pull up his horse. But the moment Miss Dixon came up to him, she reigned in her horse, stopped, and called out:

"Won't you stop, Dr. Hill?"

He raised his hat, and replied:

"I shall happy to do so," then waited for her to speak.

She was gazing at the ground and blushing deeply, but, quickly looking up, she filled the doctor's honest heart with surprise and gladness by saying:

"Dr. Hill, I have been closely watching you lately, and seeing nothing but goodness and noble-mindedness in your character, and believing you will make an excellent husband, I am willing to marry you."

Mr. Smith, coming all the way from Australia on the look-out for a wife, saw a young governess on board a Glasgow steamer, whom, from her kindness and attention to some children under her charge, he fancied would suit him. So he went and introduced himself, and, taking a seat beside her, said:

"I am fifty-three years of age; have an income of a thousand a year; am a total abstainer from intoxicating drinks; have a good house near Melbourne; and all I want is a good wife to complete my possessions; would you mind taking me?"

She quietly replied:

"I have no objections."

And a few weeks later they were made one.

A young man of about twenty-three years of age, with neither money nor the prospect of getting any, came to the conclusion that the best thing he could do would be to marry a "rich wife" and live on her money. Among his many acquaintances was a widow lady of about twice his age, with three children, but with a steady income of two thousand a year. Her he resolved to marry, and, in order to cultivate her friendship, he took her presents of flowers and fruit, and gave the children books and rides on his horse. The lady kindly received his attentions, gave him the liberty of her

house, and treated him like a younger brother in every respect. The young fellow interpreting her kindness to suit himself, and believing he had nothing to do but ask her, ventured one evening on the subject on the following manner:

"I wonder very much why you don't remarry, Mrs. L——?"

"Simply because no one wants a widow with three children."

"I know one who would be proud to have you and your dear children," said the wooer, feeling the worst well over.

"Indeed, you are most flattering this evening."

"No; I am not flattering, I love you, and would be proud to be your husband."

She looked coldly on him; then replied:

"You mean you would be proud to own my money. Sir I have been vastly deceived in you." Then pointing to the door, she continued: "Leave my house; and while I live, ever dare to re-enter it."

When Lord Strangford sat down to criticise a book of travels by Miss Beaufort, he little dreamed that before long he would write to the young authoress: "I was thinking the other day about a communication from the Emperor Akbar to the King of Portugal, which contained a request for copies of the holy books of the Christians, and in which the following sentence occurs: 'In the world of humanity, which is the mirror and reflection of the world of God, there is nothing equal to love or comparable to human affection.' For many years I have felt and known this, though I never said it till to-day to anyone. When you next write, please give me the possessive pronoun of the first person."

Surely never was a declaration made in quaint fashion, saving perhaps by the Scotch bandle who led the Manse housemaid to the churchyard, and pointing with his finger, stammered:

"My folk lie there, Mary; wad ye like to lie there?" Or the lugubriously humorous Irish lover who took his girl to see the family vault, and then and there asked her it she would like to lay her bones beside his bones!

Louise de Savole popped the question to Bourbon, but had to take "No" for her answer, the constable curtly declaring that the disparity of years between them, and his own feelings, rendered the union impossible.

If ladies sin against propriety in taking the initiative, they can hardly be blamed for bringing a shilly-shallying or over-bashful lover to the point, when a good opportunity presents itself. Such an opportunity sufficed to end what had been a somewhat tedious courtship. The young man paying his usual evening visit, asked his lady-love "how she got along with her cooking?"

"Nicely," replied she; "I'm improving wonderfully, and make splendid cake now."

"Can you?" said the young fellow, ignorantly rushing on his fate. "What kind do you like best?"

"I like one made with flour and sugar, with lots of raisins, currants, and citron, and beautifully frosted on the top," responded she.

"Why, that's a wedding-cake!" cried he.

"I meant wedding," said she; and there was nothing left for him but to say he meant wedding, too.

Equally cleverly cornered was the Western man whose girl told him she was a mind-reader; whereupon he naturally inquired if she could read what was in his mind, eliciting for reply:

"O yes! You have it in your mind to ask me to be your wife; but you are just a little scared at the idea."

It is plain the notion did not scare her, any more than it did the Galloway girl, who when Jock, coming into the kitchen while she was preparing breakfast, said: "I think I'll marry ye Jean!" answered: "I would be muckle obliged to ye if ye wud!" and so concluded the bargain; not even stipulating, like another ready lassie on accepting as sudden an offer:

"But ye maun gie me my dues o' courtin' for a' that, Jamie."

That right of courtship is one out of which no woman ought to allow herself to be defrauded.

Little as faint-heartedness in a lover may be to the liking of fair lady, it is sufficiently flattering to be condoned; but when any Caleb in search of a wife chooses to sue by delegate, he assuredly deserves to fail ignominiously. Love is not to be won by attorney; and oftentimes the attorney has thrown his client overboard, and carried off the prize himself; as happened when William Grimm went courting on his brother's behalf. Hooker escaped that risk by leaving everything, even the selection of the lady, to Mrs. Churchman, who found him a wife, and achieved a son-in-law herself at the same time.

Proposing by proxy is the rule, not the exception, in Greenland. Time was when the Greenlanders won their wives by capture; but since their conversion by Danish missionaries, they have become the tamest of wooers. Now a candidate for the holy state goes to a missionary, and tells him he wants a wife.

"Whom?" asks the missionary, and learns the woman's name.

Sometimes the man answers:

"Yes; she is not unwilling; but thou knowest womankind."

Usually the answer is "No."

"Why have you not asked her?" inquires the missionary.

"It is difficult; girls are prudish; thou must speak to her."

Accepting the office, the good man sends for the girl, and after a little conversation, says:

"I think it is time to have thee married."

The girl declares she has no mind to wed.

"That is a pity," says the missionary. "I had a suitor for thee."

Of course the damsel is curious enough to want to know who the suitor may be, and of course her curiosity is satisfied.

"He is good for nothing," she exclaims with a toss of the head, "I won't have him."

"But," the go-between urges, "he is a good provider; he throws his harpoon with skill, and moreover he loves thee."

Still pretending to be obdurate, the girl answers that she will not consent to the match.

"Well, well: I will not force thee; I shall soon find a wife for such a clever fellow," says the missionary, making believe there is an end of the matter.

The girl does not go; she stands silent for a little while, then in a low voice sighs out:

"Just as thou wilt have it."

"No; it is as thou wilt; I'll not persuade thee," replies the clergyman.

Then with a deep groan, the maiden says "Yes," and the matter is settled.

Tyrolean lassies are by old custom spared the necessity of giving tongue to their "Ay" or "No." The first time a young man pays a visit as an avowed suitor he brings with him a bottle of wine, of which he pours out a glass and offers it to the object of his affections. In any case she will not refuse it point-blank—that would be too gross an insult; but should the wooer not be agreeable to her, or his declaration come a little too prematurely, she declines the proffered wine, pleading that it looks sour, or that wine disagrees with her, or that the priest has forbidden her to touch it, or any other excuse feminine ingenuity may suggest. If she likes the lad and is equal to owning it, she empties the glass, taking especial care not to spill any of the wine, for if she does so, or the glass or bottle be broken, it is a most unhappy omen. "They have spilled the wine between them," say the peasants when a marriage turns out badly.

Dumb declarations are in vogue too among the Boers of South Africa. Mr. Anthony Trollope tells us that when a young Boer goes in quest of a wife he puts on his best clothes, sticks a feather in his cap, provides himself with a bottle of sugar plums and a candle—a wax one if possible—mounts his horse, rides to the house holding the young woman he would honor, hangs the reins on the gate, dismounts and enters. His smart gear, his feather, and his candle bespeak his errand. To make the point quite clear, however, he offers the candle to the daughter of the house. If she takes it, it is lighted; the mother sticks a pin in the candle to show how long the young couple may remain together without interruption, and she and everybody else retire. Mr. Trollope says a little salt is sometimes put in by somebody to make the wick burn slowly, but when the flame reaches the pin, mamma comes in, the "frying" is over, and a day or two afterward the pair are made one.

They manage these things differently in Texas. This is how a fond couple come to an understanding, according to one who pretends to know. He sits on one side of the room in a big white oak rocking chair; she on the other side, in a little white oak rocking chair. A long-eared deer-bound is by his side, a basket of sewing by hers. Both the young people rock incessantly. He sighs heavily, and looks out of the west window at a myrtle tree; she sighs lightly and gazes out of the east window at the turnip patch. At last he remarks:

"This is mighty good weather for cotton-picking."

"Tis that," the lady responds, "if we only had any to pick." The rocking continues. "What's your dog's name?" asks she.

"Coony." Another sigh-broken stillness.

"What's he good for?"

"What is who good for?" says he abstractedly.

"Your dog Coony."

"Fur ketching 'possums."

Silence for half an hour.

"He looks like a deer-hound."

"Who looks like a deer-hound?"

"Coony."

"He is; but he's sort o' bellowed an' gettin' old an' slow, he ain't no 'count on a cold trail."

In the quiet ten minutes that ensues she takes two stitches in her quilt, a gorgeous affair, made after the pattern called "Rose of Sharon."

"Your ma raisin' many chickings?"

"Forty odd."

Then more rocking, and somehow the big rocking-chair and the little rocking-chair are jammed side by side, and rocking is impossible.

"Makin' quilts?" he observes.

"Yes," she replies, brightening up, for she is great on quilts. "I've just finished a gorgeous 'Eagle of Brazil,' a 'Setting Sun,' and a 'Nation's Pride.' Have you even saw the 'Yellow Rose of the Paraiso'?"

"No."

More silence. Then he says:

"Do you love cabbage?"

"I do that."

Presently his hand is accidentally placed on hers, of which she does not seem to be at all aware. Then he suddenly says:

"I've a great mind to bite you."

"What have you a great mind to bite me for?"

"Kase you won't have me."

"Kase you ain't axed me."

"Well, now, I ax you."

"Then now I has you."

Coony dreams he hears a sound of kissing, and next day the young man goes after a marriage license.

Some of our readers may already have seen the following, but it is so good that we cannot resist giving it. A bashful young peasant was greatly captivated by the charms of a pretty girl in his own station in life; he was exceedingly anxious to ask her to marry him, and had often resolved to do so but so far his courage had always failed him when the opportunity arrived. However, one night he resolved to hear his fate in spite of his modesty, so he started off to spend the evening with her. When he arrived, to his joy her parents were from home, and she was seated knitting at the kitchen fire with a big gray cat lying at her feet. Jamie sat down beside her, but not a word could he say, till at the end of half an hour he

inwardly resolved to "finish this business;" so, acting on a "happy thought," he placed the cat upon his knee, and stammered forth:

"Pussy, ask Lizzie will she marry me?"

Lizzie blushed and smiled, but managed to say:

"Pussy, tell Jamie I'll take him."—*Chambers' Journal*.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XL.

#### THE LAST BATTLE.

When the Heike knights saw that their talisman had failed to avert Yoshitsune's arrow, they urged their boats forward with one accord, and advancing to within a cable's length of the shore, began to shoot with such rapidity that the cloud of shafts almost completely hid the combatants from one another. The Genji men on their side, riding out as far as they might into the sea, plied their bows with no less vigour and more precision, so that the occupants of the galleys were presently fain to drift out of range of their adversaries' missiles.

Yoshitsune, perceiving the first symptoms of this retrograde movement, was seized by an uncontrollable desire to strike a blow at close quarters. One of the larger galleys had approached much nearer than any of its fellows, and those on board, protected by a well adjusted bulwark of pavises, had worked grievous havoc among the little band of Genji knights. Neither did they now show any disposition to retire, but on the contrary crept gradually nearer and nearer, until at last aided by this advance as well as by the shoaling water of the ebb tide, Yoshitsune was able to aim a fatal sword-cut at the foremost man of the crew. Guided between the opening of the pavises, the never-erring blade clove its path through casque and skull, and sweeping back from its deadly errand scattered drops of gore into the face of a gigantic soldier seated in the stern of the boat. This man had hitherto remained an inactive spectator of the fray, but his inactivity was now suddenly exchanged for the most vigorous action. Springing to his feet he bent over the gunwale of the boat, and before Yoshitsune could either elude or parry the stroke, the iron fangs of a long grappler were fixed firmly in the curtain of his helmet.

Something more like a wail than a shout burst from the lips of the Genji knights as they surged forward to save their captain. They knew well that the stoutest soldier is powerless under such circumstances, and they scarcely dared to watch the issue, expecting to see Yoshitsune dragged from his saddle and cut into pieces before any might come within reach to save him. And indeed our hero's history would probably have ended here had the combat been on shore, but it so happened that at the moment the grappler fell on him, a sudden deepening of the water had obliged his horse to swim, so that instead of the rider and steed being separated, the two were drawn bodily to the side of the boat. The result can easily be guessed. Once more the unerring sword descended, and the holder of the grappler lurching forward, fell into the waves already dyed with his blood.

Yoshitsune's peril did not however end here. In the first struggle he had made to resist the grappler, his bow had fallen from his hand, and was now floating almost at the bows of the enemy's galley. The loss of the weapon would have been a small matter at any time, but under such circumstances, when it became apparent that Yoshitsune was seeking to recover it, friend and foe alike were astounded at his rashness—these seeing their lost opportunity restored again sought to drag him from his saddle, while those shouted to him to abandon the bow and make for the shallow water. But he was not to be either dissuaded or deterred. Parrying with his right hand the glaives and grapplers that threatened him, he gradually drew the bow towards him with his whip, which was tied to his left wrist, and raising the weapon at last from the water, rode leisurely shoreward just as a flight of well-directed arrows laid low half a score of his too eager adversaries.

The exploit was in truth a fine one, but there were not a few among the older knights who condemned its unnecessary recklessness in no measured terms, and Benkei himself took his master roundly to task, asking him whether it were well that his soldiers should adopt so profitless a precedent. "It were not only well but necessary," was Yoshitsune's answer.

"A bow is a small matter in itself, but to cast it away in the face of the foe is to leave him a trophy none might gainsay. To-day we have done little more than hold our own, and when the scale is evenly balanced a small thing will sway it in either direction."

After this the Genji knights drew off and took up their quarters for the night among the burned homesteads of Takamatsu, while the Heike on their side encamped on the site of the ruined castle. The paucity of Yoshitsune's following had now become unmistakable, and the Taira men could not fail to perceive that one vigorous stroke would rid them for ever of their worst enemy. They resolved to make a night attack. Everything seemed to be in their favour. The villagers, enraged at the loss of their houses, came to report that the Minamoto soldiers had doffed their harness and lain down to rest without even setting a watch, while some offered to guide the assaulting column by paths of whose existence the enemy had no suspicion, moreover the distance was barely two miles and of this a great part could be traversed by sea, so that there was no discernible difficulty in surrounding the Genji position with an overwhelming force, and slaying every man of the hundred and fifty where they stood.

In truth the thing was as facile as it looked. Scarcely a soldier of the century and a half mustered round the white pennon was capable of resistance, or if capable, had remembered to be prepared. Fighting from daybreak to darkness, without even that respite accorded by the enemy's momentary weariness, they were all, including even Yoshitsune himself, so completely worn out that they felt they must choose between the chance of destruction that night and the certainty of yielding on the morrow. It was not possible to avoid both, and so unbuckling their mail, they committed themselves to the care of Hachiman and lay down to sleep perhaps the sleep of death.

On the Heike side the order went out that two thousand men should hold themselves prepared to embark at midnight. They were chosen soldiers, all men of tried valour who had never known defeat, and had they marched that night, there can be very little doubt as to the issue. Yoshitsune's followers would surely have fought bravely, but that anything could have saved them from destruction seems altogether impossible. The very certainty of success, however, engendered a cause of failure. At the last moment two of the Heike nobles began to dispute the leadership of an expedition plainly destined to be so prosperous, and whether there were none wise or strong enough to decide their rival claims, daylight had appeared in the east before the question was set at rest.

The fighting during the next three days was very much of the nature we have just described. Both sides saw that no decisive advantage was to be gained immediately, and accordingly reserved their strength for the final struggle which could not now be much longer deferred. Little by little the Genji troops crossed over from the mainland and joined Yoshitsune's pennon, until at last he could count more than thirty thousand sabres and seven hundred galleys.

For some time it had been apparent that the last mellaï must take place upon the sea. The Heike captain had made two or three attempts to effect landings in favourable situations, but they had been dislodged either by Yoshitsune's troops or by those under Noriyori, who now guarded the coast line on the west and south, so that the enemy were in a manner surrounded. The forces on each side were about equal, but the Taira galleys were larger and better appointed than those of the Minamoto, whose boats were nothing more than transports originally procured with the one object of carrying the army over to Shikoku. This however was not a matter of much moment. The nature of the boats themselves mattered little provided they were capable of keeping afloat, and since the gale of which Yoshitsune had taken such daring advantage, gentle breezes and cloudless skies had been the weather's daily condition.

Never too had a fairer spring morning lit up the woody reaches and mountain-shadowed inlets of those beautiful shores than was that of the day destined to be for ever remembered by the descendants of those who fought the bloody fight of Dan no Ura. The Heike galleys moved out first to the onset. No special order of battle was adopted, for each division of boats was under the immediate orders of the noble whose contingent of troops had embarked therein, but over and above the purpose that all brave men hold on the eve of combat, one common aim had been suggested to their followers by the Taira captains and accepted by every soldier as

the immediate object of his efforts. This universal sentiment was reiterated and intensified by the Vice-Delegate, Tamomori, as the boats glided towards the enemy. Standing in the stern of his barge, he shouted out these words with a strength of utterance that carried their import even to the ears of the Minamoto knights. "Comrades, we must choose now between victory and death. There is no longer time to retreat, neither is fame dearly purchased with life. Remember every man that the single object with which you fight to-day is Yoshitsune's destruction. Let us but give his carcass to the waves and whatever be the issue of the battle, our misfortunes shall have been avenged."

This injunction was received by those to whom it was addressed with a yell of indescribable fury. In truth there was scarcely a man among the Heike host who would not gladly have sacrificed his life to achieve Yoshitsune's overthrow. So conspicuous had been his share in every fight hitherto fought, so daring his enterprises, and so plainly attributable to his boldness the reverses which had overtaken his foes, that these forgot to take any note of the strength he commanded and saw in him alone the origin of all their calamities. It was not therefore in obedience to some private feeling of revenge nor yet at the suggestion of a few nobles, that a description of Yoshitsune's appearance had been diligently circulated throughout the army on the preceding evening. Squire and servitor, vassal and vassal, all alike had exhibited the same desire to carry into battle some guiding knowledge of their arch enemy's features or bearing, and it is said that thousands never discharged an arrow that day without seeking to direct it towards a mark resembling, in something at least, the portrait they had received.

Perhaps it was this concentration of design that steadied their hands at the outset for it is certain that the first volley of the Taira shafts wrought terrible havoc among their opponents. Indeed these were shot down in such numbers that for a moment the whole line of Genji galleys visibly recoiled, and shouts of victory already began to be heard on the Heike side. But Yoshitsune had reserved a special band of skilled archers for just such a crisis at this, and these now advancing on the enemy's flank soon restored the balance. Yoshitsune himself followed by half a dozen of the largest galleys in his fleet drove right in among the foe, and wherever he passed a barge might presently be seen drifting helplessly without hands to ply the oars or bend the bows that had twanged so busily a few minutes before. He was clad that day, as was his custom, in armour conspicuously magnificent, but under any circumstances his deeds alone would have rendered him easily recognizable, so that however ill they fared who encountered him, his boat was unceasingly the object of a furious assault.

He was however well guarded. Tomomori's charge to the Taira knights as they rowed into the battle had been, as we have said, audible to the occupants of the Genji galleys also, and though Yoshitsune himself had seemed to pay no heed to the Delegate's words, it was not so with Benkei and Saburo. These two were never reckless in their master's cause. They understood that in such a mellaï as they were about to witness the purpose of the many is almost certain of achievement, and instead of taking post at their master's side as was their wont, they placed themselves at the opposite end of the boat, and devoted their whole attention entirely to meeting the many attempts which were made to board the galley from the stern.

It was to this alone that Yoshitsune owed his preservation. The Heike men were willing to sacrifice themselves in any numbers provided only the survivors might achieve the object for which all fought, so that time after time Yoshitsune's barge was made the mark for onsets some of which must inevitably have succeeded but for Benkei and Saburo's forethought. Those however who escaped the sweeping strokes of the giant's ponderous glaive only furnished food for Saburo's sword, against which casque and cuirass proved but a feeble protection that day, and despite their desperate efforts and reckless bravery, only one man of all the Heike knights gained a momentary footing in the galley of the white pennancelle. That man was Noritsune, Earl of Noto. Renowned for his enormous strength no less than for this deadly skill with a weapon seldom used and not easily avoided, he had hitherto taken no active part in the fight, but urged his boat gradually forward from the outskirts of the fray, resolved that his first and last effort should be to grapple with and annihilate Yoshitsune. He was one of the few that

had any personal knowledge of the Genji chief's appearance for the two had already come together at the battle of the Valley of Ichi, and Noritsune carried an indelible mark of that encounter. He did not therefore prosecute an uncertain search like many of his comrades, but guided at first by the evidence of destruction that distinguished the track of Yoshitsune's boat, and afterwards by the brilliant armour and comely face so well remembered, he soon succeeded in steering his galley to within a few yards of the man whose death he sought to compass. There, however, for the moment, his efforts ceased. Bidding his men rest on their oars, he himself crouched down in the bows of the boat watching the fray that was going forward, but apparently with no disposition to take part in it, nor exhibiting any interest in its progress. In his right hand he carried the weapon that had gained him so terrible a notoriety. It was a heavy ball of iron, fastened to a delicately wrought chain of the same material, and looked in itself an arm little to be dreaded, but those who had seen it launched with a force that crushed in casque and skull, or whirled with lightning speed round the head of the stalwart earl, knew that the most skillful warrior in the southern provinces might not safely venture within its range.

Yoshitsune meanwhile, knowing nothing of the danger that threatened him, was wielding his glaive with that wonderful dexterity peculiar to himself. In all the din and tumult, while bow-strings twanged and swords clashed around him, or when the shock of onset drove back his followers and left him sometimes to wrestle with men in whose furious persistence he could not fail to read the implacable purpose his own death alone might satisfy, he never once quailed or hesitated, but stood in his place calm and unwearied, always managing to strike first and finding no occasion to repeat his stroke. We have seen that when the battle was first joined he had not been content merely to remain within bow-shot of his foes, but had pressed hotly forward in the hope of at once compelling the enemy to give ground. This was not done through unreasoning impetuosity, but rather, as we shall presently understand, in obedience to a well considered design, and had Yoshitsune found others capable of following and supporting him there is little doubt he would have succeeded in his purpose. But though in appearance the assailant, he became almost immediately the assailed, for the Taira knights saw in his advance the very opportunity they so ardently desired. Instead of driving back his opponents, the death he dealt among them caused them rather to press forward, since they guessed that none but Yoshitsune himself could hold his own against such odds, and so as the battle deepened about him, it seemed that each victory he won only served to redouble the numbers and resolution of his foes.

Noritsune saw all this and begun to fear that by waiting too long some accident might deprive him of his victim. His original design had been to drive his boat against Yoshitsune's and then hurling his iron truncheon, trust his immense strength to achieve the rest. But his observation of the fight soon convinced him that with whatever dexterity he might sling the ball, its movement would be less rapid than Yoshitsune's, and so he resolved to refrain from all aggressive action until he had actually gained a footing in the enemy's galley. He had no sooner framed this resolution than an opportunity of carrying it out presented itself. A band of Taira knights, perceiving that Yoshitsune's escape had hitherto being due in no small measure to the dexterous manœuvring of his barge, determined to aim solely at disabling his oarsmen and though they sacrificed their own lives in this attempt, they succeeded in maiming or killing more than half the crew. In the moment of confusion that ensued, Noritsune gave the signal to his men, and before the Genji soldiers could make an effort to avoid the collision, his galley came crushing down upon Yoshitsune's.

Whether the shock astonished Yoshitsune into an unusual course or whether he had some instinctive perception of the impending danger, it is impossible to say. His back was turned towards Noritsune as the latter raised his hand, and his whole attention seemed to be concentrated on one of his own galleys which had pushed forward to his assistance. The boat was still some sixteen or eighteen feet distant when without a word of warning and in the very second preceding the consummation of his assailant's design, he leaped with a prodigious bound from one galley to the other, and Noritsune's missile, hurled with all his force, flew to the end of its iron chain and then plashed harmlessly into the water.

Yoshitsune laughed merrily as he turned round and poised

his glaive. The whole thing seemed to him nothing more than an amusing incident of the battle, and he appeared almost disposed to repeat his extraordinary leap when he observed his assailant's discomfiture. But from that instant Noritsune abandoned all hope of success or even of escape. He might have easily regained his own boat in the confusion, but he contented himself with unfastening the iron chin from his wrist, and then casting the weapon he had so often and so fatally wielded into the sea, stood with folded arms awaiting his fate. Two of the Genji soldiers perhaps mistaking the import of this action leaped upon him empty-handed, but he with scarcely a perceptible effort, threw an arm about each, and crying out that he took them to keep him company among the dead, jumped with them into the sea.

But these things had little effect upon the complexion of the battle. So far neither side could claim any advantage, though the Heike actually engaged were considerably outnumbered. This might, however, have ceased to be the case at any moment, for Shigeoyoshi, Earl of Awa, with his three hundred galleys had as yet held aloof from the mellay. Whichever party he joined could scarcely fail to be victorious, and it was the desire to win his alliance by some preliminary success that had induced Yoshitsune to make his first onset. We have seen that this hope had been for the moment defeated and that the Taira men had, on the contrary, assumed the aggressive, but while they were intent only on Yoshitsune's destruction, the Genji boats gradually forged forward, and little by little this wave of onset began to roll the Heike fleet back towards the shore where another army of their foes was drawn up. Seeing this the Earl of Awa no longer hesitated. Bearing down on his late allies' flank with his three hundred galleys, he immediately placed the issue of the combat beyond all doubt.

The Heike soldiers did not indeed yield or attempt to fly as had hitherto been their wont. They had come out to conquer or to die and to this resolution they adhered, not perhaps uninfluenced by the consideration that every road of retreat was cut off. Thus even when the tide of victory had inevitably turned, the occupants of each galley fought doggedly on, neither giving nor seeking quarter, so that before sunset the waves of the bay were red with the blood of the victims they had engulfed. The Empress-mother, understanding that the doom of the Heike cause was at last sealed, tied her son on her back and threw herself into the sea, an example which was immediately followed by many others of the noble ladies forming her court. Of these, however, the main part were rescued by the Genji knights, and the boy Emperor under Yoshitsune's care, soon forgot the hatred he had been taught to cherish towards the white flag.

(To be continued.)

#### DOUBLE ACROSTIC.

'Tis past and gone and we would drop a tear  
O'er all that's caused anxiety or fear,  
But since we cannot call it back again,  
Then let it go, nor let it cause us pain,  
But strive in its successor to improve  
That course in which it is our fate to move.  
If wishes for your welfare can do good,  
We'd freely give you all the joy we could.

1.

This title women may possess  
By right of birth or marriage,  
And yet be not what she'd profess—  
'Tis truly in her carriage.

2.

Frozen drops of rain or vapour  
Recall the task before you set,  
Mumble prayer with cross and taper,  
To paradise we hope you'll get.

3.

This body, you must understand,  
Is boundless, grand, and free,  
Its nature is opposed to land,  
'The truth of which you'll see.

4.

A candle, here it is a light,  
And to the sex that's tender,  
With figure pleasing to the sight,  
Implies her waist is slender.

"FUJIYAMA."

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, MARCH 5TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

-----represents velocity of wind

.....percentage of humidity

Max. velocity of wind 18 miles per hour on Thursday, at 4 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.434 inches on Saturday, at 7 a.m., and the lowest was 29.876 inches on Monday, at 10 p.m. The early part of the week was characterized by an unusually high barometer and the latter part unusual constancy in barometrical height. The range of temperature on Monday was remarkably small—being only a trifle more than 4°. The total amount of rain for the week was 298 inches.

### SHIPPING INTELLIGENCE.

#### INWARDS.

Mar. 7, Japanese steamer *Kokonoye Maru*, Dithlelsen, 1,133, from Kobe, Mails and General, to M. B. Co.  
 Mar. 8, Japanese steamer *Tokai Maru*, Hogg, 1,042, from Kobe, Mails and General, to M. B. Co.  
 Mar. 8, British steamer *Belgie*, Meyer, 2,627, from Hongkong, Mails and General, to O. & O. Co.  
 Mar. 10, Japanese steamer *Hiogo Maru*, Moore, 896, from Kobe, Mails and General, to M. B. Co.  
 Mar. 9 Japanese barque *Kinokuni Maru*, Nicols, 960, from Nagasaki, Coals, M. B. Co.  
 Mar. 10, British barque *West Glen*, Thompson, 699, from Antwerp, General, to L. Kniffier & Co.  
 Mar. 11, American ship *Merom*, J.S. Lowell, 1,200, from New York, Oil, to Fearon, Low & Co.  
 Mar. 11, Japanese steamer *Tokio Maru*, Swain, 1,146, from Shanghai and ports, Mails and General, to M. B. Co.  
 Mar. 12, British barque *G. Broughton*, Clemenshaw, 803, from Antwerp, General, to Simon Evers & Co.  
 Mar. 13, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, from Hakodate, Mails and General, to M. B. Co.  
 Mar. 13, French steamer *Tibre*, Reynier, 1,726, from Hongkong, Mails and General, to M. M. Co.

## PASSENGERS.

Per British steamer *Belgic* from Hongkong—For Yokohama: Mr. H. M. Blanchard; one Indian in steerage. For San Francisco: Mr. J. Anderson; 109 Chinese in steerage.

Per Japanese steamer *Hiogo Maru* from Kobe:—Mrs. Task, Mr. Buckmaster, 100 Japanese in steerage.

Per Japanese steamer *Tokio Maru* from Shanghai and way ports:—Mr. and Mrs. Mowatako, Mr. and Mrs. Kiyooka, Mrs. Fujioka and child, Messrs. J. R. Randall, J. P. Francis, V. Roehr, M. C. Bonger, Dr. Henderson, J. W. Beauchamp, Otta Reimers, M. Raspe, Biggleston, Uyari, Nodama, Kutanbe, Shinjitsu, Katsuo, Ichimura, Sudzuka, Matsumoto, Shirai, Yoshiwara, Nawakubo, Tamimura, Tanaka, Kobata, Deumi and Kimura in cabin; 2 Europeans, 2 Chinese and 408 Japanese in steerage. For San Francisco, Mr. and Mrs. S. D. Webb, 3 children and European nurse.

Per Japanese steamer *Kumamoto Maru* from Hakodate:—Rev. Mr. Denning and 6 Japanese in cabin, 190 Japanese in steerage.

Per French steamer *Torre*, from Hongkong:—Messrs. Bearley, G. W. Butt, and P. E. Cameron.

## OUTWARDS.

Mar. 6, H.M.'s sloop-of-war *Pryazna*, Commander Hon. H. N. S. Hood, 1,124, 6 guns, for Nagasaki.

Mar. 7, Japanese steamer *Shinagawa Maru*, Walker, 908, for Samu-sawa, etc., General, despatched by M. B. Co.

Mar. 7, German schooner *Johann Heinrich*, Oestmann, 411, for Takao, despatched by Jardine, Matheson & Co.

Mar. 7, French steamer *Tanaie*, De la Marcelle, 1,735, for Hongkong, Mails and General, despatched by M. B. Co.

Mar. 8, Japanese barque *Sumanoura Maru*, Spiegenthal, 925, for Nagasaki, General, despatched by M. B. Co.

Mar. 8, Japanese steamer *Shario Maru*, Kilgour, 524, for Kobe, Mails and General, despatched by M. B. Co.

Mar. 9, Russian corvette *Digit*, Captain De Livron, 1334, 8 guns, for Honolulu.

Mar. 10, British barque *Vivid*, Peterson, 238, for Kobe, despatched by Adamson, Bell & Co.

Mar. 10, British steamer *Belgic*, Meyer, 2,627, for San Francisco, Mails and General, despatched by O. & O. Co.

Mar. 10, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Mar. 11, German brig *Gustav*, Johannsen, 240, for Cheefoo, General, despatched by Mitsui Bussan Kuwaisha.

Mar. 11, German brig *Peter*, Holm, 241, for Cheefoo, General, despatched by Walsh, Hall & Co.

Mar. 11, Japanese steamer *Kokonoye Maru*, Dithlefsen, 1,133, for Kobe, Mails and General, despatched by M. B. Co.

Mar. 11, German barque *Anna Bertha*, Kransen, 468, for Newchang, Ballast, despatched by Ting Hong Tye.

Mar. 11, British steamer *Castello*, Anderson, 1,482, for Kobe, General, despatched by Hudson & Co.

Mar. 12, Japanese steamer *Kinshin Maru*, Davidson, 690, for Samu-sawa, Mails and General, despatched by M. B. Co.

Mar. 13, British steamer *China*, Alderton, 1,030, for Hongkong, Mails and General, despatched by P. & O. Co.

Mar. 13, Japanese steamer *Tokai Maru*, Hogg, 1,402, for Kobe, Mail, and General, despatched by M. B. Co.

Mar. 13, British steamer *Cairnswair*, Castle, 1,122, for Hongkong via Kobe, General, despatched by W. M. Strachan & Co.

## PASSENGERS.

Per French steamer *Tanaie*, for Hongkong:—Mrs. Pelikan, infant, and servant, Mr. and Mrs. Gulick and Mr. G. De Ory.

Per British steamer *Belgic* for San Francisco:—Messrs. J. Wolfe, J. L. Anderson, Yegi, G. W. Owen, John Beyer, A. Dubowski, G. J. Mutch, J. Haries; 4 Europeans, 2 Japanese, and 109 Chinese in steerage.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and way ports:—Captain and Mrs. H. E. Bridges, Mr. and Mrs. Takasaki, (Okayama Kenrei) Mr. and Mrs. Yoshidome, Mrs. Arai, Prince Date, Sir R. P. Beauchamp, Messrs. Iwasaki Yanoski, Kawada, Yom, (Chinese Consul), Tonami, Watanabe J. Date, Takezoze, Akiba, O. Silveslie, G. Poggi, Takahashi, Ito, A. W. Glennie, Mori, Shiwotani, Kajima, Arima, Mori, Kawakami, Nishigawa and Mr. and Mrs. Aoki.

Per British steamer *China* for Hongkong:—Mr. C. B. Rickett in cabin; 1 European, 6 Chinese and 1 Japanese in steerage.

## CARGOES.

Per French steamer *Tanaie* for Hongkong:—

Silk for London... .. 15 Bales.

" France... .. 203 "

Per Japanese steamer *Hiroshima Maru* for Shanghai & ports:—

Treasure... .. Yen 100,000.00

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—

Treasure... .. \$ 36,900.00

Per British steamer *China* for Hongkong:—

Silk for France... .. 25 Bales

## REPORTS.

The Japanese steamer *Tokai Maru* reports: Left Kobe 6th March at 6.15 p.m. Arrived at 6.30 a.m. 8th March. Experienced light and moderate E. winds and fine weather throughout.

The British steamer *Belgic* reports: Sailed from Hongkong Mar. 1st at 1.45 p.m. Encountered very strong N.E. monsoons and rough sea to Van Diemen Straits; thence light variable and easterly winds and smooth sea to port. Arrived at Yokohama March 8th at 12.34 p.m. Time 6 days 21 hours and 5 minutes.

The Japanese steamer *Hiogo Maru* reports: Left Kobe 8th Mar. at 6.15 p.m. Arrived at Yokohama, 10th March. Experienced to Rock Island fresh N.W. and Westerly winds; thence to port light N. E. winds with fine weather throughout.

The Japanese barque *Kinokuni Maru* reports: Left Nagasaki 24th February. Experienced strong N.E. gales with intermediate calms and dirty weather throughout, being four days in the Gulf with light variable winds. Anchored 7 p.m., 8th March.

The British barque *West Glen* reports: Left Antwerp on the 24th of October, and Flushing on the 26th; had fresh easterly winds in the Channel, and moderate variable winds to the Equator, which was crossed on the 29th of November in long. 28 W. Had fresh S. E. trades, passed the Meridian of the Cape on the 24th of December, and ran the easting down on the 46th Parallel before fresh westerly gales. Made Cape Ottway on the 25th of January; passed through Bass' Straits; and met with a hurricane, lasting 48 hours, near New Caledonia, during which sustained a small loss of deck gear and had some sails split. Crossed the Equator in the Pacific on 21st of February; had strong N. E. trades and fresh N. E. and N. W. winds to the coast of Japan. Arrived in port on the 10th of March. Passage, 135 days.

The Japanese steamer *Tokio Maru* reports: Left Shanghai 3rd at 3.5 p.m. Arrived Nagasaki 5th March at 12.15 a.m.; left Nagasaki 6th at 12.10 a.m. Arrived Shimonoeki 6th March at 2.9 a.m.; left Shimonoeki for Kobe 6th March at 4.15 p.m. Arrived at Kobe 7th March 1.55 p.m.; left Kobe for Yokohama 8th March at 6.8 p.m. Arrived at Yokohama 11th, 3 a.m. Experienced fine weather throughout the entire passage.

The Japanese steamer *Kumamoto Maru* reports: Experienced light winds and fine weather throughout. Passage 48 hours and 15 minutes.

Japan Rice ... ..	... \$2.80 to \$3.00
Kerosene Oil ... ..	... \$1.62 to \$1.65
Newchwang Peas ... ..	... \$2.20 to \$2.25

## EXPORTS.

SILK.—Very little business has been done in Silk since the 6th instant. The news from Europe has not been encouraging and natives on the other hand do not yet shew any desire to meet buyers. Sales amount to only about 120 shipping bales. Prices remain unaltered, but are to a great extent only nominal.

Total export to date 16,393 bales against 16,535 bales at the corresponding period last season.

Stock in Yokohama about 3,000 Japanese bales.

	In London at 3/9½ per lb.	In Lyons at fr. 4.85. per kilo.		In London at 3/9½ per lb.	In Lyons at fr. 4.85. per kilo.

MISCELLANEOUS.

# W. & A. GILBEY'S WINES AND SPIRITS.

**W.** & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

## W. & A. Gilbey's Head Establishments:—

**England.**—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

**Ireland.**—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

**Scotland.**—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

**France.**—Principal Establishment, Chateau Loudenne, near St. Estephe, Medoc.

Their beneficial effect is speedy and certain. The old unfailling family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

**MEDICAL TESTIMONY.**

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.  
Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G——, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

## THE GREATEST

**WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock"

## The "Japan Mail,"

A Daily, Weekly, and Fortnightly Journal,

ESTABLISHED, 1865.

## TERMS OF SUBSCRIPTION.

WEEKLY EDITION. The "Japan Weekly Mail," a Weekly Review of Japanese Commerce, Politics, Literature and Art:—Per annum, \$24; Six months, \$13; Three months, \$7.

FORTNIGHTLY Edition, being a Summary of the foregoing, is published for transmission by the American Mail Steamers via San Francisco. Per annum, \$12; Six month, \$7; Three months, \$4.

THE JAPAN DAILY MAIL is published every morning (Sundays excepted) and contains the Arrivals and Departures of all Shipping, Passenger lists, Cargoes, Vessels on the Berth and in Harbour &c. &c. Also the latest Telegrams, Japanese news, Reports of Trials in the Courts of Law, Meetings of public bodies, and all matters of interest to the Community. Special attention is called to this Journal as a medium for circulating local advertisements. It has a large and constantly increasing circulation, its low price bringing it within the means of all classes of the community. It therefore affords exceptional advertising advantages, and secures to all announcements the utmost publicity, the object aimed at by advertisers.

SUBSCRIPTION PER MONTH—ONE DOLLAR.

## JAPANESE METAL-WORK.

EVERY visitor to Kamakura must have been struck by the grand proportions and sublime features of the great bronze Buddha. This excellent casting is but a type of many smaller ones to be found in various parts of the country. There are exceptions to all good rules, and, in attributing a high standard of art to the generality of these statues we would not include the hideous representation of the notable Daibutsu at Nara. The bronze at the latter spot stakes its reputation merely upon its immense size; its proportion, execution, and expression of countenance being greatly in error. In the Kamakura Daibutsu and in many smaller representations there is a tolerable truth of proportion, and a remarkable modelling of feature, resulting in an indescribable effect of divinity in expression. From these huge images down to the smallest sword ornaments, the Japanese have shown, and still show, great skill as workers in metal. Steel swords, famous for their keen edge; bells and gongs of the softest musical tones; and vases, caskets, and metal fittings exhibiting all the tricks of casting, chasing, *repoussage*, inlaying, plating and engraving, all testify to this. Compositions in metal are produced by mixtures unknown in Europe. Much of the old bronze contains gold and silver in its mass, and to this circumstance the natives attribute the clear musical tones contained in many temple bells.

All will have read the story of the old Shiba bell so prettily written by the late Dr. Purcell. It was a bell that, for its size and the distance at which its chime was audible, might have compared with Big Ben himself. Kyoto has several bells of great size and antiquity; notably one at the temple called Daibutsu; and there is still a fine old specimen at Ueno. These bells are often excellent speci-

mens of ornamental casting, the invariable dragon on the top being supplemented by raised devices and inscriptions on the sides. Bells also take an important place among the archaeological treasures of the soil, numerous instances having occurred, in which they have been exhumed, even as far back as 714 A.D., bespeaking considerable antiquity for the treasure trove. These bronzes are small, and are supposed by some to have formed the pendants of decayed pagodas, of which there must have been many in ancient times, since we read of an early king having ordered at one time the erection of eighty-four thousand such towers in the country. It is scarcely necessary to mention that the Japanese bell has no internal tongue, being struck from the outside by a large swinging wooden hammer. There is one large bell at Chioin, in Kyoto, the sound of which is said to remain obstinate to the ordinary hammer worked by hand, and the priests have applied modern ideas of mechanism in attempting to move the immense clapper by machinery. To make our notice of bells complete it would be necessary to mention the bowl-shaped bells struck upon the edge at temple-worship; the little hand-bells with internal clappers used by the priests; and the swinging bronze plates of various shapes, hung in clusters, and tinkled by bell ropes, in connection with the larger buildings.

The point, however, in which the native metal-worker most excels is the adaptation of metals to ornamental purposes, to achieve which results, copper and iron, mixed with different alloys, have been used to obtain different effects of colour. The modern curio-dealer covers some of his cabinets with the metal-work once forming the embellishments of sword-hilts and sheaths; and, though the *total ensemble* of such over-crowded productions is bad in the extreme, many of the individual fittings are very elegant in design. The guard of the sword-hilt is an iron plate often adorned with raised and inlaid metals in elegant design and delicate workmanship. In some cases a device upon common black metal will be traced in line by inlaid strips of copper, gold or silver, let in with the level surface, similar to Persian inlaid work:—sometimes the inlaid portions are formed of a variety of metals standing out in relief from the surface, and delicately modelled to represent natural forms. With various mixtures of the commoner metals, are obtained a variety of colours from reddish tint to a black, used in combination with gilding and silver, inlay to produce an approach to natural colouring. Such metals are *akagane*, *shakudo*, *shincho*, *sogan* and *shibuchi*, being mixtures of copper and iron with tin, silver and gold, in varying proportions. But the greatest skill is shown in the modelling, with sharp delineation and different degrees of relief which is unequalled in any foreign workshops. A favourite object for such workmanship was the handle of the *kogatana* of which many can be bought with raised flowers, foliage, birds, figures, and even landscapes. Nor does this art as yet show signs of deterioration, unless indeed it be in the loss of a certain amount of discretion and a lavish overcrowding of

enrichment upon surfaces, to please those customers who think that in ornament, quantity is more to be desired than quality.

One point worthy of notice is the fidelity of imitations of small natural objects of the animal and vegetable kingdoms, such as insects, mice, fish, birds and flowers, the truth in every detail being minutely indicated. Again there is the redoubtable dragon of Japan,—with his mysterious unearthly anatomy, suggestive of terrific spleen, spouting his fireclouds,—a subject to which the bronze maker often recurs; for the artist in metals is not balked by such fleeting shapes as fire, cloud or water, and has his conventionalized representation of each, expressive of their nature and force. Vases are often modelled with the thin curling spray spirals, indicative of splashing waves washing round their bases; and the dragon's fire-breath is often shaped into a support for a globe of pure crystal. Passing from smaller to larger objects it would be an omission to forget some of the beautiful bronze water-basins to be found before many of the temples. A favourite design for these is the cup of a gigantic lotus flower, or its *bowlé* and finely veined leaf, such as are seen crowding the moats and garden lakes with their curled hollows full of rain or dew. Apart from the suitability of such an idea for a water basin, the lotus has a religious meaning which particularly adapts its form to the precincts of Buddhist temples.

The seated Daibutsu has invariably a base indicating the lotus flower, and the expression of the same idea is to be seen in a small circular shrine at Ikigami, where a few petals in front are turned down to form a step to the threshold of the entrance.

A treatise, however brief, on the bronzes of Japan would not be perfect without a reference to the fine lanterns or *Kônedôrô*, which, ranged in avenues, line the approach to the gateways of shrines. Such lamps are placed for the most part in front of the burial places of the Shoguns, notably at Uyeno, Shiba, Nikko and Kamakura. They are oblations offered to the spirit of the deceased by the daimios and high dignitaries, the largest and richest in design having precedence in position. As the name indicates, they are intended to hold lights, and have a hollow head barred by perforated metal-work in diapers. They are often seven or eight feet in height, are gilt in parts, and finely moulded and enriched with foliated bands and raised panels representing sacred symbols in telling relief. The *haka* or monument of the sixth Shogun at Shiba, with its railing and gateway, is also a fine specimen of bronze work with sharp raised ornament. The entrance has two large bronze panels, one on either side, on which are representations of the sacred bird, *kô*. This complete group of metal-work may be held up as an example of the exquisite delicacy and sharpness of modelling which is the secret of good effect. In order fully to appreciate the superiority of Japanese *relievo*, one must be familiar with the many enormities of modern European foundries, and their clumsy coarse treatment of supposed ornamentation. There is as much, or more, artistic feeling to be shewn in the modulation of an embossed or curved surface as in the line of a painter's brush; such works depending for their expression upon the clearness, variety, and decision of the shadows and half-lights,—here sharp and black,—there soft and faint. Several fine *torii* of black bronze exist in different parts of the country; and of these may especially be mentioned the one at the head of the avenue leading to the temples at Nikko.

Another mode of ornamenting metal may be mentioned in the *repoussé* or embossed work, by which designs in raised relief upon thin metal are made by beating out from the back. There is also filigree work, similar to the

Genoese, in which precious metals are used in thin threads, and tiny globules soldered in patterns upon the surface of small ornaments. Such kind of articles can be seen upon swords and in small caskets and *kanzashi*, often executed in the precious metals. In addition to this, silver and gold utensils of great value are often merely engraved, a rich effect being given to their surface by the addition of arabesques in an incised line. In some of the large metal nuts, bands and clasps, which adorn buildings, the gilt metal is boldly engraved, and the incisions are filled in with a black enamel giving a very gay effect to the whole. This work corresponds to the *niello* engraving so much used during the middle ages.

We have more than once alluded to the grace imparted to common objects by simple and quaint shapes having a highly decorative effect. It is common in some countries to see the necessary handle, lock, or button to handsome oak cabinets, and to the doors of luxurious dwellings, made merely of the orthodox spherical pattern in porcelain or bright brass, without any attempt to convert the useful appendage into a novel or suggestive form. Here it is different, and the common iron rings, locks, and handles of cabinets and chests, to say nothing of the handsome engraved finger plates to the *karakami*, take always some pleasing shape. Japan has still much to learn from, but she has also much to teach to Western nations particularly in matters of decorative art.

#### A JAPANESE GENERAL HOSPITAL.

AT the recent meeting of the friends and supporters of the Yokohama General Hospital it was, all but unanimously, agreed that it would not be convenient or proper, as affairs are at present constituted, to send European or American patients, even though they might belong to the comparatively low class which is constituted by "common sailors," to the Japanese Hospital at Nogé. Of its kind and for the purpose for which it is intended and to which it is applied this institution is a credit to its originators, to the system under which it is conducted, and to the direction under which it is controlled. It possesses excellent accommodation for the patients for whom it is intended, the best medical and surgical advice procurable, the best drugs and medicaments which can be bought for money, the best and most careful attendance for the inmates who may have to avail themselves of its hospitality. Its beneficence extends so far that the presence of the friends of those who have to submit to treatment within its walls is allowed, not only to visit them at remote intervals, but if they desire it to be in constant attendance upon them. Applicants for advice or shelter are neither sent away unprescribed for, nor commended to the cold clemency of the sky for the covering of a roof. They find medical science, medicine, care, food, wards to sleep in, and nurses to tend them. In this respect the refugees at Nogé Yama and on the Bluff resemble each other. No one who is brought or comes to either of them is sent helpless away. But the Japanese establishment has, at least in one respect, an advantage over that supported and frequented by foreigners. In the former the position of the person admitted is at once known. It matters little whether he or his friends can afford to pay for his support; but whatever the case may be no concealment is possible; and where payment is obtainable it is expected, and even without being expected promptly rendered. Thus the institution is free from the incubus of guests who, professing to remunerate the hospital largely for apartments, attendance, and luxuries, involve the chest in an unwarrantable expenditure, make

no pecuniary return, and contribute, if to nothing else, to an unhappy and confusing deficit in the balance sheet.

The hospital at Nogé is a benefit of national importance whose value and extent cannot be underrated. Among the advantages which it has procured is that of providing a practical and efficient school of medicine and surgery, whence issue from year to year competent and approved professors of the healing art, who carry the appliances of their science and their skill to the remotest parts of the empire; and so help in no mean degree to advance the popular participation in the latest hygienic improvements. That the cholera epidemic of last year was confined in this prefecture within moderate limits, as compared with the extent of ravage which it wrought in other sections of the empire, is in great part due to the experience, intelligence, and method acquired in their clinical course by the medical students of this establishment. Sent out by the Governor of the Ken to inspect districts where the disease was reported to have manifested itself, they inculcated habits of cleanliness, taught the value and the manner of use of disinfectants, stopped the water supply from wells and courses known or supposed to be propagators of infection, and caused conduits from pure sources to be erected, or wells which could not be contaminated to be dug. It is recognized that in many instances their energetic and well directed efforts were the means of utterly extirpating the germs of the malady in localities where it had obtained an established footing, and was in train to demoralize and destroy large centres of rural population. And this is, so to speak, a mere transient piece of good work, effected by an establishment which is a standing honour to the local authorities which have organized and maintain it. A more permanent and valuable benefit which it has been instrumental in conferring upon the residents within the Kanagawa jurisdiction, in the first instance, and indirectly upon other regions of the empire, is the systematic introduction and practice of vaccination. Jenner's great preventive is not only accessible at the Nogé Hospital. Police regulations provide that it shall be applied there to all infants whose parents cannot or do not otherwise procure it, and the scheme and method find such favour with the populace that, only in the rarest instances, is it found necessary to bring pressure to bear in order to have the precautionary measures adopted. Hence to the sanitary institution at Nogé, and its able direction, under the superintendence of the *Kencho*, and its competent foreign medical adviser, is due the present virtual disappearance of a loathsome and disfiguring scourge, which not many years ago was wont to turn much of the beauty of this people to ugliness and deformity, and a great portion of its youth to decrepitude and premature age. The ability and kindness of the nurses attached to the establishment are beyond dispute.

In spite, nevertheless, of all the good that has been effected by the Japanese Hospital at Nogé, and its administrators and subordinates, those who are connected with it would be the first to acknowledge that it is in no way adapted to the reception and treatment of foreign patients, even of that class for which, presumably, any treatment and housing is good enough—common sailors. For foreigners of any description—at least for Europeans and Americans—no provision has been made in its organization. Such patients would be unhappy and miserable there, if, indeed, under present arrangements it were possible to admit them. They would require a diet, modified no doubt according to the state of their health or condition, but still one of a kind to which they have been accustomed. They would, also, reasonably, or not, expect to find in the hospice to which they might be con-

ducted such articles of furniture as an occasional table or chair, and other foolish accessories to, what they have been brought up to believe, necessary accompaniments of their existence. They would also, probably, if they were to be consulted at all, desire to have about them advisers to whom they could explain their ailments, attendants to whom they could express their wants, in a mutually intelligible tongue. Now, the *personnel* of the Japanese Hospital would be the first to disclaim any pretension that these requisites of infirmary life, as we may call them, would be found there. They would say that the idea of providing them had never been contemplated: that, in fact, under the prevailing system of extra-territoriality, the whole matter of the accommodation and cure of alien patients had been taken charge of by persons of foreign nationality residing within the limits of the empire. And they would be right. At present there are British, American, and German Naval Hospitals in the foreign concession at Yokohama, where there is also a General or Cosmopolitan Hospital, supported by the voluntary contributions of foreigners of any, or every, nationality. That this latter institution might very well be abolished under proper circumstances, and even to the benefit of the community we do not deny. In fact we shall be glad to shew how the result might be satisfactorily consummated.

Why, for instance, should not the Japanese Government, or the local authorities in this ken establish a hospital of their own—called by what name they pleased—to which persons of every nation should be admitted. On the foreshore of this harbour in and near Benteu there are plenty of sites available. The plan would be on a mixed Japanese and foreign basis, with foreign appliances for foreign inmates. That one or more foreign medical men should be permanently attached to, or should periodically visit the institution would certainly be advisable. After a time Japanese practitioners, some of them speaking western languages, might assume entire charge of the establishment. Nurses with at least elementary foreign linguistic knowledge would not be difficult to obtain. The advantages which foreign patients would possess from the presence of such an institution need hardly be enumerated. Among them however, that of cheapness of maintenance and considerate attendance, are specially worthy of notice. We have little doubt that a Japanese General Hospital properly constituted, with accommodation for foreigners, would soon defy the competition of any purely foreign refuge. That it will be founded is, probably, only a question of time; but until it is opened the present General Hospital, or some refuge of the same sort, will need to be supported by the foreign residents of Yokohama.

#### REVIEW.\*

FEW persons can have failed to remark the extremely lazy and superficial ideas possessed by even well-educated Japanese about the dates of events in their own history. It is not uncommon to find that a man, who, from memory or by having the book before him, knows that an event happened in such a year of a certain period, (a description that at first sight seems sufficiently explicit), is yet totally unaware whether it occurred one hundred or three hundred years ago. The explanation of this singular fact will be obtained by the first glance at the exhaustive essay on Japanese Chronology which Mr. Bramsen has prefixed to his tables. With four modes of counting years to choose from, the Japanese historians have almost always preferred to use the most arbitrary and the most uncertain, namely that of the *nen-go*, or periods of time that lasted,

\* Japanese Chronological Tables, by William Bramsen.

sometimes less than one year, rarely more than twenty years, and which commenced and ended, *à propos* of nothing apparently, when the rulers for the time being grew tired of the old one. It was only at the commencement of this present period of Meiji, of which we are now in the thirteenth year, that it was announced that henceforth the *sen-go* are to be changed only at the commencement of the reign of a new emperor. Of the other three systems, the most used was the Chinese one of reckoning by cycles of sixty years. These took their names from the combinations of two series, one consisting of twelve and the other of ten characters. The series of twelve is also used alone by the common people, any of whom can reckon on his fingers that the year of the monkey (1871) was ten years ago; the Japanese, like the old Romans, reckoning both the year they start from and the year they count to.

The counting by the reigns of the emperors seem to have been but little used; and the fourth mode of reckoning from Jimmu Ten-ō, which, apocryphal as it may be, has at any rate the advantage of simplicity, is a modern innovation that has never got into general use. Mr. Bramsen gives an ingenious suggestion to account for the impossibly long lives assigned to the early emperors, and by means of which the reign of Jimmu Ten-ō is said to have commenced in 660 B.C. He puts forward a theory, supporting it with facts bearing the stamp of probability, that in the remotest days, prior to the official adoption of the Chinese year after the death of the emperor Nintoku in A.D. 400, the Japanese reckoned as one year the period from equinox to equinox; and thus the ages of these patriarchal emperors are set down as double what they should be.

We have not space to follow Mr. Bramsen through the whole of his essay, which makes clear not only these four systems, but also the far more intricate subject of the subdivisions of the year.

The arrangement of the lunar months, their adjustment with the *setu* or the twelfth parts of the solar year, the determining of the intercalary months, which were necessary once in about three years to preserve approximately that adjustment, are tersely and clearly explained. Intricate, and indeed dry, as the subject seems, Mr. Bramsen has succeeded in handling it in a way that invests his book with interest for all who are curious about "things not generally known," and that should secure for him a body of readers far in excess of those students of Japanese history for whom the work is more specially intended, and to whom his Chronological Tables will save hours of thankless labour.

WE have observed a recent work published by order of the Daijo Kuwan entitled (in translation) "True relation of sights and scenes in America and Europe." It consists of five large volumes, and relates the incidents of the celebrated mission of Iwakura, Kiho, Okubo and Ito to Europe and America in 1872-3. It was compiled by the subordinate members of the embassy, of whom, it may be remarked, there were nearly fifty. It is handsomely printed on foreign paper, and is illustrated with hundreds of wood-cuts evidently taken from photographs. It contains in all two thousand one hundred and ten closely printed pages, and is not only a diary of passing events, but also records the information derived from reading or personal investigation respecting the railways, roads, manufactures, buildings, constitution, and, occasionally, the history of the countries visited. Thus, the stay of the mission at Sheffield gives the writers time to examine into, and describe fully, the great manufactories of steel and railway iron. The railway

across the Rocky Mountains, the peculiar tenets of the Mormons, and the mines of Nevada find place in an account of the journey from San Francisco to Chicago. The headings of a few of the chapters will convey some idea of the comprehensive nature of the work. The reader is introduced to railways of America, West Point Academy, Philadelphia, New York, London, Liverpool, Glasgow, the Highlands, Bradford, Newcastle, Belgium, Holland, Amsterdam, Russia, Sweden, Venice, International Exhibitions, The Public Works of various countries, Education, &c., &c. It would be difficult, perhaps impossible, to find in any country a more complete and exhaustive description of foreign countries, gathered chiefly from personal observation. The large staff which accompanied the Ambassadors doubtless enabled the expedition to acquire a fuller mass of information than would be possible for any merely private individual, however industrious. If the object of publishing these volumes was to disseminate sound and accurate information respecting foreign countries among the Japanese public, it is to be feared that their high price—almost five yen—will prevent them reaching the lower classes.

IN our review of the last number of the Transactions of the Asiatic Society of Japan, we omitted to draw attention to the eccentric and altogether incomprehensible transliteration, or rather transliterations, of Japanese names used in the various papers. Thus Tōkiyō on p. 5 is Yedo in the map facing p. 86, and becomes Tokio on p. 87. Nippon on p. 61 appears as Nihon on p. 76; Otaru, p. 62, increases to Otarunai on the sketch facing p. 64. On p. 78 Yezo is metamorphosed into Yedo. Iha-ya (p. 76) is iwaya on p. 81. Zhiāmu Tefāwu on p. 77 appears under the more familiar form of Jinmu Tennō on p. 81. Similarly, the Emperors Suizei (p. 78) and Suzhin, p. 80, become Suisei and Sujin a page or two after. Koshiki on p. 76 is Kojiki on p. 81. Koshito on p. 63 is spelled on a different system to Hidéyoshi in the last paper. The confusion between 'da,' 'z,' and 'dz' is very conspicuous. Thus we find Suisei (p. 87), Nelsunni (p. 81) Suizei (p. 79) Gozen (p. 58). Again Keikau (p. 79) becomes Keikō on the following page. Apart, altogether, from the present chaotic state of transliteration—due in great part to the facility with which individuals evolve systems of their own, and the tenacity with which they cling to them, however absurd they may be, and however clearly the public shows that it will have none of them—we think that consistency should be maintained at least in the publications of the Asiatic Society. If some back numbers of the transactions were examined, quite as glaring differences in spelling the same word might be discovered. It is therefore with much pleasure that we observe a movement within the society itself to remove an anomaly which is as unsightly as it is unreasonable.

DURING last December we treated at some length the valuable lecture on mining in Japan, delivered by Professor Netto, of the University of Tokio, before the German Asiatic Society. The importance of the subject dealt with has apparently induced the Government to sanction the translation of this lecture into English, and its publication, for the information of the large number of persons who are unable to derive any benefit from the compilation in the language wherein it originally appeared. Having so recently and exhaustively reviewed Mr. Netto's work, it is hardly necessary for us to do more now than acknowledge the receipt of a copy in its new garb. The present pamphlet consists of about fifty-four pages of letter press, several plates illustrative of mining appliances, a florid title page and a formidable list of "errata." As we remarked on the previous occasions already referred to, Professor Netto's own portion of the work

leaves little to be desired, and undoubtedly forms a very useful acquisition to the literature of mining in Japan; but we are constrained to express the opinion that it is greatly to be deplored that, when the contribution was found worthy of translation into English, and publication, some person sufficiently acquainted with the English language was not employed by the Government upon the work. In that case the grammatical, idiomatic, structural and lingual absurdities with which the new rendering abounds would certainly have been avoided.

THE general use of kerosene in this country, and the liability of inferior descriptions of the oil to explode, leading frequently to disastrous and even fatal consequences, makes a simple and reliable test of the kerosene used interesting. We notice in a New York journal that there is a United States law governing the whole country and prohibiting the sale or storage of petroleum or kerosene the fire test of which shall be less than 110 deg. Fahrenheit. In New York a State law was passed enacting a similar test, and in the city a special provision is in force prohibiting the use of all oils for illuminating or heating purposes which emit an inflammable vapour at a temperature below 100 deg. Fahrenheit. This vapour test is equal to 180 deg. fire test: so the law in New York is more stringent than in any other part of the United States. The fire test is made by placing a bottle of the oil in a small basin of water, then heating it to 110 deg. when a flame is applied and if it is extinguished the oil is passed. The vapour test is more complicated and necessitates the employment of instruments. We understand that since the adoption of the vapour test in New York the number of explosions has greatly decreased until they have become extremely rare. A law here in Japan, similar to that in force in America, would, if stringently carried into operation, be very reassuring to the consumers of kerosene, who in the hot season are perpetually exposed to dangers of which many of them have, fortunately for their peace of mind, but little conception.

AT the recent meeting of the Shanghai Chamber of Commerce, evidence was adduced that there is not much likelihood of the mint at Osaka finding a competitor in China for the manufacture of a currency to supply the wants of exchange in the trading ports of the Far East. It was mentioned that, at their interview with H.B.M. Minister, the Committee had again brought up the subject of a Chinese mint, but His Excellency did not hold out any hopes that the Chinese authorities would move in the matter. A large amount of information respecting the cost, arrangement, and expense of working, had however been collected, printed, and placed in the hands of the representatives of Treaty Powers to aid in further discussion of the subject.

WE offer a hint to the new Seismological Society. Accuracy is regarded as of the highest importance in scientific matters, and hitherto, notwithstanding numerous catalogues of earthquakes in Japanese, it has been found impossible to transfer native dates exactly into those of the western calendar. With the assistance of Mr. Brausen's chronology this can now be done easily; and therefore we suggest that one or two members be appointed to collate various earthquake almanacs, such as the *Jishin Nendai*, and transfer the dates into those of the Gregorian calendar. The work, it is true, requires nothing more than patience and industry; but its value to any subsequent enquirer into, for instance, the periodicity of earthquakes in Japan, would be very great, as it would remove a preliminary difficulty, which is a stumbling-block for many.

THE principle laid down by the *Chōya Shimbun* in an article on the diplomatic policy of Japan, is unassailable. It recommends the usually passive and non-interfering course of the United States to its countrymen, rather than the active and frequently intriguing diplomacy of most European nations. Quoting what it states to be a speech of Washington's, it says that the chief objects to which Japan should direct herself in her foreign relations, are the extension of commerce, and abstinence from interference in the internal affairs of other countries. It points out that, in many respects, Japan and America are in similar circumstances. They are both free from the danger incident to continental nations; both can carry an internal development peaceably, without the anxiety and embarrassment caused by powerful, ambitious neighbours, and armies—possibly hostile—on their frontiers. It goes on to say that foreign relations will assume more and more importance, and that the time has now come to settle the basis on which these relations shall be conducted, and contrasts the position of Germany, following one policy, with that of America pursuing a wholly different course. The article is an exceedingly sensible and well-reasoned one, which is more than can be said for all the productions of the same journal.

WHILE on the subject of Mr. Brausen's recent chronology, we may ask whether it is not within the province of the Asiatic Society to assist, in some way, the publication of works of this description. The value of the book to all students of Japanese subjects is evident; but it is also evident that the number of students is small, and that, consequently, the number of copies sold cannot repay the author even for his pecuniary outlay. The purchase of fifty or sixty copies, or a vote of one or two hundred dollars to assist in paying the unavoidable expenses of such a work, would seem to be a sensible way of advancing knowledge.

REFERRING, some time ago to the introduction of foreign machinery into China, we instanced, from notes in the Shanghai journals, the foundation of a woollen mill in the remote province of Kiangsu. We now observe that one of the German employés, engaged by the Government to initiate and control the works, has returned to Shanghai. "He states that no difficulty is experienced in the working of the machinery by the natives employed, all of whom have been brought from Foochow. The sheeps' wool supplied is of the finest quality, and a great deal of camels' hair also comes to the factory. The people in that part of the country live almost entirely on meat and wheat flour, and the mutton is spoken of as being very good. The foreigners live in a compound of their own, and are well provided for by the Government in every respect." Fifty-two days were occupied by the traveller in reaching Hankow from Lan-chow-fu, the name of the place where the factory has been erected.

THE Authorities of the Tsung Li Yamen appear to be adopting an entire change of attitude toward foreign powers generally. Formerly, if a request or demand were made of them by the representative of a treaty power, and they found it inconvenient or inexpedient to comply, they would, by means of excuses more or less definite and polite, contrive to relegate the decision of the matter to remote periods if not so far as to the Greek Kalends. Now it has been affirmed that, when recently approached by the Board of Foreign Envoys, with a complaint of a long category of alleged treaty-violations, they distinctly refused to listen to the requisition, drew attention to at least as many infractions of obligation which they said had been perpetrated by the other side, and spoke of a necessary revision of the conventions which should

be remodelled as China would decide. The Peking correspondent of the *Shanghai Courier* refers to this matter. He says that there is a difference of opinion between learned sinologues as to the correct interpretation to be put upon the Yamen's latest despatch in answer to the western diplomats. He remarks that, while one party would interpret the document "as a flat denial on the side of the Chinese to entertain any more negotiations with foreigners, the other party looks upon its contents more as a kind of excuse on the part of the Yamen that, owing to the fickleness of the demands of the foreign representatives, Chinese are at a loss to know what definite state of future treaty obligations might be proposed; for in their opinion the Alcock convention grants foreigners more privileges than any convention hitherto has done." Even if the latter rendering should be the accurate one, which we have grave reason to doubt, the method of equivocation is of quite a different kind to that established by Chinese precedent in matters of foreign policy.

PROFESSOR Tyndall, we believe, is the author of the now common definition of dirt, namely that it is "matter in the wrong place." Scientific researches frequently prove the accuracy of the designation. To what numerous, and without exception valuable, uses has not that dirtiest of all dirt, coal tar, with the various substances which it contains, been applied. We are now informed of a startling discovery made by a Florentine savant. For some time past he has been analysing the dust, first of his native town, and latterly of Paris, in order to carry out his experiments. He finds that the dust of the carriage-ways in the latter capital, gives a steady return of thirty-five per cent of iron, occasioned by the abrasion of the horses' shoes. Not content with this, the Professor next attacked the dust of the foot-ways, and after two months' experiments on the Boulevards, obtained a regular average of thirty per cent of good transparent glue derived from the leather worn from the soles of pedestrians. If this story is not true it may at least be pronounced "well invented."

UNDER date of the 5th of last December, the Shanghai correspondent of the *Times* comments on the arrangements a short time previously made in his neighbourhood, between the Russian and Chinese Governments. Chung How had only returned to his native land three days before the letter was written. The author remarked that Chinese public opinion in Shanghai, so far as there is any on political subjects among the merchants of that busy port, was that the plenipotentiary had given a good deal in return for very little. "Excuses are made for him that, in view of the present complication between this country and Japan, and of the possibility of a rupture, he had to take what he could on the best terms he could get, as it would not do for China to be embroiled with Russia at a time when she is about to force Japan to give up the sovereignty of the Loochoos." The correspondent continued thus:—"There is possibly an element of truth at the bottom of this tall talk, for there is an undoubted activity in a warlike direction in all the provincial governments along the coast. The direction, however, is defence; and the efforts made are, as usual, ill-concerted or isolated altogether. The power of China to defend herself or to harass her neighbours must not be measured by the armaments which she purchases in foreign countries, nor by the amount of money she devotes to the manufacture of arms and ammunition at home. Her arsenals are nests of jobbery, and every contract for war matériel which the provincial governments make is looked on as a chance for robbery. Some five years ago, for example, the officials at the arsenal here ordered the machinery from England necessary for the construction of ironclads at a cost of something like \$180,000; they fined the firm from

whom the machinery was purchased a round sum for every day behind the time agreed on for the completion of the contract; and from that day to this the machinery has never been used, and some of it even never set up. The Shanghai arsenal is in pretty much the same position as the Government Merchant Steamer Company, in that it is filled with the cousins, the poor relations, of the high provincial authorities from whose revenues it draws the supplies of money necessary to keep it going." And, again:—"Expensive machinery rusts in disuse, and workshops stand idle, while lavish sums are squandered in salaries to an extravagant staff of be-buttoned clerks and overseers." This is only a repetition of an old story; but it serves to show that China should not be a very formidable aggressive antagonist; and that as regards any but her own feudatories she would be wise, as she is likely, to confine her warlike schemes to preparations for "defence and not for offence."

THE interest in Chinese politics centres round the Kuldja treaty and the unfortunate Chung How who contracted it on the part of China. A Peking correspondent of the *North China Daily News* affirms that he has already been incarcerated and under the control of the Board of Punishments for several weeks. It is incidentally mentioned that during the first day of his duress he was compelled to disburse three thousand taels; and that the average cost of living for each day of confinement is about one hundred taels. We learn that he has been convicted on three counts:—leaving his post without permission, acting contrary to his instructions, and exceeding his powers. Indiscretions of various kinds are also attributed to him; and, in fact, his utter ruin, if not his execution is likely to be compassed. However the Board has declared him sufficiently punished already, and the foreign ministers, with the exception of those for Russia and Japan, are reported to have interceded individually on his behalf. Evidently great excitement prevails at court, and the anti-foreign and bellicose party is in the ascendant. All that Prince Kung, even, seems to have been able to accomplish is the prevention of the extreme measure of presenting the Russian Chargé d'Affaires with his passports. Marquis Tseng has meanwhile been ordered from London to St. Petersburg on the difficult, dangerous and all but impossible errand of reëstablishing equilibrium in the disturbed relations between the two empires. The mission is considered, in Peking, to be a hopeless one. The victorious and arrogant Chinese General Tso is supported in his schemes of future warfare by the grandfather of the young emperor, the haughty Manchu, Prince Sun. His collusion with Tso is the more significant that he is credited with as much contempt for the Chinese as he is known to feel for western barbarians. Comparatively efficient troops are being massed upon the Ili frontier. From all this it is apparent that the maintenance of peace will be very difficult. That Russian statesmen view the matter in this light, may be inferred from the tenor of a telegram received during the week. It directly implies that, because of the gloomy aspect of the Chinese question, the projected expedition against the troublesome Tekke Turcomans was postponed. The developments of the next few weeks or days may be looked for with interest. Russian forces in Central Asia, under the able leadership of General Kauffman and his lieutenants, may be relied upon to dispose of the troops brought against them; but the war, if it comes, must necessarily be a costly and a terrible one; and the tortured world has actually had enough of contest for some years to come. Again, if the matter were certain to be left to the sole decision of the two parties immediately concerned, there would be comparatively small cause for anxiety. As it is, there is no predicting what interests may not be involved, or thought to be involved, in the issue.

THE "Magician of Menlo Park" is evidently not regarded by everyone, even in America, in the same favourable and enthusiastic manner, as it appears there is an electrician in New York of the name of W. E. Sawyer, who is far from being either a believer in Edison as a professional phenomenon or an admirer of him as a genius. Indeed, he asserts his clear conviction that the light-maker of Menlo is of light weight in the balance of true electrical science, and more of a charlatan than a practical inventor in the brilliant field of electric development, by which the electric light is to supplant gas in general use—an event which to judge from results may safely be set down as likely to take place about the Greek Kalends. No later, indeed, than on the fourth of last January, Mr. Sawyer issued the following public challenge to Mr. Edison, which that gentleman did not think fit to accept:—

"Notwithstanding the assertion that one of Mr. Edison's electric lamps has been running for 240 hours, I still assert, and am prepared to back up my assertion, that Mr. Edison cannot run one of his lamps up to the light of a single gas jet, (to be more definite, let us call it twelve-candle power) for more than three hours. To be still more definite, I offer to Mr. Edison, at 220 at West Fifty-fourth street, in this city, an opportunity to prove what he says. From the private residence in that street are run a circuit of 1,000 feet. Mr. Edison shall have every facility; he shall use my wires; he shall have any dynamo machine or other generator of electricity he may prefer; and all that I ask is that the power of his light be measured by a photometer; that once in place it shall not be interfered with; and that a Committee of gentlemen, preferably nominated by the editors of the New York Press, shall be present and certify to the facts of the test. Furthermore, I will place one of my lamps side by side with Mr. Edison's; it shall be run at the power of twenty-five candles; it shall outlast the entire forty lamps at Menlo Park run at the power of twenty-five candles; my lamp to stand as it is put up, and Mr. Edison to put up a fresh lamp as fast as the preceding lamp shall have burned out. I am anxious for the test, and if Mr. Edison has really run one of his horse-shoe lamps 240 hours he will not refuse to accept my offer, for he will be treated with the utmost courtesy, and shall have everything his own way."

THE discontinuance of the subsidy to the Peninsular and Oriental Company's line between Hongkong and Yokohama, has resulted in the steamers of the company being diverted from the direct service. They will, we believe, henceforth call at Nagasaki for the purpose of loading coal to supply the main line, but this alteration is of less consequence to the community of Yokohama than seems to be thought in some quarters. The mail steamers of the P. and O. Company are now due in Hongkong one day before the dates fixed for the sailing of the vessels of the Mitsui Bishi Company on their homeward trip. The Japanese Government will, doubtless, make arrangements to take delivery of all mail matter intended for Japan, in Hongkong, and ship it on board the national line which has, up to the present time, performed the trip to and from Hongkong, with praiseworthy regularity. Calling at Kobe, as the Mitsui Bishi steamers do, will then give our neighbours in that port a slight advantage as regards the English mail, which will be equalized by the similar privilege enjoyed by us through the French line. It is almost a foregone conclusion that the petition of residents in Yokohama to have a fresh subsidy granted to the Peninsular and Oriental Company will be disregarded by the Imperial authorities, as a very strong feeling against these gratuities appears to be prevalent in England.

#### MR. SMEDLEY'S PAINTINGS.

THE exhibition of pictures by Mr. Smedley deserves congratulation, were it only for the industry evinced by so considerable a collection, and the novelty of his idea in displaying them together. If any other of our artists, pro-

fessional or otherwise, have works in equal or greater number, by all means, in the words of Mark Twain, let them "trot 'em out;" for pictures are certainly not things meant to be hidden under a bushel. Professional painters resident in the East are not, as a rule, the most indefatigable of labourers, better work being done by the travelling members of the faculty, who in the full ardour of fresh acquaintance busy themselves for a few months and then pass on to depict the features of another clime. In small commercial communities where little is known about art, and where the painter has few competitors, our professional friend can sometimes afford to study the *dolce far niente* and receive the adoring genuflexions of society with very little necessity to bestir himself. "Oh what a capital caricature that was you made of Lord So and So!" or, "what a charming little landscape that was that you did for my cousin three years ago!" But our painter, with a conscience, let us suppose, well knows that the caricature cost him five minutes of observation and memory of profile; and that the charming landscape is such that he would blush at the *chaff* which it might receive were he again amidst the emulating influence of his old students of Academy.

Mr. Smedley, as a painter, would, we believe, wish to be considered as an amateur; for, though he belongs to a profession whose accomplishments stretch far into the realms of art, still there are architects, so called, who can wield neither pencil nor brush; and a painter's training can scarcely be said to form a compulsory part of the architect's curriculum. The exhibitor has, however, carried this leisure pursuit to a considerable degree of perfection, and shows us sketches and studies that many galleries at home would willingly receive.

There is undoubtedly a rich fund for the artist in the features of Japan, both so far as original subject is concerned, and also as regards the treatment of detail, atmospheric effects, sharp definition of shadows, and clearness of light and colour so peculiar to the scenery of the country. As yet thousands of glorious views and picturesque spots, full of historical associations, remain virgin to the painter's study. It is scarcely necessary to allude to the distinguishing nature of Japanese vegetation, landscape contour, and architecture, as compared with that of Europe; nor to the picturesque dress and customs of the people. Some years ago a water-colourist, Mr. Dillon, paid a sketching visit to Japan; and the subjects of his selection chiefly consisted in elaborate studies from the famous blossom trees and characteristic foliage. Mr. Smedley, so far as his exhibition shews, seems to have divided his studies between landscape and architecture. In some of his larger architectural paintings he has introduced groups of figures in the old style of costume, but, in all cases, the figures are secondary to the back ground. In the painting, No. 88, they take more prominent part, being massed into the representation of a famous historical event which took place within one of the gates of Yedo castle. The figures have not, however, that degree of finish or good drawing which would entitle the result to the name of a historical painting.

The artist is evidently no anatomist; and the pose, action, and proportion of the form often slightly errs, one remarkably noticeable point being an exaggeration of the shortness of stature of the people, some being shown less than five heads in height. So far as boldness of touch, play of light and shade, and richness of colour can go to atone for such defects he has gone: for in the careful defining of sunlight and shadow, and in the happy harmonizing of bright colour, the artist gets some of his best effects; but he is decidedly wanting in power, or, may be, patience, to finish with thoroughness.

As an instance of rich colouring may be noted the sketches Mississippi Bay, Nos. 4 and 5; where natural colour has been intensified and emphasized very powerfully without losing truth. Among the larger landscapes we prefer Yokohama from Bokenji (No. 13) which is a very pretty piece of colouring and rendering of hazy distance. Kioto from the hills (No. 27) is a very clever representation of *multum in parvo*,—a large city and its surrounding hills conveyed to the mind by a few broad touches. Mr. Smedley's architectural paintings have the same merit of effective colouring, but also the defect of want of finish and necessary minuteness. Some are so large as to admit of a great deal of beautiful detail which exists in the copy, and which is essential to any one who desires a full acquaintance with Japanese ornamentation; but the painter shows only the general effect and prevailing tones of masses, as they would appear to a near-sighted person. There is, however, one painting (No. 80) of quite a different style from the rest,

representing a view of Hongkong. It evinces an enormous amount of labour and patient finish, the boats and steamers in the harbour, and the houses and objects on land, being all depicted with almost photographic minuteness, in consequence of which a great want of tone and colour occurs in the picture. Our conclusion is, that, if the exhibitor could combine a little of the patience evinced in this specimen with the rich colouring and light and shade shown in the generality of the others, he would attain a standard of considerable merit. One thing remains to be said; and that is that the exhibition of Smedley's paintings is made under the disadvantage of a glaring and badly directed light, a fault which is of course unavoidable in a settlement where no picture gallery or large studio exists. If the idea of a periodical exhibition of paintings on Japanese subjects would spread among professional and amateur artists in the country, this drawback might be removed by fitting up a room with top-lights in a proper manner.

#### IMPERIAL COLLEGE OF AGRICULTURE, KOMABA, TOKIO.

**T**HE first class of agricultural students at this College, having completed their three years course, were recently awarded diplomas.

The College was founded at the beginning of 1877, and was temporarily located at Naito Shinjiku, whence it was removed to its present site at Komaba, the farm being a portion of the former hunting ground of the Tokugawa Shoguns, about two *ri* from Tokio. The buildings were formally opened by the Mikado in person on the 24th of January, 1878, at which time a staff of five foreign teachers was attached to the institution. On Saturday last, the 18th instant, took place the ceremony of awarding diplomas to those agricultural students who have successfully completed their course of studies. There were present, among others, the Naimukio, H. E. Matsugata; H. E. Shinagawa, Chief Commissioner of the Agricultural Bureau; Messrs. Hashimoto, Iwayama Sekizawa, Principal of the College, the Governor of Tokio Fu, the twelve Kenrei who still remained in Tokio, and the officers, professors, foreign and native, and students of the College. Shortly after 11 a.m. these all assembled in the large laboratory, from which the benches had been removed for the occasion.

The proceedings commenced with an opening address from Mr. Shinagawa, who then presented the diplomas to the eight successful candidates. Mr. Sekizawa next recapitulated the history of the College; after which addresses were delivered by the only two remaining foreign teachers, —the Professors of agriculture and chemistry. Professor Custance, while congratulating the successful students on the result of their past work, pointed out that this was but a tithe of that which lays before them. He also urged upon them the necessity of patience and perseverance in their future labours. Professor Kinch began by referring to the difficulty of condensing the discussion of those topics which naturally presented themselves to the mind on such an occasion, into the limited time at his disposal. Insisting upon the paramount value to the farmer of a really intellectual training, he proceeded to give a brief sketch of the various agricultural colleges and schools of the world; and, in mentioning the Royal Agricultural College at Cirencester, pointed out that it possessed the distinctive feature of being in no way dependent on government aid, but that it was founded and is supported by farmers themselves. The Professor next traced the history of his own particular branch of science—agricultural chemistry—stating that it is comparatively quite lately that any systematic application of the natural sciences to agriculture has become possible, and referring to the names and labours of some of the eminent men, from Sir Humphry Davy down to Liebig, who have contributed to the elucidation of what he described as “this fascinating topic.” Liebig, he said, has, more than any other man, advanced the science of agriculture from a chemical point of view, and this in spite of the very insufficient data he had to reason from. The necessity to the agriculturist of a very extended course of reading was also insisted on, the close connection with agriculture of the different sciences being shown. Reminding his students that they had now been grounded

in the principles and facts of chemistry, and that their teaching had throughout had an agricultural bias, the speaker, after warning them not to forget that they stood yet on the very threshold of the special branch—agricultural chemistry, proceeded to throw out some suggestions as to the directions to which they might profitably direct their future energies. They were cautioned not to apply general principles to particular cases, without first making sure that all the surrounding accidents were in accordance with those upon which their principles were based. A careful investigation of the accessory manures was recommended to them,—a passing allusion being made to the “martyrdom of stench which we suffer in this country.” Here again the Professor warned his hearers against acting on the results of isolated experiments, and called their attention specially to the more scientific application of certain mineral manures. The great importance of improved stock-breeding was now alluded to, it being pointed out that as trade increases so will the demand for horses, as beasts of burden and means of transport, become larger; further that the Japanese are becoming more and more a flesh-eating nation; and lastly, that a great demand for wool exists, which, if it can be supplied by the country itself, will materially increase the national prosperity. This led up to the question of the possible utilization as cattle-food of certain refuse vegetable substances now chiefly employed as manure. As an instance of possible improvements in the direction of selection of seeds, the case of the sugar-beet was adduced, the percentage of sugar obtained from which has been by careful cultivation and selection increased from two or three percent to ten or fifteen per cent. The forestry question was next touched upon, the annual removal of the forest litter being reprobated. The relative exhaustion of the soil in connection with crops especially valuable either for exportation or for reducing imports was next referred to, various valuable statistics being given. The formation of an Agricultural Society was also advocated, the politico-economical principles involved, being dwelt upon at length; while the tendency to study science for its own sake and apart from its practical application was inveighed against, ultimate truth being pointed out as the object to be gained. The Professor urged the formation of a literary and scientific association among the past and present students of the Imperial College of Agriculture, as one among other means for the formation of an *esprit de corps*, and concluded by thanking the students for their diligent attention and unvarying obedience, and by expressing his hope that the connection between himself and his students might be continued with pleasure and profit on both sides.

His Excellency Matsutata then made a speech referring to the untimely death of His Excellency Okubo, the originator of the College, and expressing the pride he felt at having had the privilege of the direction of such an important national institution; adding that his interest in the welfare of the College would not be lessened by his removal from the immediate control of agricultural affairs. He then referred to the large extent of uncultivated land in the Empire, and announced that it would be the special duty of those who had now graduated to devise the best means of bringing these waste lands under the plough, for which purpose they would need improved implements, an increased supply of farm horses, and vastly better roads than those existing at present. For the furtherance of these objects it is the intention of the Government to send the present graduates to survey some of the waste lands in the Northern provinces with a view to their reporting in detail their opinions as to the best means of utilizing these lands. These reports would then receive careful consideration from the Agricultural Bureau.

Mr. Yenomoto, the senior graduate, briefly returned thanks to the officials and teachers of the college for their invariable kindness and consideration.

The officials and graduates then adjourned to partake of a cold collation, where the proceedings were of a less formal nature, and the visitors appeared thoroughly to enjoy the refreshments provided for them. Finally the College buildings and apparatus, as well as the Museum, the farm buildings, and the live stock were carefully inspected by the visitors from the country.

We may remark on the generally improved condition of the farm since we had the pleasure of visiting it on the oc-

casion of the formal opening of the College by the Emperor. The authorities seem to have made the best of their opportunities in every way. We specially noticed, as new features, the very neatly laid out botanical gardens on either side of the main road leading to the College; the extensive veterinary hospital, with its Turkish bath and other appliances; while, in order to give better accommodation to the chemical department, the Museum has been removed from the College itself to the building formerly used as a Preparatory School. Nor must we omit to notice the flourishing appearance of some experimental plots, by means of which the students will doubtless be impressed practically with the value of a systematic course of observations from which to deduce conclusions tending to the advancement of agriculture in Japan.

We have referred above to the reduction in the foreign staff of the College. We may, therefore, add that those teachers whose services have been dispensed with have been partially replaced by Japanese Professors, of Botany, Yasumoto (of the Medical College), Zoology, Nerigi (of the Medical College), Mathematics, Taka (of the Tokio Daigaku), and Anatomy; while the professorship of Veterinary Science is, at present, vacant, and consequently, the great advantages which should be derived from the veterinary hospital, if properly organised, have scarcely become apparent.

## JAPANESE PERSONAGES.

### II.

#### GENERAL KURODA.

GENERAL Kuroda Kiyotaka is a member of one of the historic families of the great Satsuma clan, and has the reputation, proved on several trying occasions, of being a brave and upright leader, with but slight regard for pomp and ceremonial.

Prior to the restoration he allied himself with the opponents of the Bakufu Government, and loudly expressed his dissatisfaction with the arbitrary conduct of the Shogunate officials, and their contemptuous disregard of the imperial authority. In conjunction with Saigo Takamori, Okubo Tochimichi, and other able leaders, he acted a prominent part in the wars of the restoration, and when peace was reestablished received in recognition of his valuable services the appointments of Privy Councillor, Chief of the Colonization Department, and General in the Army.

General Kuroda then went to Yesso and energetically devoted himself to the colonization of the island. Under his auspices waste lands were brought into cultivation, roads and bridges constructed, and towns and villages sprang into existence with marvellous rapidity; so that whatever progress has attended the settlement of the Hokkaido is in no small degree owing to his influence and example.

While he was engaged in this peaceful work, the Koreans insulted the Japanese flag by firing upon the *Unyo Kan*, at Kokwa bay. General Kuroda was chosen ambassador to demand satisfaction for the outrage, and his dangerous mission was crowned with complete success. The Korean Government apologized for the conduct of their officers, entered into a treaty of amity and commerce with this empire, and opened Korea to Japanese trade. The valuable results of the General's embassy are now becoming apparent in the increasing importance of the mercantile relations springing up between the two countries.

In 1877, the formidable rebellion in the south-west found the subject of this memoir appointed to the command of a division acting against the enemy. Embarking with his soldiers in transports, General Kuroda landed at Yashiro and at once assumed the offensive. He attacked the rebels, who fled after a sanguinary struggle, abandoning to the victorious troops all their arms, ammunition and stores. General Kuroda then raised the siege of the fortress of Kumamoto, which was closely invested by the rebels, and on the point of falling into their hands. His forces being augmented by the relieved garrison, General Kuroda marched upon the enemy and took part in the closing struggle at Shiroyama, when the great Satsuma rebellion was finally crushed with the death of its mainstay the redoubtable Saigo.

General Kuroda was not overlooked in the distribution of rewards which followed the restoration of peace. He received

the honorable distinction of the highest rank of the Order of the Rising Sun.

The recent changes in the cabinet have not effected General Kuroda, who still retains, with advantage to the empire, his high offices of Privy Councillor, Chief of the Colonization Department and General in the Army.

### III.

#### GENERAL OYAMA.

OYAMA Iwa-o is also a member of the Satsuma sept, which has furnished so many of the typical heroes who flourish in the pages of Japanese history "to point a moral and adorn a tale":—at once guides and examples to future ages. General Oyama is a relation of the celebrated Saigo Takamori, a leader in the movement which restored the imperial authority to the position it had been deprived of for over three centuries, and who subsequently raised the standard of rebellion in the south-west, expiating his error with his life on the fatal field of Shiroyama. General Oyama bears a high reputation for gallantry in action and iron resolution. He is well educated, possessed of an extensive knowledge of strategy, and particularly careful of the wants and comfort of his soldiers.

At the time of the restoration General Oyama associated himself with Okubo and the rest of the patriotic party, and throughout his whole career has devoted himself to the best interests of Japan. After the restoration was accomplished General Oyama received the appointments of Lieut-General in the Army and Assistant Vice-Minister of War. He also received civil promotion to the senior fifth class. When the rebellion in the south-west occurred, the general was despatched to the scene of operations in charge of a division of troops, and rendered brilliant service in quelling the rising. After the conclusion of peace he was decorated with the Japanese Order of the second class, and since then, upon the death of General Kawaji, received the appointment of Assistant Home Minister and Chief of Police. When the recent changes took place he became Minister for War.

## REUTER'S TELEGRAMS.

LONDON, 15th March, 1880.

The *Times* publishes a telegram from Berlin announcing that the Russian military expedition against the Tekke Turcomans has been postponed, on account of impending serious complications between the Russian and Chinese Governments.

## The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 20TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 3RD MONTH, 20TH DAY, DO-YO-DI.

### NOTES OF THE WEEK.

The English mail came to hand on Tuesday last, per the P. & O. steamer *Sunda*, from Hongkong via Nagasaki. The O. & O. steamer *Gaelic* with home despatches, and American dates to 28th ultimo, arrived in port this morning. She is circulated to leave for Hongkong, on Tuesday next, at daylight. The M. B. S. S. *Niigata* left for Hongkong this afternoon at four o'clock, and will be followed to-morrow, at 7 a.m., by the M. M. steamer *Volga*.

Our American files by the *Gaelic* shew that the sand-lot agitators in San Francisco, are creating an immense amount of excitement in that city, which they have threatened to "burn and drench in blood." Of course no one actually fears the

accomplishment of these wild and visionary schemes, but as a matter of precaution several of the most prominent of the agitators have been arrested and charged with misdemeanor.

Snow, thaw, rain and constant traffic, have combined not to improve the condition of the road leading from the Settlement, through Honmura, to the various approaches to the Bluff. Six weeks or more ago, we indicated the then disgraceful state of this much frequented thoroughfare, which is now in several degrees worse state than it was then. It is a mere succession of knubbly knolls, and horrid holes, disastrous to carriage springs, tiresome to *jinrikisha* drawers, fatiguing to pedestrians, and provocative of a deadly succession of jolts to those who ride in vehicles. Some of the money subscribed, in the form of ground rent, by members of the foreign public to the funds of the Municipal Government, might be applied to their convenience in this respect. And as for the bridges, there is little doubt that the Tay viaduct will be renewed, long before that more stupendous structure which occasionally spans the creek at the end of the Honmura Road, shall again be rendered passable by the engineering skill of the talented local contractors employed by the *Kencho*.

H. M. S. gunboat *Albatross*, one of the new vessels for the China Squadron, arrived at Singapore on the 22nd of February.

H. M. S. *Vigilant* with Admiral Coote on board was hourly expected in Hongkong on the 6th instant.

The new Ocean steamer *Laertes*, Captain R. F. Scale, arrived in Hongkong on the 2nd of March, from Liverpool. She is one of several steamers being built for the "Blue Funnel" line. The names of the other new boats are *Bellerophon*, *Cyclops*, *Jason*, and *Telemachus*. The dimensions of the *Laertes* are—length between perpendiculars 320ft. 5in., beam 34ft. 3in., and depth of hold 26ft. Gross tonnage 2,148, and 1,391 tons register. Her accommodation is similar to that of the other vessels of the fleet; she carries twelve first-class and thirty-eight third-class passengers. Her engines are compound, direct-acting, vertical surface-condensing inverted cylinders, of 94½ inches and 65 inches respectively, horse-power 300. The steamer is said to be a very pretty model.

The M. M. steamer *Tanis*, with the Marseilles mails of 8th February, left Hongkong for this port on the 17th instant, at 6 p.m.

An inquiry was held on Thursday, on board the British barque *Chili*, before J. J. Enslie, Esq., respecting the death of John McGee, an able seaman, during the passage from Bristol to Yokohama. The evidence shewed that the deceased fell from the bow-sprit when carrying out an order to reef the jib halliards. A life-buoy was thrown to him and a boat lowered, but after an unavailing search of about half-an-hour, the boat returned to the vessel with the life-buoy, but without having seen any trace of the deceased. A heavy sea was running when the accident occurred, and the *Chili* was under reefed canvas. After hearing the evidence Mr. Enslie found "that the deceased John McGee lost his life on the 27th of August, 1879, at sea, by falling overboard from the British barque *Chili* and drowning, that his death was accidental, and everything was done by the master and the crew to rescue him."

Mr. Mechi of Tiptree Hall, a great authority upon scientific farming, and cattle and sheep raising, has written a letter in reply to one received by him on the subject indicated in the above heading. The suggestions it contains may be useful here in Japan, where there is no apparent reason why sheep raising should not prove a remunerative enterprise; and where great national advantages would accrue from its successful pursuit. Mr. Mechi says "Your suggestion or surmise is a correct one. For the last 30 years I have invariably supplied my sheep with supplemental food, such as cut hay, ground corn, cake, malt culms, bran, and sometimes condimental food, all intermixed, thus neutralizing the over-succulent and often unripe condition of the natural food. Especially was this necessary in such a cold, pluvial, and sunless season, as 1879. By this treatment my losses have been trivial, sometimes scarcely 1 to 2 per cent.; but this last trying year they were in excess as follows:—Ewes, 96—lost, 7; remaining 89. Lambs, 129—lost, 11; remaining 118. I know of cases in Essex where the loss amounted to from 50 to 70 per cent. My sheep are

always folded within iron hurdles on wheels, the fold being removed morning and evening, so that they get fresh food daily, and are not allowed to roam at large and taint extensive areas. By supplemented dry food the sheep and the land are both maintained in good condition. Dry food appears to be fatal to the liver fluke, which rots the sheep, for I heard of a case where, on low pasture subject to liver fluke, the farmer grazed his sheep safely by giving to each daily one pint of dry barley. My sheep for 30 years have never had rot or liver fluke, even in the wettest season."

In one of the small shows just beyond the Yoshida bashi, a most extraordinary exhibition is given of decapitation, which is perfectly appalling in its fidelity. The performance takes place in a small room about twenty feet long by twelve feet wide, half being allotted to the spectators, who are admitted on payment of the moderate fee of two cents. The "properties" consist of a deal table and a sword, &c. After the usual soul-stirring flourish on a drum and samisen, a man and woman appear from behind a screen, the man binds the woman's head in a cloth, and she then kneels down close to the table, and sideways to the spectators. The man then draws the sword and makes a violent blow at the woman's neck, she falls forward, arms extended and limbs twitching. He then, having first wiped the sword on a gory looking piece of rag, takes up (apparently) the woman's head, wrapped in the cloth and places it on the table. To all appearance it is a human head, the eye-lids and features, have a convulsive motion, presently the eyes open in a dreamy sort of way and to the accompaniment of the everlasting samisen, the head sings a mournful song. A curtain is then interposed between the audience and the performers and when again drawn back, the woman is disclosed quietly seated alongside the man. When it is recollected that this all takes place within about three feet of the spectator, and that the "properties" are of the simplest description, some idea may be formed of the wonderful excellence of a performance which has excited great attention.

Seven of the steamers for Tientsin started this morning (4th). The two favourites are, of course, the *Fung-shun* and the *Pau-tah*, both belonging to the China Merchants' Company. We understand that the Customs' mails have been sent by the *Fung-shun*. The *Taku* has just received new boilers and machinery, and she would doubtless have been among the favourites for the race had her departure not been delayed. She does not leave until to-morrow morning, owing, we believe, to her new boilers or machinery requiring some further attention. The list of the departures, from the official returns, will be found in its usual place on our front page.—*Shanghai Courier*.

The *Higo News* states that an alarm of fire was raised at 11.45 o'clock on the night of the 14th instant. "A godown on Lot 122 was found to be on fire in the roof, the flames having apparently made way up one of the walls. As the fire had fortunately not obtained a very strong hold, it was quickly extinguished."

It is stated in the same paper that the erection of many new buildings in Kobe has given quite an impetus to the brick-making trade, and several additional kilns have been started at the brick-making establishment at the Eastern entrance of Akashi. We hear that the price of bricks has lately risen from one to two yen per thousand, but if the low rate of *satsu* be taken into consideration, the rise has been little more than a nominal one.

The following is the decision arrived at by Court of Inquiry held at Kobe, at the request of the master of the American ship *St. Charles*, respecting the loss of the vessel by fire on the 1st of March instant:—

We, the undersigned, assessors appointed by the Court to examine into the loss of the American ship *St. Charles* by fire, and the origin thereof, do find, as disclosed by evidence adduced, on the examination of captain, first officer and crew of the said ship:—

- 1st: That the origin of the fire is unknown.
- 2nd: That in our opinion no blame attaches to the captain of the vessel.
- 3rd: That every effort was made by the captain, officers and crew of the vessel to extinguish the fire.
- 4th: That the inflammable nature of the cargo rendered the best efforts of the captain and crew, and the assistance obtained and rendered from and by the English, German, and Italian

men-of-war in port, abortive, and their efforts only ceased when the ship was in flames and the fire uncontrollable.

# ASIATIC SOCIETY OF JAPAN.

## TOKIYO MEETING.

A general meeting of this society was held at the Shōheikuwan, Seidō, Tōkiyō, on March 9th; Dr. Divers, President, in the chair.

The election of Dr. D. Brauns and Mr. A. W. Thompson as ordinary members was announced.

Mr. B. H. Chamberlain then read a paper entitled "A Short memoir from the Seventeenth Century,"—a translation of an old document which, under the title of "*O An Mono-gatari*," relates the personal experiences of a woman who, with her family, was shut up in the castle of Ohogaki, in Mino, in the year 1600. Though entirely devoid of all pretensions to literary skill, the touches of nature which bring before the reader's eyes the actualities of life in those days of perpetual warfare give an abiding interest to the little narrative, while the style in which it is composed is so peculiar as an example of the colloquial speech of those days that it is intended, in the "*Transactions*" of the Society, to print a fac-simile of a page of the original.

The President, in thanking Mr. Chamberlain for his interesting communication said that it was evident that no small part of the charm of the paper was due to the felicity of Mr. Chamberlain's translation.

Mr. Blanchet asked how the practice of blacking the teeth (referred to in the paper) originated.

Mr. Chamberlain said he did not remember with precision the reasons given for the practice, but that details were to be found in Mitford's "*Tales of old Japan*."

Dr. Faulds observed:—The fact brought out by Mr. Chamberlain that the custom of blacking teeth now apparently confined to married women in Japan, was once common to men of the higher ranks also, is quite interesting. There seems to be an exceedingly common tendency, not yet specially studied, in women to manifest such "survivals" of vanishing customs. Many familiar examples readily occur to one, such as the custom of wearing ear-rings, necklaces, bracelets, flowing robes, etc., of western ladies. A more striking example is the long hair parted in the middle which is still found amongst the males of many primitive peoples, such as some of the races of North America, the Lepchas in Asia, etc., but which exists only amongst women in more advanced races. That the blacking of teeth in Japan was as purely ornamental in its purport as the blackening of our own boots is rendered somewhat probable, I think, by the wide prevalence of the custom of teeth ornamenting in other lands. The people of Borneo bore their teeth, and insert brass pins into them. Various tribes chip, grind, or file them down, however perfect or regular they may be, into shapes differing according to the customs of each tribe. It is often said in Japan that married women now blacken their teeth to preserve them, but in Sumatra the hard protecting enamel is first removed, simply that the rough surface may better absorb the black colouring matter. In such a case the process can only be injurious to the teeth, and the custom can only be explained as one of ornamentation.

The President said he had always been under the impression that the Japanese women blacked their teeth and shaved their eyebrows after marriage, as a sign that they no longer wished to make themselves attractive to the other sex.

Mr. Dallas then read a paper by Mr. F. V. Dickins on the Kana transliteration system. In this paper Mr. Dickins explained his reasons for dissenting from the transliteration scheme proposed by Mr. Satow, and advocated instead a rigorously phonetic system. He pointed out that to propose a scheme for romanizing Japanese which was not purely phonetic, was to run counter to the whole current of modern European rational orthography. The view of the Kana transliterators seemed to be that the writing and spelling of Japanese words should rather record facts in their history than afford a clear and certain guide to their pronunciation. While admitting the scientific interest of etymology, Mr. Dickins contended that its practical value was small, and with it, in his opinion, the symbolization of articulate speech should have no concern. He also saw special objections to Mr. Satow's system, which he went on to particularise. His criticisms of it were based on the understanding that the scheme was intended for universal acceptance not only by foreigners, but by the Japanese themselves when they should have the courage to discard both the Chinese character and their own Kana. On this point Mr. Dickins expressed himself as follows:—

My opinion is, and long has been, that not all the reforms hitherto made in Japan are collectively of anything like the importance that

attaches to a romanization of the language. I have not space here to do more than indicate the grounds of my opinion. My own experience of the language is that the difficulties met with in its acquirement are almost wholly difficulties of decipherment. The best scholars among us read the easiest and most clearly printed Japanese painfully; the most intelligible handwriting is a mystery save to perhaps a dozen Europeans, and probably not a single European can handle the Japanese brush with the ease of a very ordinarily educated native. Few natives even (I have often made the experiment) can read the common books with fluency,—can read phrases or lines at a glance as we can in English; each character or word must be singled out by eye and mind and separately perceived and comprehended. A native clerk, acquainted with Roman, who for some time was in my employ, and who had to translate or copy for me numerous legal documents written in Japanese, as well as make extracts from books, was induced by me (chiefly for my own convenience) to use roman in all transcriptions from his own language. I found such transcriptions, after a little practice, as easily legible and intelligible as similar matter in French or German would be. I could indeed run the eye over them with almost the same ease as over English documents, with immense saving of time and energy. And this though the major part of such transcriptions consisted of Sino-Japanese. Not only was this result achieved, but the clerk himself soon came to prefer his romanized transcriptions to copies or originals in the Japanese character. In short, after much pondering over a subject that has been matter of reflection with me during many years, I am persuaded that the romanization of Japanese would do more toward perfecting the civilization changes now in progress, by facilitating the education of the people of Japan in the more extended sense of the expression, and by enabling them more easily to understand and be understood by the rest of the world, than the whole mass of reforms that have taken place since the downfall of the Tokugawa dynasty. The education of the people would be relieved of at least two-thirds of the difficulties that at present attend upon it, the spread of knowledge would become possible, and political reforms, without which any real or permanent advance of the nation is not to be dreamed of, would thus become feasible. I cannot dwell longer on the advantages that would result from the changes; they are sufficiently obvious, and, indeed, may be easily realised by imagining for a moment the effect in a country like England of an adoption of Japanese modes of representing the language in a written form. I shall, however, mention shortly one benefit that would almost surely be brought about—an immense one, though of a purely literary character—the arrestment, namely, of the degradation of the language actually in rapid progress. Indeed, Japanese is fast disappearing as a written language, and becoming replaced by a splay-footed and inharmonious species of broken-down Chinese, difficult of composition and more so of comprehension. This particular kind of degradation is only possible so long as Chinese characters are employed; the false mintage of current writers would of necessity cease when they found themselves obliged to use Japanese materials—not mere Chinese signs—to express their ideas with. In the term "Japanese materials" I of course include such Sino-Japanese words as have been sanctioned by sufficient usage. There are ample stores of such materials in existence without having recourse to mere sign-combinations which instruct the eye rather than the ear, and which widen the breach—already too wide—between the written and spoken languages. Indeed, I should like to see the use of even admitted Sino-Japanese restricted as much as possible; new combinations might, I think, be made in nearly all cases of purely Japanese elements, with the result of a much more harmonious and much more intelligible language than would otherwise be attainable.

The author continued that he failed to admit that there were practically two languages in Japan, or to see how the Kana system could subserve any special convenience or need of Japanese scholars. They were just the very last persons to require being reminded every time they wish to write or read the word *sūro* that it may once have been *safurafu*. Moreover, it appeared that some of the "phonetical redundancies" of the Kana scheme merely recorded practices of Japanese dictionaries, and not important etymological facts. After some further criticisms Mr. Dickins described his own proposal for a phonetic system, making use of ordinary Roman letters, after which he summed up the case as follows:—

I claim the following advantages to be possessed by the natural over the *kana* system.

- 1.—Considerable economy of letters; hence of type, time and paper.
- 2.—Constancy of letter-value; hence freedom from phonetic uncertainty, while no etymological fact of any importance is lost.
- 3.—Accordance with the spelling reform tendencies of most modern European languages (and with the spelling scheme advocated by Dr. Hunter under the Indian Government for the romanization of Indian languages), which are wholly phonetic. Sanskrit to some extent is an exception, but this is chiefly because the Devanagari is itself a most perfect phonetic non-syllabic alphabet.
- 4.—Briefer and easier for the Japanese themselves and for foreigners to learn and adopt.
- 5.—The letter-values approximate so nearly to those of most European alphabets that most Europeans would sufficiently well pronounce Japanese without special study; Englishmen alone

1. As matters are, it appears to me that the government is drifting more and more into the hands of a set of bureaucratic oligarchs, among whom those who have been in Europe or America, and have there become initiated with western ideas, are very completely understood, will have the greatest influence, and will be, at the same time, the least in unison with their countrymen. Political power cannot be vested in the hands of the masses without concomitant education, which in any sufficient degree is impossible so long as about seven years study is necessary for a native to become properly conversant with the actual modes of writing his own tongue.

would have to remember that the vowels have a continental value (save 'u').

6.—The easy rule, consonants and their combinations as in English, vowels as in Italian, practically sufficient for ordinary purposes; the peculiar sounds 'hi,' 'ri,' etc., pronounced according to this rule not considerably differing from the true pronunciation.

7.—Less departure from the commonly received system.

The only disadvantages I can think of are:—

1.—Some antique pronunciations would not be recorded.

2.—Relation of Sino-Japanese words ending in 'ô' to their Chinese originals would somewhat but not greatly be obscured.

3.—In some instances words similarly pronounced would lose the eye distinction of difference in spelling.

Lastly, the natural system would, as I have pointed out, tend indirectly yet powerfully to arrest the process of degradation to which literary Japanese more especially, but the spoken language, though to a less degree, as well, is being subjected.

The President, after thanking the author and Mr. Dallas, suggested that a phonetic system of transliteration might be found useful in providing a good means for beginning the study of the language, as had been found to be the case by the advocates of the phonetic spelling of English. It had to be borne in mind that no phonetic system could be absolutely accurate in expressing all the delicate varieties of sound in any one language. He was sorry to see that Mr. Satow was absent, but he hoped Mr. Chamberlain would have something to say.

In reply to the President's invitation to address the Meeting, Mr. Chamberlain, while paying a tribute to Mr. Dickinson's well-merited reputation as a Japanese scholar, could not help drawing attention to the fact that, in citing as a parallel to the "orthographic" spelling of Japanese the historic method of spelling our own tongue which is now so very generally condemned by scientific philologists, Mr. Dickinson had coupled together two things between which there is scarcely any resemblance. The common English spelling is not consistently etymological, nor indeed consistent in any way. The Japanese spelling of all native words is indisputably etymological. Even if Mr. Dickinson's contention against the value of the etymologies of words borrowed from the Chinese be admitted for the sake of argument, it was already abundantly shown in Mr. Satow's original paper on the subject of transliteration that it would be highly inconvenient to allow the romanization of such words to proceed on a different principle to the romanization of words of native origin. The most trenchant arguments by which the phonetic reformers of England, and of one or two continental countries support their proposed innovations therefore fail to the ground in this place. If, following Mr. Dickinson's example, European precedents are to be brought forward, let us rather adduce that of Greece, whose case is almost exactly parallel to the case of Japan. There, too, there is an ancient tongue, the vehicle of almost all the literature, and a modern dialect whose pronunciation is so much corrupted that, to say nothing of other peculiarities, no fewer than seven letters or combinations of letters are spoken with the one sound *i*, reminding one of the variously written Japanese *ji's*, whose unfamiliar spelling has of late been made the butt of so much ridicule. Would now, let it be asked, anyone seriously propose that Greek as a whole,—ancient literary Greek as well as modern colloquial Greek—should be spelt according to the present Athenian pronunciation, simply on the score of the greater convenience of such a plan to the few foreigners resident in the Greek ports? But it is thus that our Japanese phonetists ask us to act: in order to facilitate the reading of some few names of places, steamers and such like to English persons unacquainted or imperfectly acquainted with the Japanese language, we are to commit the anachronism of transliterating the traditional standard tongue, which is centuries old, according to the modern pronunciation of Yedo, which may be different a hundred years hence from what it is to-day; for pronunciation is a thing that is of its nature fluctuating, and a system of writing which follows it therefore of necessity unstable. Referring to Mr. Dickinson's animadversion on his (Mr. Chamberlain's) distinction of two tongues classed under the one denomination of "Japanese," he could only re-assert that, quite apart from the influence of Chinese words, the native language had in the course of centuries suffered such modifications that the older written and the younger spoken form differed as much from each other as Latin and Italian. The grammatical terminations were different, and even such common words as "to be," "I" and "you" were different. The comparison drawn between usual English and the stilted English that flowed from Johnson's pen was, therefore, misleading because insufficient. The disagreement between the advocates of phonetic and those of "orthographic" spelling was doubtless one which it were vain ever to hope to see changed into unanimity, as the first principles which each party takes as the basis of its opinions are diametrically opposed. But if the final vote of public opinion were to be given against the "orthographists," Mr. Chamberlain could not but hope that Dr. Hepburn's system would be, of the many competing phonetic systems, the one in favour of which the community would decide. Dr. Hepburn's system has some strange incon-veniences (e. g. the treatment of the letters 'ch' and 'j'), but at least it aims at being a true representation of the sounds that meet the ear. In Mr. Dickinson's paper, on the other hand, we are no sooner enlightened by the phonetic rule than we

stumble across the historic exceptions, and after being told that *shiyau* and *shiyou* are altogether irrationally divergent representatives of the one sound *shô*, we have perforce to accommodate ourselves to *omou* and *omoun* as written equivalents of the one sound *omô*. No; logic compels us to adopt one consistent system, be it a strictly phonetic one, or else the "orthographical" one which is advocated by Mr. Satow and his supporters, and which, less ambitious than the proposal now before the meeting, does not undertake to make a revolution in the speech of the Empire, but only sets to itself the humbler, but more practicable, task of representing in Roman letters the Japanese written language such as it was and is.

Mr. Bramson said that, however much he should have liked to make a few remarks on Mr. Dickinson's paper, and on the subject of a uniform and general system of transliteration, he was sorry to say he had come to the conclusion, that any labors in this direction would, at present, be entirely thrown away. In his opinion it was hopeless to think of any such universal system, when we have evidence before us, that this learned society, which must be supposed to consist of those who would take most interest in such matters, has not yet brought itself to adopt a fixed system of transliteration in its transactions. Not only do the various contributors follow different systems of writing, but in some papers no method at all is followed, and the same words on one page are written according to some phonetic system, and on the next in conformity with the historical (orthographic) system. The speaker thought it was high time that something was done to ameliorate this deplorable state of affairs, and he therefore gave notice that he intended at the next meeting to make the following proposal: "That three members of the Council and three ordinary members of the Society be chosen by this meeting to form a committee whose duty it shall be to consider what measures can be taken to ensure some kind of uniformity in the transliteration of Japanese words in the Society's Transactions; and that the result of their deliberations, in the form of some rule, be placed before a General Meeting for adoption."

Mr. Dallas said that, alike with Mr. Dickinson, he felt very great diffidence in putting forth an opinion in opposition to that held by scholars of such eminence as Mr. Satow and Mr. Chamberlain, but it appeared to him that they allowed it to be inferred that the orthodox mode of expressing Japanese words in Kana,—which forms the basis of their Kana-transliteration system,—is generally known to the people of Japan to somewhat the same extent as the accepted spelling of English is known to the population of England. His own experience was that the contrary was the case, and that only an extremely small percentage of the well-educated class had any acquaintance with what Mr. Chamberlain had well termed the "historical" mode of writing in Kana. Some years ago, when preparing a paper for this Society during a residence in the interior, where the local dialect very greatly mauled the pronunciation, his only mode of getting at the pronunciation accepted in Tôkyô or Kiyôto was to ascertain how a character was expressed in Kana; and he was surprised to find that out of a class of some twenty young men of from eighteen to five-and-twenty years of age, most of whom were tolerably good Chinese scholars, only two seemed to be at all certain of the mode of spelling, and even these had constantly to refer to the dictionary. He quite agreed with Mr. Chamberlain that in any attempt to romanize Japanese the point to be kept in view was its practical utility to the Japanese rather than the convenience of foreigners unacquainted with the language, but he thought that it should be made useful to the millions, whose intercourse is restricted by the extreme difficulty of their present method of writing, rather than to the limited number of highly educated men who have so thoroughly mastered the present system as to be able to express themselves in it with facility. Few errors are more common among foreigners than that of supposing that the majority of Japanese are able to readily read and write. It must surely be in the everyday experience of those members of the Society, who are not themselves independent of such aid, that, if they ask an average Japanese to read a letter for them, he does not read it as it is written, but merely renders the sense of it in his own words, and if pressed for the actual words of the writer, he will have to confess that he cannot give them. While the written and spoken languages differ as much as they do, it is no paradox, but a simple fact, to say that the ordinary Japanese cannot write what he speaks, and cannot read what he writes! The great advantage of romanization would be that it would allow the spoken language to be expressed on paper, and thus bring letter-writing within the reach of millions of the population who now never attempt it. A financier might safely predict that were romanization of Japanese to be generally introduced into the lower grade schools throughout the country, it would in a few years produce a very material increase in the revenue of the Post Office. In discussing then the merits of a Phonetic or Kana transliteration, it must be borne in mind that either system would be equally new to the people at large, and Mr. Dickinson's point cannot be too strongly insisted on, that the question for the Japanese is not one of reformation but one of creation. If this

be granted, and overwhelming evidence of its truth is within reach of every resident in Japan, the advantages that Mr. Dickens has so ably urged of a phonetic, over any other system historical or etymological, can hardly be gainsaid. He (the speaker) would not occupy the time of the meeting by entering into those minor details, in respect of which he would like to suggest modifications to Mr. Dickens' scheme, as such points would be more conveniently discussed before the Committee contemplated by the motion of which Mr. Bramsen had just given notice.

Mr. Bramsen continued: Although before coming to this meeting I had made up my mind not to join in any discussion, the temptation is too great, and I cannot help saying that I share in Mr. Dallas's opinion, that the Japanese are not well posted in the use of the Kana. I have made frequent experiments in this direction, and one of them seems to me to be very striking. I have a highly-educated and well-read friend, by name *Shiwa*. I once asked him: how do you spell the first part of your name, *Shiyau*, *Shiyon*, *Suu* or *Sefu*? My friend answered: I write it thus:—at the same time putting down on the paper one Chinese character. But, I said, how do you write in Kana? To which he replied: "I do not know, and I do not care to know!" And this was the very point on which the parallel drawn by Mr. Chamberlain with modern Greek, did not hold good. The Greeks do write in their alphabet, and cannot write in any other way; while the Japanese do not write in the Kana. The proposers of the new orthographical system thus actually require foreigners to do what the Japanese cannot do themselves.

Mr. Ewing remarked that it was quite possible that the change in the pronunciation of a language to which Mr. Chamberlain referred were due to the fact that the language was not spelt phonetically, in which case the objection to phonetic spelling as requiring change from time to time would be invalid. It was quite true, as the president had observed, that no phonetic system could hope to represent all the minute varieties of sound present in a language. Each symbol must represent a group of very closely allied sounds rather than a single definite sound, and within this range variation might occur. But once a language was spelt phonetically, we should expect the subsequent variations of pronunciation to be confined within those limits which determined the actual range of phonetic value possessed by any one symbol when the spelling was first fixed.

The meeting was then adjourned.

#### SYLVAN SOUNDS.

(From the Japanese.)

#### II.

##### VOICE OF THE WIND.

Tossed high against the well-thatched roof,  
There sounds along the eaves,  
The dash as if of mighty waves,  
While thro' the forest-leaves,  
It rushes while it swells and raves,—  
But 'tis no crooked billowy line  
That rocks the topmost boughs of pine,  
And surges on and onward still,  
In wild wrath o'er the wooded hill—  
It is the lawless wind at play,  
That rages on its stormy way.

#### III.

##### VOICE OF THE BROOK.

The brook its silver current takes,  
Swift-winding to and fro,  
Amid the fair, young bamboo groves  
That lean above its flow,  
And lend their tints of freshening green,  
To rippling crystals scarcely seen,—  
It trips along with tinkling tones,  
Clear as the harp whose music rains  
Soft-falling on celestial plains,  
When vernal angels wake its strains.

Tokio, 12th March, 1880.

#### JAPANESE PARABLES.

#### II.

ONE day during the rainy season, when small rivers become like vast lakes and tiny rivulets foaming torrents, a pedestrian arrived at the bank of a stream, usually of moderate dimensions, and was not a little surprised at the

masses of water which were surging along towards the ocean. The traveller intended to wade across, as he had previously been accustomed to do, and was just on the point of making the attempt, when he observed a man standing on the opposite bank. Wishing to ascertain the probability of his being able to pass over in safety, the traveller cried out:—

"Will you kindly inform me how deep is the water at the ford? Do you think it is prudent to go over?"

The other man, who happened to be deaf, noticing by the traveller's gestures that he was spoken to, promptly replied by pointing to his ear and shaking his head, meaning, of course, that he was deaf and could not hear what was said. The traveller, however, put an entirely different construction upon these signs and replied:—

"Oh! Is the water then so deep as to reach up to the ears? No wonder you warn me against essaying to cross!"

And he then went away to seek another and, as he thought, safer ford.

#### III.

"How I envy you," exclaimed a man with an absurdly short neck to his neighbour who had one like a stork. "I am sure that you enjoy the flavour of dainty viands much longer than I can; because my neck is unfortunately so short, that everything I eat passes rapidly into my stomach, while with you, it must be 'sweetness long drawn out.'"

"You are right to some extent," replied the other, "but I labour under corresponding disadvantages. Imagine how I suffer when I have to take an emetic!"

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

His Excellency Sano, the new Minister of Finance, inspected the Printing and other Sections of his department a few days ago.

His Excellency Prince Nagaoka, Envoy Extraordinary and Minister Plenipotentiary to Holland, has been informed that he will be allowed to draw salary after the second-class rate.

Mr. Ysaba, the new member of the Senate and ex-Governor of Aichi, left for his former prefecture on the 12th instant, in order to formally hand over the Government to his successor. Mr. Matsumura, Governor of Miyagi, returned to his jurisdiction on the same day. Mr. Funakoshi, the new Governor of Chiba, left for that district on the 14th instant.

Mr. Fujii Shozo, a *shizoku* of Hiroshima Ken, forwarded a petition to the *Genro In* on the 13th instant, demanding a National Assembly.

His Excellency Sasaki, Vice-President of the Senate, returned to Tokio on the 12th instant.

Mr. Awoki, *Sakan* of the first class of the Bureau of the Land-tax Revision, has left for the central provinces on an official tour of inspection.

Their Excellencies Okuma and Ito will shortly proceed on a visit to Arima, Kyoto, and Osaka.

Mr. Miyamoto, Chief Secretary of the Foreign Office, returned to Tokio, on the 13th instant, from Osaka. Judge Kiyo-oka, President of the Osaka Supreme Court, arrived in the capital the same day on official business.

His Excellency Lieut.-General Ida, Envoy Extraordinary and Minister Plenipotentiary to the Court of Vienna, has been empowered to draw salary of the second class.

Majors Katsura and Baba, have been relieved from the office of Under Secretaries of the *Daijo Kwan*, and Captain Inouye, Judge of the Military Court, has received one of the vacant appointments.

The object of the mission of Mr. Hanabusa, *Chargé d'Affaires* to Corea, is to endeavour arrange for opening a new port at a short distance from the Royal Castle, in addition to the port of Gensan. As it is already reported that the Korean Government object to a port being opened near to the capital or the burial place of the Royal Family, the negotiations will probably be long and complicated.

A meeting of the Central Board of Health was held on Monday last. Mr. Hosakawa, the *Kanji* of the Senate, presided.

It is rumored that the revised criminal code, and the new code regulating the administration of justice, are to be put into operation from the commencement of next month.

A meeting of the Senate was held on the 13th instant, presided over by Mr. Hosokawa, the *Kanji*, who acted in the absence of President Oki. The subjects under debate, were the resolutions passed by the recent Local Governors' Assembly.

His Excellency Tanaka, Minister of Justice, inspected the different branches of his Department on the 13th instant. His Excellency visited the *Tokio Saibansho*, the *Tokio Joto Saibansho*, and the *Dai-shin-In*, on the following day.

Major Kushiwa-mura, has been appointed attaché to the Japanese Legation at Berlin, and will shortly leave for his post.

Mr. Kawase, one of the Chief Secretaries of the Finance Department and Commissioner to the Melbourne Exhibition, will leave Japan about the middle of next month. Mr. Kawase will first visit America and Europe, and then proceed to Melbourne.

It is rumored that His Majesty the Emperor, will attend the ceremonial opening of the Kioto-Ootsu railway, to take place in April or May next.

A meeting of the Senate was held on the 15th instant.

Mr. Kunisada, the Chief Secretary of the Aichi Kencho, is to be Governor of the same prefecture.

Mr. Watanabe, Governor of Osaka, was ordered, by telegraph, to come up to Tokio before the 16th instant.

Mr. Maida, the Consul General for the port of Gensan, will shortly leave for his post.

As the Customs tariff in the port of Fusan, Corea, is to be revised, Mr. Hanabusa, *Chargé d'Affaires*, will shortly proceed there.

Governor Matsuda, of Tokio, entertained the German Consul at the *Fucho*, on the 17th instant.

It is said that Judge Yoshima has been appointed President of the Sapporo Saibansho.

On the 16th instant Mr. Kennedy, *Chargé d'Affaires* for Great Britain, accompanied by his Secretary, visited the Home Department, where he had an interview with His Excellency Matukata, Minister of the Interior.

Mr. Matsuda, the Governor of Tokio, visited the Tokio Fu Hospital, at Atagoshita, on the afternoon of the 17th instant.

About three thousand people met at Miyatsu, in the province of Tango, on the 10th instant, for the purpose of electing representatives to send a memorial to the Government, asking for the establishment of a National Assembly. The representatives chosen were to leave for Tokio about the middle of this month. The people of the prefecture of Yamannashi are also agitating for the establishment of a National Assembly.

The *Mainichi Shimbun* of Thursday morning last writes as follows:—"Our Cabinet may now have arrived at the conclusion, that the time is ripe for the granting of a National Assembly, which we are as desirous to see established as we are for rain in time of drought. We are in receipt of a letter addressed to us yesterday by an unknown correspondent, which we intended to comment upon, but we have had no time to do so, as it was very late in the evening when it arrived. We therefore publish the correspondence only, and congratulate our readers upon the prospect of the future prosperity of our country. The letter in question is as follows:—"I have heard from a well informed authority, that His Excellency the Prime Minister has given verbal instructions to all members of the Noble class, to bear in mind that a National Assembly will certainly be established."

Mr. Tomimatsu Taizo, as the representative of the prefecture of Wakayama, waited upon His Excellency Sanjo, the Prime Minister, on the 16th instant, to present a memorial demanding the establishment of a National Assembly.

The *Hochi Shimbun* states that further changes are shortly to be made in each of the Departments, and that the Bureau of Woods and Forests, which is now under the Home Department, is likely to be abolished, and all affairs hitherto transacted by that Bureau are to be brought under the control of the Agricultural Bureau. One of the consequences of the rumored changes will be that the salaries of the Governors and their subordinate officers in all the prefectures, with the

exception of those prefectures where there are open ports, will be increased before any further alterations take place.

It is reported that Mr. Nagayama, the Governor of Niigata, has sent in his resignation.

His Excellency Awoki, Envoy Extraordinary and Minister Plenipotentiary to the Court of Berlin, will leave for Germany about the 22nd instant.

His Majesty the Emperor will shortly visit the Nobles' School at Nishiki-cho, Kanda, during the hours of study.

A special meeting of the Central Board of Health was held in the Home Department, on the 18th instant.

His Royal Highness the Duke of Genoa, when on his way to Naga-saki from Kobe, visited the port of Hakata. Governor Watanabe called upon the Duke, and the latter landed and visited the weaving factories (for which the place is celebrated) and the town. The Governor subsequently presented the Duke with some specimens of Hakata fabrics.

Mr. Kawase, Chief Superintendent of the Board of Commerce, proposes to leave for San Francisco, on the 30th instant.

The *Mainichi Shimbun* writes as follows:—"His Majesty the Emperor lately attended a meeting of the Cabinet, and listened to the opinions of the Prime Ministers and the Privy Councilors on various political subjects. His Majesty remarked that it was quite proper for the country to have a National Assembly. All the members of the Cabinet expressed their opinions on the question, but we have been unable to ascertain what they said."

The same paper states that, with regard to the establishment of a National Assembly, the Cabinet was divided in opinion, but the majority were in favour of the measure.

The *Choya Shimbun* gives, as a current rumour, that Mr. Yegi, who was lately appointed Secretary to the Japanese Legation in Washington, will be transferred to the Japanese Legation in Berlin.

#### NAVAL AND MILITARY.

The Minister of the Navy has informed the authorities of the Imperial Naval college, that the man-of-war *Tsukuba Kan* will sail for Vera Cruz on a day to be hereafter named, for the purpose of training naval cadets during the cruise.

It is rumored that that the Japanese man-of-war *Hiyei Kan* will shortly sail for Singapore.

The meeting of commanding officers in the Japanese army is reported to have commenced on Monday last.

There will be a rifle match at the range at Dai-machi, Mita, Tokio, belonging to the Navy Department, about the month of May next. His Majesty the Emperor will preside, if possible.

By what we learn from a late issue of the *Mainichi Shimbun* it appears probable that the War Department contemplate adding the Chinese language to the routine of studies at the Military School of Tokio, as an obligatory course.

His Majesty the Emperor left the palace, at 8.30 a.m., on Tuesday last, and proceeded to the Military College, where he witnessed the ceremonial distribution of certificates among the cadets who had successfully passed their examination. During the afternoon His Majesty witnessed military manoeuvres, target shooting, &c., and returned to the palace at three o'clock. H. I. H. Prince Arisugawa, the *Sadaijin*, and Generals Yamagata, Saigo and Yamada, members of the Privy Council, and other high military officers, had the honour of taking tiffin with the Emperor.

Before the departure of the *Tsukuba Kan*, there will be a ceremonial distribution of diplomas among the cadets who have successfully passed their examination in the Naval College.

General Tani entertained the commanding officers of the army, on the 17th instant, at the Kame-Sei Restaurant, situated on the banks of the Sumida-gawa.

General Toriwo was, at his own request, relieved from his office at the *Gitei-Kwan*, on the 10th instant.

Sub-Lieutenant Uchiyama, who went mad the other day in the prison where he has been confined since the Takabashi mutiny, has now recovered, and will shortly be sentenced for his participation in the outbreak.

Lieutenant General Ida, having been appointed Envoy Extraordinary and Minister Plenipotentiary to the Court Vienna, has been relieved from the command of the Hiroshima Garrison.

The Japanese men-of-war *Nisshin Kan*, *Teibo Kan*, *Hosho*

Kan, and *Moshun Kan* were manœuvred in the bay on the 17th instant.

The first battalion of the Imperial Guard will shortly march to Mito, and thence to Shirakawa in the province of Oshiu. The second battalion will proceed to Nippe, and thence to Shinano, for the purpose of practising field manœuvres.

Fifty men are to be selected from the crew of every Japanese man-of-war early next month, and trained in the use of torpedoes in the Torpedo School at Yokosuka.

The *Kongu Kan* has gone to the Yokosuka Dockyard, to undergo repairs.

#### MISCELLANEOUS.

A rice company is to be established at Hakodate.

Twenty-five cases of gold bullion were sent to the Osaka Mint for coinage, on the 15th instant, from the branch office in Tokio.

In order to encourage farming in this country, the Minister and Assistant Minister for Home Affairs will, after the present year, visit in rotation all the *Fu* and *Ken* once annually. Agricultural schools are to be established in different localities.

Omori Bun-no-suke, a resident of Yokohama, shipped for Kobe by the *Tokio Maru*, on the 17th instant, gold and silver bullion to the value of 73,473 yen 45 sen, the property of the branch office of the Osaka Mint in Tokio.

There were 1,062 visitors to the Osaka Competitive Exhibition of Cotton and Sugar, during the week ending the 6th instant.

The Public Library of Tokio was re-opened to the public on Monday last.

The *Ise Shimbun* was suspended on the 12th instant, but was permitted to resume publication on the 17th instant.

It has been reported to the authorities that counterfeit two yen paper money has been detected by the officers of the Tokio branch of the one hundred and fifth National Bank, among the *kinsatan* paid into that establishment.

A proposal has been laid before the Home Department by the authorities of Shizuoka *ken*, respecting a new road to be made in the neighborhood of Hakone. Three different routes have been suggested, viz:—one from Yumoto to the sea coast at Nebuka; another from the same place to the foot of Futakoyama; and the third from the same place to a spot between Mishima and Numazu, through Yagunzawa. The line of road to be adopted has been left to the decision of the government.

A new carriage road is to be constructed between Nobiru in the prefecture of Miyagi, and the prefecture of Akita. A steamer will connect Saunusawa and Nobiru.

One of the native papers states that traffic is going on in the subsidiary coinage, by which some people are making money. The gains cannot be very extraordinary, as the average amount of coin purchased by any one individual is only about ten yen.

A correspondent of the *Hochi Shimbun* writing from Hakodate, under date the 9th instant, says:—"Mr. Tokito, Chief Secretary of the Colonization Department, returned here on the 7th instant the *Takachiho Maru*, and has become very popular. The export of ice commenced some time since, the *Kumamoto Maru* taking seven hundred tons on her last trip. The *Hakodate Shimbun* stopped publication, for its own convenience, on the 7th instant."

Awomori and Hirusaki in the north, are to be connected with the general telegraphic system. Officers from the Telegraph Bureau were despatched to these localities on the 14th instant.

On account of the opening of new ports in Corea and the expected increase of Japanese residents, a limited number of police sergeants and men are shortly to be despatched from Japan for their protection.

The image of Confucius was exhibited to the public at the Tokio Library on the 14th instant, and a great many people assembled for worship. Among the visitors was the Chinese Minister accompanied by subordinate officers.

The projected line of railway between Ootsu and Tsuruga was commenced on the 15th instant.

The port of Shimonoeki is to be improved, so as to afford anchorage for large vessels. The sum of 200,000 yen has been subscribed towards the cost of the undertaking.

An Osaka paper states that an English barque *Harmen-o* (?), taking coal from Australia for Yokohama, has been wrecked on the coast of Formosa.

Kido Shojiro, son of the late Kido, has applied for permission to make a five years visit to Germany, in order to study western culture.

An Osaka paper states that a great meeting of the *Aikoku-sha*, or Patriotic Society, is shortly to be held, and that government spies will probably attend.

The *Hochi Shimbun* contains the following account of an extraordinary occurrence on the coast. A vessel, owned by a man named Fukutaro, left Seki-yado, in the province of Shimonoe, for Tokio, having on board twenty-three passengers. When off Ogawa-saki, the vessel was boarded at about two o'clock in the morning by three men who came in a small boat. These men leaped on board, brandishing drawn swords, tied the passengers and crew, and plundered them of all the money in their possession. They then ordered food to be prepared by the wife of one of the sailors, and had just finished eating it, when another vessel from Numata, with thirty-eight passengers, arrived. The pirates seized this vessel also, and bound and plundered the persons on board. Altogether, these miscreants got a booty of about three hundred yen, and made off in their boat, expressing the utmost satisfaction at the success of their exploit. The matter was reported to the authorities on the arrival of the vessels in Tokio, and efforts are being made to apprehend the robbers.

Eighty thousand postage stamps, and four million post cards for home use, and fifty thousand post cards and three thousand special stamps for foreign use, were printed in the Printing Bureau of the Finance Department, and handed over to the Post Office authorities, during the half-year ending on the 31st of December, 1879.

Mr. Itagaki, the *ryu-Sangi*, is reported to be going to Osaka to attend the great meeting of the *Aikoku-sha*. Mr. Kataoka has already arrived in Osaka, and is diligently working to promote agitation for the establishment of a National Assembly.

Seventy-six police officers, who took part in the suppression of the South-Western rebellion, have received gratuities varying from fifteen to one hundred yen.

The *Nichi Nichi Shimbun* states that General Saigo and Admiral Kawamura were out shooting recently near Atami, and carried, as is the custom of Kagoeshim sportsmen, short swords in order to defend themselves in case of sudden attack by wounded wild boars. The admiral tripped over the root of a tree, and fell down into a deep valley, the short sword inflicting a wound, which was thought sufficiently serious to induce sending to Tokio for a surgeon, there being no medical man in the neighbourhood of Atami.

To-day has been observed by the Japanese as a general holiday. It is called the *Shuki Kori-sai* or Spring holiday, and is in memory of ancestors of the Imperial family.

#### IMPERIAL GOVERNMENT RAILWAYS.

Total.....	\$12,122.59
Miles open, 47.	

## ARRIVAL OF THE AMERICAN MAIL.

London, February 23rd.—In the House of Lords to-day, Earl Cairns, the Lord High Chancellor, introduced bills simplifying conveyancing, facilitating sales and leases of lands, and generally increasing the powers of owners for life to improve land. The principal one of these bills passed its first reading.

The Seed Potatoes bill was passed in committee.

In the House of Commons to-day, Sir Stafford Northcote gave notice that on Thursday he would move a resolution that whenever any member was named by the Speaker or Chairman of the Committee as disregarding the authority of the Chair, or abusing the rules of the House by persistently obstructing business, the Speaker shall put the question, without debate, amendment or adjournment, that such member be suspended during the remainder of that day's sitting; and if any member be thrice suspended in one session, the third suspension shall be for one week, after which a motion may be made for the continuance of his suspension; but a suspended member will have the right to be heard in reply to such a motion.

Subsequently Sullivan, Home Ruler, moved that Earl Cadogan, speaking at an electoral meeting at Chelsea, be summoned before the bar of the House for a breach of privilege, as no Peer is allowed to interfere with elections; and that Major Jocelyn be also summoned to the bar of the House, as he at the same meeting characterized the Home Rulers as despicable bands of Irish rebels.

Sir Stafford Northcote pointed out that the meeting was an ordinary meeting of the Conservative Association.

Sir William Harcourt opposed the motion by moving the previous question, but said the Chancellor of the Exchequer had to thank himself for it by his course in the Plimsoll affair.

The previous question was adopted—229 to 15.

O'Donnell, Home-Rule member for Dungannon, proceeded to raise another question of breach of privilege.

Sullivan, in a speech on his election, incidentally expressed his intention of raising a question of breach of privilege by new papers.

[NOTE.—These proceedings are doubtless in retaliation for the motion against obstruction.]

O'Donnell, in raising a question of breach of privilege, brought under notice a number of newspaper articles, which, he complained, contained a series of grossly scandalous libels on Irish members. He read from the *World*, *Advertiser*, *Daily Telegraph*, *Pall Mall Gazette*, and *Liverpool Courier*, and denounced their denunciations as part of a conspiracy to fasten on the Liberal leaders the charge of complicity with obstruction. He moved that these articles infringing on privileges of the House, and handed in the newspapers mentioned for the passages to which he had made reference to be read by the Clerk. It would be trifling with the House to read extracts.

Sir Stafford Northcote said the articles were inoffensive, and moved, as an amendment, that the House proceed to the order of the day.

The Marquis of Hartington seconded the motion, and congratulated the Government on adopting the right course; but he said there could be no doubt that some of the newspaper passages read by the member for Dungannon were serious breaches of privilege.

Shaw, Home Rule, recommended the withdrawal of O'Donnell's motion, and O'Donnell expressed his willingness to withdraw it. His motion was then negatived, without division. The amendment to proceed to the order of the day, moved by Northcote, was agreed to, and the Irish Relief bill was read a third time.

The *Standard* stated that rumors were freely circulated on both sides of the lobby last night that the immediate dissolution of Parliament is contemplated. The *Standard* adds; These reports are at present premature, but if the business of the House continues to be systematically obstructed, the Government will have no alternative but to dissolve Parliament at an early day.

The Home Rulers will meet to consider Northcote's motion to check obstruction.

London, February 23rd.—In the last boat race on the Tyne, Hawdon defeated Kempster by twenty lengths.

Constantinople, February 23rd.—It is understood that the English Foreign Office is willing to pay a reasonable

ransom for Colonel Syngé and wife, now held by brigands near Salonica.

St. Petersburg, February 23rd.—The official *Messenger* announces that the inquiry into the Winter Palace explosion has had the result of rendering it to some extent certain that the crime was committed by a person who passed as a workman, and that there is reason to suspect a connection between this person and the same individuals who were arrested previous to the explosion.

In view of possible explosions, the police have ordered citizens to be provided constantly with a sufficient supply of water for two days. The Nihilists have issued a proclamation threatening to set fire to the Capital on the 3rd of March. The Government has decided to increase the number of house porters, who will be instructed to be ready to guard against emergencies, especially on the anniversary of the Czar's accession to the throne.

General Trepoff has been appointed Military Governor of the Winter Palace, vice General Delsalle, who has become paralyzed.

The statement that the officer in charge of the Palace Guard has disappeared, is contradicted.

The Czar to-day visited the Paulowsky Military School, in an open sleigh. He was enthusiastically cheered by students and people.

Baron von Schell, Privy Councillor, has committed suicide, his mind being affected by the explosion in the Palace.

An eminent General recommends that the Winter Palace be given up as an Imperial residence, in favour of the palace opposite the Izak Cathedral.

Paris, February 23rd.—John Lemaine, editor of the *Journal des Debats*, was to-day elected Senator for life. He received 142 votes, and 95 were thrown against him, of which the greater number were blanks, while about 20 were for various other candidates.

The Chamber of Deputies has approved the convention between France and the United States for the exchange of postal remittances.

The Chamber adopted the bill reconstituting the Superior Council of Education, with the Senate's modification.

Berlin, February 23rd.—The Reichstag, after a long debate, passed a motion requesting Bismarck to cause the suspension, while the session lasts, of the criminal procedures pending against Deputies Fritzsche and Hasselmann, Socialists. Fritzsche and Hasselmann have returned to Berlin.

There was a debate on the second reading of the Budget bill. An item for the creation of a Consulate in Apia, Samoan Islands, was referred to the Budget Committee. The Federal Commissioner stated that the proposal was in no way connected with the bill relating to the South Sea Company.

The House adopted the war estimates, the Minister of War positively denying that the proposed increase of the army originated in an expectation of immediate war.

Berlin, February 23rd.—The *North German Gazette* commenting on the reported intention of Russia to erect fortifications at Roano, Bialystock and Grodo, says: "This is done, probably, to create a belief among the Russian people that an attack on the part of Germany is feared."

Paris, February 23rd.—The Russian Embassy here has received documents with a view to proving the criminality of Hartmann in connection with the Moscow explosion, and they will be handed to the French Government immediately.

London, February 23rd.—The *Standard's* Madrid special says that intelligence is received from Tripoli that 1,500 houses have been destroyed by floods.

London, February 23rd.—Professor Roscoe, of Owens College, says the evidence thus far submitted by S. Ballantyne is insufficient to establish the conclusion that Hannay has discovered a process for making diamonds.

New York, February 24th.—M. De Lesseps and some of his engineers arrived to-day on the steamer *Colon* from Panama. De Lesseps this afternoon said that there was no secret understanding between England, France and Germany, in relation to the projected canal. Even the idea of such a thing was too absurd to think about. He had also made an arrangement with the Panama Railroad Company, the details of which he would prefer not to give. The proper name of the canal was the "Canal du Chagres."

taking his appellation from the river of that name. The interest was also purchased from Lieutenant L. N. B. Wyso.

Calcutta, February 24th.—The India budget shows a surplus of £119,000 for 1879-80, and the estimates for 1881 show a surplus of £417,000. The above results are reached after paying from the revenue all charges on account of famine, the Afghan war and frontier railways. The war expenditure in 1879-80 was £2,216,000. Total net war expenditure to the end of 1881, including 1879-80, is estimated at £5,750,000. The rate of exchange for the ensuing year is estimated at 1s 8d per rupee.

Paris, February 24th.—In the Senate to-day during debate on the Ferry Education bill, M. Pelletin vehemently attacked the Jesuits.

London, February 24th.—Dean Stanley to-day received an address with 3,200 signatures and gave audience to a deputation protesting against the proposed erection of a monument in Westminster Abbey to the memory of the Prince Imperial. Dean Stanley refused to alter his decision in the matter; and said if he were to give way in this instance it would open the door for complaints from every party against honours to rivals. Relative to the supposed feeling in America against the erection of the monument, he said: "Doubtless if the Orleans Princes had fallen in the war of secession their graves would have been heaped with all the honors the United States could bestow."

London, February 24th.—In the House of Commons to-day, Courtney (Liberal), gave notice that he would shortly move a resolution in favor of withdrawing from the Transvaal.

The Home Rule members of Parliament held a meeting yesterday to consider the motion to check obstruction, the notice of which was given by Sir Stafford Northcote on Monday night. After a protracted discussion it was decided to place a number of amendments on paper, materially limiting the suspending power proposed to be vested in the Speaker, and confining the scope of resolutions to the present situation.

Berlin, February 25th.—Russia appears inclined to treat the refusal of China to ratify the Kuldja Treaty, if persisted in, as an affront making necessary diplomatic interventions as the treaty has been signed by the Czar.

London, February 25th.—The *Times* announces that the Liberal leader has determined to give general support to Northcote's resolutions against the Obstructionists. The Home Rule members have decided not to obstruct, but to criticise, the resolutions.

London, February 25th.—A large tenant-right meeting near Portadown, County Armagh, to-day, was attacked by 3,000 Orangemen, armed with bludgeons, who stormed the platform and dispersed the meeting. Twenty tenant-righters were seriously injured. The Orange party considered the meeting seditious.

Madrid, February 26th. In the Cuban Committee of the Chamber of Deputies, to-day, Señor Nicalan proposed that the privileges of the Spanish coasting trade be extended to Cuba, and that the arrangements with the United States, by which Spanish vessels are prevented from taking cargo from Cuba to North America, be discontinued.

London, February 26th.—In the House of Lords, to-day, Nolan's bill authorizing seed potatoes to be sold to Irish tenant farmers for planting, was read a third time.

The House of Commons was, to-day, crowded in all parts. Sir Stafford Northcote moved the resolutions of which he gave notice on Monday last, as follows:

"That whenever any member was named by the Speaker or the Chairman of the Committee as disregarding the authority of the Chair or abusing the rules of the House by persistently obstructing business, the Speaker should put a motion, without debate, amendment or adjournment, that such member be suspended during the remainder of that day's sitting; and if any member be thrice suspended in one session, the third suspension shall be for one week, after which a motion may be made for the continuance of his suspension, but the suspended member will have the right to be heard in reply to such motion."

Lord Hartington strongly supported the resolution and said he thought action in the matter had been too long delayed.

London, February 26th.—Very Rev. Charles William Russell, President of St. Patrick's College, Maynooth, Ireland, since 1857, is dead, aged 68.

London, February 26th.—The *Standard* is informed that, in consequence of a telegram from Parnell, Mr. Biggar, Home Rule member, has resolved to disregard the wishes of the Moderate Home Rulers and oppose the utmost resistance in detail to the obstruction resolutions.

Paris, February 26th.—The *Moniteur* announces the arrest of a Prussian officer while taking views of the Bessano redoubt. He was conveyed to Rheims.

St. Petersburg, February 26th.—A semi-official statement says: It is impossible to rectify all the erroneous statements published in the foreign press relative to the explosion in the Winter Palace. No member of the Imperial family has removed to other apartments since the explosion. The Emperor informed the Empress of the explosion the day after it occurred. No arrests have been made in the Winter Palace, except those of workmen occupying the room where the explosion occurred. The dynamite was in all probability brought to the palace in small quantities by a pretended carpenter, who had been working in the palace since September last, and who is now supposed to have been a mechanical engineer. After having sent away his fellow-workmen, this individual made his final preparations, ignited a slow match and quit the palace. Two other carpenters are still in custody, and are more or less suspected of complicity in the plot. The reports of wholesale arrests at St. Petersburg are unfounded.

Paris rumors of fresh disturbances here are unfounded.

Berlin, February 27th.—It is now generally assumed that Prince Hohenlohe's visit here from Paris has reference to a proposal that he shall shortly take the vacant Secretaryship of State for Foreign Affairs, with a view to finally succeeding Bismarck in the Chancellorship.

St. Petersburg, February 27th.—The imperial ukase has been issued by the Czar nominating members of the Commission of Supreme Control, dated February 25th, and addressed to the Senate. It says: "Being firmly determined to put an end to the repeated attempts of criminals to undermine the order of the State and society, a Supreme Commission is established in St. Petersburg for the protection of order. General Melikoff is appointed to the head of the Commission, and the appointment of the other members will be made on General Melikoff's suggestion by an imperial ordinance. The head of the Commission has, moreover, right to summon upon the Commission all whose presence he may consider useful, in order to give a united character to the action of all the authorities. The head of the Commission, setting aside the right of the Commander-in-Chief of St. Petersburg, shall have direct control over all political trials held in the capital, in the military district of St. Petersburg, and throughout the Empire. All local authorities, Governors-General and town commandants, are placed under the jurisdiction of the Head of the Commission, and all employees in the various departments are bound to afford him their entire coöperation. The Head of the Commission is at liberty to adopt any means which may appear desirable for the protection of order in the Empire, and the orders he may issue are to be unconditionally obeyed. The office of Provincial Governor-General of St. Petersburg is abolished."

General Melikoff has issued a proclamation. After referring to the indignation felt in Russia and throughout Europe at the attempts on the life of the Emperor, he declares that the Government is compelled to adopt effectual measures for the suppression of the evil threatening social order. He says he recognizes the difficulty of his task, and will not encourage exaggerated expectations of immense success. He will not hesitate to take the most stringent measures for the punishment of criminals, while endeavoring, on the other hand, to tranquilize and protect the well-intentioned part of society. He hopes for the coöperation of honest men, and begs the population to await the future with calmness, and to disregard malicious and frivolous rumors.

Hartmann, in Paris, confesses to being engaged in the attempt on the Czar's life, at Moscow. It is said, also, that the French cabinet has instructed the Minister of Justice to draw up a report on the question of Hartmann's extradition.

The *Journal de St. Petersburg* says it regards the authoritative letter published in the *North German Gazette*, in reply to its article on Russian fortifications, as proof that the article is not ominous.

Vera Sassulitch, the famous feminine Nihilist agent,

who on the 5th of February, 1878, attempted the assassination of General Trepoff, Prefect of St. Petersburg, has been arrested at the residence of one of her friends in this city.

### INCIDENTS OF IRISH CRIME.

BY TERENCE McGRATH.

The battle with crime in Ireland is quite a different matter from the ordinary round of an English rural policeman's life. There, a poaching affray is the wildest excitement that may probably distract the even tenor of his way. But in Ireland—the 'land of potato, pike, and priest, punch, poeler, proclamation'—the daily life of a policeman is more prolific in incidents generally exciting, sometimes dangerous, and always demanding discrimination, caution, and courage.

The Irish constable has the advantage of a training more complete than that of any police force in Europe, and enters on the practical duties of his profession with a large amount of theoretical knowledge of the various descriptions of crime, their probable motives, the best-known means of prevention, and the steps to be taken for their detection. It is evident that with a people, so excitable, so easily swayed by agitation to acts of violence, and not unfrequently to open defiance of the constituted authorities, a police force must be sufficiently drilled to move, if necessary, in large bodies; and scattered as the force is in small parties of one constable and four men in the country stations, discipline must be strict to preserve its morale and efficiency.

The constabulary recruit, who must have good testimonials and pass an elementary examination, is sent to the depot in Dublin, from which, after he has been drilled and theoretically trained, he is transferred to any county other than his own, in which he is never stationed.

The constabulary officers enter the force by competitive examination, for which nominations from the Government are still required, as a position of such importance in Ireland could not safely be thrown open to unrestricted competition.

The cadet finds himself in the depot, where he goes through the same instruction in drill as an officer joining a regiment. But all this time, about six months on an average, his police education is being proceeded with—a 'police school' being held daily at which cadets and recruits attend, when lectures are delivered by the detective instructor on the various kinds of crime, the Acts of Parliament bearing on police matters explained, and questions asked as to the steps to be taken in imaginary offences then propounded as examples.

After officers have taken charge of districts, they ask similar questions at the inspections of the stations; and on inspections by an inspector-general the same system is pursued. In the presence of the latter, even good men become sometimes so nervous that they quite lose their heads.

'You are on patrol, and find on the road-side the body of a man: what should you do?' asked an inspector-general, who had the reputation of being rather a martinet.

'Take his dying deposition, sir,' answered the constable gravely.

'But, my man, the man is *dead*, I say.'

A short pause, then, with a brightening look, the constable said, 'But he might have a *stint* of life in him, sir!'

In Ireland it is agrarian assassination that adds double terrors to the thought of murder: the thought that having done no wrong, save that of asserting a legal right by legal means, your life is, in so many cases, in as imminent peril as that of the leader of a forlorn hope—that yet, you must, conscious of ever-present danger, remain passive until the attempt has been made and failed, or the fatal bullet has sped. For one connected with property, either landlord or agent, and imbued with business ideas, Ireland is not a place of delight. But, on the other hand, your daughters or wife may walk along any road at any hour, with small fear of insult; and if the lock of the front door be broken, it need not make you uneasy, for burglary, robbery, and assault on women are rare, being considered dirty crimes, as distinguished from the clean crimes of murder and manslaughter.

'Are you not one of the worst characters in this county?' asked a Crown counsel, cross-examining a witness in a murder case, who attended to prove an *alibi*.

'I am not,' he answered boldly. 'Who dare say that I ever stole the value of a pipe of tobacco from any one?'

'Why, you scoundrel, were you not two years in gaol for killing a man?'

'Well, if I was, an' sure it was a clane crime!' he said triumphantly, as if he had refuted the base assertion of his tormentor.

In almost every case of outrage the police have a good idea of the guilty persons, one of the few cases affording no clue by any ascertainable motive being the following: On the morning after a race meeting it was reported that a wealthy farmer named David Cullen had been killed the previous night, when returning late from the races. A small boy who was with him said that Cullen was a little drunk, but 'none the worse'; no man being considered anything the worse who can stagger along. As they walked toward home, the night being dark, they were overtaken by a man who was walking very fast.

'Good-night,' said Cullen.

'Good-night,' answered the unknown, at the same time hitting Cullen on the head with a stick as he passed. Cullen staggered home and died.

I went to the house, which looked neat and comfortable. A number of his neighbours were about the place, waiting for the coroner, who had intimated his intention to hold an inquest that afternoon. The children sat outside the house, too young quite to understand the meaning of the assemblage of whispering groups.

Inside, poor Cullen was laid on the bed, his pale quiet face showing no symptom of having suffered, and a slight blue mark over the

forehead alone indicated where the 'loaded butt'—an ash-stick with lead melted into the handle—had done its work.

Beside the bed sat the wife, a still comely woman, who seemed distracted with grief, while the parish-priest, a cousin of her husband's, spoke words of comfort to her, now and again turning towards the bed and laying his hand gently on the forehead of the corpse.

I spoke to the wife, who, on seeing me, gave way for a time to wild bursts of lamentation, wringing her hands, and half singing, half reciting, the many virtues of her husband, as the habit of Irish mourners of that class. After a time she became calm, and I then asked her about the various circumstances that might possibly throw light on the matter.

'Has your husband ever had any difference about land?'

'O no, sir.'

'Does he belong to any faction?'

'No, sir; what would he be doing with the like?'

'Do you know if he has had a quarrel with any person, no matter how long ago?'

'Quarrel, sir! He never had as much as "you lie" with any man in his life.'

By this time her excited grief had subsided, and she spoke calmly. I asked,

'How then do you account for this sad business? Can you form no idea of the reason why that scoundrel should have killed you husband?'

She thought for a minute, her brow contracting; then, with a smile at having solved the enigma, she said,

'Faith, your honour, I'm thinkin' it was a friendly stroke he got.'

No light was ever thrown upon the matter. Whoever struck him kept his own counsel—possibly was so drunk that he did not know the mischief he had done.

But the parish-priest was determined that, so far as in him lay, Cullen's slayer should not go unpunished; and if the Church's thunders have any effect, he would have presented an appearance more abject than the Jackdaw of Rheims.

The Monday following, the constable at the nearest station came in to tell me that Father O'Brien had preached a telling sermon on the murder. 'He prayed from the steps of the altar that before twelve months the arms might wither off the man who murdered Cullen, and that his soul might be frisking in the flames of hell.' 'O sir!' he added, 'he preached a beautiful sermon about it.'

Cullen's hat remained in the possession of the police, as, being cut through by the fatal blow, it might possibly be necessary to produce it, should any other evidence turn up. One day Mrs. Cullen appeared, to beg that the hat should be restored to her. I told her I feared it could not be retained, as it might be required, when, after pressing hard for its restoration, she burst into tears, saying, 'Is it not enough that I should lose my husband, without losing my little boy or one of my brothers?' I asked what she meant. 'O,' she cried, 'does not all the world know that if I don't give away all the clothes my husband wore when he was killed, another of the family will lose his life within twelve months.'

One has not often the fortune to be present at an attack upon a house; but the following incident, in which I assisted, will show how invariably in Ireland justice leans to the side of mercy, even when the guilty parties are taken in *flagrante delicto*.

About seven o'clock on a winter's evening the following letter was placed in my hand by a person who met me in the street of the country village where I was then stationed:

'Honoured Sir.—I beg for God's sake that you will send the police to Jim Malley's house at Carrowree to-night, at eleven o'clock. Jim is getting married, and his house is to be attacked by the M'Dermott faction, disguised as *gowers*. I write this letter because I fear my son will be in it, and there will be lives lost if the police do not go: for Malley's faction is strong, and they will not die soft. A FRIEND.'

As Malley was a noted Ribbon-leader, it seemed curious that his house should be attacked. However, I consulted with my old head-constable, who knew every man in the country and almost everything about him. He read the letter carefully, and said:

'This is genuine, sir. I fear there may be some mischief in the wind.'

'But, Head-constable, do you think it likely that any person would have the hardihood to attack Jim Malley? He is the most confounded ruffian in the country—a leading Ribbon-man, with a number of friends and relatives, who will all be assembled at the wedding to-night. I think it is a hoax to draw us out.'

'Well, sir, it may be; but there is a bitter quarrel between Jim Malley and the M'Dermotts for the last six months; and this marriage makes it worse, for one of the M'Dermotts had the match nearly made up with the girl's father. There was only five pounds between them, when Jim Malley took her with the five pounds less; and when Tom M'Dermott sent back his mother two days afterwards he heard the match was made, so he is very savage. But, beside that, about six months ago, at a funeral, Tom M'Dermott put a pound more on the priest's altar than Malley, although he only had two glasses of whisky; and Malley said he had men enough there to beat M'Dermott out of the funeral, if he liked. There would have been a fight there and then if the priest had not stopped it; and Malley went and borrowed a pound and put it down, so as not to be outdone by M'Dermott; but there is very bad blood since.'

The priest's altar is an institution of a very peculiar character. When a person dies, of such consequence that the priest attends the funeral, a table is placed opposite the house of death, on which stands a small keg of whisky or beer, or a smaller quantity, in proportion to the wealth of the family of the deceased, who pay for the drink. Every person attending the funeral takes as much as he wants from the store thus lavishly offered; but beside the barrel on the table is a plate, on which it is a point of honour to place money for the priest. In Ireland, where vanity and ostentation are ruling

qualities, the amount thus given is supposed to be a measure of the generosity or meanness of the donor; and where rival factions attend, the jealousy is shown as much in the offerings as in any other of the various ways in which it is so freely displayed. This is called the priest's altar, and sometimes brings in as much as twenty pounds to the expectant pastor. It will be seen how demoralising such a custom must be, leading, as it does, to disgusting scenes of drunkenness at funerals. Fortunately the custom is now dying out except along the west coast of Ireland.

At ten o'clock fourteen men met me at a place not more than two miles from Carrowrea, and we started along a by-road that led to that remote part of the district. The night was dark, save for the dim glimmer of the stars with which the clear sky was brightly studded; and, as we walked along, I turned over in my mind what had best be done if we found that the letter was true, and an armed attack was to be made upon the house. We were fifteen, all told; but, in the event of fighting, it was by no means certain that we should not have both sides pitted against us. So it was in the old days of faction-fighting, when both parties so frequently turned on the force that tried to stop the fight; and many a mourning wife or mother cursed the police who, at the point of the bayonet or by the more deadly bullet, compelled the abandonment of the feud that had been handed down from long ago, and interfered with the national amusement where fractured skulls were common, but death was rare. Should we be attacked? Would the Malleys join the M'Dermotts in a cause so sacred as opposition to the police? These were questions that occupied me as we walked along the lonely road, and turned off into the fields. The night was frosty, and the crunching of the crisp grass beneath our feet was the only sound that broke the dead stillness, when suddenly a shot was heard in the direction of Malley's house, now within a quarter of a mile. Stepping out with a will, we soon arrived at the boundary-fence of the square field in the centre of which stood the house. The first shot had been followed by a second and a third, and as we arrived at the fence three or four were fired in quick succession.

'Shall we load, sir?' asked a constable.

'Yes, load; but no firing except by order.'

The loading completed, we walked quickly along the fence until we should find ourselves at the nearest point to the house. Loud shouts were heard, and we could see white-clad figures flitting about. Again and again shots were fired, but no answering fire appeared to come from within. The men were panting with anxiety to get over the period of suspense, and two or three times the half-muttered whisper, 'We're close enough,' was heard as we went along the low fence.

'Now,' I said, as we came opposite the house, 'remember—every man a prisoner; and we all clambered over the fence together, and made a swift rush for the house.

We were not perceived until we had got within twenty yards of the crowd, who, seeing us, broke with a yell, and fled in the opposite direction. Away they sped, a crowd of white figures, followed by police like pursuing spectres. Not a word was spoken as we slowly but steadily gained upon them, save an exclamation now and then as one after another felt the grasp of a policeman upon him. Across fields and over walls and fences the pursuit continued until at last every man, except a fat old constable, had secured a prisoner, and all were collected at Malley's house.

A curious group they looked as they stood sullenly in the light that streamed from the doorway. Every man had a white shirt over his clothes; his face was blackened, and straw was fantastically twisted in his hair. This is the usual attire of the *gunners*, who perpetuate the customs of a former period by going to weddings, and dancing fantastic dances before the house, being usually plentifully supplied with whiskey from the wedding-feast. It is also, except the straw in the hair, the means of disguise adopted by the evil disposed, whose crimes necessitated the passing of the Whiteboy Act in 1776. Within, all was confusion. The ceremony had taken place, and the returning procession was preceded by boys who carried aloft sheaves of lighted straw, unconscious of the fact that as the fires of Bael continue to be lighted on the accustomed day, so the torch of Hymen is still carried at Irish wedding festivities—so interwoven are the pagan and Christian rites in the most conservative country in Europe. Over thirty people had assembled, and the carousal was in full swing when it was brought to a sudden stop by the noise of firing outside. The door was bolted, and every person huddled together at either side of the windows, so that no shot could touch them. Malley had no arms in the house, and the terror-stricken party remained in their place of safety until the frightened yell and sudden departure of the attacking crowd told them that succour had come. Never before was the presence of a policeman welcomed by Malley, who was now effusive in his gratitude. So far the warning letter was right. The party disguised were the M'Dermotts, and it was highly improbable that they attended for the purpose of paying a complimentary visit to the bridal couple. However, no shot had entered the house; and though a search over the ground traversed by the flying party was rewarded by the discovery of four guns, no ammunition was found upon any of the prisoners, who where of course the least active of the crowd.

The prisoners were handcuffed and marched into the village, about seven miles distant, and in the morning were charged before the neighbouring local justice with having been concerned in a Whiteboy offence by going about disguised, at night, to the terror of her Majesty's subjects. The parish-priest drove off from the magistrate's door as the police approached with the prisoners. The magistrate was one of the class so frequently appointed by Government in remote parts of Ireland. He was a not very successful farmer, of slender means, whose views on the criminality of various offenders, where death did not supervene, would make the hair of an English squire stand on end.

The circumstances were stated by me, and the guns produced that were picked up after the pursuit. I explained that the M'Dermotts and Malleys were enemies, and the improbability that they had gone there for a legal purpose. To my statement the magistrate paid but little attention, as he appeared much amused at the appearance presented, in broad daylight, by the prisoners, who had been prevented from removing the straw from their hair. When I suggested the advisability of having an information taken, he said, 'O no: I am quite satisfied that they only meant it as a frolic; so I discharge them.'

'God bless your honour; long may you live!' shouted the now free M'Dermotts, as, the handcuffs taken off, they proceeded to divest themselves of their outer shirts, and to remove the straw from their hair.

'Good-morning,' I said, and took my departure, leaving the M'Dermotts behind, who went round to the yard for refreshments by Mr. Maher's directions.

'Well, head-constable, what do you think of that?' I asked, as we returned to the village, rather crestfallen at the result of our night's adventure.

'Faith, sir; I forgot that Father Pat Ryan's first cousin is married to one of the M'Dermotts; and sure, Mr. Maher's uncle is a priest, and Father Pat can do what he likes with him.'

'If I had known that, I think should have telegraphed for the resident magistrate.'

'If I may take the liberty of advising you, sir, always do so in any case of a serious nature. If you do not, you might as well do nothing, and keep the popularity to yourself as leave it to Mr. Maher, for he never will do any thing that would vex the people.'—*Time*.

## THE JAPANESE PRESS.

### THE INFLUENCE OF COMMERCE.

(Translated from the *Hochi Shimbun*.)

IN order to foster commercial enterprise it is absolutely necessary to afford facilities of transport and communication. These facilities are given by ships, railways, postal and telegraphic services, roads and bridges, the most important and convenient of all being carriage by water.

Japan has from the earliest times possessed a mercantile marine; in fact our records do not state when the shipping interest first came into existence, and it is said that, ever since the expedition fitted out by the Empress Jingu against Corea, intercourse has been carried on with that country.

Shortly afterwards, i.e. early in the sixteenth century, bands of marauders from this country were constantly ravaging the coasts of China, and accounts of their proceedings may be found recorded in the history of the Ming dynasty. About the middle of the same century, Yamada Jinsayemon sailed from Japan, and landing in Siam, formed a colony which he named "the Nippon settlement." It will thus be seen that, even so long ago, we had stout ships and skillful sailors, well versed in the art of navigation and inured to the dangers and difficulties of long voyages. Then came trade with the Dutch and English, the introduction of Christianity, and the first commencement of legitimate intercourse with foreign lands. The result was a great impetus to ship-building and commerce? and although much is attributable to the bravery and energy of the people, who were habituated to hardship and danger, yet the natural advantages of the country no doubt contributed, in a still greater degree, to the progress which was then everywhere witnessed.

In course of time the revolt of the Christians took place in Amakusa, and the authorities prohibited any further intercourse with foreign countries, forbidding the construction of large vessels, so as to prevent the possibility of undertaking long voyages.

The result of these enactments was soon experienced in the rapid decline of carriage by water, until at length matters reached such a pass that it was found impossible to convey the rice tax paid in kind to Yedo, without incurring unnecessary delay.

The Government now saw the error they had fallen into and ordered Kawamura Zuiken to take the requisite measures to improve the shipping interest, and also to provide for the carriage by water, to Yedo, of the taxes received in rice from the northern provinces of the empire. Kawamura accordingly made some amendments in the regulations affecting vessels, and established an office in every port to control maritime affairs. He also ordered life-boats to be despatched to vessels in distress, inaugurated a system of pilotage in the Inland Sea, and built a lighthouse on Suga-shima, off the coast of Shishiu. Vessels were thus enabled to make the voyage from Ushiu by the northern sea, and from Oshiu by the eastern sea, to the capital, and a great

improvement was speedily apparent in maritime enterprise and the class of vessels employed. Unfortunately, the regulation limiting the size of ships still remained in full force, and matters remained at a standstill for over two hundred years, or until the opening of the ports in 1858.

It thus appears that it was entirely owing to mistaken legislation that maritime enterprise in Japan was brought to a low ebb, and, if the natural advantages of the country and the aptitude of the inhabitants be taken into consideration, there can be little doubt that by careful management the shipping interest will speedily occupy that prominent position to which it is justly entitled.

The mercantile marine of Japan being nominal, the carrying trade of the country has fallen almost altogether into the hands of the English, a fact which is greatly to be deplored. The control of a large carrying trade is the true source of wealth, and it matters not however fertile or rich in productions a country may be, they all avail nothing if unaccompanied by a profitably employed fleet of merchant ships. It is therefore absolutely necessary for us to foster navigation and maritime enterprise, increase the number of our vessels, and resume the control of our carrying trade. To accomplish this great object will no doubt be very difficult; but, if the whole nation join as one single individual to do so, the difficulties will melt away and success will crown our efforts.

We have the experience of England and Holland to guide us in this matter. Holland at one time monopolized the carrying trade of the world; and the products of all the countries of Europe, Asia, Africa, and America were transported in Dutch vessels. England determined to enter into competition with the Dutch; and, in order to foster the rising industry, passed a law that the productions of Asia, Africa, America and the English colonies, could not be imported into England or any of the English colonies except in English ships. Shortly afterwards another law was passed extending the prohibition to the products of continental Europe, except when carried in vessels belonging to the country in which the cargo was procured. A great rise in the price of imported goods followed the passing of these enactments; and, although much discontent ensued and war was declared against the Dutch, yet England was victorious and laid the foundation of her present greatness.

We thus learn how the English people by their resolute and combined action deprived Holland of maritime supremacy, and. If the shipowners and shipmasters of Japan will only join together to rival England, who can say that they will not be victorious? When the Mitsui Bishi Company first commenced business it had to encounter severe competition, but it has ultimately proved successful, and although we are unaware of any foreign vessels opposing the local association at present, still, if ever a foreign adversary again enters the field, the people of Japan must unite to defeat the intruder and not lose sight of great ultimate advantage for the sake of a small temporary benefit.

There can be no doubt that the mercantile marine of Japan has increased considerably since the opening of the ports to foreign intercourse, and we find on referring to a return, issued after the close of last year, that this country now possesses 151 steamers, of an aggregate capacity of 36,622 tons; 54 sailing vessels of 16,384 tons; and 18,908 junks of 225,654 *toku*. If, however, we compare the number and size of these vessels with our population of thirty-five millions of people, we can then easily see that the results of maritime enterprise in Japan are very far from what they ought to be. It is also noteworthy how few sailing vessels we have as compared with steamers, and the consequent inadequacy of the means provided for the transit of merchandise in cases where speed is not an object.

Until these evils are remedied we cannot expect any great development of our commerce, and we therefore affirm that the most urgent steps are necessary in order to foster and increase the mercantile marine of Japan.

#### LAW REPORT.

##### IN H. B. M.'S COURT FOR JAPAN.

Before M. DOHMEY Esq., Act. Assist. Judge.

Saturday, March 13th, 1880.

Hermann Soole, A. B. of the British barque *G. Broughton*, was charged with refusal of duty, and threatening the

master and crew of the vessel with grievous bodily harm.

Alfred Clemishaw, Master, sworn stated:—during the voyage out from Antwerp the accused has been off duty, saying he was sick. The last occasion he went sick was on the 25th of February. He remained off duty until the 2nd of March and as I found he did not ask for any medicine as usual, I sent for him. He then told me he was not sick, but he did not intend to work any more on board. He also threatened to do me an injury saying that when he got me on shore I should never see my home again; he has been off duty ever since. He has threatened the crew also and yesterday the crew came aft and asked me to put the man in irons as they were afraid he would do some of them an injury. I accordingly did so. I think the man is not quite right in his head.

His Honour said he would see the German Consul in the matter as the accused was a native of Germany. In the meantime he would take charge of him.

The case was then remanded until Tuesday, the 16th instant, at 10 a. m.

Tuesday, 16th March, 1880.

Herman Jule, was brought up on remand from Saturday last, charged with refusal of duty and using threatening language on board the British barque *G. Broughton*.

Edwin Wheeler, M. D., sworn, stated:—I saw the accused yesterday at the jail, I think he is labouring under a monomania. He has an idea that there is some witch on board the ship which would cause him to fall down if he went aloft, and that is the reason why he will not work.

Stephen Aschinger, A. B. on board the *G. Broughton*, corroborated the evidence the master as to the threats made by the prisoner to use a knife, and refusal of duty. This witness stated that the accused never used any violence but confined himself to talking, and that he was well treated by everyone on board the ship. Johannes Reichardt, A. B. on board the *G. Broughton*, confirmed the evidence of the previous witnesses.

The accused was sentenced to be imprisoned until the first opportunity offers to send him to Hongkong, thence to be forwarded home.

#### IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.

Messrs. E. BLANC and A. DEVEZE, Assessors.

Thursday, March 11th, 1880.

NAGASAKI *Kencho* vs. P. HYVER.

This was a claim for the recovery of \$68, ground rent due for lot No. 42A, at Sagaramata, Nagasaki.

Plaintiffs were represented by Mr. Issono Hissa-hiro, from the *Kanagawa Kencho*; defendant appeared in person, assisted by Mr. Harmand.

In their petition plaintiffs requested the Court to order defendant to pay \$68 ground rent due for one year for the lot No. 42A, at Sagaramata, Nagasaki, and the costs of the proceedings.

No further observations being made by plaintiffs, Mr. Harmand read an elaborate speech for the defence, the purport of which was as follows: By judgment given by the French Consular Court of Yokohama on October 24th, 1877, Miss Labastide was ordered to deliver to Hyver the property No. 42A, as well as the buildings on it, the furniture constituting the "Hotel de L'Univers," and the deeds establishing him the proprietor of it. This judgment was never put into execution, and through difficulties created by H. B. M.'s Consul in Nagasaki, acting as French Consul, Hyver was prevented from enjoying the free possession of his property. He was not only obliged to return part of the furniture to Miss Labastide, in direct opposition to the above mentioned judgment but he was once, in connection with that affair, sentenced to 36 hours' imprisonment, which sentence was, however, changed to a fine of \$10.00, and obliged to give security for \$200.00; besides which the documents establishing him as the rightful owner of the grounds and buildings thereon were never handed to him. In conclusion, the defence requested the Court to order the Japanese authorities to furnish to defendant the original title deed of lot No. 42A, at Sagaramata, Nagasaki, or in its absence a duly legalized duplicate, as Hyver, once in possession of that document, would no longer refuse to pay the rent claimed.

Defendant handed to the Court the title deed at present in his possession, remarking that that document, not bearing the Japanese certificate establishing its validity, was of no value to him.

His Honour observed that the defence had to be translated into Japanese to enable plaintiff to reply to it, he would therefore adjourn the further hearing of the case to Saturday, 13th instant, at 2 p.m.

*Saturday, March 13th, 1880.*

Mr. Isono Hissa-hiro, in reply to the defence, stated that the *Kencho* had nothing to do with what happened between Mr. Hyver and Miss Labastide, and that it did not matter to the *Kencho* if the judgment rendered by the French Consular Court of Yokohama, on October 24th, 1877, was duly executed or not, although they admit that through its not being executed all the present difficulties had arisen. Hyver had applied several times for a new title deed, but the authorities could not issue a new one as long as the old one was in existence. Last year defendant had paid the rent without difficulty, and the *Kencho* saw no reason why he should not do it this year. In concluding, plaintiffs requested the Court to have the ground with the constructions thereon returned to the Japanese authorities if defendant should fail to pay the rent.

Mr. Harmand observed to the Court that if defendant had paid the rent last year, he had done so because he expected that the judgment would be executed and to avoid litigation.

His Honour said that the *Kencho* had handed to the Court the Japanese certificate legalizing the title deed.

Mr. Harmand inquired if this certificate annulled the old, still existing, title deed.

His Honour answered that this question was a very serious one, which could not be decided at once, but which had nothing to do with the case under consideration, as the Court had only to decide whether the Nagasaki *Kencho* is entitled to claim from Hyver the rent for the ground No. 42a.

Defendant observed that he objected to pay the rent as long as he was not in possession of the documents, for if he were to pay it to-day he might be dispossessed of the ground to-morrow, as he had been of his furniture.

This closed the hearing of the case.

Judgment reserved

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XLI.

#### YORITOMO'S MESSENGER.

In the spring time of the year following the battle that obliterated the last vestige of the Taira power, a party of cavaliers rode into Kiyoto at sunset by the great northern route. They wore no armour, neither was there anything in their appearance to distinguish them from ordinary travellers, except, perhaps, that men so well mounted and of such stout bearing suggested a concentration of force scarcely fitted to the accomplishment of any common end. Judged by his tansure and garb their leader would have been pronounced a priest, but it was difficult to believe that such thews had ever contentedly reposed under silken stole or embroidered amice. Moreover he alone of the whole band wore the harness so seldom laid aside in those turbulent times, for the glitter of an enchased breast plate shone from time to time under the folds of his alb, and in his girdle he carried a sword of singularly rich workmanship.

They stopped at a small hostel in the suburbs whither their retinue had, it appeared, already preceded them, for the vestibule and corridors were encumbered with armour cases, and the outer chambers crowded with a multitude of vassals largely disproportionate to the unassuming mein of their masters. So goodly a company of wayfarers did not often fall to the lot of the little inn, and seeing that their numbers were not confined to the thirty original arrivals, but that they were gradually supplemented by others, who rode leisurely up in twos and threes until the total had well might attained a century, one might easily have con-

jectured that the hospice had been selected for some reason other than the scant accomodation and poor fare it afforded.

Nevertheless the only place of note in the neighbourhood was the castle of Horikawa, Yoshitsune's occasional residence during his hours of leisure, chosen not for the sake of its strength as a fortress, since the condition had little influenced its design, but because the presence of a winding stream and an environment of wooded knolls had facilitated the construction of a plaisance then justly esteemed one of the fairest in the capital. In the year that followed the crowning victory of the knights of the white pennon, the young Minamoto chief's fame had not by any means grown cold. His name was still upon everybody's lips, and the people did but follow their Emperor's example when they called him the restorer of the country's peace, and prayed that they might long be suffered to sit under the shadow of his invincible prowess. But on the horizon of the future there was discernible a little cloud pregnant with tempest. Had Yoshitsune's achievements been anything less, they would neither have fulfilled the purpose of his mission southward nor satisfied Yoritomo's thirst for supremacy. As it was, however, the elder brother's renown seemed to suffer by contrast with the brilliancy of the younger's. It is difficult indeed to believe that a man who by diplomacy or strength had secured the homage of all the great barons of Japan, and who now held at Kamakura a court only inferior to that of Kiyoto in the age of its magnificence, could yet become a prey to jealousy as contemptible as it was unjust, yet whatever verdict history may have pronounced upon the outcome of Yoritomo's career, we shall scarcely find anything establishing his claim to be accredited with either magnanimity or its sister attribute, mercy. Cruel, jealous and implacable, the first breath of plaudits that made his brother's name audible to the world, not only obliterated every memory of gratitude but drove him at once to compass Yoshitsune's destruction. It is certainly true that his earliest suspicions of the young chief's loyalty were instilled by Kajiwara Kagetoki, who never forgot nor ever ceased to devise some means of revenging the slight he had suffered at the council of Captains before the battle of Dan no Ura; but it is equally true that Yoritomo's expressed discontent at the nation's undue exaltation of Yoshitsune's name and comparative neglect of his own, furnished Kajiwara with the occasion he desired. Himself an successful traitor he may perhaps have been accredited with the facility of detecting treachery, but however infallible his judgment or exceptional his opportunities of judging may have seemed, the slanders he whispered into Yoritomo's ear must have found a very fertile soil for their reception, else had they not taken root, flourished and bore fruit before the possibility of either confirming or confuting them could arise. Some lingering scruple or more probably a passing regard for his own fair fame did indeed for a time restrain Yoritomo. Yoshitsune, escorting the prisoners of note taken in his last battle, was on his way to Kamakura, and would presently be able to answer Kajiwara's charges in person. Until then judgment should be reserved, not because the success of the Genji arms was almost entirely due to the brilliant deeds of the accused man, nor yet because the accusation was founded entirely on the completeness of that success, but because to condemn either side without hearing both was an injustice that could only be perpetrated at some risk of disadvantage. Kajiwara however saw plainly how small a pretext was needed to overcome this hesitation. He knew that if confronted with Yoshitsune his charges could not be sustained for a moment, and he therefore wrote a solemn declaration in which he repeated his accusations, supporting them on the testimony of his honour and by every form of asseveration that the rules of conscience or religion prescribed.

This was all that Yoritomo needed. Almost immediately afterwards Yoshitsune, arriving at Koshigoye within a few miles of Kamakura, was met by a message forbidding him to proceed further without special permission from his brother. The astonishment this ungracious mandate caused was not dispelled by gradually received rumours of the truth. Yoshitsune was very far from overrating the importance of his own achievements, but he was still further from crediting the possibility of such an injustice as this of which he was now made the victim. He remembered the reception he had received from his brother at their meeting under the shadow of Mount Fuji only two years before and

the unlimited confidence with which he had subsequently been treated. To him the community of past misfortune seemed an indissoluble bond of friendship, while the consciousness that even this grievous wrong could not reconcile him to the very contemplation of disloyalty made it still harder for him to appreciate his brother's suspicions. For a long time he resolutely refused to believe the worst, and it was only when he had received proof upon proof of Yoritomo's implacable anger that he sorrowfully turned his face southward again. He had lingered at Koshigoye from autumn to spring never once relaxing his efforts to compass a reconciliation whether by letter, message or mediation, and during the whole of that period Yoritomo had been equally active in seeking to persuade his barons to take the field against the hero of the 'Valley of Ichi.' But to the credit of these generally venal warriors it must be recorded that they resolutely resisted their chief's magnificent offers. It can hardly have been the experience or reputation of Yoshitsune's prowess that deterred them, for while at Koshigoye he could only command a mere handful of troops, and it would not have taxed the capabilities of the court at Kamakura to put three or four score thousand men into the field at a few days' notice, but with the exception of Knjiwara himself and his immediate supporters there was scarcely a knight in Japan to whom the standard of chivalry did not seem to have been incomparably elevated by Yoshitsune's achievements. They would all have followed his pennon to the death had he solicited their aid, but to range themselves against him while the tale of his heroism was hardly yet half told, seemed little better than an impious sacrilege, for nothing short of divine patronage could have brought such deeds within reach of human capabilities.

Neither was Yoshitsune left in ignorance of the sympathy his wrongs excited. He knew that did he but raise his standard, thousands of his old comrades, tried veterans and staunch friends, would rally about him, while from Oshiu Hidehira sent repeated promises of support, and offered to place the whole northern army at his disposal for any purpose he might seem fit. From anything like open resistance, however, he resolutely turned away. The world, quick to censure and slow to acquit, is ever ready to antedate the birth of the evil that is begotten of wrongs endured, and he knew well that a blow struck in self-defence, would be easily misconstrued into a justification of the injuries which had evoked it. He therefore wrote his brother a farewell letter, a letter destined to be cited by posterity as the most perfect production of loyal magnanimity and patient manhood, and then retraced his steps to Kiyoto with a sad heart, but an unblemished reputation. We shall see presently that he did not select the capital because either the Emperor's goodwill or the presence of those who had followed him in all his campaigns made his position there well-nigh impregnable, but because he never abandoned the hope of reconciliation and deemed that a favorable influence was most likely to be exercised by the interference of his sovereign, or the mediation of the southern barons.

This then, was the cloud that marred the sunshine of the nation's hard-earned peace during the year following the downfall of the Taira power, and changed the honorable rest Yoshitsune had so well earned, into a sorrowful season of disquiet and foreboding. None knew what a day might bring forth, and every troop of cavaliers that rode to or from the capital furnished the citizens with food for uneasy surmise. The air was rife with rumours of an impending struggle and though Yoshitsune seemed to concern himself least of all about the things that were going forward, however patiently he bore his wrongs, his most intimate friends had no difficulty in perceiving that his brother's estrangement had inflicted a never-healing wound on his loyal heart.

On the afternoon of the day that witnessed the arrival of the thirty travellers we have described above, he had retired to the castle of Horikawa accompanied only by half a score of knights and Shidzuka, his beautiful wife. Never at any time did he love to surround himself with guards nor had his hostile relations with Yoritomo induced him to change his habits in this respect; for though he had ample evidence of his brother's desire to achieve his destruction, he steadily refused to admit, or suffer others to suggest, the possibility of a treacherous attempt upon his life. This confidence was not, however, shared by his trusty followers, Benkei and Saburo. They did not form a harsher

estimate of Yoritomo's character than the rest of the world when they adjudged him capable of anything that might accomplish his cruel purpose, and it was to the system of careful observation they had established, that Yoshitsune owed timely information of the thirty travellers' advent at the hostel in the neighbourhood of his castle.

It appeared that these wayfarers had passed the preceding night, at an inn scarcely an hour's journey from their present resting place. Evidently therefore they were in no haste to reach the capital, but had either purposely delayed their progress or been unavoidably retarded by some accident. To prevent the possibility of an erroneous conclusion, Benkei questioned his informant particularly on the latter point, and learned that, not only had the cavaliers met with no hindrance, but that the horses they rode were remounts which had awaited them at a village not many miles distant, the steeds that carried them before being utterly wearied out by the extraordinary speed to which they had been urged. All this was sufficiently suspicious, but it became very much more disquieting when coupled with the facts that the cavaliers, originally a hundred in number, had divided into three bands at their last halting place, one company only proceeding direct to the hostel, the other two choosing circuitous by-roads and making their way by twos and threes to the same place.

Benkei scarcely made any inquiries about the leader of the troop, probably because he had previously obtained all the information he needed, for he described his appearance accurately to Yoshitsune when reporting the event that evening, and even called him by his name, Friar Tosa. Yoshitsune, as usual, received the intelligence very calmly. There was no reason to suppose that the friar's journey had any reference to himself, he said, but at any rate as the man had chosen to come within reach, it might be as well to interrogate him directly on the subject. At the same time though still subject to an ancient ban of exile from the capital, he was a favorite liegeman of Yoritomo's and those that went to summon him must therefore see that they treated him with all courtesy.

Benkei did not stay to comment upon this latter injunction though he plainly regarded it with no little displeasure. Hastening off at once to the hostel, he scarcely waited to be announced but strode at once into the great chamber, paying no attention whatever to the menacing looks with which the members of the band watched his intrusion. He found the friar engaged in perusing a plan, which, however swiftly it was laid aside, Benkei's quick eye recognized to be the map of a castle and its approaches, and this circumstance probably tallied with some preconceived idea of his own, for he regarded the paper with a peculiar significance that was not altogether lost upon its owner.

The friar had laid aside his priestly habiliments and now appeared in a suit of light mail which looked very much better fitted to his huge limbs than the stole and cassock. He seemed at first considerably disconcerted by Benkei's sudden appearance, but quickly recovering his composure, greeted his guest with dignified courtesy.

"I congratulate you on your return to the capital, friar," said Benkei significantly, after they had exchanged greetings. "Your friends here did not count on seeing you so soon, methinks."

"I have come upon business not of my own choosing," was the evasive reply, "and I hope to make so short a stay that my visit will be scarcely illegal."

"Nevertheless you tarried beyond the suburbs for a length of time that seems somewhat disproportionate to the previous speed of your journey."

"This was a well aimed thrust, for it implied even more than a knowledge of the details of the friar's progress. It failed, however, to disturb the other in the least."

"I suffer from an old complaint which reduces me sometimes to the condition of a decrepit greybeard," he returned with a smile. "Otherwise I had not perhaps tarried long enough to have the pleasure of meeting you here."

"Nay, by my faith, if not here then assuredly elsewhere," Benkei remarked bluntly, "for since you have not chosen to pay your respects to my lord, Yoshitsune, of your own accord, I must c'en have sought you out sooner or later to conduct you to his presence."

"His lordship then desires to see me, it would seem?"

"As to that, I must leave you to form your own conjectures, but at any rate I am here to act as your guide."

"I am sorry that you should have had so much trouble, more especially as I propose to do myself the honour of waiting on his lordship to-morrow."

"There is no time like the present, friar Tosa. It irks me much to cause you inconvenience, but most things can wait better than my master, methinks."

The two men looked at each other for an instant in silence. Probably the friar was casting up the chances of successfully resisting Benkei's mission, but if so he apparently found the odds against him, for without further comment he signified his readiness to follow Yoshitsune's messenger. Benkei watched him keenly as he made his preparations, admiring not a little the wondrous strength of nerve that enabled him to control every evidence of concern, and confessing to himself that the man was well suited to his suspected mission. It was indeed difficult to believe that he would really consent to an interview so fraught with peril as this must be, and to the last the giant glaivesman was beset with doubts that almost assumed the complexion of certainty as the friar's fellow-travellers crowded about him with looks of wonder and remonstrance at the inn-door. But the priest scarcely deigning to notice their eager inquiries, mounted his horse and rode rapidly off without even accepting the escort of which his followers seemed one and all bent upon forming a part. "He means to brazen the thing out to the last," thought Benkei, "and by my faith he is right, for unless his interrogator is more suspicious than his wont, the Earl of Kamakura's messenger will easily find grace in his eyes."

Nevertheless the friar's stout bearing underwent a considerable change when he found himself in Yoshitsune's presence. Not that there was anything in the young chief's surroundings at all calculated to impress one accustomed to the pomp of the court at Kamakura, but the fame of mighty deeds has a more stirring effect upon brave hearts than any pageant power can prepare. Yoshitsune's handsome face, softened almost to gentleness by the influences of the noble nature it reflected, and at the same time overshadowed by a sadness little suited to his unripe years, was one that none might look on unmoved, and his visitor found himself strangely embarrassed as he offered some halting excuses for the tardiness of his coming. "Your lordship knows," he explained, "that for many years I have been debarred from those pious exercises to which my life is dedicated and of which my unavoidable share in the struggle so happily terminated places me in all the more imperative need. If my first hours in the capital have not been devoted to visits of ceremony, need I ask you to remember the circumstances under which I am here; circumstances which may yet any moment resolve themselves into a necessity for my immediate departure before the purpose of my journey has been even in part achieved."

Yoshitsune made no reply to this speech either by word or gesture. Knowing what he had been taught to know of the other's designs, there was something inexpressibly audacious in this allusion to their possible failure. "I had proposed to visit the seven chief shrines of Kiyoto and offer up prayers for the permanence of the Genji rule," the friar resumed, "and since this is the sole aim of my coming, I deemed, perhaps wrongly, that your lordship would pardon me for postponing my homage to the accomplishment of my religious vows."

Yoshitsune still remaining silent, Benkei now confronted the friar and asked him bluntly whether he had selected his hostel on account of its distance from all the shrines he desired to visit, or for the sake of its vicinity to the castle of Horikawa.

"The position of the inn was not of my own choosing," the other replied. "I am but one of a party and must needs consult my comrades convenience. Nevertheless, since to judge from your question that my sincerity seems doubtful, I am ready to establish it by any method of proof you may appoint."

"There is but one reason to question your good faith," Yoshitsune interposed, "though for my own part I may neither find that reason sufficient nor easily persuade myself to repeat it. I have learned from experience that slander is an evil guide, and would fain avoid a recurrence of the injustice under which I am now unhappily labouring."

"I am fortunate in finding such a considerate judge as your lordship. May I be permitted to know the reason to which you allude?"

The friar's voice was still firm, but his clenched fists were pressed down with such violence that they seemed half buried in the straw mats, and a dew of apprehension gathered slowly on his pallid forehead.

"The reason," Yoshitsune replied bending forward and gazing fixedly at the priest's face as he spoke, "the reason is that men say your purpose in coming to Kiyoto is to assassinate me, and that you have a hundred of the best swordsmen in Kamakura to aid you in the design. Sooth to say if this were true, I might easily understand your reluctance to pay me a preliminary visit."

"Aye, and your presence at a hostel that can barely accommodate half the following you found it expedient to divide into so many sections at your last halting place," added Benkei, "not to speak of the extraordinary celerity of your journey's early stages and the timely deliberation of its latter portion. By my faith, friar Tosa, the master you serve would meet you small mercy on evidence half as damning."

For a moment the priest had seemed on the verge of losing his self-command, but the sound of menace in Benkei's tones and the aspect of approaching danger roused him to more than his previous strength of resistance. He did not trust himself to reply but drawing from his bosom a paper bearing a delineation of the ravens of Gongen, inscribed thereon a solemn assertion, reading it out word by word as he wrote. "I swear by Izanagi, Izanami and Sura no O, the God kings of our sacred land, that I am innocent in thought, word or deed, of the crime laid to my charge, and I pray that if this my declaration be obscured by any shadow of falsehood, the curse of heaven in any or every conceivable form, may fall upon me and annihilate me as I speak."

Having indited these characters and repeated them thrice in a voice scarcely tremulous, he ignited the paper at the brazier and held it as it burned so that the ashes settled down in a little black heap upon his extended fan. These he then mixed in a draught of water and turning his face to the south, swallowed the charred particles with a convulsive gulp.

Yoshitsune scarcely seemed to concern himself about this performance but Benkei followed each of its details with an astonishment almost amounting to consternation. The giant soldier was not so far exempt from superstition as to credit the immunity of deliberate perjury, and that the priest had uttered a black falsehood in the very ears of the gods themselves, he never for an instant doubted. "It was even such an oath," he muttered angrily, "that obtained credence for the foul traitor Kajiwara's defamation of the least and best knight that ever poised a glaive. Surely those phylacteries have lost their virtue or else on this soil people have lapsed beyond the care of their guardian gods."

The priest had hitherto suffered no symptom of umbrage to appear, but now one might have fancied that he almost welcomed this opportunity to give his passion vent. Springing to his feet he drew his sword half out of its sheath, and confronting Benkei, asked him fiercely whether he dared to impugn the good faith of his oath. The other, evidently delighted at this new phase of the affair, replied to the friar's invective with a jibing laugh, and tucking the skirts of his garment under his girdle, stretched out his hand towards the ponderous glaive from which he could never long endure to be separated. But before he could raise the weapon Yoshitsune's iron fan had fallen upon its blade, and once again ill-timed forbearance averted a most desirable issue.

"Yours is the fault, Benkei, since you refuse to be persuaded by what is beyond impugment. I crave your forbearance, friar Tosa, for my liegeman's mistrust. I think you have sought to persuade me alone, and a less extreme measure would have amply achieved your purpose. Nothing shall even induce me to believe my brother capable of the designs report ascribes to him, and I thank you heartily for confirming my faith in his honour. Is it impossible that you should supplement your good offices by acting as a mediator between him and me?"

It would have been difficult indeed for friar Tosa not to fancy that he discovered some tone of sarcasm in these words, but to the last his performance of the rôle he had devised was almost faultless. With every semblance of serious resolve he promised to obey Yoshitsune's injunctions, and even claimed some probability of success for his intercession. Nevertheless he would not consent to share

the banquet prepared for the master of the castle and his guests, excusing himself on the plea that until the accomplishment of his vow he had sworn not to touch fish or wine, and though Yoshitsune was almost peremptory in his invitation, this resolve could not be overcome. Nothing remained, therefore, but to accept his excuses and permit him to return to the hostel, whither Benkei would fain have accompanied him to discuss the value of the phylactery more at leisure, but Yoshitsune seemed resolved to prevent a collision between the two men. He desired the glaivesman to remain at his side, and after the friar's departure, secured the presence, not of Benkei alone, but of all his followers by bidding them to a feast at which the fast circulating wine cup soon dispelled every memory of Yoritomo's treacherous purpose. There was still one thing in life that could induce oblivion of severed affection and unmerited wrong, but was it desperation or an evil fate that persuaded Yoshitsune to court so perilous a condition on this night of all others?

(To be continued.)

### DOUBLE ACROSTIC.

In this pursuit vast energy and pains  
Mid certain peril seek uncertain gains.  
Courage, endurance, knowledge, force of mind,  
To grand results directed, few to find.  
Each mighty man who in this path has trod  
In classic times had been dubbed demigod  
Heroes from various climes have filled the roll  
By grateful fame inscribed on hist'ry's scroll  
Savants, kings, merchants, joined with seamen bold!  
First think on Cabot, then on Nordenkjöld.

1.

Turn when this word you hear : you're wanted surely !  
If you prefer it, go your way demurely.

2.

That tedious hicough has another name,  
More like sound made by martyr to the same.

3.

Sweet little infant ! on your pinafore  
You've spilt some. More defiles the floor.

4.

Of various values, but a well known measure,  
Of length, I wean ; but not of malt or treasure.

5.

Sir, I decline to take your trashy paper,  
Pay me in coin, or I'll make you caper !

6.

In Club or tavern, here the thirsty band,  
With jest and laughter, take a constant "stand."

7.

The Saxon *jeunesse d'orée* with this co-in  
For drinks, and cards, and pleasure used to go in.

8.

I hope you won't be quite so impolite,  
As say it of this poem ; though you might.

9.

Like other clergymen, this fine old priest  
Had naughty children ; so I've read, at least.

10.

I'm not at all ashamed of doing this.  
Latin or English, I have found it bliss.

11.

Poor girl ! To you denied that sweet sensation,  
Which rules "the camp, the court, the grove," the nation.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, MARCH 12TH, 1880.  
Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
.....represents velocity of wind  
.....percentage of humidity  
Max. velocity of wind 23 miles per hour on Sunday at 4 p.m.  
The barometer is reduced to the freezing point and to the level of the sea.  
The highest reading of the barometer was 30.044 on Thursday at 10 p.m., and the lowest was 29.655 on Sunday at 2 p.m.  
There has been a considerable rise in temperature during the latter part of the week, the maximum being 68° on Wednesday, and the minimum temperature has also rapidly risen. The total amount of rain for the week was .534 inches. The barometer has been generally low, but is rising at the end of the week.

## SHIPPING INTELLIGENCE.

## INWARDS.

Mar. 13, British barque *Chili*, Veal, 445, from Bristol, Coal, to Captain.  
Mar. 14, Japanese steamer *Shario Maru*, Kilgour, 521, from Kobe, Mails and General, to M. B. Co.  
Mar. 15, Japanese steamer *Chitose Maru*, Pyne, 295, from Yokkaichi, General, to M. B. Co.  
Mar. 15, Japanese steamer *Niigata Maru*, Walker, 1,603, from Hongkong via Kobe, Mails and General, to M. B. Co.  
Mar. 16, British steamer *Sunda*, Seaton, 1,029, from Hongkong via Nagasaki, Mails and General, to P. & O. Co.  
Mar. 16, Japanese steamer *Kokonoye Maru*, Dithlefsen, 1,133 from Kobe, General, to M. B. Co.  
Mar. 18, Japanese steamer *Takasago Maru*, Young, 1,230, from Shanghai and way-ports, Mails and General, to M. B. Co.  
Mar. 18, British schooner *Floral Star*, Davison, 244, from Takao, Sugar, to Chinese.  
Mar. 18, Japanese steamer *Takachiho Maru*, Nye, 1,407, from Hakodate, Mails and General, to M. B. Co.  
Mar. 19, Japanese steamer *Tokai Maru*, Hogg, 652, from Kobe, Mails and General, to M. B. Co.  
Mar. 20, British steamer *Gaelic*, Kidley, 2,652, from San Francisco, Mails and General, to O. & O. Co.

## PASSENGERS.

Per Japanese steamer *Niigata Maru*, from Hongkong via Kobe:—Mr. and Mrs. Yamaguchi, Mrs. Nabeshima and child, Mrs. Hayato, Kitajima, Sano, Uyeta, Sakamoto, Mr. E. H. House and servant, Messrs. Furukawa, Shibuya, Haraguchi, Iwatsuki. 17 Europeans, 2 Chinese and 64 Japanese in steerage.  
Per British steamer *Sunda* from Hongkong via Nagasaki:—Hon. J. Russell and Mr. C. D. Bottomley for Nagasaki. Mr. and Mrs. Waterhouse, Mr. Seriebckoff, and 8 Chinese for Yokohama.  
Per Japanese steamer *Kokonoye Maru*, from Kobe:—101 Japanese in steerage.  
Per Japanese steamer *Takasago Maru*, from Shanghai and way ports:—His Excellency Awoki, (Minister to Germany), Madame Awoki, General Stahl, (U. S. Consul) Miss H. Valliria, Mrs. Omoto and child, Dr. George Slys, Captain Edward Gates, Captain Waga-gawa, Messrs. Watanabe, Kitago, Iwahashi, Jenkins, Maitland, Draven Kelly, Gasper, Santa Marina, Gilman, Horre, Kagawa, R. D. Rolison, Moritera, Midsuno, Okada, Tamimaru and Koshiwara in cabin; 2 European, 3 Chinese and Japanese in steerage.  
Per Japanese steamer *Tokai Maru* from Kobe:—100 Japanese.  
Per British steamer *Gaelic* from San Francisco:—Rev. C. S. Long and wife, Paymaster R. Washington, U.S.N., Edward Cronin, U.S.N., Rev. G. Draper and wife, Messrs. Alfred McGlew, H. N. Bramwell, M. Isaacs, Donald Ross, W. B. Griffiths, Omiten Kanda in cabin, and one Chinese in steerage, for Yokohama, and Rev. D. W. Willetts, wife and child for Shanghai, and Capt. E. H. Bun, and 255 Chinese for Hongkong.

## OUTWARDS.

Mar. 15, British barque *Coldstream*, Morgan, 545, for Kobe, General, despatched by Simon, Evers & Co.  
Mar. 15, Japanese steamer *Hingo Maru*, Moore, 896, for Kobe, General, despatched by M. B. Co.  
Mar. 15, Japanese steamer *Toyoshima Maru*, Hubbard, 946, for Hakodate, Mails and General, despatched by M. B. Co.  
Mar. 17, Japanese steamer *Tokio Maru*, Swain, 1,146, for Shanghai and way-ports, Mails and General, despatched by M. B. Co.  
Mar. 17, Japanese barque *Kanagawa Maru*, Eckstrand, 606, for Nagasaki, despatched by M. B. Co.  
Mar. 18, Japanese steamer *Chitose Maru*, Pyne, 295, for Yokkaichi, Mails and General, despatched by M. B. Co.  
Mar. 19, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, for Hakodate, Mails and General, despatched by M. B. Co.  
Mar. 19, Japanese steamer *Akitashima Maru*, Frahm, 1,146, for Kobe, Mails and General, despatched by M. B. Co.  
Mar. 19, Japanese steamer *Shario Maru*, Kilgour, 521, for Kobe, Mails and General, despatched by M. B. Co.  
Mar. 20, Japanese steamer *Niigata Maru*, W. Walker, 1,603, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Per Japanese steamer *Tokio Maru* for Shanghai and way ports:—Mr. and Mrs. D. Arnat, Mr. and Mrs. Koidzumi, Mrs. Iwamura, Dr. W. A. Henderson, Col. J. G. Fair, Lieut. Behr, Messrs. Ishimaru, De la Costa, Hirayama, Sakai, Takahashi, Seki, Iwamura, Ikeda, T. Walsh, H. de Possel Deydier, J. M. Scott, R. N. Dey, J. G. Fair, jr., Moroto, Idei, Takenaka, Komoteda, Sasaki, V. Roehr, H. Schoning, Chin Kai San, Naka, Shima, and Goyee.  
Per Japanese steamer *Niigata Maru* for Hongkong via Kobe:—General J. Stahl, Messrs. D. Stratton, Seki, F. A. Copo, and L. Dubois.

## CARGOES.

## MISCELLANEOUS.

W. & A. GILBEY'S  
WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

## W. &amp; A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bouny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

Japan Rice ... "	\$2.50 to \$3.00
Kerosene Oil ... "	\$1.62 to \$1.65
Newchwang Peas ... "	\$2.20 to \$2.25

## EXPORTS.

SILK.—Our Silk market has been very depressed during the past week, business being almost at a standstill, and sales scarcely amount to 100 shipping bales. Holders at last appear to realize that they cannot entirely ignore the home markets, and they would in most cases accept a reduction of about \$20 per picul, on quotations of 13th instant. Prices are, however, to a great extent nominal and on really high class Silks, which are scarce, natives do not yet admit any but a very slight decline.

Stock about 3,000 Japanese bales.

Total export to date 16,393 bales against 16,714 bales at the same period last season.

	In London at 3/9½ per lb.	In Lyons at fr. 4.85. per kilo.		In London at 3/9½. per lb.	In Lyons at fr. 4.85. per kilo.

THE GREATEST  
**WONDER OF MODERN TIMES**  
**HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!**  
**HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1873.

## THE BEST REMEDY FOR INDIGESTION.

TRADE

MARK

**CAMOMILE PILLS** are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengtheners of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

## CAUTION.

## THE PRESS AND A REPRESENTATIVE ASSEMBLY.

IN virtue of the authority which the Government has reserved to itself over all Japanese publications issued within the empire, a warning is said to have been addressed to all printers and publishers that any work dealing with political subjects, such as the formation of a representative assembly, is liable to censorship. Should any treatise appear, which is deemed offensive or dangerous, it will be suppressed. It is certain that the pamphlet of a Mr. Uyeki, a member of the *Aikokusha*, or so-called patriotic society, has been so dealt with. Now it would be the height of absurdity and injustice to suppose that the authorities would have acted in the manner which they have seen cause to adopt, without due deliberation, and what they deemed sufficient reason. On the whole, ever since the promulgation, four years and a half ago, of the press laws which are now in force, they have, often under very trying circumstances, used their power firmly, but with wisdom and moderation. That the code formulated was urgently required must be admitted by all who recollect the degradation into which the newspapers of the country were falling, in their youth and unfettered freedom. It is also evident that the present comparatively high tone attained by the institution, is in great part due to the wholesome sense of restriction arising from the knowledge that impropriety, slander, licentiousness and sedition, would not be allowed to find free expression in any sheet which chose to prostitute its columns to any species of depravity. As the then conductor of the *Japan Mail* lucidly shewed, the press law was a necessity, and would not injuriously affect upright and high-minded writers. Subsequent history has fully justified his sensible predictions, which were in direct contrast to the diatribes about "a muzzled press" and so on, indulged in by other commentators. Had the very humanely designed "muzzle" of September, 1875,

never been contrived, the newspapers of Japan would probably by this day have become a raging, rabid, howling nuisance. Learning and discretion would have been reduced to a discount among its guides and contributors; and vernacular ephemeral literature would certainly never have been the vehicle for such articles as we have often had the pleasure of translating from the *Nichi Nichi Shimbun* and other high class journals. We leave the question to the decision of impartial foreign readers, which state of affairs is preferable:—the actual orderly and generally well-conducted condition of an institution respectable and respected, a fair representative, informant, and instructor of the people; or the condition which might and must have been produced had journalism been allowed to drift into a sink of scurrility, defamation and obscenity?

Is it probable, we would ask, that a Government whose sagacity in its control of publications events have so fully justified; whose hand upon the press during the Satsuma rebellion,—when the national mind was wrought to great excitement, and the flame of partizanship, vigorous and fierce in its last expiring effort, had heated the nation's blood to a feverish glow,—was the reverse of oppressive:—is it probable, we ask, that such a Government would lightly and inconsiderately take measures to forbid or curtail the discreet and proper discussion of what all admit to be an important and an interesting subject? We have no hesitation whatever in replying in the negative to this query. We have above mentioned the suppression of a work on representative institutions by a mere agitator. It is not improbable that the warning here conveyed, coupled with that said to have been generally imparted to publicists, will be the means of saving unquiet scribblers, of the class to which Mr. Uyeki belongs, a great deal of useless trouble, and relegate them to more profitable idleness if not to a worthier toil. We have reason to believe that a stupid plot has been discovered by the police department, having for its aim and object the simultaneous issue, in various parts of the empire, of tracts or hand-bills calling upon the people generally to demand the prompt establishment of a representative assembly. Now, although the masses of the populace care as little for, and know as little about, the meaning of the term so loudly mouthed, as do many of those who declaim and scrawl about it, yet the Government can hardly be blamed for refusing to allow them to be disturbed in their avocations, and disquieted in their minds, by broadcast insinuations or assertions of administrative deficiencies, and advice to assemble in crowded meetings in order to listen to the conceited, mendacious and ignorant rant of a parcel of discontented and lazy lads, having a smattering of knowledge, an ingrained notion that they themselves should not work for their daily bread, and an ambition as futile as it is little justified. It is quite as well to realize fully, and once for all, whence the clamour arises that the difficult path along which the progress of the nation's destiny has been carefully traced should be traversed at lightning speed, and the goal reached, as it were, by one perilous bound. Such

precipitation is not required by the temperate and thoughtful, but none the less patriotic, organs of the higher intelligence of the community. Leaving out of account the governing and official classes, who in their several spheres are preparing the way for its ultimate attainment, it is not desired by the scholastic or substantial mercantile element, while the socially inferior traders, fully engaged in their daily transactions, so long as they have no oppression or misrule to complain of, have not even the time, not to say the thought, to busy themselves about the matter. And as for the toilers whose ranks are recruited from the peasantry,—the farm-owners and laborers, and other people employed in manual or menial pursuits,—most decidedly they care for none of these things. No, the agitators and would be demagogues belong to that division of the Japanese race of which Mr. Uyeki is a type. No longer able to hang about some baronial residence, to eat their daily rice in indolence, to swagger, two-sworded, through the streets and lanes, to the terror of the country-side: no longer able to plot and shout for a return to feudalism and the expulsion of foreigners: they or their sons have changed their attitude. Having picked up a few crumbs of western knowledge, and acquired some inadequate and distorted incidents in western history, they pose now as advanced patriots, and endeavour, by false reasoning, false statements, false comparisons, to create a fictitious excitement on behalf of the most extreme and sudden innovations. How can such people as these be expected or expect to apply aright the annals of Europe or America. Least of all are they able to realize or expound the gradual evolutions, through sacrifice, remonstrance, civil and external war, through the alternations of despair and hope, through oft threatening national ruin, and lastly through a number of fortuitous or providential circumstances working for her good, whereby England has attained to that near perfectness of a constitution, which is alike suited to the genius of her people and to which that genius has in turn adapted itself, but an imitation of which they, shallow sciolists, pretend they would have Japan acquire in an hour or a day. The fact is that their old instincts of idleness and arrogance cling to them still. Little care they for the general weal of their country. Prospective place, profit, plunder, positions of ease and pleasure, are the results which they foresee in the fruition of their schemes. It is against the demoralizing influence of such irrational and iniquitous dreamers that the Government, by its recent exercise of authority over the press, would protect the people of this realm.

And this by no means signifies that undue delay will be caused in the final grant, to the nation, of the fullest possession of constitutional liberty. To this end it is that the labours of the present administration directly tend; and it is as useless as it is wicked to attempt to interrupt, retard, or hasten the work. Initiatory means have been adopted, and progress has been made, in the establishment and deliberations of local assemblies of delegates from the people, in the periodical meetings of the provincial governors in the capital, and even in the recent ministerial change, which in a measure foreshadows the ultimate formation of upper and lower houses of legislature. A measure so vast and comprehensive as that which has been promised, and will accrue, to the nation, must be the gradual and natural achievement of circumstance and time. It cannot be accomplished by a mere mandate or a feat of political prestidigitation. By the period when progress has attained its fullness, and those whom the change shall benefit are educated to an appreciation of its advantages and the ability to enjoy them, it will have been effected without tumult or concussion. It should not be essayed otherwise or earlier; and it is wholly unlikely that the feather-brained and flighty politicians of the platform will have any

part in its organization, if, in a manner which they never imagined, they participate in the privileges which it will confer.

#### THE RETROSPECTIVE RAMBLER.\*

##### IV.

“THE Uncommercial Traveller,” as Dickens chose to call himself, made this observation:—“Since the introduction of the short time system, it has been proved that eighteen hours a week of book-learning are more profitable than thirty-six; and that the pupils are far brighter and quicker than of yore. The good influence of music on the whole body of children have likewise been surprisingly proved.”

Ah! that “book-learning.” It is becoming a fetish, among those who profess to aim at education upon which—rightly understood—it often acts as a damper. There is no superstition more complete than that which holds to the book-statement more than to the fact of nature; and yet the school-world is full of such superstition. Take some young student out into the open expanse of heaven, or a star-lit night, and teach him to trace the course of a planet through the constellations, or the path of the moon, and her changes, ten to one but he will hesitate to accept what is thus ocularly demonstrated from nature itself, and will prefer “what the book says.” And so with geology: not what nature exhibits but what Lyell or Dana describes (with diagrams) appears satisfactory to your book-worshipper; and the consequence is that the refreshment and re-invigoration which open-air studies might give are unknown and (what is worse) uncared for. Now, what Dickens calls the “Short-time System” guards against the formation of this morbid habit of print-and-paper learning, to the neglect, nay disparagement, of direct nature-lore; and it is worth a great deal, in any system of education, to have a foundation of *naturalness* laid in the earlier stages of instruction.

One of the most interesting of all the sights of Tokio is the Kinder-Garten attached to the Female Normal School, which the Empress so largely contributed to establish, and in which she continues to show so unfailing an interest. There the little ones are occupied, for full the half of the short school day, in bodily activity, or in looking at and describing *objects*, not in poring over books.

It would be well if this kind of training were carried much higher up into the advanced classes: then there would be fewer of those pale, meagre, dyspeptic, bloodless, nervous specimens of book-guiltiness who haunt the “halls of science,” wearing spectacles at the age of eighteen, and sitting up late at night to read small-print books by dim lamp-light.

What becomes of such students? After the strain of a successful examination, a fit of exhaustion ensues; a general collapse, and a sense of general dissatisfaction; from which, however, there may be a recovery, if favorable circumstances give speedy and healthful occupation. But if hope deferred (even for a short time) maketh the heart sick, then the enfeebled health and want of stamina are only too apparent: a heavy cold, then consumption, or typhoid, or dysentery; and then, a sad funeral, and a tombstone bearing an inscription which laments the loss to the world, of talents and culture that were so promising! Such losses, often repeated, constitute a heavy discount on any system of education, especially a state-supported system, in which it is entirely proper to keep a “profit and loss” account.

Tokio has another children's school which is not so well

\* See *Japan Weekly Mail*, September 20th, 1879.

known as the Kinder-Garten. Hidden away among the groves at Uyono, somewhere in the rear of the Educational Museum, not easily found, and not very good to look at when discovered, is an establishment where work is provided for the destitute poor, and some sort of an education for homeless children. It is rather a cheerless place, largely susceptible of improvement every way; but at the same time highly commendable as a practical effort to do something for those who cannot help themselves. The poor, uninviting food, is better than no food; the dreary chilling rooms are better than no shelter; and the lifeless teaching better than no instruction at all.

But how easily might all these discouraging features be changed! A little more money, and a good deal more human sympathy and personal interest on the part of well-to-do neighbours and right-minded officials, and this place, which is now enough to give its visitors a fit of the dumb-ague, might become a child's paradise, resounding with the merry shouts of happy childhood. To judge by the effect of a little donation, made for the purpose of furnishing a children's feast, on one of those oft-recurring holidays which Jimmu Tenno has beneficently bequeathed to the people of Japan, it would not be a hard matter to reach the hearts (through the stomachs, of course) of those poor little starvelings, so as to make them almost suppose that "life was worth living;" not to speak of preparing them for positions—naval, military or industrial—in which they might do the State some service.

If it is indeed true that "there is a time for everything under the sun"—and who will dispute it?—how is it that people make such wonderful mistakes as to the proportion of time which each thing may claim? From the days when "Jack" was first photographed in verse, under his two aspects of "all work and no play," succeeded by "all play and no work," there would seem to have been a constantly failing effort at adjustment on the *ne quid nimis* question. Too much spending makes the prodigal, too much saving, the miser; too much reading and learning, the book-worm and the pedant; too much hand-work and roaming abroad, the dunce and the vagrant; too much even of good food and drink, the glutton and wine-bibber; too much self-denial, the ascetic. But what we are chiefly thinking of is "too much book." In vain has Shakspeare told us of "Sermons in stones, Books in the running brooks, lessons in leaves, and good in everything:" in vain does Herbert Spencer insist that "in all its effects, learning the meaning of things is better than learning the meaning of words." Whether for intellectual, moral or religious training, the study of surrounding phenomena is immensely superior to the study of grammars and lexicons; in vain has it been demonstrated on the grandest scale, in the case of China, that mere book-learning dwarfs the mind. Still the rage for reading, just for reading's sake, enervates the thinking faculty of half the scholars of our day, and lowers the standard of oratory, of journalism and of conversation.

In the days when manuscripts were worth their weight in gold; when those who wanted to learn, were obliged to copy; when (as was the case in Japan, some years ago) forty ambitious students only owned one Dutch dictionary among them, and scrambled for its use like hungry men for a dinner; then there was more vigor of intellect in those who thought at all, than in these times when every body owns a "Webster," and text-books are so abundant that the trouble is to select those which impose least thinking upon the enfeebled student. If the present plan goes on, unchecked and unmodified, the civilized and enlightened nations of the world will lose all intellectual tone, and become bankrupt in force and originality.

This subject has its national aspect. It may be true in the sense Cicero intended, when he said, *Dulce et decorum est pro patria mori*; but to be killed off by a national bad habit, or a faulty state-system of education, is not either sweet or fitting, much less profitable. Monasticism is reproached, by those, who make much of "heredity," with depriving the state and the world of what would have been the best elements of family life, if the monks and nuns who lived and died in unblest singleness had obeyed the first—the very first—commandment, and had left behind them children who would have inherited the nobler characteristics which were concealed in the cloister, while the outer world was left all the worse. In not having blended with it, the heroism which enables a man to conquer himself, and a woman to exhibit the devotion which sacrifices to a fiction all that the loving heart most longs for:—sympathy, domestic happiness, maternity.

Now, if a vicious system of religious education can work such ill results, even in the pursuit of so high an ideal as the attainment of personal holiness, what mischief may not result to a nation from persistence in a scheme of mental education which substitutes a feeble cleverness, for an energetic ability. Let a generation of half-learned sciolists, put in charge of the next generation of scholars, higher and lower, and what a poor set of incapables would soon afflict the land! And here comes in the patriotism again. If a man wish well to his country, and his warm-hearted sympathies embrace, not only compatriots who are his contemporaries, but his children and theirs, will he not watch with double jealousy the influences which—feeble now perhaps—will exert their full effect, it may be some thirty years hence, when they will have gathered strength, and become, for the moment, irresistible? If some men "build more wisely than they know," the converse may be also true: "many think more wisely than they build;" because they let others do the building, not feeling disposed to contend (as they ought to do) with the pushing, driving, unscrupulous "practical men," who carry all things before them by dint of mere persistence and self-assertion. It is true that against such pressure a reaction will surely take place; but the welfare of some myriads of the scholar-class for a dozen of years, is too serious a matter to be made the sport of ill-judged experiments, when the materials are at hand for the promotion of judgment, and the preparation of schemes which will surely work well in the main, if their great outlines are sketched in accordance with true principles; and unquestionably the world is old enough now to make it unnecessary for us to grope in the dark any longer.

China, in her seclusion, has had the advantage of a simple, definite system, thoroughly carried out for a long period, and the results have been marvellous: a nation so compact though so extensive, so coherent though so numerous, and withal so largely attaining one great end of government—security to person and property—is not to be found elsewhere on the face of the globe.

Japan, with her very different experience in the past, has now the distracting advantage of being in a position to choose either some one of the existing educational systems, or some scheme of her own construction; the materials for which may be first gathered eclectically, from any and every source, and then adapted to her present condition and circumstances. This needs the labor of a presiding mind—one mind, and that a good mind, well furnished, perceptive, resolute and judicious.

Such a one is not often met with; and, when found, is apt not to be appreciated by the men of his own generation; those whose wisdom it would be to co-operate with

him, but who are too often occupied in debating and demurring about what they only half appreciate, instead of giving the needed "aid and comfort" to that rarest of rare characters—a really good educator.

#### FISH PROPAGATION IN THE UNITED STATES.

THE following communication on the subject of artificial aid to fish-propagation in America has been obligingly forwarded to us. Systems similar to that therein described are also in vogue in Australia and New Zealand :—

In an interesting conversation, which I had last night with Professor Baird, the secretary of the Smithsonian Institute, president of the Fish commission, and a prominent authority on all questions relating to the artificial propagation of fish, he gave me a full account of the various methods employed by the Fish commission in their work along the coasts of America, and incidentally spoke of the methods employed by China and Japan, as well as other nations, in the same direction of work. He said that the science of breeding by artificial means, as practiced in this country, was entirely new and confined to us. The countries of Asia had long taken care of their fish and had resorted to various ingenious devices to economize their wealth of the waters. But under our system the eggs are taken from the breeding grounds, and, by steam, the processes of natural impregnation are imitated, so that the spawn is impregnated, and the fish born by the million and by the billion, if necessary, and laid down in what hereafter is to be their home. Now, it is a principle, which is as fixed as the very law of gravitation, that fish will return to the spot of their birth. Thus, take fish propagation in the valley of the Mississippi, for instance. The spawn will be deposited in the Allegheny river, we will say, or at the head of some other branch of the main stream. Then, young fish in due time, when hatched out, like young men of mettle, will set out on their travels to go to sea, but when they reach maturer years home-sickness overcomes them and they are bound to return to the starting place. This fact is utilized by science in the most extraordinary way. It has already succeeded in stocking many of the important American rivers with an abundance of edible fish, and brought into the market, and to the tables of citizens, the choicest fish known to the world, at a reasonable price. It provides employment for thousands of men, and increases to a marked degree the wealth of a nation. Thus, in California, the San Francisco market,—and, I presume, the same holds true of other large cities,—is chiefly supplied by shad which have been propagated in this way. So that in that single town, probably, the profits springing from the work of the commission more than pay for its entire cost. It can easily be seen that the process by which the fish are hatched by the million,—and each one is worth in ready money seventy-five cents or a dollar,—is of the highest economic consequence. Professor Baird is one of the most practical and thorough of scientific men. His methods are very simple, and his results bear out his theories. For a long time the commissioners have used the rudest methods, and their chief apparatus has been a fleet of four scows, which are so built as to allow of the scientific processes involved in the propagation of the fish, and which have been towed from place to place as their presence was found desirable. In a few weeks, however, a steamer, which has been built under a government appropriation specially made for the purpose, will be ready; and the professor thinks that, aided by this vessel, he can accomplish far more important results. The old scows formerly used were, of course, not sea-worthy, and so the commission had to dodge storms and hug the shore, in a way which interfered with the efficiency of the work; but this ship, an iron steamer, built by the Pusey and Jones Co. at Wilmington, Del., is a sea-worthy vessel, specially planned for the purposes of the commission, and can do service not only on inland waters but also at sea. The importance of this step will be made evident; for the professor, with that audacity which characterizes modern science, intends not merely to refurnish the exhausted streams of the country with edible fish, but intends also to increase our stock of salt-water fish indefinitely. Acting on the same invariable theory, that fish return after wanderings to the home of their youth, he plants such valuable fish as the cod in shallow waters,

and after their birth in these localities permits them to stray off, confident that when they become of maturer, and, hence of marketable, age, they will be found again in the shallows off the coast. The vast importance of this method will be readily comprehended. If we may have the banks of Newfoundland, so to speak, at various points along the coast, we can easily see that the wealth of mankind will be indefinitely enhanced. In fact, such a development has its philosophical as well as practical side. We all know of the theory of Malthus concerning an ultimate over population of the world; but if we may increase food in this indefinite fashion the good people of our race may continue to marry and give in marriage with the usual results, and without fear of a universal famine as the result of their industry.

The application to Japan is apparent. The fondness of the Japanese for sea foods, and the desirability of keeping the coasts and the rivers well stocked with edible fish, have long caused the Government, as I said at the beginning, to do its best in the artificial preservation and propagation of this valuable commodity; and the Japanese have by no means been blind to the advance made by our nation in this particular. On the contrary, Professor Baird tells me, that they have always shown the greatest interest in the labours and results of the commission, and that he has furnished them from time to time with our apparatus. But to attain any efficient result, the Professor thinks that the Government should enter on the work in the same broad and scientific spirit which marks the new work of our commission. The United States gladly gave him the funds for the construction of the ship needed, in view of the palpable advantage such facilities would bring to the work of the commission, and no doubt the Japanese would, with equal eagerness, adopt similar measures if the desirability of such action were brought to their notice.

The *Fish-hawk*, as the ship is appropriately named, is a vessel of several hundred tons burden, and cost the Government \$46,000. The recent rise in the price of iron, however, would make its present value \$60,000. This is about the only expense, or, at least, the chief expense, in the whole business, apart from the salaries of the officers; and, as I have shewn, the work of the commission increases the wealth of the country by millions of dollars. This is no exaggeration, and it can be substantiated by proofs of an incontrovertible character. On the 20th of April, there is to be an international fish exhibition at Berlin, at which most of the civilized nations will be represented,—I presume Japan among the number. Owing to the proverbial slowness of our national legislature we have failed, as yet, to make the necessary appropriation for a representation of our Government. This tardiness on our part has given great distress to Germany, and the cable has been freely used to hasten our Government. Yesterday, a bill was introduced giving the necessary authority and funds, but, under some technical rule, its consideration was postponed for a few days.

By special permission the United States are allowed to enter at the very last moment, if necessary, and, I trust, we may yet do so. It was largely to enable Europe to study our methods that the exhibition was organized; and the anxiety of those responsible for its success that we should be represented, is really painful and somewhat humiliating to us to observe. Probably we shall get there after the customary American fashion, in a hurry, and give an unsatisfactory and incomplete exhibit where we might show to great advantage, had we given ourselves sufficient time to suitably prepare.

H. R. E.

Washington, D. C., January 30th, 1880.

IT is really a pity that the value of the English rendering of Mr. Netto's brochure on "Mining and Mines in Japan" should have been diminished by the frequent faults of language and construction with which careless translation and exceptionally bad proof-reading—the fault in this particular, no doubt in considerable part, reflecting upon the office where the work was printed—have over-larded, and often obscured, its excellence. It is not perhaps much to find "abnormous" for "abnormal;" "quantum," repeatedly, for "quantity;" "cokes" for "coke;" "charcoals" for "charcoal;" "pessimistic" for "pessimist;" "expropriation" for "appropriation;" "net" for "net-work;" "summa" for "total;" and, "As curiosum I may here mention,"

for—well, perhaps the translator knows what idea he intended to convey. These lingual peculiarities might be allowed to pass without notice if they were not mere trifles when compared with those graver errors of arrangement, which are an extra and annoying task, imposed upon any reader who may really desire to discover the meaning of the sentences before him. For instance :

1. (p. 4)—Mr. B. S. LYMAN, formerly chief-geologist under the Kaitakushi, in his geological report on Yesso estimates the quantity of the there existing accessible coal at about 150,000 million tons, an amount, which would enable the said island during 1000 years to furnish the coal-supply at present derived from Great Britain. Although the time is still far off, that such quantities of coal, when supplied, could find use here, and although the average quality of the Yesso coals may be inferior to that of the English, there can from the above said be no question, that coal mining here has a great future.

2. (p. 5)—Besides at all events also a certain quantity of ore of antimony, the figure of which I, however, am unable to give. As to the form, under which the minerals won by mining occur, magnetic iron-ore, ore of antimony, sometimes also silver-ore are found in layers, the greater portion of the iron here produced is the result from the working of alluvial sands of magnetic iron. Gold and silver-ores, copper mostly only as copper-pyrites, lead as galena occur in lodes.

3. (p. 17)—The fuel is everywhere charcoal mostly hard one.

4. (p. 37)—Even when the new iron-works are set going, and the apprehensions, that have been entertained with regard to the extent of the deposits of magnetic iron-ore at Kamaishi, should, prove groundless, it still remains a question, whether the national iron-industry, in the face of the fact that coal and iron do not occur in each other's vicinity, that charcoal costs dear, that the means of communication are difficult and undeveloped, and being moreover hampered by a circumstantial administration, is able successfully to oppose foreign competition.

5. (p. 39)—The example, drawn from America, where the quick progress of some states for a great part is due to the railways, does for several reasons not hold good here.

6. (p. 51)—Although there, according to table III, in 1877 was an increase of 19.4% in the total mineral production, and of 40% in the net proceeds, when compared with the average of the working period in question, it is not to be expected, that Japanese mining, however susceptible of development in certain directions, will soon be able, even but approximately, to meet a billion-export of such a magnitude, so much the less, as there is no prospect of such a rapid increase in the production as the above mentioned, at least not in the nearest future.

These are a few passages, selected at hazard, typical of a translation, which, we are compelled to repeat, "abounds" in "grammatical, idiomatic, structural and lingual absurdities." Rather too common a fallacy is carefully cherished by the average English-speaking or English-writing foreigner, namely, that he necessarily possesses a more perfect mastery of the English tongue than can possibly be attained by any scholar who labours under the disadvantage of being only an Englishman.

IN the present complicated condition of European politics it is extremely unlikely that Russia would involve herself in a purposeless and unjustifiable quarrel with France. Hence there are not sufficient grounds for the supposition that the withdrawal of the Russian ambassador from Paris has any particular significance. It is asserted, in Renier's latest announcement, that the cause of the envoy's removal was the refusal of the French Government to order the extradition of one Hartmann, suspected of complicity in the attempt to assassinate the Czar by blowing up the train in which His Majesty was travelling. Now political offenders are specially exempted from liability to extradition, by the treaties of all those countries which have

international arrangements for the mutual surrender of criminals, who, having escaped apprehension in their own land, are discovered in the territory of the other contracting power. As the offence in which Hartmann is suspected of having been an accomplice, was as distinctly "political," as were those of a great many other people, more or less famous or infamous in modern history, and who lived and prospered in the foreign lands whose hospitality they sought, there is no reason why France should have made an exception in his disfavour. This is no doubt the light in which the Government at St. Petersburg will view the matter; and the return of the Russian envoy may be for explanatory purposes as regards the Hartmann case. Perhaps other matters of policy which demand the secrecy and explicitness of personal communication may also render expedient the ambassador's temporary presence at the court of his master.

IN a letter from Ceylon to Dr. Dickson, published in the *New York Herald*, Professor Nordenskjöld records with pleasure the kindness shown to himself and the members of his expedition by the "government, learned societies, prominent natives and foreigners in Yokohama, Tokio, Kobe and Nagasaki." The reception which the *Vega* party met with at Naples was most brilliant and cordial. All the ships in the bay hung out their flags, and in the harbor of Santa Lucia the fishermen's boats were bright with bunting. A salute from the Castello dell' Oro woke the echoes of the old town when the *Vega* steamed gallantly into port. There was an official dinner and a gala soirée at San Carlo, all the foreign consuls being invited. There was also a grand excursion to Pompeii and Vesuvius. Friends of the officers in this vicinity will remember that one of them, Lieutenant Bove, is an Italian. It is mentioned that he received permission from his commander to name several islands discovered during the voyage. He availed himself of the privilege by conferring upon them, respectively, the names of the King and Queen of Italy, the Minister of the Navy, Commendatore Negri, and other distinguished persons among his compatriots. He has also forwarded to the Minister several interesting ethnological curiosities, for disposal in the museum of the Geographical Society of Italy.

DEVELOPMENT in the trade between Japan and Corea is confidently anticipated in consequence of the opening of the port of Gensan. Japanese newspapers announce that the Mitsu Bishi Company have undertaken that one of their steamers shall ply between Japan and that harbor once in every two months, the Government granting a subsidy stated at ten thousand yen. At Fusan there appear to arise, periodically, slight trade troubles between the native and foreign dealers; but, on the whole, the transactions are no doubt satisfactory to either side. It is said that the Japanese residents already exceed fourteen thousand, of which number two-thirds are males. The formation of a Chamber of Commerce is reported to be decided upon, the site for its accommodation having been selected, and the necessary buildings being in course of construction.

THE many friends of Dr. David Murray, late of the Monbusho, will be glad to hear of his appointment to the secretaryship of the Board of Regents of New York University. *Harper's Weekly* remarks of the nominee:—"Dr. Murray is a son of New York, a distinguished teacher in his earlier years, subsequently a professor at Rutgers College in New Jersey, and more recently the organizer of the new system of education in Japan. He is a gentle-

man singularly fitted for the position of Secretary of the Regents, not only by his special attainments and experience among the schools, and his broad and generous comprehension of the subject of education, but by his remarkable administrative and organizing power. He and the State are to be sincerely congratulated upon his selection to be the executive officer of the board which manages the relations of the State to the academics and colleges."

#### MR. BRAMSEN'S CHRONOLOGICAL TABLES.

THE first feeling caused by an examination of this work is one of admiration, not unmixed with wonder, at the vast labour and research which it must have entailed; and we must say at the outset, that it is doubtful whether any scholar in the country, besides the author, is capable of critically examining the book. But be this as it may, we must confine ourselves to the humbler task of explaining its contents, endeavouring to indicate the labour given to its compilation, and its value to every one engaged in Japanese research.

Hitherto, the only Japanese chronological tables in a foreign language were those compiled by "E. M. S.," and we must not allow their great inferiority in every respect to the present work, to blind us to their value to students for several years past. By their assistance one could ascertain to within a year, the date of any event, as well as the names of the reigning sovereign and Shōgun of the period. It was not to be expected, however, that people would be satisfied for ever with this "rough and tumble" way of fixing events, and as an instance of the errors that have been made by a most careful scholar, when without reliable tables, we may quote from Mr. E. M. Satow's interesting translation of *Kinsē Shirakiu*, which was published in 1878. The translator has attempted to give the Gregorian as well as the Japanese dates for the events recorded, and, in connection with the murder of the Regent Ii Kamon, has the following note (p. 15):—

"In Sir R. Alcock's despatch to Lord Russell of the 2nd of April 1860, the attack on the Regent is said to have taken place on the 24th of March. As will be seen by reference to this despatch, Sir R. Alcock was still unaware of the result when he wrote, and it is quite possible therefore that he may also have been misinformed about the date, &c., &c." The truth is, that Sir R. Alcock was correctly informed, and that Mr. Satow is stating that the assassination took place on March 28th is incorrect. In fact every Gregorian date up to page 19 in Mr. Satow's translation is one day out. We repeat that our intention in mentioning this case has been to show how an important historical event could be misdated, and doubt placed on the accuracy of a British Envoy's official statement, by a leading scholar, simply from the absence of exact chronological tables such as those of Mr. Bramsen.

There has also been a series of tables compiled in the Department of the Interior, but owing to the error of using the Gregorian calendar throughout, instead of since 1582, and the Julian calendar before that year, the work is incorrect for the first 1,100 years. It may be thought by some that, with these tables already made, Mr. Bramsen's labour would be confined to making the needful corrections in the Japanese figures; but an examination of the two works will shew how unfounded such an impression would be. Their arrangements are exactly the reverse of each other. The Japanese tables start with the *European* dates, and give the Japanese equivalents for the initial days of *our* months; thus:—

1st January.....	4th year	12th month	25th day
1st February .....	5th "	1st "	27th "
1st March .....	5th "	2nd "	26th "
etc.	etc.	etc.	etc.

Now if anyone will try to transpose these figures so as to get the European day corresponding to the first day of each Japanese month—this being the arrangement of Mr. Bramsen's book—he will find that the calculations are in themselves more troublesome, than to calculate wholly afresh, with no other material than the Japanese calendar, giving the lengths of the months in each year, and then one starting date to commence with, which can be found by the cycle. Moreover, add to this that the Japanese dates contain many errors "possibly typographical," and that therefore, after

transposing, there would still be numerous mistakes to correct, and a number of days to deduct, varying according to the century, and it will be seen that in their present state these tables could be but of little assistance to Mr. Bramsen. Another defect which we have observed, in consequence of the arrangement of the *Naimusho* tables, is that, the Japanese months being on the average shorter than the European, frequently a month does not appear in them at all. In such cases no transposition could take place, but resort must be had to some other kind of calculation. Apart from the fact that this process would be very troublesome, the result of such transposition would of course be that any error or misprint of the tables would be reproduced in the present work; and on the question of its correctness we shall speak presently. It must be remembered that *one* day wrong at any one place means that the balance of the work would be one day out;—as witness the case of the *Kinsē Shirakiu* before referred to. Speaking now on the tables alone, it seems to us that the actual work of compiling them is very great, but that that of checking every item in them is still greater. With a starting day, and a most careful use of the old Japanese calendars, the transposition of a year from native to foreign dates can be effected without much difficulty; but it must be remembered that the process has to be repeated more than twelve hundred times, and that the whole has to be checked once and perhaps oftener. For the sake of curiosity we have gone through the process for a *nengō* of seven years, and can truthfully say that we have no desire to continue the experiment. We have thought it well to give at length this statement of a comparison between the methods and result of Mr. Bramsen's tables and those of preceding workers in the same field, in order to shew that his work is, to all intents and purposes, original and independent, and that his labours can in no degree have been lightened by those of his predecessors.

But now we come to what, after all, is the most important question:—Are the tables correct? Curious to see how they worked in with each other, we made the following experiment, which we describe for the benefit of those who may desire to test the tables for themselves. Choosing at random a date falling during the beginning of the period covered by the Chronological Tables, and another occurring towards the end—we find in the *Dai Nihon Shi*, volume IV., p. recto, that Kō-toku Tennō died on Haku-chi *nengō*, 5th year, 10th month, 10th day. Let us now take the commencement of the present period, Meiji, 1st year, 1st month, 1st day. These dates, according to Bramsen's tables, correspond with November 24th, 654 A.D. and 25th January 1868. By the aid of Tables 1 to 4, given opposite page 41, we ascertain, almost at a glance, that the *E-to* (number or name by the cycle) of the two dates are 49, *midzu-no-e*, *ne*, and 47, *ka-no-e*, *inu*; consequently, on the former of the two dates chosen, there were still twelve days unexpired of the sexagenary cycle, while the latter is the 47th of another unexpired cycle, and between these, of course, thousands of expired cycles. Adding now 12 and 47, we get therefore, as a necessary sequence, that the number of days between the two dates must be the sum of 59 plus some multiple of 60. If we now proceed to count the days from the first date, November 24th, 654, up to January 25th, 1868, the last, we get 1,213 whole years—of which 301 are leap years—and 63 odd days, from which however must be deducted the 10 days, which were expunged when the Gregorian calendar was introduced. This gives us a total of 443,099 days, which, as already said, when divided by 60, should leave 59 and this it does. This instance gives very clearly, not only the facilities with which the tables under review may be used, but also the implicit reliance that may be placed in their accuracy. Calculations similar to the above can be made by everyone for himself, for shorter or longer periods. We have ourselves made several both for before and after the adoption of the Gregorian calendar, and in all cases the results have coincided with Mr. Bramsen's tables. Before passing on from the tables, properly so-called, we may call attention to their general arrangement. At a single glance the day of any month of any year of any *nengō* can be ascertained, and this without any knowledge whatever of the old Japanese chronological system. A child could use them as easily as it uses its arithmetical tables. They are, moreover, very full, giving as they do the *nengō*, the year by cycle, and the year according to the era of Jinnmu Tennō.

Apart from the tables there are many points worthy of

attention, but we can only refer to them cursorily. Every student will thank the author for the index to the names of the *nenjō*, in which all forms of pronunciation, even improper ones, are given. Again tables 1-4, for ascertaining the *E-to* when the date is known, or *vice versa*, as well as plain directions for their use, will be appreciated by anyone having even a slight previous experience of the subject.

We have left but a very limited space in which to refer to the introductory essay, on the various systems of counting years, the subdivisions of the year, and the division of time prior to the introduction of the Chinese calendar. This portion of the work, however, will be read with much interest, even by those who may never require to use the tables. The ingenious and scientific systems of reckoning time used by the Chinese, are fully and clearly explained, and add another to the many proofs of a high civilization amongst them, at a time when almost all the rest of the world was in a state of the darkest barbarism. The lunar system and the cycle, though often mentioned and also explained, have never been done, as far as we can remember, in such a clear, exhaustive, and altogether satisfactory manner. In the chapter on the mode of counting time before the introduction of the Chinese system, an ingenious theory, supported by some plausible facts, is broached, to the effect that in those remote periods the standard of time—year, as we call it—was measured from equinox to equinox, that is, consisted only of six months. The chief fact in support of it seems to be that, after the accurate mode of counting time was introduced from China, the ages of the Emperors become suddenly only about half of those of their predecessors. It is doubtful if it will ever be possible completely to prove or disprove this theory, although it looks very plausible. As an instance of the pains that have been taken by Mr. Bramsen to render the book as complete as possible, we may notice that, in the directions for the use of the tables, simple rules are given as to precautions to be taken in transposing the dates into German, English, French, Russian and other dates, owing to the different times at which the Gregorian calendar was adopted in various countries; and also the last table of all, giving the dates both of the Julian and Gregorian calendars corresponding to each day of the Japanese month during which the latter calendar was inaugurated in Europe.

We are glad to see that the work has been translated into Japanese by its author, under the title of *Wa yō Tai reki hio*; and that it has been most favourably noticed by the *Nichi Nichi Shimbun*. We observe, however, that, in this edition, all about the Japanese lunar system is omitted, and a popular explanation of the Julian calendar, its origin, principles and the drawbacks which led to the adoption of the Gregorian calendar, the advantages of which are dealt with in detail, is inserted. The *Nichi Nichi Shimbun* remarks with some glee on the fact of a foreigner being able to correct the work of a Japanese department, on what is almost wholly a Japanese subject.

Our work being now concluded, we were about to insert a sting in the critical tail, and refer to the omission of the Emperors' names with the dates of their reigns; but we have reflected that, after all, the book is intended to shew the different modes of chronology in Japan, and as the Japanese ceased counting by Emperors when the *nenjō* were introduced, it was as well to omit this. The succession and death of an Emperor are facts belonging to history, and may perhaps be deemed extraneous in simple chronological tables. Moreover, an additional column or two, such as this addendum would involve, might make the book ungainly, and the tables complicated; and the inconvenience resulting from the addition might outweigh the benefit derived. Again, the names of the Emperors and their reigns may be ascertained in numerous books, as in Griffis's "Mikado's Empire" and in various hand-books.

In fine, if a student cannot place confidence in this chronology, he had better seek another one; and it is because a most careful and detailed examination has convinced us of the absolute accuracy of Mr. Bramsen's tables, that we have been anxious to impart to others the modes we have employed in testing this accuracy, in order that they may try for themselves, and have the same confidence in, and admiration for, the work that has been forced upon us by this examination.

SHOSEI.

## JAPANESE PERSONAGES.

## IV.

## GENERAL YAMADA.

THE subject of this memoir, although still young,—not yet forty years of age,—has passed through stirring scenes of strife and peril which fall to the lot of few to experience even in the longest lifetime. General Yamada Akiyoshi is a scion of the Choshu clan, and was originally known as Ichi-no-suke. From his first admission into the ranks of manhood, he was a staunch and persistent advocate of the restoration of the imperial authority. He also, we regret to record, favoured the expulsion of foreigners; but his opinion on this subject has long since been changed; and the political errors of youth, when subsequently redressed, are, in his case, no more fit subject for animadversion, than would be a Liberal's condemnation of Mr. Gladstone for commencing his public career as a conscientious Tory.

In 1863, General Yamada visited Kioto with the object of assisting in the formation of a league to carry out the patriotic objects upon which his mind was fully bent. In the ancient capital he became intimate with the leaders of the party with which he had identified himself, and when the seven imperial ministers (among them was the present prime minister, Sanjo Sanetomi) fled from Kioto to Choshu for safety, taking with them the reigning emperor, then the heir apparent, Yamada accompanied the party on their journey, until immunity from all danger was secured to them. He then returned to Kioto and remained *perdu* in the dwelling of a secret sympathiser, watching the progress of events, and keeping the other leaders of his party acquainted with everything of importance that transpired in the imperial city.

At length concluding that the time for decided action had at last arrived, the subject of this memoir left Kioto in 1863, and returned to Choshu, where he organized a large military force, and assuming the command raised the standard of revolt against the Tokugawa dynasty. Nothing decisive following, he again visited Kioto in the ensuing year (1864) and there learned that Takeda Kōunsai had also refused further obedience to the Shōgunate authorities, and was in armed opposition to them in the province of Yashu at no great distance from Yedo.

Yamada was anxious to throw in his lot with Takeda, but was prevented from doing so by various unexpected obstacles. However, in the autumn of 1864, his desire for active service was gratified, a detachment of the Choshu army being sent to Fen-no-zan, whither he at once hastened. In conjunction with the celebrated leaders, Hisasaka Michitake and Maki Idzumi-no-kami, he warred with varying success against the armies of Aizu and Yechizen, which were opposed to the imperial forces.

Before this campaign was decided the allied expedition of the English, French, Dutch and American fleets sailed against Shimo-no-seki, and Yamada returned to Choshu to assist in the defence of his native province against the assaults of the foreigner. In the winter of the same year the Shōgunate Government determined to send an expedition against Choshu, which caused the seven imperial ministers to withdraw to Chikuzen, as many of the Choshu samurai were in favour of the Tycoon's Government and opposed to the reestablishment of the supreme imperial authority. In January, 1865, Yamada took the field against the malecontents, and in conjunction with Takasugi Shūmpu, Ota Nawokata, and other loyal subjects, he completely defeated the partisans of the Tokugawa usurpers.

In the following year the Shōgunate authorities despatched a strong force against their stubborn opponents in Choshu, and great preparations were made to give the assailants a warm reception. Yamada was appointed to the important position of commander of the Choshu artillery, and took an active part in the operations which followed. Prominent among his many services may be mentioned a night attack by sea which was ably designed and brilliantly carried into execution, and also a flank march towards the frontier of Geishu, which resulted in the enemy being cut off from his base of supplies, out-manceuvred and defeated.

When the final war of the restoration broke out at Fushimi in 1868, Yamada was appointed Head of the Staff

under Prince Higashi Fushimi,\* the Commander-in-Chief, and after participating in the campaign he returned to Choshu on board the man-of-war *Teibo Kan No. 1*. Leaving Choshu he took part in the operations against the rebels in Yochigo, and distinguished himself at the stoutly contested and sanguinary battles of Idzumo-saki and Niigata, and indeed throughout the whole campaign which resulted in the total defeat of the rebel forces.

While the operations in Yechigo were in progress, Enomoto Kawajiro, (now Admiral Enomoto Take-aki, the recently appointed Naval Minister) who held a command in the Shōgunate fleet, sailed from Yedo to Hakodate with a rebel squadron, Yamada was placed at the head of the land and sea forces sent to reduce Hakodate to submission, and succeeded in accomplishing the object of the expedition after a series of hard-fought engagements, in which large numbers of men were killed and wounded.

Returning to Tokio, in May 1868, Yamada was appointed *Daigo* of the War Department, and in the following year he was rewarded for his eminent services with a pension of six hundred koku of rice.

Early in 1870 Yamada was entrusted with the task of establishing and organizing the arsenal, military school, hospital, &c. at Osaka, and met with that success in this new field of labour which skill and energy always command. In July, 1871, he was appointed a Lieutenant-General in the army, and afterwards to the suite of His Excellency Iwakura, with whose embassy he visited America and the various countries of Europe. While abroad, Yamada attentively studied the military systems of the west, and returned to Japan in time to take part in the campaign against the Saga rebels in 1873. In command of a strong column of troops Yamada greatly distinguished himself, and the desperate valour for which he is celebrated was never more conspicuous than when he rallied his wavering troops under a tremendous storm of bullets in the decisive battle which crushed the rebel rising.

In February, 1877, the brave and popular, but misguided Saigo Takamori, the leader of the powerful Satsuma revolt and Field-Marshal in command of the Japanese army, yielded to the representations of false advisers and raised the standard of revolt in the south-west. Yamada had to take the field against his old superior officer, and took his usual prominent part in the sanguinary operations which resulted in the total defeat of the insurgents.

The return of peace to the country, so long distracted by the horrors of war, brought new and well-merited honours to the subject of this too brief memoir; he was decorated with the Japanese Order of the second class and succeeded His Excellency Inouye Kaworu, (now Foreign Minister), as Minister of Public Works. This office he retained until the recent changes in the Cabinet, when he was appointed to the honorable position of a member of the Privy Council.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 3RD MONTH, 27TH DAY, DO-YO-NI.

### NOTES OF THE WEEK.

During the past week no European mail has come to hand. The French steamer *Tunais*, which left Hongkong on the 18th instant, at noon, had not arrived up to the time of our going to press. There must have been heavy weather on the China coast, as the *Sumida Maru*, which was to have left Kobe for here this evening, had not reached the former port

\* See Japan Weekly Mail of the 13th instant.

at noon to-day. Reference to our meteorological report will be interesting as shewing the great atmospheric changes during the past week.

Story says, of the magnificent bronze Daibuten at Kamakura, that it was formerly surrounded and covered by a temple, which, having been destroyed by an earthquake shock, was never rebuilt. It is now in contemplation, among devout members of the Buddhist sect, to erect another shelter over the image; and the cost of the undertaking is estimated at 35,000 yen. With great munificence Mr. Inouye has subscribed a large sum toward the project, he and some of his friends heading the list of donors with the guarantee of 5,000 yen.

The *Hiogo News* says of the Osaka exhibition, lately opened, that "it is located this year in the Minami Mido San, which, if it were well lighted, would be a very fine place for it, but unfortunately the very first thing that attracts attention is the want of that great desideratum—light. The grounds and buildings of this fine old temple are in themselves well worth a visit. The exhibits this year do not differ from those of former years; there is the same bazaar-like look, nearly every article being placed there for purposes of sale. The actual manufactures for which the city of Osaka is celebrated are very poorly represented. The same collection of objects of natural history that was exhibited last year is on view again. It has not been increased, but nevertheless, small as it is, it forms a centre of attraction. The prettiest exhibit is a case of artificial flowers, which are well executed and are very life-like. To those who have an hour or so to spare in Osaka, the exhibition is well worth a visit. The usual opening ceremony took place, the Governor and all the officers of the Fu being present."

An American paper gives the following description of the three magnificent horses which were lately landed in Yokohama from the *Gaelic*. "Barb, of Ethan Allen blood, is four years old, and was presented by General Grant to the Emperor of Japan by whom the General was so hospitably entertained while visiting that country. This horse a fine bay, with two white hind feet, with white star on forehead, long mane and tail, is fifteen hands high, has beautifully formed limbs, possesses good action and is very promising as to speed. This horse has been owned by General Grant since it was a colt. Kingsley is sixteen hands high, seventeen years old, is a rich mahogany bay, with no marks, and has a long mane and tail. He is a running horse, having a record of 1.44, and was sired by Harper's Longfellow. Black Hawk, Jr., is a jet black horse, with white hind feet, one white front foot, and white star on forehead, long mane, tail drags on the ground; he is fifteen and three-quarters hands high, is symmetrically proportioned, has elegant limbs, and has trotted a mile in 2.22 and 2.23, and has prospects of getting below 2.20. He is one of the most beautiful horses that man ever laid eyes upon. These horses came from the farm of General Beale, near Washington, where the Arabian horses presented to General Grant are kept. It will be remembered that General Grant was the guest of General Beale while visiting Washington. Kingsley and Black Hawk were purchased for the Japanese Government by its agent, Mr. Horace Capron, assisted by Mr. Edward France, at a cost of about \$4,000 each. Barb, the present of General Grant to the Japanese Emperor, is valued at about the same figure."

The *Obed Baxter* arrived at New York on the 14th of February, after a passage of 117 days, and the *Wylo* on the 16th having been 112 days on the voyage from Kobe.

No vessel sailed direct from New York, for either China or Japan from the 30th of January to the 20th of February ultimo. During that period, however, the following vessels cleared for Anjer to await orders:—

January 31st, <i>Enterprise</i> ,	21,874 cases keroseno
February 1st, <i>Egyor</i> ,	19,122 " "
" 11th, <i>Whittier</i> ,	44,750 " "
" 11th, <i>Oncata</i> ,	19,079 " "
" 14th, <i>Anahuac</i> ,	40,700 " "
" 16th, <i>Daniel Barne</i> ,	48,800 " "
" 20th, <i>Sheila</i> ,	40,500 " "
" 20th, <i>Marie</i> ,	14,700 " "
Total.....	249,525 " "

This shows a decrease of nearly 120,000 cases on the preceding three weeks and at last advices there were only two vessels on the berth for Yokohama and one, the *Adeone*, for China (Shanghai). The detailed list of exports from New York to Japan for the fortnight ending on the 16th of February is as follows:—

	value.		value.
Slates, cs. ....500	\$1,686	Bromide, cs. ....40	764
Clocks, ca. ....600	6,677	Hardware, ca. ....6	323
Books, ca. ....9	1,095	Rosin, bbls. ....50	306
Wax, bbls. ....5	102	Glassware, ca. ....91	1,037
Woodware, pkgs. ....3	100	Mattresses, ....4	45
Crockery, pkgs. ....4	67	Mf of iron, pkgs. ....6	85
Butter, lbs. ....50	7	Furniture, ca. ....3	80
Piano, ....1	300	Petm, gals. 400,010	45,141
Beer, bbls. ....10	120	Brass goods ca. ....32	1,580

Total .....\$59,505

A few days will now probably see the last of the other hunting fleet depart on the annual perilous cruise. The *North Star* left last Saturday and has been followed by other vessels.

The Pacific Mail Company's steamer *City of Tokio* left San Francisco for this port on Saturday, the 20th instant.

The P. & O. Company's steamer *Malacca* left Hongkong on Sunday last, the 21st instant, at 6 p.m. direct for this port.

We observe that the steam dredge, which has been employed at the Creek for sometime past, was towed down to Yokosuka, yesterday.

The *Indian Mirror* confirms the report that the King of Siam contemplates visiting Hongkong and China. If this turns out to be true, His Majesty may, perhaps, extend his trip so as to include Japan.

"The inexorable laws of supply and demand that have such a perfect control over matters of trade," says the *Philadelphia North American*, "are happily illustrated in the report of last month's work in the oil regions. Every one complains that oil is too low, that it ought to bring a higher price, and that the producer is making no money, and yet the little advance in the price made during the winter has at once worked an increase in the operations. Despite the deepness of the mud the sinking of wells goes on, and the capacity of those completed during the past month is fifty per cent. more than of those finished during November. The operations in the Bradford district are the largest for any month for over two years. With such an impetus given to production, it will be found very difficult to advance prices in the same time."

Under date of Lyons, January 31st, the *Bulletin des Soies* says:—The market has lost the feverish condition which characterized it during the last three years. There is a measured improvement, not a rise of 8 or 10 per cent in a week, but one of two or three per cent which is regularly repeated. Thus, fine organzines, which sold only two months ago for 65 to 70 frs, are now quoted 78 to 79 frs, and this advance has been obtained without leaving any signs of a reaction. Another good sign is to be noted: there is a greater difference between the prices of the raw and thrown silk, and this is a certain index that the manufacturers are buying. The crop of fine silks of Europe and the Levant was very deficient last year and this is now beginning to be felt, and the quotations for these have sensibly risen, and Japanese have also shared in the advance. The average rise, both for raws and thrown, since our last report, may be estimated at from 1 fr 50 to 2 fr. We quote Italian raws, 10-12, 72 fr; Piedmontese organzines, 20-22 and 22-24, 80 to 82 fr; Japanese, European spun, 10-14, 65 to 66 frs. Chinese Tantees, which have been put up by English speculators, are with difficulty maintained on the basis of 49 @ 50 frs for Black Lion No. 3 and 41 francs for 5ths. Great activity is reported from the Cevennes, and 78 francs are refused for classic marks. The Milan and Turin markets put up prices with every offer, and this prevents closing many transactions. The difference between raw and thrown has again reached the nominal point.

There is a general impression in the silk markets that the long crisis is at an end, but it is to be desired that a too rapid rise may not again throw us back to the former condition.

The market for manufactured goods is rather inactive: buyers

are still holding on the reserve, accustomed as they have been to see every rise followed by a decline. But the situation has completely changed, and there is no doubt but the spring orders will realize these hopes of manufacturers. The Conditioning House registered during the week 94,131 kilos, against 73,198 last week and 71,851 corresponding week of 1879.

The steamer *Genkai Maru*, with the next Shanghai mail, did not leave Kobe until to-day, and will therefore be due in Yokohama on Monday next, at daylight, to connect with the P. M. Company's steamer *City of Peking*.

It by no means follows that, because the so-called Jockey Club has died of inanition, there must be an end of racing in Japan. The probability is, on the contrary, that a very well organized race meeting, with large fields and good attendance, will be held some time near the end of May on the Race Course at Negishi. Particulars will, no doubt, soon be made public. Meanwhile it is not necessary to say more than that the matter is under consideration in the proper quarters, and that a club will soon be formed having at its head some of the princes and ministers, the foreign representatives, and official and private gentlemen, Japanese and foreign, of influence and note.

The *Hioogo News* writes:—"To those who would like to see a really good bout at fencing with the two-handed Japanese sword, we can recommend a visit to the Kompira temple at Osaka, where a tournament is now being held. We went there a few days since, and were much gratified. In the middle of a large space of ground, a wooden platform about three feet high and twelve yards square with a mat roof, has been erected, and there are seats and mats for about 1,000 spectators. At two corners of the platform chairs were placed, and these were occupied by two elderly gentlemen (ex-swordsmen), who acted as referees. When a match is going on an umpire, also a swordsman, has to move about and watch every move and decide which is a fair hit and which is not. This is a very difficult position to fill, and one in which none but a first-class swordsman can officiate. Eight or ten men with helmets and guards on assemble, they squat down on the edge of the platform, two are called out, and these have a set-to. When one has been fairly hit, the umpire proclaims it, the man retires, and another takes his place. During our visit we saw one small active man polish off six opponents before he was hit. There was a match between three Osaka and three Kioto men, during which the excitement was intense, and the power of the umpire and referees was taxed to the utmost. The Osaka men had the best of it. There was another kind of contest which caused great excitement amongst the spectators. Six men aside were chosen, one side having a red band round their helmets, the other side a white one; attached to the side of their helmets was a small piece of wood. At a signal from the umpire, these men charged each other with great fury, the object being for one side to cut these wooden labels from their opponents' heads. When a man lost his piece of wood (equivalent to losing his head) he had to retire. Both referees and umpire had to work very hard during this, it being their duty to order a man off who had lost his headpiece. Towards the last part of this we saw one man trying to defend himself as best he could, he being charged by four men at one time; he was overpowered and sent flying off the platform, amongst the spectators. When these men had retired we saw two men tossing and tumbling each other over upon the stage; they had lost their swords, and their object was to wrench each other's helmet off; after a long tussle neither seemed able to get the better of the other, and the umpire ordered them to stop. After this the first-class men came upon the stage, when some really excellent fencing took place, and what was very pleasing was that there was no nonsense about the contest. All were fair trials of skill—the best man to win. The arrangements for a match of this kind were perfect as far as judging was concerned. The Japanese have not many sports, and we shall be sorry to see such a national game done away with. By the native papers we are informed that there is some idea of prohibiting the science from being taught. The last war in Japan proved what a few skilful swordsmen could do amongst a lot of soldiers imperfectly taught the use of rifle and bayonet. We do not mean that the sword is a better weapon than the

modern rifle and bayonet, but as a physical exercise and as an amusement for soldiers it is most valuable. Beside giving a man courage, it makes him feel that he can both defend and depend upon himself."

We have been shown a piece of the aerolite which fell on the morning of the 18th February last. It was picked up at Fukuchiyama, in the province of Tamba, and brought into Kioto. The piece we saw was small, and only a little over an eighth of an inch thick. An analysis made at Kioto shows that it contains copper, silver, cobalt and platinum.—*Idem*.

Through the courtesy of the telegraph authorities we were informed yesterday, that telegraphic communication between Amoy, Hongkong and beyond, was restored at 8.30 a.m.

In order to prevent disappointment we may mention that the famous cherry trees are not yet in full bloom, and it is therefore premature to visit the Ueno gardens with the idea of witnessing the annual display. We are informed that about to-morrow week the trees will be in all their spring beauty.

The Irish agitator has not met with a favourable reception in America. The New York *Nation* writing of his visit says:—

Mr. Parnell seems to be getting into very troubled water as he continues his oratory. He said when he first came over that the Queen of England was the only sovereign in Europe who contributed nothing to the relief of Irish distress during the famine of 1847. This was promptly declared to be a falsehood by a cable despatch from Lord Randolph Churchill, the Duke of Marlborough's son, who gave at the same time the amounts contributed by the Queen and other members of the royal family—\$30,000 in all. Mr. Parnell now says that what the Queen did was to prevent the Sultan of Turkey from giving

more than she herself gave. He has since stated that the fund raised by the Duchess of Marlborough for the relief of Irish distress was not applied to the relief of tenants who did not pay their rent. This has brought another despatch from the same quarter, pronouncing it another falsehood; and it is also alleged that it is *his* organization which is guilty of intolerance in refusing relief to those who *do* pay their rent. In fact, they are "making it hot under the old flag" for Mr. Parnell. He replies to this last contradiction by alleging that one of Lord Randolph Churchill's ancestors was the first Duke of Marlborough, who rose from the dishonor of his sister, and another the "notorious Sarah Jennings," the mistress of the Duke of York, and that therefore the people with better ancestors must not mind what he says about the distribution of the fund. Mr. Parnell also adds apparently in corroboration of the above, that he has "the best and most recent information from the distressed districts," and his charge is "absolutely true." He has also got into a controversy with the *Herald* because that paper does not report his speeches; but it defends itself very successfully by alleging that he delivers only one speech, and that it always reports any changes he makes in it. This savage quarrelling over a work of charity is, however, a repulsive spectacle to all decent people on both sides of the water, and the only substantial result it can have is to diminish the amount available for the relief of distress both among those who do and those who do not pay their rent, and to disgust the civilized world with Irish patriotism.

#### REUTER'S TELEGRAMS.

LONDON, 22nd March, 1880.

The Russian Ambassador has been recalled from Paris, in consequence of the refusal of the French Government to consent to the extradition of Hartmann, charged with complicity in the attempt to assassinate the Czar, by blowing up the Imperial train.

LONDON, 25th March, 1880.

The Chinese Government have ordered 20,000,000 cartridges from the United States.

#### PARIS LETTER.

JANUARY 31st, 1880.

M. de Grandssagne carries his adoration for Donizetti to fanaticism. He sued the director of the National Opera for damages, or a complete representation of the work, for not giving the *Eucorite* in its entirety. The air "yes thy voice inspires me" that tenors, in the provinces regard as the *close* of the score, was eliminated and many of the prettiest bits of the music were amputated. Another barbarism; the orchestra ought to consist of 50 musicians as the com-

poser desired, whereas only a paltry 50 had been provided. The complainant, in the interest of the musical world, claimed the Opera in all its virgin charms, or fr. 500 compensation for a mutilated joy. The director had to make important researches in the archives, which it is said have led to the accidental discovery of some unknown fragments of a work by Meyerbeer, to get up his defence. The plaintiff, he asserts, is a disappointed composer, who seeks, in eccentricity, a popularity denied him by talent; tradition and usage justify directors in pruning down operas, which are too tedious, too cold, or too long; thus have been docked, the *Huguenots*, *Robert*, *Africaine*, *Prophète*, *Masaniello*, *William Tell*, *Fra Diavolo*, the *Dame Blanche* and *Crown Diamonds*, and the same condensation has been applied to the works of Molière; further, when the authors, their representatives, or the Government, sanction the measure, as has been here the case, directors are no longer responsible. And so ruled the judges, who dismissed the case and mulcted M. Grandssagne in costs, some 4,000 francs, but martyrdom in some shape or other is the fate of all reformers.

The feeling is gaining ground, that the dead-locks to which the cabinets are periodically subjected, will necessitate premature general elections. These will not, of course, in the least affect the existence, or even the stability, of the Republic; but they will regularise the political situation, compromised by republicans too timid, too bold, or too ambitious. The last elections had no other "ticket," but the maintenance of the *egal régime*, or the unknown, or what is tantamount to the latter, the choice between three unpopular and impossible pretenders. The deputies have declined to vote the unrestricted right of public meetings, as in the case of clubs, and the same limitation will be tagged on to the press-bill. Abstract liberty is an excellent ideal, but Frenchmen are not educated for its possession. In time they will of course become as law-loving as Englishmen, and as respectful of established institutions. The Senate contains quite a little hornets' nest of rancorous but questionable republicans, whose aim is to put a spoke in the wheels of every ministry of which they do not form an element. This explains the momentary check of Dr. Broca, a kind of French Darwin, being elected life-Senator. Before the next general election the Constitution will undergo some salutary revisions; for, oddly enough, it is the work of the late Monarchal Assembly. Ameliorations will be carried, electing all the deputies for a department by a common list (*scrutin de liste*), and abolishing the system of life-Senators, who compose one-third of the Senate. It is like a jouvence bath or an Antean touching of mother Earth, to send every representative periodically before his constituents.

Communists who decline to sue for pardon, waiting till France rather seeks forgiveness from them, intend to force the government to amnesty them. It is thus that a certain number of refugees, drawn by lot, will cross the frontier every month, and defy the authorities to execute the sentences pronounced. It is to be hoped the Republic which crushed the mad insurrection in 1871, will as firmly uphold the law in 1880! If not it will certainly disappear. The opinion as well as the feelings of the country, are against any kid-glove dealings with the ring-leaders of the Commune. The Republic is not responsible for the immunities extended to the criminal agents of the coup-d'état, and in censuring the MacMahon-de Broglie cabinets, for playing with conspiracy up to the verge of illegality, that verge, it should be remembered, was never overstepped; it was a case of gross moral culpability.

M. Grévy's Thursday dinners and receptions, are very brilliant successes; only the old dowagers of the Faubourg St. Germain, and the Mameluke partizans of the phantom-pretenders, continue conspicuous by their absence, an abstention that does not set the Seine on fire. At the last pleasant soirée, Mme. Grévy looked well; she wore a toilette of black silk, with head-dress of natural flowers. M. Grévy conducted General Marquis de Galliffet, Gambetta's right-hand *militaire*, and presented him to his lady. Mlle. Grévy, looking pale after influenza, was charming in white satin, trimmed with tulle and pearls. The prettiest of all the Graces present, was voted to be Mme. de Bachmteff, wife of the Secretary of the Russian embassy. Lord Lyons positively flirted with her—proof of the *entente cordiale* between the Tartars and the English. How does it arise that the most celebrated beauties are married ladies? Satin and silk are favorite materials for ball toilettes, provided they are as covered with flowers as the gardens of Alcazar, or display Valenciennes or point d'Alençon by the fathom. *Tubliers* are laden with embroidery; you can work your escutcheon—unless your ancestors, like those of Sydney Smith, were accustomed to seal their letters with their fingers—or initials on them, or even a drawing of a *château* or a moderately sized landscape; shoes may be rose-colored and trimmed with primroses or daisies, but then the wearer must possess that Castilian jewel—a tiny foot.

When Jeshurun waxed fat he kicked. The *Théâtre-Français* is so plump that it is accused of not even kicking: it nets so much money by acting old plays, as to neglect bringing out original ones, which it is bound to do on pain of losing a good state subvention, and what will the world do if France produces no new pieces? It promises Sardou's *Daniel Rochat*, a life-struggle between a model husband, who is a materialist, and his equally excellent and evangelical wife. Daudet's *Nabab* has been dramatised, and those who have not had enough of *Assommoir* life, can look forward to Zola's *Nana* being adapted to the stage; it will be a more æsthetic treatment of Upper Ten prostitution than Dumas' *Dame aux Camélias*. The Casino Theatre at Monaco introduced a *débutante* from Bavaria, Mme. Reicher, a very elegant and handsome lady, with a contralto voice capable of being made admirable after two years training in Italy and France. Faure sang in the *Enrôlée*, the *Jardin de l'Alcazar*, and *For so much Love*, in a manner that might win the applause of even M. Grandjean. Miss Jenny Howe, the American diva, has made a very fair début in *La Juive*; she appeared to be frightened at first, but later regained self-possession: the upper notes of her voice are faulty and she lacks passion, but she is superior to the hosts we have had of Polish and Russian *prima donnas*—of a night.

It is nearly even betting as to whether or not the Chamber of Deputies will prove protectionists or free-traders on the bill for the revision of the Customs' tariffs; the two camps have ardent representatives in the cabinet. France has never taken the women's question seriously to heart, because perhaps, they are the men, not the ladies, who stand most in need of rights. Something however, remains to be done for grown-up girls, in the sense of higher education; perhaps their physique is the cause why they cannot, like their German sisters, split wood, carry sand and stones on their heads, or mount ladders with hods of bricks, or plough, harrow, reap, and thresh corn. Arthur Young, however, states that in his Travels through France, he has seen "a woman and an ass yoked to a plough," and not at all out of fun. It is contemplated to establish lycées for girls, as exist for boys: not to make sweet girl graduates, but woman womanly. Heads are to be cultivated more, though Diderot observed that, we walk and work so little, and think so much, that in the end man will become nothing but a head; now a head, though a little thing, is everything. That old crusty bachelor Voltaire maintained that, to win men you must gain the women to your side, and the latter are all false. Schopenhauer could not be more ungallant.

Attention is being drawn to the number of children to be encountered any day in the gardens and squares, about the age of nine, who are invalids from their birth, dwarfed, paralysed, *monne* and silent. Mothers and nurses call them "children of the siege," and perhaps not incorrectly. Nine years ago—what a transformation between now and then—Paris surrendered after an heroically borne siege of four months and twelve days, and one month's bombardment—the "psychological hour." During that period 3,000 children died; imagine those born just before, but reared during the siege; born pending it, or soon after it; insufficient food; no fires; wet nurses, whom doctors lay down ought to be ever "gay," in a permanent state of alarm and melancholy about the fate of husbands and their own babes; wives wretched over the destiny of soldier-spouses, and all burning from absolution fever. No wonder the infants of 1870-71, carry the seal of that cataclysm in their shattered organisms. The Second Empire thus makes victims even after its death. May the Empress Eugénie, who boasted of having provoked the war, remember this when in Zululand, and that he whom she bewails had the intention, according to his confidant, de Cassagnac, to make a Boulogne descent on France like his papa, and so entail more useless bloodshed.

Few eminent men merit a statue better than Lamennais: its erection will take place in Bretagne; it was contemplated to erect it in his native town of St. Malo, where sleep Chateaubriand and the famous mariner, Duguay-Troniu; but political considerations decide in favor of Chesnaie close by, and where he passed his school-days. He was not ordained a clergyman till 34 years of age. When he had no visitors and suffered from ennui, he sought relief in playing the accordion; the first sounds of which brought up his servant man, who leisurely stretched himself on a sofa, and listened out the music. When Lamennais resigned the priesthood, he came to Paris, and his friend Liszt welcomed him. Victor Hugo, then not a millionaire as now, boasted he had three friends; "an old ballad-monger named Béranger; an old philosopher called Lamennais, and an old exile yelet Chateaubriand." With Béranger he went to make the acquaintance of a remarkable woman then living in an attic, Georges Sand, who was frightened at the size of his nose. Lamennais in 1847 gave lessons in philosophy to Prince Jerome

Napoleon. On one occasion, when Lamennais was delivering to his pupils a lecture on philosophy, the lamp which illuminated the room became suddenly extinguished. "Holla," said a student, "we now can discern nothing at all." "My friends, such is the way courses of philosophy generally conclude," replied Lamennais.

In Florence, barristers, artists, professors &c., act as volunteer teachers on Sundays to instruct, gratuitously, adults who cannot attend school during the week; before being named a teacher, six months probation is exacted: in France this philanthropy for the grown-up is exercised during the week-days as well.

While a policeman was inside the church arranging for the baptism of his baby, a man approached to admire the latter, but picked the nurse's pocket: she screamed; the policeman after a chase captured him, and being an old offender, entitles Bobby to fr. 50. In the Jura a sportsman short of game, blazed at a bear dancing in a village; he has been condemned to pay over fr. 2,000 damages; a publisher has been fined fr. 4,000, not for issuing an old French classic, but for putting all the obscene phrases in Latin; a man has thrown himself off the July Column; in his descent he struck against one of the Gallic cock ornaments, and was decapitated as cleanly as if by the guillotine. Visitors may remember a rather good-looking beggar—cripple,—who in default of limbs, paddled his own canoe, a sort of bowl, in and about the entrance to the Champs Elysées. He has just been married, in presence of a great crowd, to a good-looking young wench in the Madeline—a member of the Jockey Club paying the expenses. A like deformity did not prevent the poet Scarron marrying, whose wife later became Mme. Maintenon. In England such an object can not only wed, but become a member of Parliament too.

A red nose, whether produced by stimulants, indigestion, tight-lacing, or patent medicines, can be toned down by Turkish baths. Criticising two persons, a wit replied; "I do not compare—but separate them." Painters and sculptors decline to accept as models any females who wear stays. The municipality is to construct four monster warm swimming baths, tickets two sous; the age of the unwashed is over.

Deputy Lockroy, Hugo's half-son-in-law, is to have a duel with the communist editor and town councillor, Humbert, when the latter quits prison, in six months. Mistress, servant, and pork-butcher:—"Demand the price of, and examine his pigs' feet." "I could not madame, he had his boots on," said the maid on returning.

#### SYLVAN SOUNDS.

(From the Japanese.)

#### IV.

#### BIRD-SONG.

If the harp with silver numbers,  
Lure us from the lightest slumbers,  
How much more the choir of voices,  
When the woodland wild rejoices!  
Hark! From groves that bud and burgeon,  
Forests fringed and crowned with flowers,  
Hundred-voiced, the choral trembles—  
Thro' the depths of greening bowers,  
Birds of high and low degree,  
Plaining soft, or wild with glee,  
Sweetly trilling,  
Loudly shrilling,  
All the fragrant silence thrilling,  
Flit on wings of melody.

F. B. H.

Tokio, March 24th, 1880.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

Their Majesties the Emperor, the Empress and the Empress Dowager, visited the Fukiage Park on Monday morning last, they witnessed the game of *Naba-same* (shooting with bows and arrows at a target from horseback while the horse is in full gallop), and also *Iwa-o-nomo* (shooting at dogs).

His Majesty the Emperor has presented 1,000 *yen* to each of

the *Fu* and *Ken*, to increase the funds for taking precautionary measures against another outbreak of cholera.

Governor Matsudaira, of the prefecture of Miyagi, visited the Police Department on the 19th instant.

The Governors of Yamaguchi, Awamori, Guma, Shiga, Nagano, Okayama, Saitama and Yamagata *ken*, and the Secretaries of Gifu, Ishikawa, Wakayama, Nagasaki, Miye, Hiroshima, and Hiogo *ken*, have all returned to their respective prefectures.

Judge Araki, the President of the Fukushima *Saibansho*, arrived in Tokio, on official business, on the 19th instant.

The Post Office at Yedo-bashi, Tokio, will in future be styled the Central Post Office, and business connected with the Chief Post Office will be transacted in the Home Department.

The local assembly of the prefecture of Kanagawa is shortly to be held at the Town Hall.

We (*Nichi Nichi Shinbun*) hear that His Majesty the Emperor will shortly visit the prefecture of Yamanaishi and Kioto, and also the province of Yamato, where His Majesty will perform the usual rites at the tombs of the Imperial family. His Majesty will return to the capital by the Isé road.

His Excellency Yoshi-i, the Assistant Vice-Minister for Public Works, accompanied by two subordinate officers of the Department, left for Kiushiu on the 24th instant, on an official tour of inspection.

A special meeting of the local Assembly of Tokio was held on Monday evening last, to consider the advisability of extending the gas mains.

President Kishira, of the *Dai-shin-in*, having recovered from his recent indisposition, will return to his duties about the first of next month.

Mr. Watanabe, Chief Secretary of Kagoshima *ken*, returned to his post on the 24th instant, and Mr. Kawada, Chief Secretary of Shiga *ken*, leaves for his prefecture on the 28th instant.

Three officers of the Imperial Household Department are to be despatched to inspect the route to be followed in the intended Imperial progress towards the province of Yamato.

His Excellency Yoshida, Envoy Extraordinary and Minister Plenipotentiary to the Government of Washington, will leave for America by the mail steamer on the 30th instant. Mr. Kawase, Commissioner to the Melbourne Exhibition will leave by the same steamer.

His Excellency Matsukata, Minister of the Interior, accompanied by Mr. Yendo, Chief Superintendent of the Board of Trade, having left for Osaka on the 24th instant to attend the ceremonial distribution of medals among the successive exhibitors at the Cotton and Sugar Competitive Exhibition, His Excellency Miye was appointed Acting Home-Minister during his absence.

Prince Matsura-ura, who gave the entertainments of *Yaba-same* and *Juu-o-mono* in the presence of Their Majesties the Emperor, the Empress and the Empress Dowager in the Fukiage Park the other day, was received in audience by Their Majesties on the 23rd instant.

Prince Yamauchi, the *ex-Daimio* of Tosa, is going to give an exhibition of tilting in the presence of the Emperor, the Empress and the Empress Dowager. The combatants will be mounted and divided into two parties of thirty men each, armed with lances and shields, and will tilt against one another after the manner described by Scott in his account of the great tournament of Ashby de la Zouche, *temp.* Richard Cœur de Lion.

The Princess Fushimi gave birth to a son on the 18th instant.

The *Nichi Nichi Shinbun* says:—"We hear that on the 22nd instant an Imperial edict was issued to the Heads of all the Departments informing them that, as His Majesty the Emperor attends the Daijō Kwan every day from 9 a.m. to 3 p.m., thus paying personal attention to the administration of affairs, all the officers are therefore cautioned to perform their functions with great diligence."

His Imperial Highness the infant Prince is to be presented to His Majesty the Emperor on the 28th instant.

Mr. Matsudaira, Governor of the prefecture of Miyagi, left for his post on the 23rd instant.

The Presidents of the different *Saibansho* are shortly to meet in Tokio, to consider the provisions of the new codes about to be issued.

His Excellency Yanagiwara, Envoy Extraordinary and Minister Plenipotentiary to the Court of St. Petersburg, has been appointed Acting-Minister to the Court of Stockholm.

It is now under consideration to establish a Japanese Legation in the capital of Corea.

His Excellency Sanjo, Prime Minister, is going to entertain the Junior Prime Ministers, the Privy Councillors, and the new Ministers and Assistant Ministers of the various Departments of State, on the 3rd proximo.

Judge Nakasawa of the Nagoya *Saibansho* returned to his post on the 24th instant.

#### NAVAL AND MILITARY.

The War Department contemplates despatching a number of officers on a visit to Vladivostock, &c.

The Tokio Garrison will go into camp on the Narashino plains in the province of Shimosa, on the 1st proximo.

Major Kajiyama has been appointed an attaché to the Japanese Legation in Peking, and Captain Furukawa has been ordered to Teheran.

The *Heiji Shinbun* (*Army and Navy Gazette*) says:—"The *Tenkuba Kan* will sail for Vancouver's Island about the middle of next month, and on the return voyage will call at San Francisco and the Sandwich Islands; it is expected that the cruise will occupy about three months. The *Tenkuba Kan* will be commanded by Captain Sagaura, and the crew will consist of about two hundred and eighty men, inclusive of thirty naval cadets. The *Hiyei Kan* will sail on a cruise in the Indian Ocean early next month, and, when returning, will visit Cochin China. Commander Ito takes charge of the *Hiyei*, and the crew will consist of about two hundred and eighty men. Some officers of the Home and Finance Departments will take advantage of the cruise of the *Hiyei* to visit foreign lands.

The *Amaki Kan*, in charge of Commander Taki-no, is about to be despatched to various ports on the coast of Corea. This vessel will carry a crew of one hundred and forty-five men, and will be absent about six months.

His Excellency Admiral Enomoto, the newly appointed Minister for the Navy, accompanied by Rear-Admiral Hayashi, the Commander of the Eastern Admiralty, proceeded to Yokosuka on Wednesday last, in the *Soria Maru*, to inspect the men-of-war lying there.

The injury to Admiral Kawamura is not very serious, and it is expected that he will have quite recovered in about a fortnight.

A telegram has been received stating that Lieut-General Takashima who was recently sent to Europe, will return home early next month.

The *Seiki Kan* will sail for the Persian Gulf, about the middle of next month, under the command of Captain Ogata.

There will be horse races at the Military College, Tokio, on the 17th or 18th of next month.

#### MISCELLANEOUS.

Nine hundred and seventy-two persons visited the Competitive Exhibition of Cotton and Sugar in Osaka, during the week ending on the 13th instant. The Exhibition will be closed on the 5th of next month.

The *Takusago Maru* brought the sum of 13,000 *yen* in gold coin from Kobe, consigned to Nishimura Kisaburo, a resident of Yokohama.

The German man-of-war *Prinz Adalbert* left Kobe on the 18th instant and arrived at this port at 3.30 a.m. yesterday.

During the gale on the 19th instant two boats were capsized off Shinagawa. They carried a cargo of about five tons of coal each, which was, of course, lost, but the crews escaped with a ducking.

The Exhibition at Kioto was opened on the 15th instant.

Nakamura Rokuzo, a native of Hizen, in the prefecture of Nagasaki, who has been under arrest, charged with complicity in the assassination of the late Hirosewa, *Sangi*, was on the 22nd instant adjudged innocent and set at liberty.

There will be an exhibition of fencing in the Police Department, Tokio, on the 30th instant.

A barque, named the *Hikaku Maru*, was launched on the 25th instant from the Kawasaki dockyard, Tokio.

The Government have arranged with the Mitsui Bishi Company for a steamer to be despatched regularly every second month to Gensau-shiu, Kau-kiu-dai, Corea. A return service

will also be established. The Company will receive an annual subsidy of ten thousand yen towards the cost of maintaining the line.

Messrs. Okura & Co., and the Kiodo and Senyu trading associations are going to establish branches in the new open port of Gen-san-sin, Corea, for the sale of Japanese produce. Mr. Shioda, the vice-manager of the Senyu trading association, will proceed to that port early next month with a stock of goods to commence operations.

Mr. Kawasaki, a resident of Chitose-machi, Honjo, Tokio, sent in an application, on the 24th instant, for permission to establish a bank, under the name of the Kawasaki Bank, with a capital of 300,000 yen.

#### IMPERIAL GOVERNMENT RAILWAYS.

#### WHY FOREIGN GOODS SHOULD NOT BE USED.

(Translated from the *Choya Shimbun*.)

FOR a long time our exports and imports have not balanced each other, and for several years we have desired to secure the sole control of our tariff, and as long as our imports exceed the exports our people suffer great misery, and so long as we are deprived of sole control over the tariff, our national treasury can never be well supplied, thus we labour under two great disadvantages. Now, we import a large stock of goods, because they are very cheap, and why are they so cheap? Because they are not sufficiently taxed, and if we do not tax them sufficiently, certainly we must then tax our own produce, so as to make up the deficiency in our revenue occasioned by foreign articles not paying sufficient duty. When we do this our own articles will certainly rise in value, and imports will decrease in accordance with natural laws. We believe that the true cause of the poverty of our Government and people is simply because foreign goods are admitted into the country without paying fair duties. Our Government, of course, desires to increase the duties, but it is unable to do so, and why? Because although we urgently desire it the Treaty Powers decline to consent. We are quite right and justified in requiring this increased taxation, while foreigners are quite wrong and acting unjustly in refusing to agree to our proposals. The reason why, although knowing themselves to be on the wrong side, they still depend upon their great power, and do not listen to us, is because they look down upon us with contempt. Ah! is it right for the people of an independent country to be treated with such contempt, and to patiently suffer such injuries, leaving the heavy responsibility entirely in the hands of the Government, and paying no more attention than if they were looking at a fire on the opposite bank of a river? What means then should we adopt to get rid of the contempt and injury under which we now suffer? Shall we close the ports? No, the exigencies of commerce do not allow us to do so. Shall we appeal to the force of arms? No, our circumstances forbid it. Shall we burn down the foreign settlements? The example of the late Mr. Hayashi gives us a lesson. Shall we encourage our industries so as to get rid of the imports? That cannot be accomplished speedily. There are not means for saving us from our present difficult position, and we have now arrived at the conclusion that the best thing to be done is for the people to enter into a mutual agreement not to use imported goods.

Foreigners have seized the control of our tariff, and act as if they will never restore it to us, but use it in the same way as they would a fleet to attack our interests, and employ the importation of goods as ammunition for firing upon us. We should be setting up a very strong fortification if we refrained from using imported goods, and we could then rest quiet, never attempting hostile measures. When the foreigners saw such a resolution being steadily carried into effect they would soon cease to trouble us, because when they found their profits at an end, they would speedily abandon the position they have taken up merely for the sake of gain. This is the only means of conquering the enemy in a peaceable manner, and it can be very easily accomplished. Nothing can, in our opinion, be better calculated to strengthen and enlarge our national influence than the scheme we have propounded.

Now, the Government is the reflection of the people, and if the latter grow in power, the former naturally become strengthened, then how can it be possible for foreigners to despise us? They have, of course, entered into trade with us for their own benefit, and if we do not purchase their goods, they cannot help suffering losses which they will be unable to avenge upon us; and therefore, through this simple process, we can get rid of the two grievous injuries which the country is suffering under at present. Therefore, we wish to see our countrymen enter into an agreement without delay to carry our proposal into operation.

However, it is true that, of the imported goods, there are several articles which are absolutely necessary to us; such as arms, books, machinery and surgical instruments. All these are essential for improving our knowledge, cultivating science and art, protecting our country, and maintaining the health of the community. Although we are now obliged to adopt defensive measures, still we ought not, in consequence, to check our progress; and therefore we must continue to import all those articles that we have specified. What we now propose not to use are, luxuries, superfluities, provisions, liquors, and clothing, all of which we can produce ourselves without depending upon importation. It is true that these things are very nice, convenient and cheap; therefore if we wish to dispense with them every individual will suffer more or less inconvenience in his household affairs. If a man has no hopes in the far distant future, he cannot sustain present trouble. Sweet things injure the stomach, and people being aware of the fact, do not constantly consume them. Now, foreign articles are to us as sweet things, and their constant use has caused the excess of imports over exports, made the specie of the country find its way abroad, lowers the value of the paper currency, raised the price of provisions, clothes, and other things necessary for life, and ultimately brought about such great complication that the people will find much difficulty in obtaining a livelihood. If the inhabitants of this country become cognizant of such an unfortunate result, not only will they refrain from using imported goods, but they will endeavour to destroy the import trade altogether. To this end we must practice economy, accumulate wealth, and replace foreign goods with the products of our own industrial undertakings.

We have now for a long time been accustomed to use imported goods, and it may be that without them we shall be unable to supply all our wants, but we now produce many things made after the foreign style. No doubt if we compare our imitations with the genuine articles, the former are inferior both in quality and appearance, and also rather dear in price. However, if we make use of our own productions, and have some patience, we can supply our requirements, and the increased demand will encourage the manufacturers to make their goods as neat, beautiful, convenient, and cheap as possible. Thus our native made articles will equal or surpass the foreign ones in several respects, and this will not be the only resulting advantage. When our industry becomes prosperous other enterprises will be encouraged, and we shall find the native manufacturers in active competition and discovering new inventions. Therefore, by refraining from the use of imported articles, we can get rid of the two disadvantages we have already mentioned, and, moreover, we can derive great benefit from encouraging new enterprises. Should not our countrymen then willingly enter into and keep the agreement we have proposed? Until a few years ago the use of imported goods was confined to the upper classes, but now they are used even among the

poor people in the far interior; and to judge the future from the present we see plainly that all the inhabitants of Japan will, without exception, be using imported goods in a few years time. The country is in a sufficiently serious condition at present, but when the use of foreign articles becomes the universal custom, the miseries inflicted upon the nation will be far greater than we can now even imagine, and if we do not take precautionary measures at once against such a result, the disease will become irremediable. Therefore if our proposal be successfully carried out, the existing discontent and excitement will pass away,—a result which cannot otherwise be attained, unless by a righteous revision of the treaties, and a restoration of the balance of trade.

Someone criticising our proposal may say:—"The idea is good enough, but very narrow-minded. The suggestion reminds me of a person who drinks out of a river to gratify his thirst, and cannot notice any decrease of water when he can drink no more, because the suggestion made, would, if carried into effect be too long in showing any result, when rapid action is necessary to remedy the evils under which we suffer. Besides it gives the Government an opportunity to issue more irksome orders which the people will be obliged to obey." To objections of this nature we would reply:—"We are quite aware that our suggestion may be considered narrow-minded, but then, as under present circumstances nothing can be liberal and magnanimous from the commencement, some one will be found to gradually enlarge it. It is our duty, as the initiator of the idea, to improve and extend it. The words issuing from a man's mouth, resound in all directions; and if such is the case with mere words why cannot the same be the case with our suggestion? Having heard of a similar scheme being already in operation in the provinces of Mino and Owari, we were highly pleased, as it coincided well with our own views. With our proposal others will comply also, and when we circulate it more extensively the whole country will join, and we firmly believe that our countrymen will eagerly pursue an upright course. Moreover, the whole population of the country have now begun to regard the condition of national affairs with anxiety, and the only thing they regret is, that they have no means of removing the existing embarrassments. Even if some people can ameliorate the present state of affairs they have not the means of doing so independently, but if a leader comes forward who shows them how to carry out a promising scheme, the whole people will at once hasten to put it into operation. If our opponent is unaware of all these things, what reason has he for saying that our scheme is narrow-minded and useless, and treating our suggestion with contempt? He is a jealous and worthless fellow, who not only does not follow an upright course himself, but wants to prevent other people from doing good. The present is a very critical period for this country, and, if we find out any means of saving it from its embarrassments, let us at once carry them into effect, whether great or small, liberal or narrow-minded. It is wrong for us to wait for the leadership of the Government. Cannot everyone see the present state of our people? Whenever a new law is issued by the Government, they always canvas its advantages and disadvantages, and if our proposal was founded upon an order which would deprive the people of their comforts and conveniences for a time, they would not adhere to the agreement, unless they sincerely wished from their hearts to do so. If the Government issued such a proclamation, the people would consider that they were deprived of their freedom; then the bold would cry out openly against such a law, and the cowardly, secretly opposing it, would blame the Government. It is very easy for the Government to pass a law ordering the people to do anything, but the mere promulgation of a law can have no influence on the minds of the people, just as a marionette can never dance better than a human being. We are now, as it were, on a stage, acting in competition with other nations, and we are about to give a practical performance of the restoration of our sovereign rights, and the promotion of our national prosperity. Therefore unless we unite the valour and power of the whole country, how can we hope to make head against the powerful and unscrupulous foreigners? This is a matter in which the Government cannot interfere, because it might injure our relations with foreign countries, and perhaps be deemed a violation of the treaties of peace and commerce. Accordingly we have no desire to see the Government interest itself overtly in this ques-

tion, and even if it wanted to interfere, we should certainly advise it to refrain from doing so.

A long time ago, before the United States of America became an independent country, England governed them, and when war broke out between England and other countries it resulted in England finding her national debt increased, and being obliged to levy fresh taxes. This was done without the consent of the Americans, who took an oath that they would never use the newly taxed articles. Then came a war which lasted eight years, and laid the foundation of the independence of the United States. We wish our countrymen to bear in mind how these events reflect upon the present state of Japan; and, if they do so, we feel confident that an unconquerable spirit of patriotism will spring up in their minds.

## LAW REPORT.

### IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.

Messrs. E. BLANC and A. DEVEZE, Assessors.

Saturday, March 20th, 1880.

Nagasaki *Kencho* vs. P. HYVER.

(Adjourned from the 13th instant.)

This was a claim for the recovery of \$66.64, ground rent due for lot No. 42A, at Sagaramatsu, Nagasaki.

#### JUDGMENT.

The Consular Court of France in Japan, at Yokohama, judging publicly and in last instance:

Having read the petition addressed to the Court in the name of the Prefect of Nagasaki, dated November 26th, 1879, for the recovery from P. Hyver, owner of the ground No. 42A, Sagaramatsu, situated on the foreign concession at Nagasaki, of the sum of \$66.64, as the annual rent due for said ground on June 30th, 1879.

Having heard the parties and their conclusions, the Nagasaki *Kencho* being represented by Mr. Isaono Hiasa-hiro, officer of the Kausagawa *Kencho*, and Mr. Hyver being assisted by Mr. A. Harmand;

Considering that the title-deed, delivered originally by the Japanese authorities to Hyver, states that the annual rent of \$66.64 is to be paid in advance, in default of which the ground, with the constructions erected thereon, is to return to the Government;

Considering that Hyver, in his defence, alleges that the Japanese authorities are not entitled to claim the rent as long as they refuse to deliver to him a title-deed instead of the original document, which is not in his possession;

Considering that, by judgment of the Consular Court of France, at Yokohama, dated October 24, 1877, Hyver has been put in possession of the ground mentioned above, of which he had been formerly dispossessed by Miss Labastie, and Mr. Teissier, her grantee; his assertion that, not having the original title-deed in his hands, he is in fact dispossessed of the property, is not to be admitted,—this the more so as he continues to have the free and entire use of it, and that he is still carrying on the "Hotel de l'Univers" erected on the premises;

Considering that the Japanese authorities, in delivering to Hyver a duplicate of the original title-deed, have done all they could to secure to him the benefit of the judgment rendered in his favour;

Considering that the said authorities, contrary to Hyver's allegations, could not state in the duplicate that it was in lien and instead of the original document, as this latter is not lost or destroyed, but in possession of a third person as security for a loan contracted for the benefit of Mr. Teissier before he was dispossessed;

Considering that neither the Japanese authorities nor the Consul of France have to decide as to the validity of the claim of said creditor, who being of another nationality is under the jurisdiction of another tribunal; a fact of which Hyver has been informed by a letter from the Consul of France, dated December 16th, 1878.

Considering that the observations made by Hyver attributing the non-execution of the judgment of the 24th of October, 1877, to a mistake made by the Consul of France are not admissible, and that the pretended non-execution of

said judgment does not interfere with the right of the *Kencho* to the payment of the rent of the ground.

Therefore recognizes the claim of the Naga-saki *Kencho* against Hyver :

Orders Hyver to pay to said *Kencho* the sum of \$66.64.

In default of which Hyver will be dispossessed of his rights to the property, which is to return to said *Kencho*, with the constructions thereon as stipulated in the title deed ;

Orders Hyver to pay the costs of the proceedings.

### FIGHTING FITZGERALD.

The portrait of Fighting Fitzgerald has been painted by enemies as vindictive as any that ever slandered the dead, and is therefore distorted in every feature.

George Robert—his baptismal name—was born in 1749. Through his father, a fair specimen of the profligate and reckless Irish landlords of long ago, he was the heir of Torlough, an estate near Castlebar, then worth 4,000*l.* a year ; and also the representative of the Desmonds, the eldest branch of the haughty Norman-Irish Fitzgeralds. His mother came of a race so conspicuously eccentric that the saying ran concerning it—"God made men, women, and—Harveys." Separating from her husband after two years of miserable married life, she remained for many years one of the gay leaders of gayest London society. She was the sister of that splendid singularity, the Earl-Bishop of Derry.

Brought up in England from infancy to his sixteenth year, George Robert was for a time an Eton scholar. In 1766 he was gazetted to a lieutenancy in the 69th regiment, then stationed in Ireland. Here, while yet a mere boy, he fought several duels, in which he displayed not a little generous feeling, and in one of which he lost a portion of his skull. In February 1770 he made a love-match with one of the daughters of a redoubtable Irish personage, the Right Honourable J. Conolly—otherwise known as "the Great Commover." Thus he obtained a fortune of 39,000*l.*, and eventually became the brother-in-law of an Irish viceroy.

Ten thousand pounds of the money was handed over to the owner of Torlough, who was then, as ever, in pecuniary difficulties. In return he signed deeds securing George Robert 1,000*l.* a year in the present and the reversion of his estate, whole and unimpaired. This settlement was the main cause of our hero's faults and misfortunes, and ultimately of his doom.

Immediately after his marriage George Robert resigned his lieutenancy and went to France. At this period his appearance was singularly striking, nor did it ever undergo any change. The portrait painted of him at twenty remained perfectly true to the last.

He was under the middle height : "his person very slight and juvenile ; his countenance extremely mild and insinuating. The existing taste for splendid attire he carried to the utmost. The button and loop of his sword-knot, and his shoe-buckles were brilliant with diamonds. His coat and vest were as rich as French brocade and velvet could make them. He wore a muff on his left arm, and two enamelled watches, with a multitude of seals from either fob." Another writer describes the muff as "drawing the eye of the public by its uncommon size ; it fell from his chin to his toes !"

Indeed, his fondness for glittering baubles and ultra-finery amounted to a passion. At a later date, when his house at Torlough was sacked by the mob of Castlebar, he estimated his loss, in jewels and embroidered robes, at upwards of 20,000*l.*

Among the articles pilloined on that occasion he mentions—"a casquet containing a complete set of diamond vest buttons, two large emeralds, a hat band with five or six rows of Oriental pearls worth 1,500*l.*, a large engraved amethyst, a gold watch and chain studded with diamonds, several other gold watches and seals, a great number of antique and modern rings, gold shoe and knee buckles, silver shaving apparatus, several pairs of silver shoe and knee buckles, with 6,300*l.* worth of other jewels."

This diminutive, youthful-looking, and ornate Fitzgerald was pronounced "an effeminate little being" by those of his own sex who did not know him. As to those who did—"He was so light, foppish, and distinguished, none could think he was the man who had fought more duels than any other of his time."

The dames, without exception, pronounced him "a fascinating creature." Nor was the opinion confined to them. One who owed him no goodwill, Sir Jonah Barrington, allows that "a more polished and elegant gentleman was not to be met with." And the renowned "Dick" Martin, who met him pistol to pistol and got the worst of the encounter, confessed the strong impression made upon him by "the elegant and gentleman-like appearance" of his antagonist.

Even polished Paris admitted itself surpassed in all that was graceful and splendid by this extraordinary young Irishman. "Qui est ce seigneur ?" asked the Parisians of one another, on seeing him for the first time. "D'où vient-il ? Il n'est pas François. Quelle magnificence ! Quelle politesse ! Est-il possible qu'il soit étranger !"

Let us now conceive this dazzling outside as covering the best and boldest rider, the dearest swordsman, the surest shot, and the most reckless gambler of the day : let us conceive him with literary tastes, an author, and a patron of authors ; with as much subtlety as daring ; with intensest pride of race and intensest contempt for all that was vulgar ; and with a repugnance that was absolutely passionate for the gross vices and carnalities and the coarse amusements of his era—and we shall have some idea of what "Fighting Fitzgerald" really was.

Received with enthusiasm by the Parisians, our hero plunged headlong into what was then the all-absorbing pursuit—gambling.

Thanks to it and to his inordinate taste for splendour, not a farthing of his twenty thousand was left by the end of the first year. As to his amity, he never received a penny of it.

He might have found a home with the Bishop, who could see nothing but perfection in him ; or, had he so desired, nothing would have been easier than for his numerous powerful friends to have thrust him into a lucrative sinecure. But he could not bring himself to quit delightful Paris and its whirl of refined excitement. So he sent his wife home to her friends, and remained in the gay capital, relying on the gambling skill he had acquired by this time for the support of his splendour. And here he showed to the fullest that strange capacity for rapid and complete transformation of character which seems peculiar to the Celtic race. In an incredibly short space of time he was all over the cruel and remorseless gambler, yet still as brilliant and fascinating as ever.

Among our hero's chosen associates was the Comte d'Artois—afterwards Charles X.—who was then the votary of every pleasure, and notably as keen a gambler as Paris could boast of. The Prince had pocketed a very royal share of George Robert's fortune ; and when that was gone, continued to pocket an equally royal share of his dashing young friend's winnings. On one occasion Charles happened to win three thousand louis, which Fitzgerald would not pay down. The latter vanished therefore for a time from the presence of the Prince. A few days later he reappeared, with his purse replenished, but forgot to pay his debt of honour. Nevertheless, he presumed to take a part in the game that was going on betting, in his usual plunging style, "a thousand louis against the Prince's card."

Raising his head, Charles remarked very coolly, "You owe me three thousand louis ; are you prepared to pay ?"

"No."

"Then how dare you bet in my presence !"

Suiting the action to the word, his Royal Highness took Fitzgerald by the shoulder, led him to the stair-head, and dismissed him with an ignominious kick.

George Robert was now in an unpleasant position. As a man who had been publicly dishonoured, he was excluded from good society. Nor could he set himself right by crossing swords with the Prince, who was beyond the reach of a cartel, even from the head of the house of Desmond. To a common mind there was no getting out of the predicament, except by flying from the land or from life. Our youth, however, was not the possessor of a common mind. Disclaiming both the alternatives, he hit upon a means of setting himself right with everybody, and that too with *celat*.

Louis XVI. was a mighty hunter of the deer, and Fitzgerald, the *beau idéal* of horsemanship, was a constant follower of the royal pack. Shortly after the affair of the kick, the deer took a course not at all in harmony with the views of the mass of the hunters, making straight for the Seine.

Along the bank ran a road, fenced from the river by a wall some three feet high on the land side, but having a descent of fourteen or fifteen feet towards the current, which here ran deep and strong. The deer leapt the wall, swam the stream, and gained the forest on the other side. So did the dogs. But all the hunters pulled up, with a single exception—Fitzgerald.

He dashed at the wall with a cheer and cleared it, amid the astonishment of the gentlemen and the screams of the ladies. Everybody concluded that horse and rider must surely be drowned. In a few minutes, however, the gallant horse was observed breasting the river and making straight for the opposite shore, which it reached in safety with its rider. The latter did not even lose a stirrup in achieving the harebrained feat.

Fitzgerald became more popular than ever with the courtiers. But though he had effaced his ignominy from every other mind, he could not forget it himself. As soon, therefore, as etiquette would allow he transferred himself to England.

Here he appeared under very favourable circumstances. The Harveys held high place in society, of which his mother, Lady Mary Fitzgerald, was one of the leaders. But our hero's most effective recommendation to the more exclusive London circles was the great reputation that had preceded him across the Channel. And a conspicuous item of that reputation was the fact that he had already, fought *decisive* duels, though not yet twenty-four !

He soon became a favourite of fashion ; and, moreover, a social leader himself—gathering round him a body of golden youth who formed themselves in most essentials on him. And foremost among those exquisites were the "wicked" Lord Lytton, and the officers of the elegant regiment of the day, Burgoyne's Light Horse.

In company with these curled darlings, he frequented all brilliant assemblies, surpassing everybody else in glitter and deep play, and treating whoever and whatever he encountered at variance with his delicate tastes with merciless ridicule and scorn. The last peculiarity involved him in a number of scrapes, including one duel, from all of which he extricated himself in a way that added to his brilliant reputation. At length an event occurred which showed his darker side, and brought forth in very bold relief his more repulsive characteristics as a gambler and a duellist.

Shortly after his arrival in England a youth known as Daisy Walker—the son of an honest tradesman who had left him 20,000*l.*—had a cornetcy purchased for him in Burgoyne's Light Horse by his rather injudicious guardians. The plebeian, who was still a minor, was very much looked down upon by the exquisites of that refined corps. Nevertheless they condescended to introduce him to all the fashionable follies of the day, and especially to win his money.

Ere many months had flown the Daisy was in difficulties. All his ready money had passed into the purses of his acquaintances, and with it bills to a large amount. Fitzgerald, a constant visitor at mess and one of the largest winners, held some of the bills to the nominal value of 3,000*l.*

Walker's guardians now interposed. Removing their charge from the regiment, and indeed from fashionable society for the remainder of his minority, they compounded for his debts, Fitzgerald receiving

500*l.* for his share. Our punctilious gentleman took the money, but not as Walker's guardians intended. In his eyes debts of honour were not to be compounded for like rascally trade debts; and he held himself ready to claim the residue of his account whenever the Daisy should furnish him with a occasion. This was all very French; and our hero was intensely French in most respects.

Walker chafed a good deal under the restraint imposed by his guardians, and the moment it was removed hurried back to his old haunts and habits. Fitzgerald kept him well in view, but made no move until he happened to surprise the Daisy making a heavy bet on a forthcoming race. No sooner had Walker booked his wager than Fitzgerald—following the august example of the Count d'Artois—met him with a claim for 2,500*l.* Walker refused to pay, and, for the next six months, was made supremely uncomfortable by the persecutions of Fitzgerald.

The Daisy was not remarkable for valour, and did his best to avoid Fitzgerald, who, on his part, was equally assiduous in hunting up the Daisy; and a game of hide-and-seek was maintained between the two which furnished the lookers-on with a good deal of amusement. Walker could not keep away from fashionable resorts, but he attended them in fear and trembling—always keeping a sharp eye on the door and hastening to retreat at the first indication of the approach of his terror. But he could not avoid his fate. The two met at length on Ascot racecourse, and Fitzgerald caned the Daisy, who was now compelled to challenge him. The duel, which had a good many sides, including a ludicrous one, was fought in the Low Countries towards the end of 1774.

Walker, being entitled to first shot, fired and missed; because, just as he pulled trigger, Fitzgerald flung himself into his favourite duelling attitude, and thus greatly diminished his height. It was now Fitzgerald's turn, and Walker prepared himself for the shot with very evident trepidation. Our hero saw what was passing in his mind, and resolved to take advantage of it. Instead of firing, he affected to consider his pistol somewhat out of order, and spent some minutes in hammering the flint with a key. The pistol being adjusted at length, he then turned and lectured Walker's second concerning his neglect of some of the rules of the duello. The second received the rebuke with due humility, and hastened to rectify his error. All this time, be it observed, the poltroon was waiting to be shot at. At last all was right, and Fitzgerald, taking a very deliberate and ostentatious aim, lowered his pistol and apologised in very graceful terms for having used his cane on Walker. The latter and his second—being evidently unacquainted with the law of the duels, which insisted that a caning was always to be apologised for before the caner could take a shot at the caned one—indulged in a feeling of relief, which was rather premature.

Having made his apology, Fitzgerald resumed his fighting air and demanded his 2,500*l.* or the resumption of the duel at the point where it had been interrupted. Walker was much inclined to comply, but his sense of the overwhelming disgrace which must attend submission mastered his terror, and he refused to pay. Levelled his pistol, but lingering on his aim, Fitzgerald offered to bet anybody a thousand guineas that he would hit Walker wherever he pleased, but of course received no reply.

"You won't take the bet?" cried the duellist; "then here goes at his right shoulder!"

The bullet struck the spot indicated, but did not penetrate, thanks to a couple of thick coats which Walker wore. However, it inflicted a contusion which disabled the arm and terminated the duel, though the quarrel itself was kept up much longer.

On his return to town Fitzgerald reiterated his demand for "his" money or another meeting. Both alternatives being rejected, he attempted to renew the quarrel on other grounds, proclaiming everywhere that Walker had been "padded" on the late occasion, and had thus escaped injury by fraud. This device proving as ineffectual as the others, and society frowning on the system of hunting his victim about which our hero had resumed, the latter published an account of the affair which certainly hit Walker very hard, but which also revolted most people by the cynical frankness of its avowals, gambling sentiments, and duellistic practices which, though common enough on the Continent, had not yet obtained currency in England.

In short, the Walker business—displaying as it did so many un-English qualities in our hero—ruined him for ever in London society. Nobody cared to consort with him afterwards. He therefore took an early opportunity of returning to France and to close gambling partnership with an old comrade, Major Baggs, like himself an ex-officer of the 69th, and the original of "Captain Duff Brown" in Charles Lever's novel, *Jarrington*.

There was then a mania among French fashionables for English horses and for horse-racing as it was in England; and Fitzgerald (in addition to his gambling speculations) took to supplying his Parisian acquaintances with the one and to initiating them into the practices of the other, making full profit the while out of their sublime ignorance of both. Somehow or other, few people can have much to do with horse transactions without contracting some of the peculiarities of the low-lived horse-dealer, and ere long George Robert became rather too well known for such peculiarities. A bit of sharp practice of this kind enabled him to fasten his acquaintance on another Irish celebrity of that day, Archibald Hamilton Rowan, who happened to be then in Paris.

Rowan, who was very unwilling to have anything to do with Fitzgerald, but whose easy good-nature would not allow him to repel the other's advances, has left an account of this acquaintance. It is the only notice extant of this portion of Fitzgerald's career, but it is sufficient. A better picture than it gives of our hero as he then was could not be desired. This perfection, however, is not due to any artistic skill on the part of Rowan, but to the fact that Fitzgerald was one of those people whose attitudes are always picturesque in the highest degree, and who interest us in any portrait, however coarsely drawn, which has the merit of fidelity.

Not long before, a Mr. Sandford, a very young man and a stranger in the French capital, was fastened upon by Fitzgerald, who was always on the watch for such victims, and led him to supper at the most dangerous house in the city—that kept by Baggs. Play of the deepest kind succeeded the supper, and Sandford lost a large sum. Then came a dispute between the plunderers respecting the division of the booty; and this developed rapidly into a mortal quarrel, the true cause of which neither cared to avow. Baggs, who considered himself the party aggrieved, found a more decent pretext, asserting that he had lent Fitzgerald much money from time to time, and that the latter refused to acknowledge the debt.

One evening, when Fitzgerald was quitting the theatre with Rowan, he encountered Baggs in the lobby. There was a short but sharp dispute between the gamblers. In the end George Robert drew his glove over Baggs's face, an insult to which Baggs replied by dashing his hat in the other's eyes.

Here the guard appeared and laid hold of the Major, while Fitzgerald slipped out and was driven off by Rowan. Several days passed, Baggs remaining under arrest and Fitzgerald finding shelter in Rowan's hotel. At length the Major was released, and it was arranged that the parties should meet on Austrian territory, in the vicinity of Valenciennes, and fight the quarrel out. Baggs was to be attended by a Captain O'Toole, and his opponent by a Mr. Hodges, and the parties were to leave Paris on the same day.

The day came, and Baggs and his second started as arranged. Hodges did not appear, but sent his principal a note in which he apprised him that he had just been seized by a severe attack of gout, and could not move. A messenger was despatched in the hope of arresting Baggs, but the Major was gone. Fitzgerald now appealed piteously to Rowan to save his honour; and the latter, who had no desire to mix himself with the affair, consented, though reluctantly, to act as second.

Here occurred a difficulty which, as Rowan significantly remarks, explained the sudden attack of gout which had prostrated Hodges—Fitzgerald had no money, and no means of raising any. He drew a bill for 100*l.*, but nobody would cash it until Rowan was induced to endorse it. Ultimately the good-natured second had to pay the money.

The pair set off in pursuit of Baggs and O'Toole, and soon reached Valenciennes. A suitable piece of ground was soon met with, and the distance—eight paces—measured. Baggs knew too well with whom he had to deal to let him have his pet distance, five paces. When the parties were placed in position, Baggs beckoned his second and whispered a few words. The next moment O'Toole drew Rowan aside, and, apologising for the remark, said he had reason to think that Fitzgerald was *plastronné*—a word meaning padded, or plated. What followed was remarkable.

Overhearing the remark, Fitzgerald threw off his coat and vest, "exhibiting himself," writes Rowan, "to our great astonishment, with his shirt tied round the body by a broad ribbon, *couleur du rose*, while two narrower ones closed his shirt sleeves round the upper and lower joints of the arms." George Robert gave an explanation of this which we omit. It did not satisfy Rowan; and it does not satisfy ourselves. The Major was afterwards examined to the same extent, and no further, though he invited Rowan, in his bluff, English way, to "Feel, sir; feel." The duel then went on.

"Baggs sank on his quarters," writes Rowan "something like the Scottish lion in the Royal arms, while Fitzgerald stood as one who has made a lounge in fencing. They fired together, and were in the act of levelling their second pistols, when Baggs fell on his side, saying 'Sir, I am wounded.'"

"But you are not dead," said Fitzgerald.

"At the same moment he discharged his second pistol at his fallen antagonist."

"Baggs immediately started on his legs and advanced on Fitzgerald, who throwing the empty pistol at him, quitted his station, and kept a zigzag course across the field, Baggs following. I saw the flash of Baggs' second pistol, and, at the same moment, Fitzgerald lay stretched on the ground. I was just in time to catch Baggs as he fell, after firing his second shot. He swooned from intense pain, the small bone of his leg being broken. Mr. Fitzgerald now came up, saying—

"We are both wounded; let us go back to our ground."

Such a proposal could not be entertained; and the wounded duellists—for Fitzgerald had been hit in the thigh—were carried off the field.

"I could not help asking him," adds Rowan, meaning George Robert, "how he came to fire his second pistol. His reply was: 'I should not have done it to any man but Baggs.'"

Our hero was long confined by his wound, which left him slightly lame for the rest of his life. When he recovered he went straight to Ireland, which he reached towards the end of 1775.

Thanks to his uncle, the Bishop of Derry, with whom he was always a favourite, he was able to make a suitable appearance in Dublin. Here he fixed himself for some years, and met with the greatest success; and here, again, he displayed that capacity for rapid and complete change of character which we have already remarked. In untoward circumstances he had flung aside his nobler qualities and conformed to degradation, until it seemed as if that, and no other, had been his native state; and in success he cast off the baseness which penury had fastened to him, and resumed his old self with the same facility and completeness.

For the next three years he was in most things the superb representative of the haughtiest race on the island. His house in Merriem Street was the resort of all that was high-bred in Dublin society. He was the idol of the mob too; for in addition to his dash, glitter, and fighting reputation—things always dear to the Irish—he took impetuously to patriotism, which was then a passion with all that was great and noble in the land, as well as with the masses.

He took the lead wherever he went; outshining all that was brilliant; humiliating all the swaggers—notably those legal and pugnacious celebrities, Barry Yelverton and Fitzgibbon—two men

who remained ever after his mortal enemies; and winning, it is said, no less than a hundred thousand pounds during this short period.

Whatever he might have been elsewhere, he always gambled in princely style in Ireland. His stake was never less than fifty guineas—his sideboard was heaped with rouleaus to that amount: while he seldom stirred abroad without having a hundred of them carried along by a couple of servants in gorgeous liveries.

There was no sharp practice now, but much wild wagering, on which tradition still loves to dwell.

Other traditions tell how he dealt with the "bucks," a plague then infesting the streets of Dublin, and, indeed, the street of every town in Ireland. These "bucks" were half-bred young fellows of some means and high animal spirits, whose sole occupation consisted in making town-life intolerable to quiet people. Parliament was more than once compelled to frame penal enactments with the view of restraining their peculiar rufianism; but as there was no properly constituted police to enforce them these statutes were of small effect.

Among the tricks of the Dublin bucks was this. One of them would take his stand in the middle of a crossing on a dirty day, and, drawing his sword, thrust everybody who wanted to pass into the mud. It was a common thing to see half-a-dozen or more of these unpleasant sentries lining a leading thoroughfare all ready to afford each other support. Nor were they content with merely obstructing the passage. They knocked off hats, ripped up garments, and pricked the limbs of the wearers with the points of their weapons, and broke ribald jests on them the while—to the vast amusement of the ragamuffins who used to collect in the vicinity. If anybody tured on one of these bullies the rest would rush up and form a circle round him; then seizing him by the collar and the arms they would prick him about the legs until they considered him punished sufficient.

Fitzgerald proposed to some of his brother exquisites and fire-eaters that they should clear the streets of the metropolis of these pests. It was just the sort of proposal to suit such daring spirits, and an association was immediately formed to carry it out. After Fitzgerald himself the most conspicuous members were three Sligo notabilities—Mat Ormsby, Abram Fenton, and Pat O'Hara, one of whom, round whose knees the writer has often played, attained the patriarchal age of ninety-seven. Like their leader they were consummate swordsmen, and dandies of the first water—the Dandy being in all essentials the antipodes of the Buck—a distinction which people who write about the Ireland of the past are very apt to forget.

The association set to work most heartily, and in this way. Whenever a fine afternoon followed a showery morning they would rally forth in knots of four or five, each being followed by a lusty valet carrying an oak sapling. On reaching the haunts of the bucks the servants kept the rabble off while the exquisites did the work they had undertaken. For a couple of months few days passed without three or four affrays between the bucks and the dandies, in which the former invariably came off second-best. Ere long the mainstay of the bucks, the mob, turned against them too. This meant that defeat was sure to be followed by hooting and pelting with mud and stones. Then the pleasant pastime of blocking the thoroughfares in broad daylight was abandoned. Oddly enough, the man who had the chief hand in putting down the bucks for the time, is the one who more than anybody else is credited with their brutal tricks.

Had Fitzgerald confined himself to Dublin the probabilities are that he would have remained to the last a social leader, and been remembered only as the fitting companion of Charlemont, Alvanly, Flood, Ponsonby, and the rest, who made the choicer circles of the Irish metropolis in those days the most brilliant in Europe. But his evil fate drew him down to semi-barbarous Mayo, where he—the essence of Parisian refinement—was as much out of place and as much misunderstood as he would have been among the Zulus.

On his return to Ireland, George Robert found his father—who was evidently in his dotage—in the hands of three very dangerous persons. These were, Charles Lionel, our hero's younger brother, who saw nothing before him but poverty, should the settlement of the estate on George Robert remain unchanged; a woman whom old Fitzgerald had taken from a life of lowest infamy and made his mistress; and a relative, Patrick Randal McDonnell by name, who was a low-lived attorney, profligate in his manners and utterly unscrupulous in his profession—a pettifogger of the genuine old rascally stamp, and such a one—so given to violence and fraud, to impudent perversions of the law and to daring contempt of it when it suited his purpose—as was not then to be met with out of Ireland. He was, besides, the recognised leader of about the most truculent and lawless mob in the island—that of Castlebar.

These three exercised unlimited sway over old Fitzgerald, simply because they allowed the depraved appetites of the weak old senile lunatic full swing. And they used their power in obtaining for themselves and their supporters, among whom were some of the leading men of the neighbourhood, the most valuable portions of the property on long leases and at nominal rents. The leases of course were illegal, but the accomplices stuck to the plunder as long as they could.

Our hero took the necessary legal proceedings to secure his rights. While these were in progress the old man, who was enormously in debt, was arrested and carried to a Dublin sponging-house. George Robert interposed at once and procured his father's release, by paying down £1,000, and rendering himself responsible for the rest of the old man's just debts. In return the latter ratified the original settlement. And shortly afterwards the Court of Chancery constituted George Robert custodian of the estate. However, by this time the old man was back again in the hands of the trio, and our hero had literally to fight his way into possession, storming the family mansion in the course of the business, and at the risk of his life. This was in 1778.

George Robert now set up for a model landlord, and did a great many wise and good things. But he set up also for a political and social reformer of the most advanced order: he declared against the oligarchy that ruled the country; he denounced alike the tyranny and greed of the landlords, the indolence of the tenants, the treatment of the very poor, the extravagance of everybody who had anything to spend, and the universal lawlessness; he settled a colony of thrifty and industrious Presbyterians from the north on his lands, and provided them with a clergyman and a meeting-house: and he interfered, when no other man of position dared to do so, in aiding the officers of the Crown to arrest a multitude of people in and about Castlebar, guilty of the then very common offences of obtaining the premiums offered by the Lieutenants by fraud and perjury. Thus he set against him the great landowners, the squires, the fanatical lower classes, and the dangerous rabble of his county-town. Every one of them regarded him as an interloper who was to be put down, no matter how.

But such was the dash, energy, and terrible reputation of Fighting Fitzgerald, and such his powerful connections, that not a man, far or near, dared to oppose him openly. The best among them cowered before him as though he had been their sovereign. And it must be allowed that he bore himself towards most of them—especially those whom he regarded as upstarts—with all the scorn and insolence of an Eastern despot, which only rendered the general hatred the more intense.

The only way in which his enemies could reach him was by inciting his brother, the mistress, and the pettifogger to annoy him in every way: and this was done to an extent perfectly inconceivable. Over and over, murderous ambushes were laid for him, and over and over were the wild fighting squires of Galway urged against him; but he escaped the first, though not always unscathed, while his sword was invariably an overmatch for the swords of the second.

Tired out at last, he seized his father by force with the view of paralyzing the trio. It was a lawless act, but hundreds worse were daily taking place around him: and considering the circumstances under which the deed was done, nobody really blamed him. In our own day the law would have assisted him in it; but there was little law to be had in such cases twenty miles outside of Dublin in those days, and none at all in Mayo. So far as that sort of thing went, Cromwell's equivalent for Connaught still held good. The deed was illegal, however, and that was all his enemies wanted.

A warrant was granted against him for kidnapping his own father but the difficulty was to execute it. For Fitzgerald had erected and armed a formidable battery commanding the approaches to his house, and—this being the volunteer era of Ireland—had organised a military force among his tenantry, who, being mostly Presbyterians and strangers, hated of the natives, were devoted to his person.

He was arrested at last by surprise, in the grand-jury room of Castlebar, on the first day of the summer assizes of 1780, and tried instantly—the presiding judge being a member of one of the powerful country families. It is hard to square the proceedings that followed with modern ideas of what such things should be. George Robert was convicted and sentenced to pay a fine of 1,000*l.*, and to be imprisoned for three years—the latter portion of the sentence being intended to keep him from taking any part in the forthcoming general election of 1782.

Irish prison discipline was then very lax. Three days after his commitment, our hero—who had the run of the gaol—walked up to the principal entrance, threw down a bag of guineas to be scrambled for by the warders, and walked quietly out while they were rolling in a heap on the floor. He remained at large for fifteen months, during which he kept his father tight in his clutches; hunted, gambled, and duelled to the top of his bent; and carried things in general with a high hand over everybody.

At length the general election drew nigh, and the Government, giving way to the pressure put upon it by the Mayo magnates, sent a strong military force against Turlough. There were three companies of foot, a troop of horse, and a battery of artillery under a field officer. It found the fort dismantled, and George Robert and his father gone. Three weeks later the latter turned up in Sligo and the former in Dublin. Our hero was arrested instantly, and kept in prison till the general election, when he was released at the intercession of his high-placed relatives.

The old man was now dead; but the trio, who had managed him so long, continued to pester George Robert still, being encouraged, of course, by the leading men of the county. His imprisonment had somewhat tamed our hero, who became a good deal more circumspect than of old, though still remaining quite sufficiently headlong. This emboldened the pettifogger. Among other courses the latter took to bringing charges of attempting his life against Fitzgerald—four of them in as many months. They were all transparently false, and failed egregiously. Moreover, he instigated the mob of Castlebar to rob Fitzgerald, harry his lands, maltreat his tenants, and take pot-shots at himself. In short, McDonnell got up a feud of the right old Irish fashion between the men of Turlough and the mob of the county-town which stood about four miles off.

At length the pettifogger and two of his accomplices, towards the close of 1785, had the audacity to kidnap one of Fitzgerald's servants and to hold him close prisoner in one of their houses for eighteen days, doing their best the while to bribe or intimidate the man into turning false witness against his master in support of one of McDonnell's murder charges.

The man escaped, and Fitzgerald lost no time in obtaining warrants for the arrest of the three, who went into hiding for several weeks. Their whereabouts being discovered at last, they were cleverly captured by a party from Turlough, early on the morning of February 24, 1786. Fitzgerald directed the prisoners to be marched to Castlebar, and the party started immediately.

On the way occurred a circumstance which Fitzgerald's enemies

have succeeded in throwing into deep obscurity. A shot was fired at the escort, one of whom there is reason to believe was killed by it. Thereupon the Torlough men—fery spirits all, who had little regard for human life, and who heartily detested two of their prisoners—turned upon these two, McDonnell being one, and slew them. They then retraced their steps to Torlough with the remaining prisoner. George Robert heard their story with amazement. Disregarding those about him, who entreated him to fly, he despatched a mounted messenger to Castlebar with the news, and sat down quietly to wait the result.

They soon came in the shape of a party of soldiers and a raging mob. The former took possession of George Robert, and left the mob to sack his house at their ease. This was done very effectually; plunder to the value of 30,000*l.* being carried off, nor was any inquiry ever made concerning it.

Our hero was lodged in his old quarters about noon that day. Two hours later a troop of assassins—connived at by the local authorities—entered the gaol and assailed the prisoner, whom they wounded in fifty places; nor did they depart until, as they thought, they had "done his business." Unfortunately for him, they were mistaken.

He was now completely in the hands of his enemies, and these from the greatest to the smallest, took full advantage of his situation. Under pretence of preventing a recurrence of the outrage, he was confined so rigorously as to render the preparation of his defence really impossible. Meanwhile care was taken to suppress everything—men and facts—that told in his favour, and to twist the matter fatally against him.

The assizes came on at length, the presiding judge and the prosecuting counsel being his old enemies, Yelverton and Fitzgibbon, and the high sheriff an enemy more pronounced than either, the Honourable Denis Browne.

The ringleaders of the prison outrage in February were tried first, and though the case against them was proved to the hilt, they were every one acquitted.

Then George Robert was arraigned with two others. The theory of the prosecution was that the slaughter had been premeditated, and that a plan of rescue had been got up to give a colour to it; but not a particle of reliable evidence was produced in proof. On the contrary, much of the testimony was improbable, and the more material portions were contradicted by circumstances that could not lie. In short, there was nothing whatever to connect Fitzgerald with the deed. Still he was condemned, and left for immediate execution, as were his companions in misfortune.

At six in the evening, an hour after the hanging of the others, he was led to the hill of Castlebar, where a new gall was in course of erection. A part of the scaffolding was utilised as a gallows. George Robert was dressed in a faded suit of the Castlebar Hunt, his vest soiled and unbuttoned, his shoes and stockings coarse and dirty, and his hat bound with a hempen cord. A more striking contrast to his former elegance could not be conceived. His step, however, was firm, and his demeanour self-possessed and courageous.

The execution—greatly prolonged by bungling, which many thought intentional—was very cruel and trying to the doomed man. The first rope broke with his weight; and as nobody could be induced to supply another, they were obliged, after waiting about an hour, to use a rope from the building. This proved so long that Fitzgerald's feet touched the ground. And it was only when a storm of indignation from the spectators apprised the high sheriff, who stood by, that this vile work was being carried too far for even the mob of Castlebar to put up with it, that the rope was shortened and the tragedy brought to an end.

The dead body was transported at once to Torlough, and "waked" for a few hours in an out-house. At midnight it was borne to the grave, "dug on the wrong side of a ruined chapel in a lonely part of the estate." Here it was buried without coffin in the dress described.

What right-minded people thought of the trial and execution may be gathered from the following remark made to the judge on his return to Dublin: "Come from doing Connaught justice, my lord! Yes, George Robert Fitzgerald was a murderer, and—he was murdered."

Many years later his brother, Charles Lionel, made it a death-bed request that he should be buried in the grave of the celebrated duellist. When this was opened, the body of George Robert was found almost perfect, a fact which told strongly on the superstitious minds of the people, but which may be accounted for by the chemical properties of the soil. However, it is beyond dispute that not a single one of the ringleaders in the prison died a natural death. —*Cornhill Magazine.*

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XLII.

#### SHIDZUKA'S WATCH.

From sunset until nearly midnight the little band of friends and liegemen who had accompanied Yoshitsune to his retreat, kept the wassai bowl circulating without intermission from hand to hand. Ignorant, for the most part, of the events described in the last chapter, or careless if not ignorant, these knights and vassals were more than willing to promote so unwonted a revel. Benkei himself and the few that shared his confidence were not entirely

without misgivings, but after all it seemed little likely that Friar Tosa would make any immediate attempt to carry out his evil design. If it had once been possible, however, to entertain a hope of deterring him by an exposure of the suspicion under which he had fallen, that hope was now no longer tenable. The false oath he had taken—an oath of doubly solemn import for one in his position—proved him to be a man altogether beyond the reach of scruple or hesitation. Partial failure would in all probability have the effect of rendering him even more desperate, and under any circumstances the destruction of those that might attest his perjury could not fail to be regarded by him as a considerable gain. On the other hand it seemed almost certain that he would await a fresh opportunity, since the present was forfeited by the presence of his victim, and it was in the faith of this assurance that Yoshitsune's most devoted followers gradually allowed themselves to be absorbed into this tumult of carouse which their chief shewed so unusual a desire to promote.

As for Yoshitsune himself, it is not difficult to understand his feelings. They were in part wrathful; in part reckless. He had refused to credit any evidence of his brother's treachery until confronted with Friar Tosa, and then the instinctive aversion aroused in noble natures by the contact of baseness, had suddenly made him wise, to the momentary destruction of his trust in everything just or loyal. In his patient exile and brave struggles against early disaster, Yoritomo had shewn himself well worthy of the marvellous success he now enjoyed, but at the same time the world was not wrong in attributing the attainment of that success to his younger brother's prowess no less than to his own merits. Of this Yoshitsune did not affect any false ignorance. He had imperilled his life a thousand times, and was still ready to sacrifice it at any moment for the sake of his father's memory, but never once had his efforts been weakened by any feeling of envy or emulation. What he had done was done loyally and without a thought of self-aggrandizement, for believing that the confidence and affection he so largely bestowed were at least in part reciprocated, it never occurred to him to apportion the results achieved by his victories. He was willing to resign everything in his brother's favour except the right to fight for their common cause, and the merit of having helped to restore the fair fame of the House of Gen. Is it wonderful then that finding his youth of patient purpose and his manhood of real effort rewarded by contemptible envy and mistrust, he was roused for a moment to unreflecting anger and utter carelessness for a life that seemed so little worth living? This fabric of rebuilt power could not hope to have more stability than that upon whose ruins it had been created, such weakness being already discernible in its mainstays, and if all that had hitherto been achieved was destined presently to prove abortive, what profit could there possibly be in tarrying to witness so miserable an issue? Better be merry for a time with the comrades he had essayed beyond the possibility of mistrust, and in the contemplation of whose fidelity he might even lose sight of the shadow that loomed in the future. If his brother had really conceived so foul a scheme and entrusted its execution to so base an instrument, it was scarcely worth while to take precautions that could only serve to preserve him for renewed attempts. He himself at least would be loyal to the last, nor let the world find cause to question his faith by seeing him suspicious.

They were but a small band that mustered that night at the castle; some thirty men in all, neither in case of attack would it be possible to obtain succour for a considerable time but, as we have said, the main part knew no reason to anticipate danger and the rest either despised or wilfully ignored it. Before midnight moreover they had drunk so deeply that it mattered little whether they were many or few. Man after man had laid down to a sleep of utter oblivion, and in the whole castle there was but one left to keep watch—that one was Shidzuka, Yoshitsune's young wife. Entrusted by her husband with every secret of his life, she knew from first to last the story of Yoritomo's past confidence and his present mistrust. She had heard too all the particulars of Friar Tosa's arrival from Kamakura; his summons to the castle; his interview with Yoshitsune, and the solemn oath he had sworn in support of his innocence. But she was not for an instant deceived by her husband's profession of belief in that oath. She saw on the contrary that, disgusted beyond measure at a combination of treason

and perjury scarcely conceivable to one himself of so loyal a nature, he had lapsed for the moment into reckless indifference, and she observed too with no little alarm that the same carelessness seemed to have overtaken not only the knights that ought to have kept guard, but even the ever watchful Benkei and Saburo themselves.

The castle was in fact to all intent left completely defenceless. Of what avail was it that amongst the garrison were numbered men whose names will be remembered so long as their country exists? Or that one brave girl sat with beating heart and strained nerves expecting every moment to hear the shout of onset? Even though her anxious ear detected the approach of danger in time to give warning, that warning would fall unheeded, or at best rouse soldiers scarcely capable of resistance.

At midnight the moon sank below the hills and a spring rain began to fall in fitful dashes. Sometimes it descended with a gentle pattering that served as an accompaniment to the monotonous ripple of the river; sometimes it hurled itself down in headlong haste, making the silence resonant with its tumultuous din, and it was only in the intervals of its violence that any other sound was distinguishable. Nevertheless, though Shidzuka felt that her watching, in any case little likely to be of much service, was rendered well nigh completely useless by this mischance, she relaxed nothing of her painful vigilance, hoping always against hope, that either the thunder of the rain upon roof and pavement or some passing vision of the perils they were neglecting, might rouse the sleepers from their death-like lethargy.

Every hour that passed thus was a decided gain, not merely as an added respite but also because time alone was needed to restore the garrison's numbed faculties to their wanted wariness. Yoshitsune would surely return cityward on the morrow, so that the real danger was limited to that one night, for however little disposed he might himself be to anything like precaution, such an attempt as that supposed to be contemplated by Friar Tosa could only be feasible under exceptional circumstances like the present. On the other hand this fact was probably well known to the friar and if so would surely have the effect of hastening his action, so that even the undisturbed passage of the moments was not an unalloyed advantage since it might in reality signify the gradual approach of peril.

Revolving these things over and over in her mind, Shidzuka maintained her attitude of unwearying watchfulness until the first ray of dawn appeared on the eastern horizon. The night had seemed so long that unconsciously she had learned to esteem it interminable, and when across the stillness that succeeded the rain's pattering there came to her ear the feeble note of a half-awakened mavis, it sounded like a message of safety sent specially by the gods. She moved to the verandah and opening the shutters looked out into the still impenetrable darkness. The silence was almost oppressive. Nothing lived or moved around; only the outlines of the hills separated themselves little by little from the darkness, and the river, swollen by the rain, surged and murmured in its channel as though the messengers from the clouds had reminded it of their freedom and its own captivity.

Shidzuka knew that the moment on the confines of darkness and daylight was the one most commonly chosen for the delivery of an assault, and it seemed to her that if only the light just glimmering in the east might find time to whiten the foam of the stream's eddies, all cause for apprehension would be past. Possessed by this fancy she turned her eyes towards the dark line of rushing water with breathless intentness. As yet the movement of the current alone was discernible, and that rather by the sounds of its progress than by any certain appearance it presented. Little by little, however, whether her sight adapted itself to the darkness, or the twilight really grew brighter, she thought she could discover the shadowy mists brooding by the river's margin, and at the same time the murmur of the current appeared to assume a more regular and distinctly marked cadence. To this latter fact she paid at first slight attention. Indeed the calm influence of the hour and the gradual return of confidence were beginning to convert her watch into a drowsy unconsciousness, and in another moment the fruits of all her brave vigilance had been lost, when suddenly a breath of air stirring in the south gave a new import to these soft sounds.

She sprang to her feet, and without waiting to seek any confirmation or contradiction of the terror that had fallen upon her, ran rapidly across the garden and mounted the watch-tower. Her senses were now so sharpened by apprehension that neither darkness nor distance had power to baffle her, and the briefest possible interval saw her speeding back to the castle with the newly acquired certainty that a large body of horsemen were approaching the southern barbican. The hour, the direction from which they came and the occurrences of the preceding day, made it impossible to doubt that they were enemies, while to oppose their attack there was no force at hand, except a score of men as yet unarmed and sleeping a sleep from which it might be more than difficult to arouse them.

Shidzuka's first idea, of course, was to warn her husband. She fancied that he at least would be easily moved by her voice, and she depended on his summons to muster the rest of the garrison. Even then, however, there would scarcely be time for the knights to buckle on their harness, and man the barbican before the attack commenced, so that the safety of the whole party might depend on the gain or loss of a moment. Realizing all this as she sped back from the watch-tower, the extreme peril of the situation presented itself so vividly to her mind that when she reached Yoshitsune's side and sought to speak his name, her lips refused to adapt themselves to any articulate utterance. She essayed various devices to rouse him, but the heavy lethargy induced by the fumes of the wine resisted all her efforts, and in her despair she fancied herself destined to witness his murder and know that her own weakness had brought it about. Already it seemed too late to hope, for the sounds of the approaching terror had been so borne in upon her mind during the moment she tarried in the watch-tower, that the plashing of the river, the rustling of the wind and even the deep respiration of the sleepers now went to multiply these menacing echoes until all the air was filled with the clash of weapons and the clatter of approaching hoofs.

Truly the perjured priest's evil design had attained the very verge of completion. The only conceivable obstacle that remained in his path was his own ignorance of the facile victory that awaited him, for the less resistance he encountered in his approach, the more he might anticipate on his arrival. In this, however, there was scanty comfort, seeing that the end must in any case be the same: a brief struggle more terrible perhaps in its details than complete submission, and then, the fatal blow. But would Yoshitsune recover consciousness before that blow was struck, or would his sleep pass undisturbed into the everlasting unconsciousness of death? These were the speculations with which Shidzuka was now tormented. She had heard it said that the sound of clashing arms has power to recall any true knight's senses even from the delirium of disease, and if so, she was perhaps destined to see her husband start up at the last moment with empty hands, and fall under a hail of crashing strokes, without the power to punish one of his craven murderers, though they were nothing but untried shavelings and he, the peerless soldier no arm had ever yet overcome. No! this at least should not be. She would be his sword-bearer, and if haply he awoke to a knowledge of his peril before the worst had come, from her hands he should receive the blade all Japan had learned to dread.

Eager to achieve this purpose, she turned towards the alcove, and was about to possess herself of Yoshitsune's sword and glaive when a new idea presented itself. Two paces from where her husband lay, his armour—cuirass, casque, greaves and gauntlets—hung suspended from the lacquered mail-rack. Seizing all this with the strength of phreusy, she raised it above her head and cast it clashing to the ground.

The result was almost more than she had hoped. Yoshitsune sprang to his feet, not confused or startled as one might have expected, but so composed and in such perfect possession of every faculty that Shidzuka could not persuade herself he had slept at all. He did not ask any question, but after a brief scrutiny of his girl-wife's terror-stricken face, seized the alarm-horn and blew a blast that echoed from end to end of the castle. In a moment every soldier was on foot. Accustomed to deliver or repel an attack at an instant's notice, these veterans were not to be perturbed by any summons however sudden. Every man set himself silently to buckle on his harness, and though Yoshitsune

did not wait to be accompanied to the barbican, he had scarcely reached it before half the garrison were ready to range themselves at his side.

Friar Tosa had reckoned fully on surprising the castle, for he fancied that his enemies would count their avowed knowledge of his designs more than sufficient to deter him. At the same time he knew his force to be fully four times that of the garrison, so that he was resolved to persevere in his attempt, whatever resistance he might experience. Instead, therefore, of sharing the hesitation which the sound of the conch caused his followers, he urged them to increase their speed, so that the hundred cavaliers dashed up to the castle gates, just as Yoshitsune and his men took their posts within.

The drawbridge was up and the gates were already closed, but the place, as we have said, was not designed to withstand any serious attack. Its narrow mont and low parapet made it accessible at many points, and the danger was that the friar might divide his men into three or four bands and deliver simultaneous assaults. The mere capture of the place, was not, however, the assailants' object. Unless they carried off its master's head, their whole attempt would be worse than useless, and knowing this Yoshitsune understood that their efforts would be directed chiefly towards setting the castle on fire, and so compelling its garrison to sally forth and encounter an overwhelming attack in the open. He would not himself have shrunk from this meeting, however unequal the forces engaged, for he longed to come within striking distance of his treacherous foes and their forsworn leader, but as a general he was constrained to consider his followers' safety and if possible defeat the enemy's design. At the same time this could only be achieved by sending a force to engage the assailants in rear, and the paucity of the garrison's numbers rendered such a proceeding impossible, so that it became a question whether, after all, an immediate charge might not be the best chance of escape.

Yoshitsune would probably have acted forthwith upon this idea could he have mustered all his men at once, but he observed, somewhat to his surprise, that little more than half the number had as yet reached the barbican. While he paused, the attack commenced, and soon he had no leisure to think of anything but preserving the place from immediate capture. Three times the enemy advanced to the assault under cover of a flight of arrows that made it impossible to man the parapet, and three times he was driven back leaving not a few of his men dead or disabled before the gate. Friar Tosa himself led every onset, exhibiting a strength and skill that more than justified Yoritomo's choice of such an agent, and when his followers retreated after the third attempt, eight only of the thirteen soldiers garrisoning the barbican, remained capable of wielding a sword.

If this continued, the fall of the castle was only a question of time. Every attack must inflict greater loss upon the defenders and less upon the assailants in proportion to the constantly increasing disparity of their numbers. Moreover, at any moment the much dreaded dispersion of the enemy's force might be carried out, and indeed even now it appeared to be in contemplation, for a movement evidently having reference to some redistribution of their band was already discernible among them. Yoshitsune looked round upon his men still standing stoutly in their places, but scarcely outnumbering the corpses of their comrades that lay at their feet. He knew that he could count on their support so long as any one was left to grasp a weapon, but he knew also that for his sake alone they were imperilling their lives, and he experienced an intense reluctance to accept such a sacrifice at their hands. Better far ride out alone among these priests and hirelings and sell his life at a cost that would be long remembered, than involve so many others in his ruin for the sake of deferring what could not ultimately be avoided. The end for which he had lived was, after all, accomplished, and if his death were really essential to Yoritomo's peace of mind, why should he shrink from it now, any more than he had done when the issue was the fall of a fortress or the fate of a skirmish?

But first he would fain say farewell to his old comrades Benkei and Saburo. He had missed them sorely from his side hitherto, but still he never doubted that they were close at hand until a careful scrutiny convinced him that they had not yet joined the defenders of the barbican.

Never before had they failed him in his hour of need, and never before had he known how insignificant his strength seemed without them. Had it, however, been a mere question of the aid they might have rendered, he could easily have pardoned their tardiness, but as it was, it gave him no small pain, for he knew what the thought that they had been absent at such a time must afterwards cost the men themselves. Yet on the whole it was perhaps better so. They would never have consented to be disassociated from the step he was about to take, and though he deemed it little likely they would survive him under any circumstances, still it would be easier to die with the knowledge that he had not led them to certain destruction.

These reflections and the resolve they induced were all the work of an instant. The Genji knights had no conception of their leader's design, and when he ordered them to open the gates, they immediately prepared to take part in the sortie this proceeding heralded. Neither did Yoshitsune venture to declare the truth. He knew his liegemen too well to believe that they would suffer him to ride alone to his death, and so telling them merely that he proposed to advance and treat with the enemy, he forbade any to follow him and sheathing his sword passed deliberately through the gate.

When Friar Tosa observed this extraordinary proceeding he was at first inclined to doubt the evidence of his senses, but seeing presently that the solitary cavalier who came forward so unconcernedly was Yoshitsune himself—not an envoy sent to treat nor yet a common soldier whose life was of comparatively small value, but the one man who could never be expected to forgive this treacherous attack nor ever himself to expect to be spared by those that had so much injured him—he at once concluded that this manoeuvre was the preliminary to one of the wonderful stratagems for which Yoshitsune was famous. Instead therefore of leading his men to the charge immediately, he admonished them to be wary and on no account suffer themselves to be inveigled from their position until he gave them permission, lest they should fall into an ambush or by some other accident forfeit the victory they had almost won. The consequence of this was that not only were the garrison's suspicions dissipated by their chief's unmolested advance—for they had begun to grow uneasy as he left the castle further and further behind him—but also that the enemy forfeited their opportunity by that moment of hesitation. For at the very instant that Yoshitsune drawing his sword rushed forward to his death, as he fancied, Friar Tosa's men found themselves furiously assailed in rear by the foe they dreaded most after the Genji chief himself. Indeed so exactly coincident were the two events, that one might not, reasonably, have supposed them to be the result of accident, and it is scarcely wonderful that the priest's followers were overtaken by a fatal panic under the circumstances.

The thing had, however, fallen out simply enough. Benkei and Saburo knowing the attacking force's numerical superiority, and foreseeing that if the assault were delivered from several quarters at the same time it could not possibly be withstood, had immediately adopted the only apparent method of preventing such a contingency. They had not communicated their design to Yoshitsune, fearing that the peril it involved might induce him to oppose it, but passing out of the castle by the back gate, had made their way along circuitous streets and lanes till they found themselves in the enemy's rear. That they should have reached their destination and delivered their charge at the exact instant of Yoshitsune's advance was of course nothing more than a happy accident, no less surprising to themselves than demoralizing to their foes, but even after the event there were many of the garrison who refused to be persuaded that the whole affair was not the result of an extraordinarily perfect design. As for Friar Tosa's party, they scarcely made any resistance. Few of them even paused to consider what had befallen them, but fled away at once to escape the death the newcomers' swords dealt here and there with such terrible rapidity. The friar himself, giving no further thought to the men who had failed to accomplish his purpose, made the best of his way to the cloisters of Kurama, hoping to find a temporary refuge there among the hills, but the cenobites were faithful to the affection they had bestowed on Yoshitsune in his boyhood. They pursued the perjured priest, captured him, and led him the same day to the castle of Horikawa.

The crime he had committed was one that no honest man could regard without aversion: assassination undertaken solely for the sake of guerdon, and a false oath sworn under conditions that made the perjury doubly heinous. Among the knights and nobles who hastened to congratulate Yoshitsune or to guard his castle against any fresh attempt, there were many not more devoted to his interests than to those of Yoritomo, but not one that would have sought to shield the priest from the punishment his foul deeds merited.

He was led bound into the castle garden and placed before the room where Yoshitsune and his knights sat. Wounded, disgraced, and in all probability about to die a painful death, his bearing was just as stout and defiant as when he rode up to the castle gates in the grey of morning with the assurance of speedy victory and the realization of Yoritomo's magnificent promises in the near future.

Yoshitsune looked at him long and fixedly but without any evidence of anger. Much as he loathed the man's doings he could not but admire his unflinching courage, neither might he forget that even while he sat in judgment on his would-be murderer, Yoritomo was praying at Kamakura for the success of the agent his false suspicions had armed.

"Friar Tosa, the curse of the gods and the contempt of your fellow-men are your guerdon in this matter. It was not the cenobites of Kurama that overtook you in the valley of Sojo, but the sentence of heaven."

The priest laughed jibingly at this solemn address. "You know well, my lord," he retorted, "that all these things are the device of your brother, the Lord Constable, and that in condemning me you accuse him. As for the misfortunes that have overtaken me, there are heavier ones in store for those that judge me, I trow."

Yoshitsune was not easily moved to anger or resentment, but this insolent speech and the painful allusions it contained caused his face to flush a deep crimson. He made no sign nor even trusted himself immediately to reply, but Benkei who had restrained his wrath up to the present with infinite pain, perceiving these symptoms of displeasure in his master's countenance, took off his sandal and struck the priest heavily on the mouth.

Friar Tosa neither winced nor changed colour. "Strike on," he said quietly, "it is your turn for the moment. Your blows cause me no bodily suffering since the face they fall on is not mine own but that of the chief whose messenger I am. The time is not far distant when they shall be returned with fitting interest."

Benkei raised his hand again but before it descended Yoshitsune spoke: "Yours is a stout heart, Friar Tosa, and it were little fitting that service so well rendered should be punished by those who know how to value it. You are free to return to Kamakura at once if you please."

The knights looked at each other in astonishment, but no dissentient voice was raised, for the priest's gallant bearing found ready sympathy among these brave men. His bonds having been loosed and his swords restored to him, Friar Tosa did not, however, show any anxiety to depart. Kneeling at Yoshitsune's feet, he prayed that yet another boon might be added to the favours he had already received. "Say on, Friar Tosa," was the answer. "If it be within the limits of my power, your request is already granted."

"My Lord, when I left Kamakura, I never for an instant believed it possible to succeed in what I had undertaken. The sword is not yet forged that shall achieve this deed, nor the man born that shall wield it. I knew well that my life was forfeited, and with that certainty I shrunk from nothing that might acquit me of hesitation. How then can I go forth again into the world, a perjured priest and a disgraced soldier? Take therefore, I pray you, the life I have lost the right to keep, and let me hope that the gods may pardon me for the sake of this sacrifice."

"It shall be as you desire, Friar Tosa," said Yoshitsune with evident reluctance, "for though I would fain turn you from your purpose, I may not gainsay its fitness. Tomorrow," he added, turning to a knight who sat beside him, "let the friar be taken to the plain of Rokugo and there beheaded, but I charge you that beyond this deed to which we are constrained by his own desire, no insult be put upon him in life, nor any indignity offered to his remains after death."

(To be continued.)

## DOUBLE ACROSTIC.

A ship whose course, or long or short,  
Is terminated at this port.

1.

It sparkles upon Scottish legs.

2.

Not oval quite, but doubtless eggs.

3.

A record brief of bygone day.

4.

What people oft sit down to play.

5.

Try it reversed, you will be right.

6.

I give you but a ray of light.

7.

Of noble family in Spain.

8.

You seek to find me out in vain.

9.

Plainness itself,—say what more plain?

JUMBUCK.

## LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship: flag B. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, MARCH 19TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

Dotted line—represents velocity of wind

.....percentage of humidity

Max. velocity of wind 41 miles per hour on Saturday, at 4 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

A glance at the chart will show that the week has been one of extraordinary fluctuations in all of the meteorological elements. The highest barometer was 30.357 inches on Monday at 7 a.m., and the lowest was 29.178 inches on Saturday at 7 a.m., the range being 1.179 inches for the week. This is greater than the range for the entire month of March of last year. A minimum temperature of 30° was reached on Thursday, which is lower than the minimum of the month for last year. The minimum percentage of humidity which cannot be shown on the chart, was 45, on Wednesday. A total of 2.44 inches of rain fell during the week.

## SHIPPING INTELLIGENCE.

## INWARDS.

Mar. 20, British barque *Oleander*, Joass, 342, from Newcastle, N.S. W., Coals, to Walsh, Hall & Co.  
 Mar. 21, Japanese steamer *Toyoshima Maru*, Hubbard, 598, from Kobe, Mails and General, to M. B. Co.  
 Mar. 23, American ship *Centennial*, Bearse, 1,287, from New York, Kerosene, Order.  
 Mar. 23, Japanese steamer *Chitose Maru*, Pyne, 295, from Yokkaichi, General, M. B. Co.  
 Mar. 23, Japanese steamer *Shario Maru*, Kilgour, 800, from Kobe, Mails and General, to M. B. Co.  
 Mar. 26, American ship *L. J. Morse*, Ames, 1300, from New York, Oil etc., to Adamson, Bell & Co.  
 Mar. 26, British barque *Lady Boreen*, T. Pain, 891, from Newcastle N.S.W., Coal, to Mollison, Frazer & Co.  
 Mar. 27, German corvette *Prinz Adalbert*, Maclean, 3,995, 11 guns, from Kobe.  
 Mar. 27, Japanese barque *Sakurajima Maru*, Cheetman, 551, from Nagasaki, to M. B. Co.

## PASSENGERS.

Per Japanese steamer *Toyoshima Maru* from Kobe:—Mr. Cook and 120 Japanese.  
 Per Japanese steamer *Shario Maru* from Kobe:—Messrs. Lees and Townsend, and 230 Japanese.

## OUTWARDS.

Mar. 20, German schooner *North Star*, Jansen, 707, Otter hunting, despatched by Hohnholz & Co.  
 Mar. 21, French steamer *Volga*, Guirand, 1,502, for Hongkong, Mails and General, despatched by M. B. Co.  
 Mar. 21, Japanese steamer *Tamara Maru*, Carrow, 558, for Hakodate, Mails and General, despatched by M. B. Co.  
 Mar. 23, British steamer *Gaelic*, Kidley, 2,652, for Hongkong, Mails and General, despatched by O. & O. Co.  
 Mar. 23, Japanese steamer *Kokonyo Maru*, Dithlefsen, 1,133, for Kobe, Mails and General, despatched by M. B. Co.  
 Mar. 23, American schooner, *Matinée*, Lenard, 35, for the Kurile islands, Captain.  
 Mar. 24, Japanese steamer *Tokai Maru*, Hogg, 653, for Kobe, Mails and General, despatched by M. B. Co.  
 Mar. 23, German schooner *Mary C. Bohm*, Petersen, 72, Otter Hunting, despatched by P. Bohm.  
 Mar. 24, Japanese steamer *Takasago Maru*, Young, 1,230, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 Mar. 25, Japanese steamer *Takachiho Maru*, Nye, 1,407, for Kobe, Mails and General, despatched by M. B. Co.  
 Mar. 25, British barque *Chili*, Baade, 445, for Hakodate, Coals, despatched by P. Bohm.  
 Mar. 26, Japanese steamer *Kinshia Maru*, Davidson, 690, for Yokkaichi, General, despatched by M. B. Co.  
 Mar. 30, Japanese steamer *Toyoshima Maru*, Hubbard, 597, for Kobe, Mails and General, despatched by M. B. Co.  
 Mar. 27, Japanese barque *Kinokuni Maru*, Nicol, 960, for Nagasaki, Mails and General, despatched by M. B. Co.  
 Mar. 27, British steamer *Sunda*, Scaton, 1,029, for Hongkong, Mails and General, despatched by P. & O. Co.

## PASSENGERS.

Per French steamer *Volga* for Hongkong:—Messrs. R. H. Remington, A. Guitassen, and L. Harris.  
 Per British steamer *Gaelic* for Hongkong:—From San Francisco: Captain E. H. Burr; and 255 Chinese in steerage. From Yokohama: Mr. H. M. Blanchard.  
 Per Japanese steamer *Takasago Maru* for Shanghai and ports:—His Ex. Matsugata, (Minister of Home Department), Mr. and Mrs. C. H. Cobden and infant, Mrs. McDonald, Mrs. T. Walsh, Miss M. Fry, Mrs. D'Ifanger, Rev. C.W. Willit, wife and child, Messrs. Enno Kinsuki, Suzuki, Ono Shige-aki, Tani Kinsichiro, Namiki, Suyehiro, D. Reynolds, Kondaiha, Mori, Watanabe, Yokogawa, Sahai, Nakagawa, M. C. Bouger, Master Bouger, Nishimura, Funakoshi, Shishido, M. Funagawa, Watanabe, Ishii, Kunishi, Hayashi, Tanimura, Komuro, Okumura, Taneta, Nagai, Ten Sen, T. C. Parker, Tanaka, O. Reimers, C. Dresser, C. Croun, R. Washington, and A. Doudabes.  
 Per British steamer *Sunda* for Hongkong, &c.:—Mrs. Schraub and child, Mr. Waterhouse and 3 Chinese.

## CARGOES.

Per French steamer *Volga*, for Hongkong:—  
 Silk for France... .. 182 Bales.  
 Per British steamer *Sunda* for Hongkong, &c.:—  
 Silk ... .. 29 Bales

## REPORTS.

The Japanese steamer *Shario Maru* reports: Left Kobe at 5.30 a.m. on the 24th instant, arrived at Yokohama at 7.30 p.m. on the 25th instant. Experienced strong N. winds first part of passage later westerly winds and fine weather.  
 The German corvette *Prinz Adalbert* reports: Left Kobe 18th March. Experienced first part of passage westerly winds, latter part, very strong S.E. and N. E. winds and dirty weather.

Japan Rice ...	"	\$2.80 to \$3.00
Kerosene Oil ...	"	\$1.60 to \$1.62½
Newchwang Peas ...	"	\$2.20 to \$2.25

## EXPORTS.

SILK.—During the week under review our Silk market has continued quiet and sluggish.

The wish to meet buyers has become rather more universal amongst the Japanese, and the decline in prices mentioned in our last report has become more decided; a further drop, however, can scarcely be quoted yet.

Sales of about 100 shipping bales are reported; consisting principally of Kakedas and Filatures for America.

Stock about 3,200 Japanese bales.

Shipments to date, 16,575 bales against 17,264 bales at the same period last season.

	In London at 3/9½ per lb.	In Lyons at fr. 4.85. per kilo.		In London at 3/9½. per lb.	In Lyons at fr. 4.85. per kilo.

## SHIPPING.

SHIPPING.—The *Oleander* and *Lady Bowen* have arrived with coals from N.S.W., and the former is reported chartered for coal from Nagasaki. The barque *Chili* has been sold, and sailed for Hakodate the day before yesterday. The *Floral Star* is bound for Newchwang. The *Merom* is said to be chartered at home. The other vessels in port are disengaged.

A number of Otter schooners have left, and the remainder are about to start for the Northern Islands.

**THE GREATEST  
WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

**SIR SAMUEL BAKER,**

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakhry that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

**MR. J. T. COOPER,**

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of pear, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1873. tf.

## THE BEST REMEDY FOR INDIGESTION.

TRADE

MARK.

CAMOMILE PILLS are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengtheners of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

## CAUTION.

Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.

## KEATING'S COUGH LOZENGES,

COUGHS,  
ASTHMA,  
BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

### MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G——, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

## KEATING'S WORM TABLETS,

## TRANSLITERATION.

MR. F. V. Dickinson's paper on "The Kana Transliteration System," read before the last meeting of the Asiatic Society of Japan, does not appear to us to be a contribution of any importance: the arguments therein adduced are to a great extent inconsistent, and often trivial; and the matter has, upon the whole, hardly been seriously treated by the author. Thus, while taking the field against the principles upon which the etymological scheme set forth by Mr. E. Satow is based, and pronouncing himself in favor of a phonetic system, Mr. Dickinson still says: "The sound of long *ō* I prefer to write so, whether represented in Kana by *au*, *eu* or *ou*; but where *ō* is represented in Kana by *ofu*, as in *omofu*, I think 'ou' (or 'oia') may be written . . . . In cases like *yoku*, contracted into *yō*, I see no objection to the form *yo'u*." We are thus left to choose among three different ways of expressing the same sound, viz.—*ō*, *ou* and *yo'u*, the use of these forms to be decided by—etymology! Further, without anticipating any confusion through writing all the different syllables *chō*, *shō*, *jō*, etc. alike, Mr. Dickinson is apprehensive that *omou*, as a contraction for *omoku* (heavy) will be confounded with *omon* (to think). He acknowledges, at first, that they are both equivalent to *omō*, yet he adds that the introduction of *u* in one of them, thus *omouu*, would "preserve a useful eye-difference without introductions of phonetic confusion. Indeed, he says, the 'u' in 'omouu' might be of service in conserving a slight difference of pronunciation between 'omō' (heavy) and 'omō' (to think)."

After perusing the lengthy arguments of Mr. Dickinson, one is disappointed, on arriving at the *résumé* which he

gives at the end, to find that the difference between his "natural scheme" and the system followed by Dr. Hepburn consists in absolutely nothing but the aforesaid—anything but natural—modes of writing long *o*, and the spelling *tenu*, instead of *tsū*. Well may one exclaim, *quel bruit pour une omelette!* and wish that Mr. Dickinson, being, as he says, "without any authorities at hand and writing chiefly from memory," would have abstained from "inflicting upon the Society the paper, which he feels to be a crude presentation of imperfectly thought-out conceptions."

While thus unable to find that Mr. Dickinson's paper has contributed at all to a solution of the present difficulty, its appearance has again drawn attention to the vexations, but all important, question of transliteration, and we may therefore be permitted to pass a few remarks on the subject. At present we think the question should be confined to this:—Should we adopt a phonetic or an etymological (historical) system? This once decided, we shall again have to consider what particular system of the many that have been propounded we are to follow; but this latter point necessitates a detailed investigation, which under the present circumstances would be premature and wholly fruitless. We shall therefore merely consider, at large, the main differences between the two principles now advocated, and endeavour to shew which of them ought to have the preference.

The present divergent opinions as to what principle is to be adopted, arise entirely from a different conception of what should be the aim in transliterating Japanese words. Living, as we do, in a country, which we cannot exactly say why, does undoubtedly possess a certain charm, inducing us to take more interest in the history, politics literature and social life of its inhabitants than is, we believe, generally evinced by foreigners in China for the country in which they reside, it follows that there are many of us, who without laying pretensions to even an attempt at study of the Japanese language, yet have occasion daily to read, and sometimes to write, Japanese words in Roman letters. If we go a step further, we shall find that there is a numerous class of foreigners who, without having mastered the written language, have yet sufficiently advanced to occupy themselves with, and write about, matters pertaining to Japan; and we shall not be wrong in saying, that within this class will be found most of those who have contributed to our general knowledge of Japan and its inhabitants. These two classes of foreigners require such a system of transliteration as they, themselves, can use with facility, and with certainty of being understood by others who are unacquainted, or at least not thoroughly conversant, with the Chinese characters.

Besides these, however, there are the real scholars, those who have made a specialty of the study of the written language, and who are as much at home therein as, or even more than, the educated Japanese. Specialists often

become selfish, and by concentrating their minds on one particular object are apt to overlook the interest of others, who are not similarly engaged. So with our leading Japanese scholars: thoroughly acquainted with the Chinese signs, and of course also with the *Kana*, and experiencing no difficulty themselves in using an etymological system, they choose a mode of writing which, in their opinion, is scientifically correct, as all that is written in it may at any time be re-transposed into the *Kana*. They forget, however, that for every one scholar there are scores of foreigners in this country, who, though requiring a system of transliteration, have no knowledge of the written language, and to whom positively nothing is gained by a system possessing the specified characteristics. We say, that the scholars who support the etymological system, forget others; for we should be sorry to think that they, with full knowledge of the actual circumstances, have made up their minds to entirely disregard others, and to sacrifice the requirements of the majority to what is in reality but a fancy of their own. For, what object can they after all, have in view? It would seem that to scholars, intimately acquainted with the *Kana*, there could be no object in transliterating according to the way in which the words are written in that alphabet. If they make notes for their own use, during their studies, or publish anything for the information of other scientists, who possess the same degree of knowledge, it must surely in every respect be simpler to use the *Kana* characters, than the lengthy, artificial Roman substitutes. Thus, to a person, who has the necessary knowledge, it is decidedly more natural, shorter and plainer to write *chi*, than *chi*, *chi*, *chi*, etc. If on the other hand these scholars write for the public in general, then the introduction of their etymological system will only have one effect: their publications will as a rule not be read, or if read, will not be understood; and in any case the pleasure of reading will be marred by the irritation caused by meeting with what to the general reader must have the appearance of hieroglyphics. Thus, when in a popular treatise on Japanese pictorial art, we find every page stocked with such information as that *Teu Deñsu* or *Miyauten*, and *Zhiyosetsu* were celebrated painters in the fifteenth century; that the former, according to *Honten Gucashi*, was a novice at *Toufukuzhi*; that his superior's name was *Daidan*; that his first painting was a portrait of *Fudon*, and that later on the *Shiyangun*\* became his patron:—then, we say, the large majority of readers, seeing that they are unable to read these names, commence by skipping them; and on perceiving that, by so doing, they retain nothing of what they read, and that the whole article might, for that matter, apply equally well to any other country in the world, or be a pure fiction, they lay the book aside in disgust. It is really astonishing that this consideration alone does not suffice to induce the few supporters of the new system to abandon it.

We repeat, that unless the aim is that of simplification, by representing in as short and precise a form as possible, the pronunciation of Japanese, there can be no object in transcribing into Roman letters. Merely to substitute a fixed combination of Roman letters for every single *Kana* character, irrespective of its position in relation to other characters, is, so to say, but to add another complicated series of signs to the already existing *Kata* and *Hiragana*; and from this to the invention and substitution of quite a new set of arbitrarily chosen characters, is but a

\* We surmise that the words quoted stand for *Chō Denan*, *Miōchō*, *Jōetsu*, *Hunchō Gashi* (?), *Tōfukuzhi*, *Daidō*, *Fudō* and *Shōgun*.

very short step. And what is gained? Nothing, absolutely nothing. Those only, who already are perfectly familiar with the Chinese characters, can write in such a system, and the only result would be to give these people the additional, though to them perhaps not very difficult, task of learning the series of Roman equivalents, chosen to represent the *Kana* characters.

That it shall not be said that we are exaggerating the difficulties connected with the use of an etymological system,—we believe its supporters maintain there is nothing very difficult about it,—we will, for argument's sake, suppose that foreigners in Japan generally succeeded in learning the *Kana*, all its combinations, and the Roman equivalents assigned to each *Kana* character. They would consequently be able to read words romanized according to the etymological system; but let it come to writing, and they will be entirely helpless. In illustration of this we can choose no better instance than one adduced on a previous occasion by a leading opponent of this system. The syllable *tō* is written in *Kana* in six ways: *to-ho*, *to-o*, *to-u*, *to-fu*, *ta-u*, *ta-fu*; while *kiō* may be spelt in four ways: *ke-u*, *ke-fu*, *ki-ya-u*, and *ki-yo-u*. Anybody who knows this will, as said above, be able to pronounce these Roman combinations correctly, when he sees them. But ask him to write a common word as *Tōkiō*; he has then to choose among *To-ho-ke-u*, *To-o-ke-fu*, *To-u-ki-ya-u*, *Ta-fu-ki-yo-u*, or any of the twenty-four combinations, that may be formed from these syllables. The only way of deciding which combination is the correct one would be, first to ascertain with what Chinese characters *Tōkiō* is written, then to look up these characters in a Chinese-Japanese dictionary to see how they are spelt in *Kana*; and finally, —as even dictionaries are unreliable in this respect,—to verify, if possible, the *Kana* spelling by one of the handbooks specially compiled for the purpose of assisting Japanese in deciding how to spell in the *Kana*. But this operation is just what we maintain not one in fifty foreigners in this country can perform.

What we want, then, is a purely phonetic system, equally easy to write as to read. If the supporters of the etymological system still mean that, for scientific purposes, it is absolutely necessary to transcribe Japanese words into Roman letters, in strict accordance with the *Kana*, then let them do so by all means; but they should confine the use of such a system to purely philological works, always remembering that to the majority it is perfectly unintelligible, and therefore quite inadmissible in any treatise or compilation, that is intended to be read by others than philologists.

#### THE PLEASURE GROUNDS OF TOKIO.

THE religion of Japan has bestowed one great boon upon the people of its larger cities, which will be prized more and more as the capitals become crowded and busy with enterprise. We refer to the temple groves, with their fine old trees and open grounds, occupying some of the healthiest sites, and close to the most populated districts. It is to be hoped that the increase of manufacturing effort will be accompanied by the exercise of a wise discretion in placing these useful but obnoxious hives of industry, such as English towns abound in, outside the city itself. The example of Paris and other attractive continental cities should be followed, rather than that of certain prosperous towns of the nation which Adam Smith first dubbed a "nation of shopkeepers," where the foundry and the factory, smoke and reek amidst the most crowded haunts of the people, poisoning the air with their injurious

vapours. Tokio possesses one bad precedent in the iron-works erected at Akabane, in a frequented part of the town, and close to the fine wood and temples of Shiba. Were the people of this country to realize the vast trouble entailed in reclaiming, for the health and enjoyment of a population, but one small piece of open pleasure ground in cities which have been allowed gradually to encroach upon space, they would be more proud and jealous than they are of these lovely groves and gardens which still exist in abundance in the towns of Japan.

The modern capital has yet another relic of feudal grandeur which it has to thank for much of the open space and pure air that it continues to possess, in spite of its constant increase in population. The growth of the city of Yedo, from what was originally but a village, dates from the foundation of its large military stronghold,—the castle and residence of the Tokugawa Shoguns. The castle, with its spacious enclosures, wide moats and steep escarpments, forms the kernel of the city which has gradually congregated around it. The inner enclosure was reserved for the keep and the large palace and garden of the Shogun; and the outer enclosures between the serpentine walls were divided into large areas of land bestowed upon the Daimios, who were compelled to maintain a mansion at the capital, and to prove their allegiance to their leader by spending several months of the year in person at his court. Thus the parts within which the merchant and labouring classes could encroach were comparatively limited; and though of late years many of the large Yashikis have been destroyed, and their grounds have become covered with people's dwellings, yet green trees, grassy slopes, and gardens with clear stretches of free space, remain in the very heart of the metropolis. The open grounds of these yashikis, and the groves surrounding the temples, have undoubtedly combined to obviate evils which would otherwise have manifested themselves more frequently, than they have in a city deficient in water supply and drainage.

Some year or so ago, many of the commoner houses which had gradually occupied the temple grounds at Shiba were swept away, and preparations were commenced for converting this comparatively neglected but picturesque spot into a fine public garden. The clearing of the wild underwood and surface drainage which have accumulated in the gloomy shades of the old wood, where the pedestrian can even now at times start the woodcock, will rob the place of some of its romance; but the preservation of the fine old trees, and the contemplated laying out of the site as a park, are to be looked forward to as of great advantage to the people. Nevertheless, the low position of Shiba and other disadvantages of locality will prevent it from ever becoming as important a recreation ground as Uyeno. One of the most pleasant haunts in Tokio is this latter park. All such resorts in Japan have their particular season imparted to them by the blossoms for which they are famed. There are Uyeno and Mukojima, which vie with one another in the growth of the cherry-blossom. Kameido boasts its fine show of *wistaria*, and the plum, the peony, and the chrysanthemum all provide a fashionable season for the favourite spots where they respectively abound. Uyeno is just now in the glory of its prime, the cherry-trees which have here grown to such size and in so many varieties being now in full bloom. The visitor to this summer resort may see crowds of gaily dressed holiday makers flocking through its walks, and feasting their eyes on a rich show of the favourite spring flower of the country. Since the last days of the revolution have robbed Uyeno of its grand old temple and gateway, much care has been bestowed upon the improvement of the place and its conversion into a so-called park. But the Japan-

ese idea of a park is somewhat different from ours, the people being more fond than we are of scenery in its wilder garb, and less anxious to trim and pare nature into a formal and artificial arrangement. They have never delighted in geometrically disposed flower beds, and plants arranged in regular patterns; for their gardening is but scenery on a small scale, with all its variety and pleasing irregularity of mountain, stream and foliage. All the art and skill of the gardener has been directed to the training of miniature trees and shrubs into the fanciful shapes worn by the vegetation of the wildest and most picturesque mountain scenery, rather than in producing formal designs in colour upon flat overcrowded flower beds of mathematical precision, and the clipping of foliage into shapes artificially regular.

The want of anything like formality at Uyeno is one of its charms. One enters through an avenue of old trees stretching their crooked trunks and arms around, with a really rustic carelessness. On the right, grassy slopes and stone steps lead up to a tree and temple-clad platform abounding in the *sakura*, which are sprinkled among the dark foliage, some single blossomed, some double blossomed, some weeping-*sakura*, and some so old and hoary that one wonders at the rich display which their aged branches make. On the left a glance through the fine trees reveals a lotus-strewn lake below, having a stretch of land, crowded with tea-houses which overhang the water, leading out into the expanse. At the end of the promontory is a pretty temple sacred to Benten, the island goddess. Upon this lake took place, among other pyrotechnic displays, that famous one before General Grant on the evening of the fête which was honoured by the presence of the Emperor. Further on is the wide open space surrounded by trees, on which on the same occasion were held a number of ancient sports in the old style and costume. And even though fire and war, as before remarked, have denuded Uyeno of its immense temple and gateway, the park still abounds in fine specimens of Japanese architecture. Next to the old bronze Daibutsu, approached by wooden *torii*, is an avenue of stone lanterns leading to the small temple called To shogun which is noticeable as one of the finest examples of colour decoration in the city;—rich gilding setting off bright strips of colouring to the panels, beams, and richly bracketed cornice under the eaves, and giving to the whole a very gay but harmonious effect of colour. The temple abounds in elegant carving; and the interior is rich in mural paintings of flowers, birds and mythical and religious representations. And here we are reminded that one sees in Japanese buildings what is not so common in countries where stone or marble is used as a medium of ornamentation; namely the intimate combination of carving and painting. The bright plumage of birds, the ripeness of fruit, and the varied verdure of foliage are all shown in colour upon the deeply cut carvings in the panels and posts.

Not far from this temple are the shrines of the Shoguns with their *haiden*, or oratories, attached. The tombs being arranged in threes, one oratory serves for each triplet. These buildings, richly carved, and painted in black, gold, and colours, surrounded by the paved courts, fences, belfries and font-sheds, such as are found before all Buddhist temples, form a valuable collection of monuments well worthy of a careful visit from those who have not seen them. To the native public they are still a fund of wonder and interest, for until late years all these mausoleums, upon which such lavish expenditure has been bestowed by luxurious generalissimos, have been hidden from the public gaze. These shrines, and the still more ornamental sepulchres at

Shiba, are now visible for a trifling donation to the priests in charge; and reports are current that they are soon to be thrown more completely open to the people. And such art treasures of a civilization now changing are to be found set amidst the scenery of a fine park, presenting the attractions of varied foliage, and flowers, airy elevation and open space.

It will not be long before Shiba will also be a well cultivated pleasure garden, thus affording to the people of the capital two large resorts for recreation and healthy enjoyment.

#### RAILWAYS.

THE triumph of railways as a means of communication was fully established long before most of us were born; but it is still not too late to point out again the inestimable benefits that a country like Japan, which is practically without roads suited to the requirements of a commercial community, can and must derive from the adoption of some such railway system as obtains in the unsettled territories of the United States, and the sparsely populated colonies of Great Britain. The future of railways in Japan, a country teeming with inhabitants and natural products, is full of promise; provided that enormous sums of money are not squandered in the construction of lines out of all proportion to the business to be done. That the traffic may be reasonably expected to increase as communication is opened up with the interior of the country, is conclusively shewn by the returns furnished by the railway authorities giving the results of the two short lines now working. Taking, for example, the Kobe and Ootsu Section, we find that, during the week ending on the 21st of March last year, there were forty-seven miles open for traffic, and the gross earnings amounted to 12,694.16 yen, or 268.81 yen, per mile. This year at the same date fifty-five miles were open, and produced for the corresponding period 20,248.96 yen or 368.07 yen per mile, which is equivalent to £47.10, at the present value of kinsatsen and taking exchange at 8/9. Let us now see how these figures compare with the receipts from railways in other countries. From the published returns it appears that, during the year 1876, the average gross weekly earnings, per mile per week, of the railways in Great Britain and Ireland were £68.07; in India (State lines), £8.72; in New South Wales, £27.00; in Victoria, £30.00; in New Zealand, £12.80, and in Tasmania, £12.80. It will thus be seen that Japan occupies a very favourable position as regards income from her railways; for, although as might naturally be expected the earnings on the Japanese lines are considerably below those of Great Britain, still they compare very favourably with those of the other countries quoted. Judging then from results, there can be no question that, supposing even ordinary economy has been exercised in the construction and working of the railways at present open, the Government must be in receipt of a return on the outlay incurred which undoubtedly should encourage the rapid extension of the benefits of railway communication to all parts of the empire. One thing, however, should not be overlooked, and that is the initial expense, which can now be adapted to the requirements and financial position of the country. One of the greatest blunders that can possibly be perpetrated is the making of railways with too great a regard for the future and not sufficient consideration for the immediate present. No business can stand against a capital outlay which is out of proportion to the business to be done. It is familiar to all that the successful manufactories and trading enterprises of every country have been the result of small first outlay

and gradual development of business. In many well known instances where a new enterprise has been commenced with a large capital and huge buildings, failure and disaster have been only too frequent, even in cases which had all the advantages of modern machinery, a skilled staff, and good business connections. The man of business who begins in a small way, keeps his premises and capital fully occupied; and success is the outcome of the demand exceeding the supply. To build a railway many times too large in all its belongings, is simply to postpone the day of its becoming remunerative—a postponement which is for ever adding all sorts of burdens to the capital account. Here, in Japan, the authorities have the varied experience of other countries to guide them; and there certainly seems a very wide margin between £39,000 a mile, which has been the average cost of the English lines (including land), and slightly under £4,000 a mile, which is the estimated total cost (including of course rolling stock), of some of the railways in the Australian colonies.

AN advertisement in this paper conveys the pleasant intelligence to the sporting community that a Race Club has been formed, and that, as we announced last week was probable, a race meeting will be held in the latter part of May. The rules of the new institution have not yet been completely drafted; but they will be made public very shortly. We may state that they are being designed with great liberality, and a desire to secure to the community full participation in the rivalry of the turf. It will be provided, for instance, that any horse-owner can compete, if the nomination is made by a member of the Club. Membership, too, will be as open as possible, the ballot being confined to a very large number of associates. The draft programme contained in the advertisement is sufficient to show that a good gathering is confidently expected; and, although the unavoidable lateness of the time selected may be urged as a drawback, yet it must be remembered that some of the most successful race meetings ever held in this neighbourhood have occurred in the early part of June. It only remains to trust that the hopes and anticipations of the founders of the new society may be verified; and that no dispute may arise in their councils, similar to that which resulted in the ruin and death of three racing associations.

WE call the attention of our readers to the announcement of Mr. Crane's Concert on Tuesday evening next. A long residence here has made him known to all the community, and he has been always foremost in giving his services at all times for the benefit of our local charities, or for the public amusement in connection with the late Amateur Dramatic Corps. What a pity it is that we should have to write the word *late*; but, if all accounts be true, that lethargic institution has at last slept to wake no more. This being the case, amusements are likely to be scarce here, and we hope that a large audience will shew their appreciation of Mr. Crane's talents at his farewell concert on Tuesday. Himself no mean proficient upon the violin and violoncello, he will be assisted in the execution of a well-chosen programme by some of our best known local professors and amateurs, who with characteristic modesty have withheld their names from publication; and all lovers of the divine art may look for some good music, worthily performed on this occasion.

ACCORDING to Renter's telegram received this morning, the end of this month will witness the decease of the parliament of 1874. Without endeavouring to foretell the result of the approaching general election, we may yet

predict that the constituencies will, as a rule, return men to represent them who are jealous of their country's honour and influence. And these characteristics need by no means be accompanied by that rant and riot which have gone so far to create that modern English institution which has come to be known as "Jingoism." Not but what even the vulgar and stupid excitement of the tavern and the music hall has done some good in its way. It was certainly a kind of demonstration of patriotism, and a factor in the position taken by England in recent European troubles, when her enemies in her own household would have urged her to a line of policy which would for ever have excluded her from part or interest in the affairs of the continent. As it is, she has resumed her place among the great powers, and the world is grateful to her for an attitude which, when the history of the past decade comes to be written, will appear on the whole to have been modest, firm, self-reliant, and benevolent. It must not be supposed that, in or out of the House of Commons, the opinion of party is confined to the extreme notions which principally find expression. There is a very extensive and largely occupied area between the extreme fanaticism of imperialism, and that other aberration which would keep the United Kingdom a secluded group of islands, and its inhabitants a selfish class of recluses. Many members of parliament are entirely independent, and prepared to support any Government, conservative or liberal, which will maintain the same and position of their country by a policy of justice and moderation. And such representatives have a very large following in the most influential ranks of society—in the middle classes. The views of this school have lately been ably expounded by Mr. Cowen, M.P. for Newcastle-on-Tyne, who is recognized as a very advanced liberal, but nevertheless disdainfully disclaims participation in the views of the Manchester school; and would have his country something more and greater than "an emporium for cheap wares." He has even anticipated the verdict of the future, and accorded to the Government that praise which it has merited for its dealing with the Eastern Question. Well may the *Times* remark: "We must contrast the present state of Europe with what it might have been, and not improbably would have been, if England had held her hand just at the decisive moment. The crisis is now past, with all its dangers and difficulties and opportunities for error in every direction. It was not the less real enough two years since, and it will be seen to have been real enough when the country comes to reflect upon it, and to do justice to those who took the conduct of it and brought England safely through." And, whatever may be the political creed of a Government which is capable of such achievements, it will never lack the support of that portion of the community of which Mr. Cowen is a type, and which represents the best wealth and intelligence of the nation.

WRITING from Shanghai on the 7th of November last, a correspondent of the *Times* explains the demands which the foreign diplomatic body was then urging upon the attention of the Chinese Government. Referring to the abolition of the British postal agencies in Japan, he contrasts the condition of postal matters in China with that obtaining in this country; and surmises that the attempts made along the coast last year by the Imperial Chinese Customs postal service to introduce a European system of receipt and delivery may result in the establishment of British agencies in ports where none at present exist. He thinks that foreign diplomats at Peking have little reason to "dread any activity in the direction of peaceful reform by the government." Why activity in the particular direction indicated should be "dreaded" is not explained; and so we

are left to our previous enjoyment of the opinion that it might not only be desirable, but encouraged as far as foreign powers are able to encourage it. However, we are told that the energies of the envoys will long be confined to stimulating the Government to abide by treaty stipulations, and to settling the different points supposed to have been finally adjusted by the Chefoo Convention which are described as the regulations of a code of etiquette between the native officials and the diplomatic and consular officials of treaty powers; the new arrangement regarding the *lehin* on opium, which formed the subject of former letters; the recognition of the different foreign settlements in China as the limit of exemption from *lehin* of all classes of foreign goods, which is a recognition of the legality of the impost elsewhere; and, generally, the rectification of the conditions of foreign trade and the inland transit of goods of foreign origin or *en route* to foreign countries. The writer, after indicating that it has been recognized that the only means of securing permanent reforms in China, or of accomplishing a satisfactory settlement of these points, is a unanimity of opinion among themselves and joint remonstrances to the Chinese Government, goes on to show how and by whom joint action had been determined on, and its course defined. "A conference of the Ministers for England, Germany, and the United States is now being held in order to attain a common understanding, and it would be difficult to select three more suitable or more experienced men. The American Minister was twelve years Consul-General and Judge in Shanghai, during which time he must have been able to test thoroughly the practical working of existing treaties, and to appreciate the points where commercial and judicial reforms are most needed. The German Minister is known to have great influence with the Chinese Government, and to have obtained concessions from them by unaided firmness of mind which the Ministers of other Powers have failed to obtain even when supported by the material aid of fleets. Sir Thomas Wade, Her Majesty's Minister, has the experience of a lifetime spent in China, and an unrivalled acquaintance with the language, the motives, and the modes of thought of the statesmen who rule the Empire." The sequel appears to have proved that the hope of the writer that the "demand, warning or advice" of this "strong combination," has not been "acted upon."

QUININE is admittedly the most valuable tonic and febrifuge ever discovered. Until a few years ago the world was dependent for its supply on certain naturally inaccessible and politically disturbed regions of South America, where the various species of cinchona trees grew wild. Many attempts have been made, sometimes successfully, to introduce this health-sustaining and important plant into different parts of the globe, and we learn that, in San Francisco, the prospects in favour of the successful cultivation of cinchona in the State of California are extremely favourable. The *Bulletin* says:—"The trees, after a start has been made from seeds, are increased by means of cuttings. According to Mr. Morris of Ceylon, returns can be obtained from a cinchona plantation at nearly as early a date after planting as from coffee or tea. The best climate is one which has moderate winds and rains, and the tree does best on rich soils. It is reported that the cinchona plantations made by the British Government at Hakgalla, Ceylon, suffered last year from too much rain. An unusually wet season injured and destroyed a large part of the grove. This was partly owing to destructive floods, and partly to the water standing about the roots of the young trees, but many of these have grown again from the base." Experience has shown that the cinchona grows admirably in Jamaica, some trees in the parish of Manchester having attained a height of twenty-five feet at the age of seven years, growing at an

levation of two thousand feet above the sea. The largest trees we read of are thirty-five feet high, with trunks two feet in circumference and growing in ordinary soil. A few hundred pounds of bark, stripped from these trees, were sent to England in 1878, and sold for forty-five cents per pound. The report of the Government states that the best altitude for cinchona in the island is three thousand feet. It would certainly seem as if the counterpart to the climate of a three thousand feet height in Jamaica could be easily found in the State of California, which may be said to contain within its boundaries almost every known description of climate, from the heat of the tropics to the cold of northern Europe. Besides its valuable medicinal properties cinchona may be reasonably expected to yield a handsome profit in the event of its cultivation proving successful. From the report already alluded to we learn that the bark of *Cinchona Succirubra*, grown in Jamaica, sold in London last year as high as sixty-four cents per pound. A gentleman in charge of some cinchona plantations in the island writes to Sir Joseph Hooker, the eminent botanist, and states that he cut down one hundred trees of ten-year-old *C. Succirubra*. They yielded 1,660 pounds of green bark, which dried to 415 pounds, and sold for two hundred and forty-four dollars. Three hundred trees were planted to each acre, so that cinchona culture has been proved to be very profitable. The wood also is valuable for fuel, and the trees, when cut down, sprout from the stump. Returns once in ten years of over seven hundred dollars per acre, or seventy dollars per year, are worth attention. The plantation on which these results were obtained is to be extended by one hundred acres. This experience is confirmed by Mr. Willis Weaver, of Bogota, who states that profits of \$8,000 per acre had been yielded in a few authenticated cases, the bark being of the most valuable species, bringing \$1.75 per pound in the English markets. In Bogota, altitude 8,650 feet, temperature 60 degrees Fahrenheit, and where there are heavy frosts, *Cinchona Cordifolia* grows, and even thrives 1,000 feet higher up the mountain side. The true cinchona region varies from 30 degrees to 60 degrees, according to the species, but *C. Succirubra* is not successful in a temperature below 60 degrees and above 70 degrees. The cinchona belt evidently covers 40 degrees extreme variation, and some single varieties have a range of over 80 degrees. On the Andes the oak and walnut grow alongside the cinchona, and the apple, peach and wild cherry occupy the same range. All these data tend to show that, among the useful foreign plants which the authorities are endeavouring to acclimatize in Japan, the cinchona might well be included, local conditions of soil and temperature being eminently favourable to its growth and propagation.

**WE** have to acknowledge the receipt, from the Chinese Imperial Maritime Customs, of the Reports on Trade at the Treaty Ports of China for the year 1878. The volume demands more extended notice than the limits of our space will, this week, permit.

#### JAPANESE PERSONAGES.

##### GENERAL TANI.

**G**ENERAL Tani Kanjo is a native of the rich and fertile province of Tosa, and has since his youth been remarkable for his brave, thoughtful and calm disposition. His father was renowned for an extensive knowledge of literature; and being naturally anxious that the subject of this sketch should enjoy the advantages derivable from culture he sent him to Yedo, when a boy, to study under the celebrated Yaei, who was famous for his knowledge of Chinese, and had written many works in that language which attracted much attention.

Yaei, perceiving the generous impulses and noble aspirations of Tani, bestowed great pains upon fitting him for his career in life; in fact he became the old man's favourite pupil. An affection altogether dissimilar to the relationship usually existing between master and pupil, and not unlike the love David bore for Jonathan was the result, and continued not only without abatement but increasing in strength, until the death of Yaei plunged Tani into the deepest grief.

An active life was considered the best remedy for the state of despondency into which Tani had now fallen, and his feudal superior, the Prince of Tosa, accordingly appointed him a Censor and ordered him to visit and report upon, different localities in his domains. This duty Tani executed in such a manner as to give great satisfaction, and thus led to more important employment.

At the commencement of the war of the restoration, Tani was placed in command of a detachment of the Tosa army, and marched on Osaka, accompanied by Itagaki Taisuke (an ex-member of the Privy Council), and other prominent persons. After the occupation of Osaka he was appointed Inspector-General, and entrusted with the command of the advanced divisions of the army. In March, 1868, he captured the castle of Kofu, and fought the battle of Katsunuma in which the rebel forces, led by the brave Kondo Isami, were signally defeated. Tani followed up this victory by a rapid advance, and engaged the enemy at Shitakawa, Miharu, and Yasuzuka, in all of which combats he routed the adversaries opposed to him. Flushed with success the victorious army pushed on to Aizu, and routed their opponents on several occasions, and at last crowned their triumphs by the capture of the great fortress of Wakamatsu, the stronghold of Aizu. The campaign being thus happily terminated, Tani led his forces back to his native province; and, in recognition of his services, was appointed a Lieutenant-General in the army Imperial, and entrusted with the command of the castle of Kumamoto.

When the expedition was despatched to Formosa, Tani was made an Inspector-General and sent to assist the Commander-in-Chief, General Saigo (the younger brother of the rebel leader) and, after the objects of the expedition were achieved, he returned and was unemployed for some time.

In 1876 the Jimpu party rose in rebellion in Kumamoto, and Tani was re-appointed to the command of the garrison upon the death of General Tanaka.

In 1877 the great revolt of the Satsuma clan occurred, and the stronghold of Kumamoto was for weeks the point to which the fears and hopes of the contending parties in the mighty struggle were turned. Never during the brightest days of chivalry in Japan were braver feats of arms performed than at the sieges of Kumamoto, the possession of that fortress being looked upon as of vital importance to both belligerents. Again and again the flower of the southern forces, fighting under the eye of their beloved Saigo, rushed to the assault and as often recoiled, shattered and decimated by the stubborn valour of the defenders, encouraged by the dauntless Tani, who exposed his life with the most reckless bravery. At last the siege was raised by the main body of the imperialists; and shortly afterwards the formidable rebellion was crushed, and peace restored to the distracted country.

Tani was rewarded for his extraordinary achievements with the Order of the Rising Sun of the second class, and promotion to the rank of General in the Army.

#### REUTER'S TELEGRAMS.

London, 29th March, 1880.

Lord Hartington in a public speech stated that the Liberal party would not stake British interests on the maintenance of Turkish integrity and independence.

London, 1st April, 1880.

Parliament will dissolve on the 29th of April. The dissolution of the Society of Jesuits in France has been decreed.

(From the N. C. Daily News.)

London, 20th March.—Disturbances have broken out between the Mussulmans and the Christians at Smyrna, and the Consuls have summoned the Ironclads.

The Grand Shereef of Mecca has been assassinated.

London, 22nd March.—The Oxford and Cambridge Boat Race was won by Oxford.

(From the "*Hongkong Daily Press*,")

London, 6th March.—An unsuccessful attempt has been made to assassinate General Melikoff. The would-be assassin was caught and hanged.

The Nihilists again threaten the Czar unless he abdicates.

London, 8th March.—Parliament will be dissolved at Easter.

The new elections are to be held and Parliament will reassemble in the beginning of May.

London, 10th March.—A gun has burst on board the Italian man-of-war *Dulio*.

A Commission of Delegates from the Great Powers has been formed to determine the Greek frontier.

The Imperial Prince of Austria has been affianced to a daughter of the King of the Belgians.

London, March 13th.—Recent advices from the scene of the wreck state that the steamer *Travancore* is expected to become a total loss.

A manifesto has been issued by the First Lord of the Treasury addressed to the Lord Lieutenant of Ireland.

The *Times* publishes a telegram from Berlin stating that the military expedition to Tekke is postponed on account of probable serious complications with China.

London, March 17th.—The Governor of Tasmania (F. A. Weld, C.M.G.) has been appointed Governor of the Straits Settlements.

Lord Derby has notified his adhesion to the Liberal party.

Parliament will be dissolved on the 24th of March.

The Revenue for the past financial year amounts to £80,860,000.

The expenditure to £84,216,000.

The Revenue for the ensuing financial year is estimated at £81,560,000.

The expenditure at £81,485,000.

Taxation will not be increased.

£50,000 worth of Diamonds have been stolen from the Cape Post Office.

An alteration has been notified by the directors of the Railway Department, that from the 1st instant the time of departure and arrival of the trains between Shinbashi and Yokohama, and *vice versa* has been changed. The first daily train starts from either terminus at 7 a.m., and is followed by others at intervals of one hour and fifteen minutes until noon. The afternoon service commences with a train at 2 o'clock, and continues also with intervals of seventy-five minutes until 9.30 p.m. The last departure from Yokohama and Shinbashi is at twenty minutes to eleven o'clock at night.

With the change in the monsoon, comes the usual spring alteration in the date of the departure of mail steamers for Europe. The Peninsular and Oriental Company has announced that its packets will, until further notice, leave this port for Hongkong on alternate Thursdays, commencing with the 8th instant.

A subject for inquiry by the Seismological Society should be any connection which may have existed between the earthquake which alarmed this neighbourhood on the 22nd of February, and that which visited the Philippines on the 27th of the same month. As reported by the Jesuit Father in the Meteorological Observatory of Manila, the shock at Luzon was followed by various undulations, decreasing in intensity. Its direction was from S. W. to N. E., and it continued for about eight seconds.

The San Francisco *Sunday Chronicle*, writing on the subject of house decoration, gives a long description of the adornment of Mr. Yanagiya's pleasant home in that city. The comparative proximity of Japan to the Pacific coast, and the constant communication between the two countries have been the cause that the art of this empire has taken an abiding hold upon the tasteful and wealthy in the western states. The Japanese consul's house has been visited by the ubiquitous reporter, who describes the arrangement of the apartments and the objects of art with which they abound.

We find, in one of our German exchanges, mention made of a testimonial presented to their Consul by the German residents of Tokio. It consisted of an album, splendidly bound, and containing the likenesses of all the donors. Such a gift is in every respect well chosen as it always brings to the view of the recipient the faces and forms of those whose esteem and regard it serves to commemorate. It is in every way preferable to the stereotyped "service of plate," etc., which on similar occasions is generally made to do duty. From what we have always understood, the German residents of the capital have every reason to entertain kindly feelings towards their Consul, whose advice and assistance in public or private matters is always at their command. To show their feelings it probably needed not the usual special occasion, which in this instance consisted in the admirable arrangements, organized by the Consul, for the *fête* given in honor of the arrival of His Imperial Highness Prince Heinrich. As the latter has, within the last few days returned to our city, we are glad to be able to refer to what will certainly prove a pleasing remembrance to the distinguished visitor.

The flags were at half-mast on Monday in consequence of intelligence being received of the death of Commodore Blake, U.S.N.

U. S. *Flying-Fish*, 4 composite sloop, 894 tons, 836 H.P., is to be placed in commission as a surveying vessel in the China Sea.

The American corvette *Ticonderoga* arrived at Manila from Borneo on the 9th ultimo.

The *Oceanic* was advertised to leave London in the second week in March, under arrangement with the China and Japan Shippers' Association.

The *Hongkong Daily Press* says that "as the French flag-ship *Thémis*, Rear-Admiral Duperré, has not been to Hue, we presume that the difficulty with Annam has been amicably settled, as was intimated in a recent article in the *Saigon Indipendant*."

In the same paper we read that a telegram has been received announcing that the P. and O. steamer *Travancore* has been

## The Japan Weekly Mail.

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 3RD, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 4TH MONTH, 3RD DAY, DO-YO-NI.

### NOTES OF THE WEEK.

On Sunday last the M. M. steamer *Tanis* arrived in port and was followed in the evening by the P. & O. steamer *Malacca*, with London dates to February 8th. The *City of Peking* came in from Hongkong on the 30th ulto., and left for San Francisco on Thursday, the 1st instant, at 3 p.m.

Among the severest sufferers by the earthquake of the 22nd of February were the sisters of the convent of the Holy Child Jesus. Their building was much shaken, and the roof was almost entirely denuded of its tiles by the shock. A very modest sum is required to cover the expense incurred in putting the edifice into thorough repair, and appeal is made to the public to aid the work, not by direct subscription but by taking chances in a lottery. It is proposed to issue only five hundred tickets at one dollar each; and one hundred and twenty-five prizes, consisting of albums, photographs, and water-colour drawings are guaranteed. Baron Stillfried, of No. 83, Main Street, has kindly consented to take charge of the lottery. This is certainly one of those instances in which speculation, of the kind indicated, may well be encouraged; and we hope that the list of purchasers of tickets will soon be filled.

stranded on Cape Otranto, South Italy. The *Trucanore* was carrying the Indian mails from Alexandria to Brindisi. There was a dense fog prevailing at the time of the disaster. The passengers and mails have, been landed safely.

We are informed that, after the 1st instant until further notice, the vessels of the Mitsui Bishi Company sailing for Hongkong and Shanghai, will leave port at 6 o'clock p.m. instead of 4 o'clock as hitherto. The *Tokio Maru* will be despatched for Shanghai on Monday, the 12th of April, instead of the 14th, so as to connect with the P. M. Co.'s steamer *City of Tokio* due here from San Francisco on the 10th proximo.

Paris papers assert that a ball, given on the 8th of February at the Japanese Legation, was one of the most brilliant of the season. Madame Someshima received her guests with a grace which provoked universal admiration, and the arrangements of all kinds were singularly perfect. The Faubourg St. Germain and the Corps Diplomatique were largely represented; indeed, it was generally observed that so many French families of high rank have not been seen in a foreign house since the war. The dancing was most animated, and the Cotillon, led by the Comte de Chabannes, lasted till daylight.

Cargo is now received on board the steamers of the Mitsui Bishi Company's Hongkong and Shanghai lines up to four o'clock on the days of sailing, instead of ten o'clock as hitherto.

Whoever is the official charged with the duty, should take steps to prevent Water-street being obstructed with building material in the manner it is at present. The thoroughfare in question is narrow enough, in all conscience, without a great portion of it being used for the purpose of dressing stone. The other day, it was quite as much as a dray could do to pass; and then, of course, pedestrians and jinrikishas were at a standstill until the large vehicle was out of their way.

There was a very perceptible shock of earthquake on Monday afternoon at twenty-four minutes past five o'clock.

On the 18th ultimo the steamship *Merth* left Hongkong for Shanghai, and the Russian corvette *Craysser* sailed for Europe.

The *Glencagles* left Hongkong for Shanghai on the 20th ult.

Reliable information has been received in Tokio, confirming the intelligence of the sentence of decapitation passed upon the Chinese ex-Minister to Russia.

His Excellency Maury (Mori) Arikita, Minister to the Court of St. James, has been presented to the Queen. The *Court Circular* of the 4th of February says:—"This day had audience of the Queen, Maury Arikita, to deliver the letter of recall of Wooyeno Kagenori and his own credentials as Envoy Extraordinary and Minister Plenipotentiary from his Majesty the Emperor of Japan. To which audience he was introduced by the Right Hon. Richard Assheton Cross, M.P., Her Majesty's Principal Secretary of State for Home Affairs, acting for the Marquis of Salisbury, K.G., Her Majesty's Principal Secretary of State for Foreign Affairs, and conducted by General Sir Francis Seymour, Bart., K.C.B., Her Majesty's Master of the Ceremonies."

According to *Vanity Fair*, Garibaldi has at length ended his very singular matrimonial adventures in a more regular way. His elopement with Annetta, the mother of Menotti and Madame Canzio, her adventures with him, and her death, would fill a moving drama, for she was a brave and devoted woman. In 1859 Garibaldi, then rather spoilt by adulation, met the Signorina Raimondi—a natural daughter of the Marchese Rainoudi. Her mother was a singer of the name of Gianoni, who will be remembered as a *protégée* of the old Lord Hertford and Lord Lansdale, and who sang in the year 1837-8, at the Lyceum, with Blais, Catone, and Fanny Wyndham, now Madame Frederick Lablache. Garibaldi, when he returned from the church with his bride, had a letter put into his hand with "Pressing" on it, the result of which was that he instantly parted from her and never saw her again. Then he declared an affection for his daughter's wet nurse, Francesca, by whom he had three children, two of them now living. Garibaldi having £4,000 a-year from the Italian Government for his life, and £2,000

a-year after his death (his children by Annetta and Francesca being illegitimate and thus unable to inherit this two thousand a-year,) has got a divorce from his wife and married Francesca; a wise and proper proceeding. But the accounts in the Italian newspapers of the marriage—of Garibaldi in a white cloak, with a gold embroidered cap, and Francesca, the wet nurse, in white satin; of the feast, the toasts, the dancing, and Garibaldi singing the Marseillaise, accompanying himself on the harpsichord—are wonderful.

In a notice of Mr. B. S. Lyman's report on the geological survey of Japan published last year, the *Times* of the 11th of February last remarks:—

The Japanese have now a completely organized Geological Survey, somewhat similar to our own, with a full staff of native surveyors, under an American chief, Mr. B. S. Lyman. The first Report of Progress of this survey, for 1878 and 1879, has just been published, and contains some accurate and valuable information on the mineral wealth of the country. Mr. Lyman describes a survey journey which he made with some of his staff from June, 1878, to February, 1879, extending over a distance of 2,800 miles. Mr. Lyman reckons that the coalfields of Western Japan contain about 620 million tons, and if one-third be deducted for the working, there will remain 400 million tons, representing a value at the coast of 1,000 million dollars. Inconsiderable as this is in comparison with the large and rich coalfields of other lands, it is quite equal in value to all the metal products together, except iron. The copper of all the workable mines scarcely reaches the value of 750 million dollars; the eight or ten gold and silver mines, which were formerly worked and may be so again, may, including the lead, antimony and tin mines, the workability of which is doubtful, be valued at not more than 250 million dollars. On the other hand, the value of the iron amounts to at least 250,000 million dollars, or 250 times more than that of the coal. The relative importance of the mineral products of Japan (excluding Yesso and the small coalfields of Kii, Ise and Iwaki) may be represented by the following numbers:—Iron, 1,000; coal, 4; copper, 3; all other metals (chiefly gold and silver), 1. The total value of these products reaches the sum of about 252,000 million dollars—i.e., just as much as the coalfields of Yesso, which in other respects is so poor in natural products. Mr. Lyman gives some details concerning 24 of the hot springs in Shimonotake, Iwashi, Uzen and Ugo, and a table of the petroleum springs of Japan, according to which by far the most numerous and most productive are in Echigo and in Akita Ken, and the total delivery in the year 1879 was 4,525 gallons per day.

STUART ELDRIDGE, M.D.,

Surgeon-in-Charge.

#### PARIS LETTER.

FEBRUARY 14TH, 1880.

Republican senator Crémieux was an Israelite in whom there was no guile, and his death, at the patriarchal age of 84, is a loss for the Semitic race, which on the authority of Earl Beaconsfield rules like love, the court, the camp, the grove and men below. It is but a few days since he buried his wife, who counted as many lustres as himself. They climbed the hill together, and they now sleep together at its foot. Crémieux was born in the hot royalist town of Nîmes; his father died a bankrupt, and the first act in Crémieux's public life was to assemble the creditors, bind himself to liquidate the parental debts, and, which he did in the course of a few years. In the centre of intolerance, he declared himself a liberal—as Jews are, for sufferance, which is the badge of all their tribe, has made them so, and he never

belied his programme. He was an eloquent speaker, but a jurist-consult rather than an orator; still his political addresses were not the less powerful, because they were sustained by an upright life. It was in his office that Gambetta was trained: he was his "devil;" yet when the ex-dictator escaped from Paris in a balloon, Crémieux, though head of the government of National Defence, at once placed himself under the orders of his former secretary. Crémieux like other liberals, made the mistake of supporting Louis Napoleon for the presidency of the Republic, but when he saw the prince aimed at the purple he became his inveterate opponent. He was honored with imprisonment after the coup d'état. The 2nd December was kept by him as the anniversary of his wedding, but after the crime of Napoleon he changed the observance of the ceremony to October. Everywhere he pleaded in favor of Jewish emancipation; he secured it for his co-religionists in Algeria, and it is to his efforts that the Berlin treaty insists on Christian equality being applied in Roumania. He went to Damascus to defend an Israelite against Turkish persecution. He was a warm friend of the gentiles; he consented to his children being baptized Catholics; he contributed largely to churches, and so munificently at Nîmes, that his portrait hangs in the church there beside that of the patron-saint of the locality, St. Nicolas, and often humble worshippers kneel before it by mistake. One of his most intimate friends was the present Archbishop of Paris. In 1831, when the celebrated Bishop Grégoire died, it was Crémieux, an Israelite, who delivered the oration over his remains. For so worthy and loyal a chief the Republic has done well to vote the grant to give him a public funeral. How such puts the interment of a de Morny into the shade.

France, like other nations, is uneasy at the increased armaments of Germany; not that she is afraid, for she could well repel an invasion, while not having the least desire to make one. She will maintain her *saug froid*, and never depart from her resolution of prudence; but in any European conflagration, old Nestor himself could hardly guide her from being absorbed to join in. The French, while acutely on the *qui vive*, admit Germany must feel uncomfortable with Russia and themselves on her flanks, but consider that the immediate "objective" is the Tartar, who presents now so many weak points—an interior honey-combed by all manner of secret societies: an exchequer that even Falstaff would not deem worth robbing; a position in Asia to be maintained ever with the sword half-out of the scabbard; an ugly quarrel with China, and an hereditary one with England, who is complimented on securing Persia, and above all maintaining a hold on Herat. These arrangements disposed of, it is believed that Lord Beaconsfield will give publicity to the Russian correspondence seized at Cabul, and if he does not go to war with Holy Russia as a consequence he will to the hustings. No matter who may direct the policy of England, it is the opinion of the Continent, as well as the earnest wish, that John Bull ever insist on making himself heard in the councils of Europe, and always in a manner that will receive attention.

Two important questions that were believed would create some excitement when commenced to be debated—the secularizing education, and the customs tariff, prove to be as dull as ditch water or a London Sunday; not a good speech has been delivered on the tariffs, save by the Minister of Commerce, and the opposition to the governmental education reforms has lost all interest, since the opposition, led by recreant republicans united to reactionists, has degenerated into a sordid attack to trip up the constitution.

That political eye-sore, the plenary amnesty, has been legislatively disposed of for this session. Minister de Freycinet made an excellent speech, declaring that the consolidation of the Republic must have precedence of the pardoning of the Communist ringleaders. He spoke well; neither through the nose like Dufaure, nor in a continued stammer like Waddington. He indulged in no *jamais*, no never: said, in time, when passions became calm, and public opinion favourable or contemptuously indifferent, the full amnesty might be politically prudent to accord. M. Rouher said *jamais* the French troops would quit Rome; it was once thought that setting the old fool Blanqui at liberty would compromise the Republic; at present

no one knows where the notorious gaol bird is, and, better still, not a soul has any curiosity about the matter.

M. de Freycinet urges the development of railways, &c., as the one thing useful for the country; he would confer a greater and a more immediate boon, were he to reform those that exist; to ameliorate their administration, to see the servants of the companies less worked—and so avoid accidents—and better paid; passengers not compelled to pay extortionate fares, or goods rates that swallow up rational profit of both manufacturer and purchaser.

I observe an increased attendance on the part of the fair sex in the lobbies—that is, ground floor—of the Chamber of Deputies: they are the moving spirits of the Women's Rights agitations; some are so very pretty that if they ever become candidates, when the daughters of Eve possess electoral rights, they ought to carry all before them. It then seems positively brutal to quote Napoleon's recommendation to woman—"Mind the house, and bring up children, well and abundantly." Statistics attest that the population of France contains half a million more women—mothers-in-law included—than men. Imagine the consequences that would ensue, if a plébiscite was resorted to, on a question where the domination of "the critters" was involved.

There is a sort of joy generally felt that we have escaped from the Laocoon-grip of winter; we feel "Spring comes slowly up this way;" in the flower markets we have hyacinths and heaths; "violets, dim but sweeter than the lids of Juno's eyes," and "daffodils that come before the swallow dars, to take the winds of March with beauty." We have had no carnival, and no disappointment was felt, as none was expected; Paris has transferred her interest in this Shrove Tuesday folly to Nice, where excursion trains convey the lovers of "the sport," and who ought to have, with their 30 lbs. of *impedimentum*, a diving dress to protect them from those hail-kissing comfits in plaster of Paris, called *confetti*. A few characters appeared in the streets: men in women's costume and *vice versa*, a licence tolerated for twenty-four hours; there was a weak instalment of infants shivering as dairy maids and shepherdesses; marquises, soldiers and a few specimens of the not-in-France-popular service, sailors. There was no *lurex grus*, but every butcher had a stalled ox from the fat cattle show; the pork-pie shops had the decapitated heads of gaping pigs in their windows, and poulterers had fowls that could only be purchased by a joint-stock arrangement. Madame Fauvel gave a fancy ball, and a right merry one it proved to be; her pretty self was disguised as a coquette of the year of grace 1817; her grave husband, the popular doctor, was a bouncing baby boy, in short clothes and ribbons; several vedette journalists made up so well as to deceive even the elect; the leading *artistes* from the Opera were present and sang a ballad of their best; one gentleman executed a *brin* during supper, and it proved an excellent innovation. Patti continues to live very retired—as compelled by society; anything she purchases, the shop-keepers at once advertise the fact: she looks more than her thirty-seven summers, though she has been off and on the stage since her first appearance, at the age of eight. The last unoccupied subscription seat—a foot-stool—at the Gaieté theatre, has been sold for 510 francs, so great is the Jenny-Lind *furor* to hear the diva. When her flirtations with Nicolini were first noticed in the press, she wrote in reply "why not say with my coachman?" "And why not?" added the editor in a note. Since her arrival in Paris, she has adopted the latest fashion with ladies, that of love birds in gilded cages, with perfumed wood roosts, delicate China drinking and bathing troughs, and which have cut out scented poodles and their artistic coats. She has yet to adopt another accomplishment, that of becoming as stout as a Sultana, or as her friend Albani.

The body of a Russian gentleman has been fished out of the Seine; he was apparently one of the many political travelling agents that Russia supports to spread her "civilization and culture;" he had plenty of money, as his baggage testified, and was in intimate relations with his embassy: the latter pronounce the death to be "mysterious"—a verdict that perhaps explains the catastrophe. A young poet is to be prosecuted for putting the Darwinian theory in verse: the poem is called *Dnia*, the name of a negress in Central Africa, and the sister of a queen,

who has been abducted when a baby by a monkey that rears her up, and then makes her his partner. The indictment does not set forth in what the *graveness* consists—a reflection on European monarchies or a physiological impropriety. One Malvezin, who had been fined fr. 100 and sentenced to three months imprisonment for his book, "The Bible a farce," has succeeded in quashing the sentence, on technical grounds, on appeal; he was found guilty of an outrage of public manners; along with the above penalties. The sentence involves his disqualification for any public employment or duty, or to exercise parental rights if he have them: he is socially outlawed by the Code.

A gentleman states he visited the other day an old curiosity shop, and was speaking to the owner's wife, who said her husband was in the back-parlor; soon the report of a pistol was heard, then a second; believing the unfortunate man had committed suicide he rushed in, and saw him deliberately re-loading the weapon with shot: an explanation followed: he was "making old Gothic furniture," by firing at an oaken press to pock mark it, as evidence of age.

The French have been often accused of ignorance of their colonies: the Minister of Marine in asking a grant a few days ago for the fortifications of Guadeloupe could not state, whether it was true the island had but one cannon, doing duty as a public clock? Next day he replied, there were 80 cannons, barracks &c. The cannon it seems are buried in weeds, and the barracks serve for a parish school and a common hospital.

According to the latest edition of the language of flowers, a rose-bud with thorns and leaves signifies, "I fear, but I hope;" presented upside down, it expresses, "Don't either fear or hope." The language of flowers originated with the Chinese.

In the Rue d'Aboukir is an open air space, where the carriers of woollen mattresses are to be hired—quite an important guild, since wool, not feathers or hair, is the bed-stuffing in France: close by is the market for wandering minstrels of low degree—any instrumental performer can be engaged at a moment's notice: violinists are most in request: flute players are flat.

"S" was a letter which recurs frequently in the names of incidents in the career of Napoleon III.—he was a Swiss citizen: Strasburg expedition; the famous reviews at Satory, the prelude of the coup d'état; Sebastopol, Solferino, Sadown, Sedan, and September—when he was dethroned. Macmahon has the M.—Marshal, Malakoff, Magenta, May, when elected president, and Montargis, the name of his estate.

The new public clocks, for marking "uniform time" with that at the Observatory, beat the latter already by 3 minutes.

The 63rd edition of the *Nabob*, Daudet's novel, is announced: about 200 volumes constitute a French edition. Writing poetry on orange peel, is the latest feat in calligraphy.

The Anti-tobacco Society offers a prize of fr. 200 for the best essay "on the influence of smoking in the case of women *enroute*." No reference to the negroes of Central Africa.

Drunkard, to a policeman: "For the future I will patronize a more civil lock-up."

#### JAPANESE PARABLES.

##### IV.

**D**URING the domination of the Tokugawa Shōguns it was the custom—in fact the law—to respect the crest of the clan to such an extent that, as our readers may probably be aware, if one of the lower class wore any device even resembling it, he was liable to be severely punished for his audacious insolence. Under those circumstances it followed that the name of Tōshōgū, the illustrious founder of the family, was regarded with extraordinary veneration, and this feeling was taken advantage of by an astute criminal in order to evade just retribution for his manifold offences, which entailed the forfeiture of his life when captured.

After many hairbreadth escapes this notorious marauder was at last arrested, brought to trial and condemned to death. On the execution ground, just as the minister of the last dread sentence of the law was about to deliver the fatal blow, he observed, tattooed upon the back of the criminal's neck, the revered characters—Tō Shō Gū! Under no circumstances could the executioner permit the edge of his sword to sever the sacred name, and the decapitation had therefore to be postponed until the opinion of the judges could be obtained on the important point involved.

After mature deliberation it was at last decided that the capital sentence could not be carried into effect; and the man's punishment was commuted to banishment for life to the island of Hachijō.

As may readily be imagined the news of this decision spread rapidly among the criminal classes, and very shortly afterwards a footpad who had also incurred the penalty of death was found to be tattooed in a similar manner: only the characters were much larger and of darker colour, so as to be readily noticed by the executioner. The case was also referred to the judges, who on this occasion arrived at a conclusion as unexpected by the offender as it was unwelcome to him. "This is now the second instance," observed the dignitaries of the law, "of a similar kind. If this criminal escapes the just punishment of his misdeeds, every ruffian in the Empire will surely follow the example set him—and the country will be overrun by offenders, deserving of death, but enjoying immunity. We therefore decree that the prisoner be executed, but in order to preserve the sacred name of Tōshōgū from contamination by the headman's sword, the skin of the prisoner's neck must be carefully and respectfully removed before his decapitation." The sentence was at once carried into effect and all this criminal earned by his plagiarism was the additional agony of being partially flayed.

M.

#### SYLVAN SOUNDS.

(From the Japanese.)

##### V.

##### CRICKETS AT NIGHT-FALL.

Half-interlaced in an eddy of bloom  
Stand the shadowy grasses,  
While thro' the ranks of their tremulous spears  
Softly the moonlight passes.  
Calm and clear in the Autumn night  
Glitter the dewdrops pure and bright,  
Like to the tones of tinkling bells,  
Borne from the travelled highway, swells  
Far-off a sound that seems to say,  
"A welcome guest is on his way."

I long for friends the scene to share,  
The night hath grown so very fair,  
With moonbeams wandering everywhere,  
And voices murmuring in the grass,

Chi-rin—Chi-rin!

Now here—Now there!

Chi-rin—Chi-rin!

Surely the traveller comes apace,  
For nearer sounds his hurrying steed.

Rin-rin—Rin-rin!

The bridle chimes to tell his speed,  
I'll garnish all my house and make,  
A merry feast for friendship's sake.

Rin-rin—Rin-rin!

Now crisp and clear,  
The sound I hear.

Impatiently I watch and wait,  
And yet no wanderer seeks my gate.  
Ah! now I find the riddle plain,  
For, hid in haunt of clustering grass,  
Where jewelled dew-drops thickly lie,  
A cricket chirps with ringing cry,  
So like the clink of bridle-rein,  
It made me long and wait in vain.

F. B. H.

Tokio, 3rd April, 1880.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

##### GOVERNMENT NOTIFICATION.

It is hereby notified that His Majesty the Emperor will visit the prefectures of Yamaguchi and Miya, and the city of Kioto during next summer.

Note:—The date of the Imperial departure, and the route chosen for the Imperial progress, will be notified hereafter.

SANJO SANETOMI,  
Prime Minister.

The 30th of March, 1880.

#### COURT, POLITICAL AND OFFICIAL.

Prince Kita-Shirakawa has been appointed commissioner, and His Excellency Shinagawa, chief executive commissioner, of the second National Exhibition to be held next year.

It is reported that His Excellency Sameshima, Envoy Extraordinary and Minister Plenipotentiary to France, will be recalled, with a view to receiving a more important appointment, and succeeded by Mr. Shioda, of the Foreign Office.

Mr. Yamazumi, the Governor of the prefecture of Fukushima, has received an increase of fifty yen on his monthly salary, in consideration of his long and faithful service.

On and after the first of April, all the Government offices, except the *Daijo Kwan*, open daily at 8 o'clock a.m. and close at 2 o'clock p.m. The *Daijo Kwan* will open at but will close at 3 o'clock.

A native contemporary mentions that Mr. Yoshida Masaharu, of the Foreign Office, will shortly visit Persia and India with the object of negotiating treaties of friendship and commerce between Japan and various other Asiatic nations.

A class for the study of the Korean language has been established in the school of foreign languages in Tokio.

His Excellency Yoshida, Minister to the Government of Washington, and His Excellency Awoki, Minister to the Court of Berlin, were received in audience by His Majesty the Emperor on Saturday last.

Mr. Ishida, the Governor of Akita, left for his prefecture on Monday.

The people of Kagoshima are agitating for the establishment of a National Assembly, and have despatched representatives to the capital, who lately forwarded a memorial on the subject to the Senate.

His Excellency Matsukata, the Minister for the Interior, arrived in Osaka on the 27th ultimo, and has accepted the hospitality of Mr. Hatayama Unai.

His Imperial Highness the infant Prince is shortly to be presented to Her Majesty the Empress Dowager, at the Aoyama palace.

His Majesty the Emperor entertained the President and members of the Senate at 12 o'clock, noon, on Tuesday.

Their Excellencies Yoshida, Minister to the Government of Washington, and Awoki, Minister to the Court of Berlin, were decorated with the Japanese Order of the 2nd class, on the 27th ultimo.

The construction of the new premises for the *Daijo Kwan*, will be commenced sometime in this month.

To-day being the anniversary of the death of Jimmu Tenno, the Prince of the Blood, the Prime Minister, the Privy Councillors, the high functionaries of the different Departments, and the nobles, visited the Imperial palace.

The Imperial Progress notified by the Prime Minister will, it is rumoured, commence about the end of May, and occupy fifty days.

Dr. Yano, Surgeon-in-chief of the Navy, is leaving for the new port of Gensan, Corea, on the 10th instant, in order to establish a hospital. Mr. Maida, Consul-General in Corea will accompany him.

A matriculation examination of students desirous of entering the Imperial College of Engineering at Tokio, will take place on the 4th instant. There are about one hundred and twenty candidates.

Mr. Kitagaki, the Governor of Kochi ken, will return to his prefecture on the 7th instant.

All matters connected with the National Industrial Exhibition are to be entrusted to Prince Kita Shirakawa, the Chief Commissioner, by His Excellency Shinagawa, Acting Home Minister.

Their Excellencies Iwakura, the Junior Prime Minister, and Ito, a member of the Privy Council, will accompany His Majesty the Emperor in the Imperial Progress.

The *Mainichi Shimbun* mentions as a current rumour that the authorities are going to establish a Government Gazette.

Mr. Fujisawa, an officer of the Bureau of Woods and Forests, is shortly going to the prefecture of Akita, on a visit of inspection.

The *Osaka Shimpu* states that, "having been informed that Mr. Zeisho, the Governor of Sakai, addressed a memorial to the Cabinet on the subject of the establishment of a National Assembly, we made inquiry into the matter and were told that the Governor is of the anti-popular faction, and is consequently opposed to the establishment of representative government, his views being entirely different to those of the Governors of the neighbouring cities and prefectures. We are, however, unable to answer for the correctness of our information." The same paper adds that "the police authorities of the prefecture in question are going to ascertain the names of the people who have become members of the *Aikokusha* or Patriotic Society."

Her Majesty the Empress Dowager will visit Kogane-i about the 7th instant, to see the cherry trees in blossom.

Two pieces of the woollen cloth manufactured at the Senji factory have been forwarded to the Imperial Household Department, for inspection by His Majesty the Emperor.

The *Mainichi Shimbun* says that "a meeting of the Senate was held on the 30th ult., with closed doors, and we are informed that it was on account of the Government having brought forward for discussion proposed regulations regarding public meetings. We are also informed that by the proposed regulations it is provided, that the societies in different localities shall be declared illegal and canvassing for new members strictly prohibited."

His Excellency the Chevalier Hoffen de Hoffenfels, the Minister from Austro-Hungary, arrived by the *Hirosshima Maru* on the 1st instant.

His Excellency Yoshida, Envoy Extraordinary and Minister Plenipotentiary to the Government of Washington, accompanied by his wife, and his two Secretaries Messrs. Tanaka and Hoshiguchi, left here for America on the 1st instant, in the *City of Peking*.

It is rumoured that His Majesty the Emperor will shortly visit His Imperial Highness Prince Heinrich of Germany, on board the *Prinz Adalbert*.

The *Choya Shimbun* mentions a rumor that the Japanese Government are about to make the Korean Government a present of the man-of-war *Chiyoda Kan*. Upon this the *Choya* remarks:—"If the rumour turns out to be correct, this proceeding is not unlike the Dutch authorities giving the *Kwanako Maru* to the Bakufu Government. We shall probably next hear of the Koreans asking us for naval instructors."

#### NAVAL AND MILITARY.

The Japanese man-of-war *Hiyei Kan* has left the dockyard at Yokosuka, having been thoroughly overhauled, a final preparation is now being made for the vessel's voyage to the Indian seas and Europe.

It has been determined to rebuild the Naval College in Tokio, and sixty-three thousand yen have been appropriated for the purpose.

His Excellency Admiral Enomoto, the Minister of the Navy, returned to Tokio from Yokosuka on the 26th ultimo. While at Yokosuka His Excellency witnessed some torpedo practice with which he expressed himself highly satisfied.

Lieutenant-General Takashima, who went to Europe last year, accompanied by Captain Tsuchiya and Sub-Lieutenant Noshima, returned on the 29th ultimo. The three cadets who were taken abroad with them, have remained in France to continue their military studies.

The Navy Department is going to build two sailing ships, one of which will be used as a transport, and the other as a surveying vessel.

On the representation of Captain Ito of the *Hiyei Kan*, the Admiralty have decided that the vessel shall not make a prolonged stay at Singapore, in consequence of the excessive heat of that place, but proceed to the milder climate of the Mediterranean.

The *Tsukuba Kan* will prosecute as much as possible of the cruise to Vancouver's island under sail. Steam will only be resorted to in case of absolute necessity. Both the *Tsukuba* and *Hiyei* carry a supply of tinned meat, put up in Yesso.

Rear Admiral Hayashi, the Commander of the Eastern Admiralty Office, called upon His Royal Highness Prince Heinrich of Germany, on board the *Prinz Adalbert*, on the 29th ultimo.

Certificates of efficiency were presented to the students of music in the Military College, on Tuesday last, in the presence of General Prince Higashi-Fushimi, and several other distinguished officers.

The sum of 20,000 yen has been paid to the authorities of Gumba, for the purchase of the land occupied by the Iwahana arsenal.

The meeting of commanding officers terminated on the 29th ultimo, and the members were entertained by General Nodzu at his private residence on the following day.

The reserve forces called out recently were reviewed on the Hibiya parade ground on four successive days commencing last Sunday. They were marched out to the Narashino Plains yesterday to practise field manoeuvres.

Mr. Sugi, an officer of the Staff, has been appointed to the command of the Army Telegraph corps. The military operators will be trained in the premises formerly occupied as a Military School, at Tatsunokuchi.

Lieutenant General Miyoshi, who is in command of the Osaka garrison, has returned to that city.

Major Komatsu has been appointed Superintendent of the Surveying Section of the Staff.

It is currently reported that Lient-General Takashima will be appointed Chief of Police.

Five military cadets, attached to the Staff Office, were to leave the capital to-day en route for Vladivostok. They will arrive at Nagasaki on the 8th instant, and proceed thence to their destination in a Russian vessel.

#### INDUSTRIES, TRADE, AND FINANCE.

Nine hundred and twenty-five persons visited the Competitive Exhibition of Cotton and Sugar at Osaka, during the week ending on the 20th ultimo.

A *shipken* of Tokio *Fu*, Mr. Fujikura, has obtained from the Government a grant of some waste land in the prefecture of Chiba, for the cultivation of sugar cane. A company has been formed with the necessary capital, and operations have already been commenced.

The first of the new season's tea was delivered at the godowns of Messrs. Okura and Company on Monday last. It came from the province of Yemshiu.

The Colonial Department has imported five hundred young maple sugar trees from America, and planted them out in the botanical gardens at Awoyama, Tokio, and the Department has also forwarded 150,000 young mulberry trees to Sapporo. At the present time in Yesso the immigrants are all diligently working to bring the land under cultivation, and those farmers who emigrated from the province of Awa have already commenced the manufacture of indigo, and built a beautiful village.

The following is the return of exports and imports at all the open ports of Japan during the month of February last:—

Imports .....	Yen 2,325,305.73
Exports .....	" 1,809,502.86
Excess of imports over exports ...	Yen 515,802.87
Export and import duties and } miscellaneous revenue ...	Yen 174,778.43
Export of bullion ...	" 327,817.47
Import " .....	" 23,630.00

Excess of exports ... .. Yen 304,287.47

A number of gentlemen in Kioto have applied to the authorities for a loan of 350,000 yen on security of pension bonds, for the purpose of erecting extensive buildings in the premises of the old Imperial Palace. It is proposed to use the buildings for a museum and to hold an exhibition once a year. It is probable that the application will be granted.

It is under consideration to open an exhibition in the prefecture of Miyagi.

The construction of the railway between Tokio and Takasaki is estimated to cost about 2,000,000 yen, or at the rate of 35,000 yen per English mile, which is much less than the previous estimate. The side-station buildings are each estimated at five hundred yen.

The silk company at Nihonmatsu, in the prefecture of Fukushima, which has already obtained high honours at several exhibitions in foreign countries, applied for permission to send some exhibits to the International Exhibition at Melbourne, this year.

The woollen manufactory at Senji is gradually being extended, and another building is now to be erected to accommodate machinery driven by a seventy horse-power engine. The addition will be exclusively used for the manufacture of cloth for the army and navy. The requisite machinery has been ordered in Europe.

The *Genkui Maru* carried 235 English pounds weight of gold and silver bullion, and 4,998 silver yen belonging to the Osaka mint, from Yokohama to Kobe, on the 31st ultimo.

The inhabitants of the Island of Hachijo built two sailing vessels some years ago, and commenced the export of local produce to Tokio. They have been so successful that they are now going to order a large vessel for the purpose of extending the trade.

The distribution of prizes among the successful exhibitors at the Cotton and Sugar Competitive Exhibition in Osaka, took place on the 28th ultimo. The first prize was one hundred yen.

The people of the prefecture of Okinawa (Loochoo), having paid great attention to agriculture, the waste portions of the islands are gradually being brought under cultivation. In order to assist the people, Governor Nabeshima has applied to the authorities for agricultural implements to be sent down.

A native journal states that, "owing to the fall in the value of kinsatsu to the extent of 47 sen 5 rin per yen, the import business is very dull, in fact almost at a stand-still. The sale of cotton yarn and shirtings has ceased, and only a trifling business is being done in black velvet."

#### MISCELLANEOUS.

The *Akebono Shimbun* states that the report of great distress existing among the poorer classes throughout the prefecture of Niigata is contradicted.

The *Hochi Shimbun* states that the country round the mountain of Hotsusan, in the prefecture of Isakawa, is now constantly experiencing earth tremours, and the mountain is emitting sounds which are considered premonitory of its bursting into a state of active eruption. The inhabitants are making preparations to remove from the threatened danger.

The authorities of Kanagawa and Shizuoka have arranged for the construction of a carriage road between Odawara and Atami.

Work is to be commenced at once on the extension of the railway from Ootsu to Tsuruga. Two officers of the Railway Bureau have left Tokio, to inspect the preliminary work.

His Royal Highness the Duke of Genoa landed at Nagasaki on the 21st ultimo, and visited the Takashima coal mines, where he was entertained by the proprietor, Mr. Goto. Among the guests were Governor Utsumi and Judge Okada.

Mr. Torada Masukichi, the editor of the *Kinji Hiron*, having published a copy of the memorials forwarded by Mr. Ayano Sozo and another, on behalf of Osaka *Fu* and nine *Ken*, urging the establishment of a National Assembly, was fined 100 yen on the 30th ultimo.

A telegram from Osaka, dated 9.40 a.m. on the 30th ultimo, states that a great disturbance took place among the rice merchants at Doshima on the previous day. Several hundred persons were concerned in it.

Princess Nabeshima, the wife of the newly appointed Minister to the Court of Rome, died on the 30th ultimo. The deceased lady has been ill since last January.

The *Hochi Shimbun* mentions that a small steamer, called the *Suyehiro Maru*, running on lake Biwa, left Moto-yamada at 8.30 a.m. on the 27th ultimo, and capsized almost immediately. Eighty-nine passengers who were on board at the time were precipitated into the water, but fortunately the accident having occurred not far from shore, it was at once noticed and an alarm given. Boats put off without delay, and all the victims of the catastrophe were saved and brought to land, where they were properly attended to. As the weather was extremely fine it is conjectured that the accident was occasioned by the overloading of the boat, which is said to be only of seven tons burden.

The people of Iochoo are at present very peaceable and quiet, but are afraid that the Japanese Government will issue an order for them to cut off their queues.

The *Vellor Pisani*, under the command of His Royal Highness the Duke of Genoa, left Nagasaki for Shanghai at 9 a.m. on the 24th ultimo.

A telegram dated Nagaoka, Yechigo, at 10.15 a.m. on the 1st instant, states that a severe south-westerly gale sprung up at 3 a.m. that morning, and was still blowing when the despatch left. Many vessels had already been wrecked, and further particulars are promised. A native contemporary remarks that the shipwrecks mentioned in the telegram are probably those of vessels trading in the Shinano-gawa.

During the past month, ninety-one Japanese vessels with 4,869 passengers and 236,718 tons of cargo arrived in Yokohama, and ninety-nine Japanese vessels left. During the same period twenty-one foreign ships arrived and twenty-six cleared.

It is proposed to construct a street tramway between Shinbashi, Asakusa and Ueno, at an estimated cost of three hundred thousand yen. It is said that the cars, which will each accommodate twenty passengers, will be drawn by two horses at a speed of about eight miles an hour.

To-day, the 3rd instant, being the anniversary of the death of Jimmu Tenno has been observed by the Japanese as a general holiday. There was no publication of Japanese newspapers.

#### IMPERIAL GOVERNMENT RAILWAYS.

##### TOKIO AND YOKOHAMA SECTION.

#### THE JAPANESE PRESS.

##### THE CRISIS IN THE SENATE.

(Translated from the *Mainichi Shimbun*.)

WE consider that there is nothing but the law to protect the liberties of the people; and law is not of one sort but several. In despotic governments what the sovereign thinks proper becomes the law of the land, and

in some constitutional governments, laws are made with the assent of both the sovereign and the people, while in republics, the legislative power is vested in a representative body chosen by the people.

Arbitrary laws may govern some barbarous or stupid people, but not those who have an independent spirit; republican governments may be established in certain foreign states, but not in such a country as our own, where one and the same dynasty has continued to reign for many thousand generations. What we eagerly desire is, however, to have the laws made by the mutual assent of both the sovereign and the people. But there not being a House of Commons to represent public opinion regarding matters of legislation, we may say that the liberty of the people is now in as dangerous a position as if it hung over a deep pool or stood upon thin ice.

Well then, whose duty is it to make the rights of the sovereign and the people operate favourably to all, and to ensure the tranquillity and prosperity of the whole empire? Certainly the Senate is the only department where such a duty should be performed. This department was established in the year 1875, in accordance with His Majesty's declaration, made on oath at the commencement of his reign, "to decide all matters by public opinion." And perhaps it is not too much to say that, if the Senate exercises due weight in the councils of the state, the liberty of the people will be safely secured; but if, on the contrary, it is without influence, freedom will be seriously endangered; and thus both the life and death of liberty depends upon the action of the Senators. We can thus see how important an office they hold.

By the recent changes in the government, the Senate was deprived of its magnanimous President, Prince Arisugawa, who has been promoted Sadaijin, and of its able vice-President, Mr. Kawano, who was appointed Minister for Public Education. It is a matter very well known to the world that Prince Arisugawa paid great deference to the wise counsels of others, and that Mr. Kawano strongly advocated the liberty of the people. Thus they considerably protected the happiness of the whole empire while in their former offices; but we know not whether their successors are able enough to keep the Senate in the same satisfactory state as before. Mr. Ogi, being appointed the new President, in addition to his original office as a member of the Ministry, we are led to imagine that, in case of the Senate henceforth following out the views and adopting the opinions of the Ministry without entering into full discussion of them in its sittings, the department will become a place for merely ratifying the will of the ministers;—which would involve the Ministry exercising the legislative powers of the Senate. Have we not reason then to fear that the hope of enjoying the gift made by the imperial oath taken in the year 1868 will eventually be taken from our community?

Who shall be blamed in case the Senators do not insist upon their rights at this critical moment and thus let their legislative power decline? As regards the president, it would not perhaps be contrary to his inclination, if the balance of power between the Senate and the Ministry was not maintained, and the former reduced to a mere passive agent of the latter;—because Mr. Ogi's primary duty is to increase the influence of the Ministry; while that of the other members of the Senate is exactly the reverse. The real functions of the Senators being to legislate, the welfare of the whole empire rests entirely in their hands.

The question at present appears to be:—Shall the Senators, retain their power and influence, or let it drift into the hands of the Ministry? We have been told that Mr. Yanagiwara and Mr. Nakajima were prominent among the Senators for their determination to preserve the rights of the Senate inviolate; but the former has been appointed a Minister to a foreign Court, while the latter is said to intend resigning his office. We cannot but regret the loss of such members of the legislative body.

Let us repeat then, that either the retention or the loss of the Senators' power and influence depends upon this critical moment. If they are not ambitious enough to gain glory, they had better make up their minds whether to remain or resign, as it is not advisable for them to act without a fixed purpose, and thus leave behind them an evil reputation for future generations to scoff at.

## ARRIVAL OF THE FRENCH MAIL.

Allahabad, February 15th.—Abdul Rahman in now said to have twelve lakhs of rupees. There are rumours that he is staying with his father-in-law Jehandir Shah Mar Babakshan. Syed Mahomed Taki, head priest of the Hazaras, has come in with 200 of the most influential men of lower Hazara to pay his respects and offer his services. General Roberts had a short but satisfactory interview with him. Mustafi Habibula Khan has been granted leave to visit his home in Warlak, and as he was one of Mahomed Jan's great friends, he may use his personal influence to bring that leader in.

Kandahar, February 16th.—Colonel St. John left this morning on special duty for Calcutta, riding post. Colonel St. John will return for a short time to Kandahar. Weather is unusually severe. Much snow has fallen at Quetta and on Kwoja. This must necessarily delay the march of the Bombay Division, and the forward movement of General Stewart's force. The Bishop of Lahore is expected here this week. A large number of labourers have been engaged for work in the Peshin valley on the Kandahar Railway. News from Ghuzni represents the tribal gathering as dispersed, though there was an idea that the tribes might collect again at the Nouroz. Daud Shah is on his way back to Lahore.

Allahabad, February 16th.—A truce has been concluded between the Hazaras and Mohammad Jan's men, and is to last till the 21st of March. Samch Khan, son of Safi Khan, attacked and defeated Butchaisian Martuza at Charikar. The latter fled to the Opian Ghorbund Valley. Samch has gone in pursuit. News has been received from Turkestan that Sirdar Shalabaz Khan, whom the British appointed Governor, is still detained at Babakshakar. Several chiefs at the head of a considerable force of Ghazis have arrived six miles from Babakshakar with the intention of opposing Shabaz, who is reported to have fled or concealed himself. Ghuzni reports are still circulated that the intended attack by Mohammad Jan will take place in February, or the beginning of March.

Calcutta, February 17th. A camp follower having been murdered at Perwan, a party of the 51st and 8rd Bengal Cavalry was deputed to surround the village within whose limits the murder was committed, a complete surprise was effected on the morning of the 16th. The village paid a fine of Rs. 300 at once, and the troops returned without a shot being fired. General Bright telegraphs from Mindrawur, where he had proceeded to settle matters with the Utkheyls in the vicinity who have been engaged in the robberies between Gundamuck and Fort Battye. A reconnaissance is being sent to Bogri. The weather is still very severe in the Upper Kurram. The health of the troops improving, except the 13th (very bad) and 11th N. I. bad. No political reports of consequence. A deputation of Wajirs is said to have visited Mushki Alam. A railway accident occurred early on the morning of the 17th, near Mittri, twelve miles from Sibi. Particulars are not yet received, but several persons are reported to be seriously injured. Two trains collided, in one of which was the Poona Major Reynolds, who has been deputed to make a full enquiry.

In official circles at Calcutta it is regarded as probable that Sir Ashley Eden will be appointed to Bombay, and will accept it.

Kurrachee, February 18th.—The Governor of Bombay was entertained last night by the Sind Club. Over sixty sat down to dinner. The Governor spoke at some length on Sind, past and present, and dwelt on its rising importance. His Excellency inaugurated the Kurrachee Waterworks this afternoon. He returns to Bombay in the *Tennasserin*, arriving probably on the 22nd.

There is considerable inquiry from England for land in the gold district.

Bombay, February 18th.—Stanley won the cup at Calcutta. The largest breaks during the handicap were Roberts 240, Shorter 231, and Stanley 112.

Scindia is seriously indisposed, and obliged to abandon his projected tour.

At a meeting at Hyderabad, the Nizam subscribed twenty thousand rupees to the Irish Distress Fund, the Amir-Kabir and family ten thousand, Sir Salar Jung and family eight thousand. Upwards of fifty thousand rupees were subscribed on the spot. Sir R. Meade was in the chair.

Calcutta, February 18th.—Subsequent report states that,

in the railway accident on the Sibi line, seven coolies were killed and two severely hurt, the Sowars and horses of the Poona horse being injured. General Bright has moved to Mandrawar in the Lughman Valley with a strong force. The villagers are friendly and supplies more plentiful. The troops under Colonel Boisragon hold Asianatulla Khans and other forts. The local headmen have come in to General Bright.

Kabul, February 19th.—A convoy of sick and wounded of British soldiers left on the 16th for India. Small parties of British and native soldiers will be despatched regularly every other day. Supplies being brought in greater quantities. Weather slightly warmer during the day. Several degrees of frost still at night. The 3rd will be expected to arrive on the 20th, the 5th Punjab Cavalry leaving on the 21st. Fortifications progressing rapidly. All stores of grain and forage now being brought in are placed in Bala Hissar. General Bright encamped at Maz Tigri. Supplies plentiful. People are friendly. The Governor of Lughman giving every assistance. A number of local Khans are coming in. The rumours of Abdurrahman Khan having crossed the Oxus are still unauthenticated.

Allahabad, February 19th.—The son of Wali Mahomed, sent by us to Afghan Turkestan, reports that some Chiefs who tried to hinder his advancing were defeated. There is no doubt of Nek Mahomed's presence near Balkh. Mahomed Jan's forces seem to be breaking up. The Logaris refuse to give even food now to his supporters, and Hasan Khan is making overtures to come in to Sherpur. Many independent Ghilzai and Kohistan Chiefs, who have hitherto held aloof, are also anxious to make terms. Bellevue at Mussoories has been purchased by Government as a residence for Yakoub Khan. The *Pioneer* has reason to disbelieve the report of Brigadier-General Tytler's death.

Allahabad, February 20th.—The factions in Kohistan are quarrelling among each other. Syed Mir Khan has shut himself up in Fort Sorab Khan, and is besieged therein by a force led by Mir Dutcha's father-in-law. Our Governor, Shabaz Khan, has ordered 200 men to assist in the attack. Our sick convoys are now going regularly down to India, the European and native field hospitals being first cleared out. News received from Lughman states that the force crossed the Kabul river on the 15th, and marched through Charbagh and Kagai to Mandrawar. Crowds of villagers turned out, and seemed much astonished at the sight of elephants carrying guns of the G-8 R.A. No opposition has taken place. Mr. Lepel Griffin visits the Maharajah of Kashmir before proceeding to Kabul.

Col. Sir G. Pomeroy Colley, Private Secretary to H. E. the Viceroy, has been offered, and has accepted, the appointment of Governor of Natal and High Commissioner of South East Africa, with command of the troops in South East Africa, succeeding Sir Henry Bulwer and Sir Garnet Wolseley. Colonel H. Brackenbury, R.A., succeeds as Private Secretary to H. E. the Viceroy.

Bombay, February 20th.—The Bombay reserve division is to be moved on.

Calcutta, February 20th.—There are rumours of fighting being imminent near Istalif between the adherents of the British Government and some 2,000 men of Ghulam Kadir's party.

Sibi, February 20th.—Five men at Dadur, left in charge of the stores, were cut up by Murrees. The withdrawal from Dadur is completed. Except this the whole of the European troops are about going to Nari, five miles further. The water is presumed to be the cause. The details under Captain Gordon, one hundred and fifty, arrived from Mean Meer, and battery of Horse Artillery arrived to-day.

Calcutta, February 21st.—General Bright's force has moved up to Tigri in Lughman, and encamped to the south of the Alishing river near the meeting of the Alingar valleys, which are both well cultivated and densely populated, containing numerous forests and enclosures of different Khans and chiefs.

From Candahar:—The ringleader of the revolt of the Is-hattzais against the representative of Sirdar Sher Ali is said to have been executed and the tribe fined 15,000 Candahari rupees, which had been paid. These measures are said to have restored order in the district. All the high hills round Candahar are covered with snow. The fall has been very heavy, and continues at Kelat-i-Gilzai, Quetta, and Khojuck and Peshin valleys. The health of the troops is good. All

quiet through Candahar, Kelat-i-Gilzai, and Zamindawar districts.

London, February 21st.—In the House of Lords last night the Duke of Argyll moved for papers relating to the Russian correspondence found in Kabul, and denounced the whole policy of the Government in Afghanistan. Lord Cranbrook declined to produce the papers asked for as being inexpedient and prejudicial to the public service. A long discussion then took place relating to the policy of the Government, during which Lord Beaconsfield said that when in 1878 Russia, considering the strained relations with England, naturally tried to use her influence in Asia, the British Government then thought the moment had arrived to finally settle who was to possess command of the great gates to India; that policy, wherefrom Government had never swerved, had been successfully carried out. His Lordship said it was impossible to retire from the country while it was still in a state of anarchy. When the Afghans understood that England was just, but resolved to be obeyed, the present difficulties would disappear. The motion was ultimately withdrawn.

St Petersburg, February 22nd.—The Academy of Forest Culture at Moscow, together with the Museum attached, has been totally burned down. It is believed to be the work of incendiaries. Several students have been arrested on suspicion.

Allahabad, February 22nd.—At Sherpur arrangements are being made for a mounted infantry. Sixty men are to be chosen from the 67th, 72nd, and 92nd Regiments. Major White, of the 92nd, is mentioned as the probable commandant. The fighting near Istalif has been reported to be at an end. Our lines of policy are hazy as ever. The two strongest parties in Kabul are those of Yakub Khan and Hashim Khan. If countenance is given to the latter, no doubt a faction strong enough to hold Kabul could be formed, but the control of Turkistan would be an open question. Abdol Rahman will probably possess himself of the Northern Provinces in any case.

Allahabad, February 23rd.—The Bishop of Lahore has arrived at Kandahar. Very heavy snow has fallen in Southern Afghanistan. The Khojacks are hardly passable for troops, and the movements of the Bombay division have been greatly retarded. In Kelat-i-Gilzai and neighbourhood the roads are all blocked with snow. No forward movement of this division is probable for some weeks.

Calcutta, February 23rd.—From Kabul Mir Bucha is said to have left Ghazni, and is expected at Baba Kushkar. Ghullum Hyder is reported to have addressed the Rajik chiefs, informing them of his numbers, and his intention to use them after the melting of the snow. The weather at Kabul is fine, though cold. The snow is lying on the northern slopes. There is no deficiency of supplies. From Mandrawar General Bright reports that a reconnaissance had had been made to Badliabad. Every part of the Lughman valley has now been examined with hardly a shot being fired. All the chiefs and headmen, with few exceptions, have come in, and co-operated cordially. The troops have been moved back close to the Kabul river, and were to move on to Asmatulla's fort. Mulla Khalil is said to have quarrelled with the people of Belmani, and moved to Spintangi.

Calcutta, February 24th.—General Bright has returned to Asmatulla Khan's fort in the Lughman valley. No news from the Jellalabad district; rumours indicate that the coalition of the Mohmuds for raiding has probably failed. News has been received from Herat that fighting has again broken out between the Kabuli and Herati regiments, ending in the complete discomfiture of the former, of whom many were killed.

Sir John Stacley presented the Financial Statement for 1880-81 in the Legislative Council. Results are highly favourable. In 1878-79 surplus £2,044,000. In 1879-80 surplus £119,000, budget estimate 1880-81 surplus £417,000. The foregoing figures in each case are after paying from ordinary revenue all charges for famine, Afghan war, and frontier railway warcharges; 1878-79 £676,000; 1879-80 £3,216,000; 1880-81 £2,990,000; setting off increased railway and telegraph revenues total net expenditure was, to end of 1880-81, five and three-quarter millions.

The comparison between the present total net and ordinary expenditure with that of twelve years back shows, apart from loss by exchange, only a trifling increase either in civil or military charges. Even including loss by exchange the total

net expenditure shows no increase owing to improvement in railways and canals.

London, February 25th. The London press generally regard the Indian budget as satisfactory. The *Standard* says that as the famine fund has been used for the Afghan war and the frontier railways, it is a reason why the cost of the war should be shared by England.

The *Daily News* says it is rash to infer that all danger to Indian finances is past.

The House of Commons has negatived a motion to restrict the duration of Parliament to five years and abolish the immunity from arrest of members of the House of Peers.

London, February 25th.—Sixteen gentlemen formed a deputation which waited on the Secretary of State on the 21st instant to urge the immediate extension of the railway to Haputale. Sir Michael Hicks-Beach's reply, although not pledging the Government, was considered satisfactory by the Deputation. Some of the number thought that, if more pressure were applied, the deputation might succeed.

Constantinople, February 25th.—Some Greek naturalized British subjects have been arrested for being found in possession of bombs with which it is suspected they had designs on the life of the Sultan.

London, February 26th.—The statement that Sir Charles Ellice succeeds Sir Frederick Haines as Commander-in-Chief in India is contradicted.

Berlin, February 27th.—Prince Hohenlohe, the German Ambassador at Paris, has been appointed Foreign Secretary for six months.

London, February 28th.—After three days' debate the House of Commons agreed without a division to a resolution of punishing obstructive members with suspension. The resolution was made a Standing Order. The Liberals supported the Government.

Berlin, February 28th.—The illness of Prince Bismarck is the reason of Prince Hohenlohe's appointment to the Foreign Secretaryship.

London, February 29th.—Consols 98½. 5 per Cent. Rentes 115. Bar silver, 52½. Exchange on India 60 days' sight, 1'8.

#### ARRIVAL OF THE ENGLISH MAIL.

Bombay, February 13th.—The Chamber of Commerce, at a special meeting yesterday, attended by the representatives of all the principal firms in Bombay, passed the following resolution unanimously:—"That this Chamber tenders its grateful thanks to the Government of Bombay for their efforts to secure a change in the departure of the mail steamers, and having considered the telegram just received from the Government of India (proposing the closing of the mails at Bombay at twelve noon on Saturday.) Resolved as follows:—That the Chamber fails to see that the Friday evening departure would cause any real inconvenience anywhere, while both at home and in Bombay the most serious inconveniences are now experienced from the Saturday evening departure, and most of these inconveniences would remain were the proposal for the Saturday afternoon sailing accepted. That the Government of India be respectfully requested to communicate by telegram with the British postal authorities on the subject as the Chamber believe the mercantile community in England object strongly to a Saturday evening departure from Bombay."

Madras, February 14th.—Chendrial has been beheaded by his own followers, and his head has been taken to Chodavaram by his own men. Four hundred rebels under a new leader have risen in Zerranagudien taluq. A police force under Inspector Millett has been sent to quell the disturbance.

Madras, February 15th.—Chendrial's head was taken to Rajumundry yesterday, where it was identified by Unmuledly and the jail warders where he was formerly imprisoned, also by his wife and mother. The Agent to the Governor at Vizaggram has forwarded to the Madras Committee of the Irish distress, a cheque for one thousand pounds sterling. The amount already received or promised is over rs. 24,000, which with the Maharajah's donation makes the Madras Fund larger than that of Bombay. Sir Neville Chamberlain has consented to remain in his post of Commander-in-Chief till the home Government is in a position to send a successor. All arrangements for his departure by the *Mirzapore* on the 6th March have therefore been cancelled.

General Travers has declined the Madras command. Sir Donald Stewart has accepted it. Sir Neville Chamberlain remains till relieved. Daoud Shah is about to be moved again up-country. His destination will probably be Lahore for the present.

Allahabad, February 20th.—Cabul, February 18th.—Mahomed Isa Khan, and Mahomed Aza Khan, with a Turkoman force, strength unknown, left Bokhara and reached Akocha town, in Afghan Turkistan, 42 miles from Balkh. Abdul Rahman is also reported to have arrived there. The Usbegs are giving Gholam Hyder revenue willingly. Mahomed Hoosein Khan and Takir Khan have returned. Bala-kijan men were seen proceeding on to Logar with Enfield rifles, which they are said to have brought in from the Charlah Valley at twenty rupees apiece. Pneumonia is on the decrease. The cases which lately occurred are of a much milder form. Mahomed Hissan Khan Logari, who has not met with much success, is persuading the Ghilzas to join him. News of Abdul Rahman's probable arrival at Cabul has struck consternation into some of the Sirdars. They are said to be taking counsel whether they had not better bolt. Abdul Rahman, who was sent after Sirdar Isa Khan, has brought him to Mazari Shareef, where the former chief was, to despatch this information.

London, March 1st.—Bank Shares:—Oriental Bank Corporation, £24. Chartered Bank, £23 10s. Chartered Mercantile Bank, £23. Hongkong and Shanghai Bank, £37. Consols, 98. Five per Cent Rentes, 115. Bar silver, 52. Paris Exchange on London, 25.22.

London, March 2nd.—Colonel Stanley, in the Commons, in moving the Army Estimates, which were passed unopposed, expressed an opinion that experiments made recently will probably result in breech-loaders replacing the muzzle-loaders.

The Russian Government is going to increase its silver currency.

Teheran, March 2nd.—The proposal of a Persian expedition to Seistan has been abandoned for fear of encountering political difficulties.

Constantinople, March 2nd.—The firing at and wounding of a member of the Russian embassy here, is in no way connected with politics.

Berlin, March 2nd.—In yesterday's sitting of the German Parliament there was a long debate on Prince Bismarck's bill for the increase of the German army. Field-Marshal Moltke made a speech in which he defended the increase, stating that he regarded it as a precautionary measure and not a menace.

London, March 3rd.—Sir Stafford Northcote, in reply to a question in the House of Commons last night, said the Afghan programme published in the *Civil and Military Gazette* of Lahore was purely imaginary.

Consols 97½.

#### LAW REPORT.

##### IN H. B. M.'s COURT FOR JAPAN.

Before R. T. RENKIE, Esq., Judge.

Tuesday, the 30th day of March, 1880.

KONO MICHIOTOMO (acting Kon Rei on behalf of the Japanese Government), *versus* G. DOMONEY and A. K. NOBLE, trading as G. Domoney & Co.

This was a claim of \$262.25, rent, for the year 1879, of the land at Kitagata occupied by the defendants as a butchery.

The grounds of the defendants refusal to pay the amount claimed, are disclosed in their answer, which is as follows:

1st.—That said defendants deny having leased the butchery ground from said plaintiff from the 1st day of January as alleged in the first paragraph of said petition.

2nd.—That, by arrangement made many years ago between the local Government of the time and the foreign butchers, the former agreed to lease to the latter certain allotments of land situated at Homoko, in perpetuity, and to erect suitable buildings thereon, and to keep the same in repair, in consideration of the latter paying to the former an annual rental, which has since been stipulated at \$262.25.

3rd.—That, on or about the 10th day of December, 1878, said defendants paid to the former the sum of \$4,265.19 in satisfaction of all claims for arrearages of rent and as

purchase money of the said buildings erected on said butchery grounds.

4th.—That said plaintiff at the time of receiving said payment agreed to execute a lease to said defendants in conformity with the arrangement as aforesaid.

5th.—That a draft of a lease of said premises was submitted by said plaintiff to said defendants in the month of October, 1879, for their approval, but that the duration of the term was limited to the period of five years only, and that conditionally, reserving to himself the right to re-occupy the said premises upon giving six months' notice to said defendants to quit, the Japanese government to be exempt from all liability for any expenses to be incurred in the surrender of the same.

6th.—That the value of the buildings erected upon the land as aforesaid, for the business of a butchery, as they now stand, is not less than \$3,000; that to remove the same the value would be deteriorated by an amount of not less than two-thirds, which would cause loss to said defendants of \$2,000.

7th.—That said defendants admit their indebtedness to said plaintiff in the sum of \$262.25, due for rental of said premises, provided said plaintiff executes a lease of the same to said defendants in conformity with the arrangement aforesaid, by virtue of which said rental is due.

8th.—That said defendants bring into Court the sum of \$262.25 under protest that such a proper lease in perpetuity as aforesaid be executed by said plaintiff.

9th.—That said defendants are willing to agree to give up possession of said land to plaintiff upon receiving six months' notice to quit, upon being indemnified in the sum of \$2,000 for the expenses to be incurred in and about the surrender thereof, and in the removal of said buildings, and also upon having leased to them another suitable lot of land for a butchery business at a reasonable rental, and for a term of not less than twenty-five years' duration.

The defendants therefore pray as follows:

1st.—That payment of the sum of \$262.25, now brought into Court by defendants, shall be withheld from said plaintiff until he shall perform his engagement to execute a proper lease of said premises to said defendants.

2nd.—That each party shall be ordered to pay their own costs of this suit.

3rd.—That defendants may have such other and further equitable relief in the premises as by this Honourable Court may be deemed just and requisite.

(Signed.) A. K. NOBLE,

For self and partner of

G. DOMONEY & Co.,

Defendants.

Mr. Osborn, an officer in the employment of the Kencho, appeared on behalf of the plaintiff, and Mr. Noble represented the defendants.

Mr. Osborn read the petition and answer; whereupon

His Honour remarked:—The answer is altogether irregular. There can be no prayer in an answer. If the Court deems the defendants entitled to any relief after hearing the evidence, it will consider an application for leave to file a cross-suit and for a stay of proceedings in the present suit until the cross-suit is heard. The form of the answer is quite irregular.

Mr. Osborn then entered the witness, box and having been sworn stated:—In October, 1878, after protracted negotiations and to save further discussion and trouble to the land officers of the Kencho in having to make repairs to the buildings occupied by defendants, I, on behalf of the Kencho, made an arrangement with Mr. Plummer, formerly of defendants' firm, for the payment of rent for the property known as their butchery; and I agreed to accept \$153.71 as the purchase money of the buildings on the ground. This was a nominal price but was looked upon as a concession, as defendants said they had actually put up the buildings themselves. To simplify matters they were subsequently to pay an annual rent of \$262.25. This they agreed to do by the following letter, (Exhibit A.):—

17, Yokohama, 2 Oct., 1878.

Imperial Land Officers,

I. Gentlemen,—We are willing to pay the sum of Mexican four hundred and fifteen  $\frac{9}{100}$  for rent of butcheries at Homoko presently occupied by us for this current year of

1878, ending 31st December, same payment to be in full settlement of all claims.

II. Commencing in 1879 we would pay you yearly two hundred and sixty-two  $\frac{1}{100}$  dollars.

All erections on the ground to belong to us.

We are,

Yours obediently,

G. DOMONEY & Co.

At the same time defendants asked for a lease, which was promised to them. Some question arose as to the duration of the lease. Mr. Plummer wanted it for ten years; but the land officers said there would be a difficulty about granting a lease for more than five. I do not know whether Plummer agreed to accept five years, but he asked for a draft lease to be sent to H. B. M.'s Consulate for his perusal. Plummer was also informed that the Government would reserve power to resume the ground if they wished to do so on giving six months notice. Plummer demurred to this stipulation, but it was explained to him that the power would only be acted upon in case of necessity. When he left the office my impression was that he was satisfied; at any rate he asked to have the draft lease made out and forwarded. A draft was accordingly prepared and sent to H. B. M.'s Consulate. The form attached to the answer was the one sent. From time to time I have asked defendants to come to some definite conclusion upon the matter, but without success. The defendant Noble has always said he would have to consult his partner in Kobe. At last I told Mr. Noble he would be summoned. He then wrote me the following note, (Exhibit B.):—

17 Yokohama, 18 February, 1880.

P. Osborn, Esq.,

Municipal Office,

Sir,—In reply to your letter of to-day's date, the writer would ask you to please defer any matter till arrival of steamer from Shanghai due 19th instant.

If 2 o'clock would be convenient I will come to the Kencho to-morrow at that time.

I am,

Your obedt. servt.,

A. K. Noble.

Mr. Noble came on the day mentioned in the letter, and then for the first time raised the objection that \$100 out of the \$262.25 was for cattle tax, and not payable by British subjects. I told him that in making the arrangement with Mr. Plummer I had purposely omitted any mention of tax and only named a round sum for rent, without giving any details, and referred him to the letter written by Mr. Plummer (exhibit A). Mr. Noble seemed to have forgotten about this letter, and asked me for a copy of it, which I gave him. Up to that time, and in fact until the answer in this suit was filed, no objection was made to the terms contained in the draft lease. In defendants' answer they say they would lose \$2,000 by moving the buildings in the event of having to leave the premises. This assertion is hard to reconcile with the fact that they only paid \$153.71 for these buildings. The third paragraph of defendants answer is incorrect. They agreed to pay in January of the year mentioned \$3,849.25 which was taken by the Kencho in satisfaction of \$5,679.36 for house rent, ground rent, cattle tax and rent of servants offices. The reduction of \$1,830.11 was made on account of repairs having been effected by defendants which should have been made by the Kencho. No portion of this sum was for the purchase money of the buildings on the ground, as the receipts given to defendants will prove. Of this sum they paid \$1,283.08 in cash and the balance by monthly instalments, the last payment being made in July, 1878. The actual purchase money of the buildings was \$153.71, paid by defendants on the 10th of December 1878. This payment had nothing whatever to do with the other payments.

His Honour:—It appears to me from the evidence adduced on behalf of the plaintiff, that the only question I have to consider is whether I will, upon application by the defendants, order a stay of proceedings to enable them to file a cross-suit claiming the execution of a lease in such form as they deem themselves entitled to. It is quite clear that the Court cannot grant the prayer of the answer, even if Noble's evidence should substantiate it. But then, in all important particulars, Osborn's story coincides with the

defendants' own statement, and they have asserted their willingness to pay \$262.25 rent, in fact that sum has been paid into court. If you have any questions to ask Mr. Osborn, Mr. Noble, you can do so now.

Mr. Osborn, cross-examined by Mr. Noble:—There was no draft lease shown to Mr. Plummer. The \$5,679.36 was made up thus:—\$1,300.48 ground rent, \$2,537.93 house rent, \$961.62 house rent for servants' quarters, and \$879.33 cattle tax. No portion of this sum of \$5,679.36 was on account of the purchase of the buildings on the ground.

His Honour.—All the defendants appear to want a lease containing different provisions to those in the draft furnished. The answer is entirely irregular, but if Mr. Noble is prepared to ask me to allow him to file a cross-suit for such a lease as he desires, I will consider the application. If Mr. Noble can satisfy me that Mr. Plummer never agreed to pay rent after the rate of \$262.25 per annum, unless his firm was granted a lease upon different conditions to those contained in the draft supplied by the Kencho, I will doubtless be prepared to order a stay of proceedings in the present suit until the terms of the lease can be investigated.

Mr. Osborn mentioned that he would like to have the receipts given to the defendants for the \$3,849.25 produced.

His Honour remarked that he should have given defendants notice to produce them.

His Honour, addressing Mr. Noble, said:—Unless you are prepared to prove that Mr. Plummer stipulated for a different form of lease to that tendered by the Kencho, the Court will have to order defendants to pay the rent as claimed, and refuse to allow a cross-suit to be entered.

Mr. Noble stated that he was unable to do so.

Judgment was accordingly given for plaintiff in the amount claimed, with costs of court.

Mr. Osborn pointed out that plaintiff claimed interest on the rent from the 1st of January last.

His Honour:—I don't think this is a case in which to allow interest. The rent is only three months in arrear, and, as a rule, interest is merely a question of damages; and I cannot see that the plaintiff has suffered any damage.

Before R. T. RENNIE, Esq., Judge, and M. DOMMEN, Esq.,  
Acting Assiet. Judge.

Friday, the 2nd day of April, 1880.

FRANCIS STILLFRIED *versus* WILLIAM WAGGOTT.

This was an action to recover the sum of \$16.00 for two dozen photographs taken by the plaintiff for the defendant. The case was heard before His Honour the Acting Assistant Judge, on the 11th day of March ultimo, and a verdict was given for the defendant with costs. The plaintiff subsequently applied for a rehearing which was granted and set down for trial to-day.

The parties appeared personally.

His Honour Judge Rennie:—You have applied for a rehearing, Mr. Stillfried, on the ground that you are prepared to prove that it is not the custom among photographers that customers are not liable to pay for rejected photographs, even if the photographer is willing to take the pictures over again.

Plaintiff:—I am prepared with evidence to shew that the contrary is the custom. My brother, who is now present, was the senior partner in the firm of Stillfried & Andersen, and is the best informed on the subject, and I can get Mr. Anglin to prove that he printed circulars for Stillfried and Andersen, which stated that customers who refused to accept photographs taken under their instructions, would have to pay for a dozen.

His Honour:—Then you are prepared with evidence to prove that the custom set up by defendant does not exist?

Plaintiff:—That is what I can prove.

His Honour:—You see I understand from the evidence given at the former hearing, that there are only two firms of foreign photographers in the town, who are of course rivals, and it is consequently extremely difficult to obtain any satisfactory evidence of custom. The Court will therefore dispense with all evidence relating to custom, and decide the case without going into that question at all. No evidence of what is customary or usual in Yokohama can possibly affect the legal view of the case. The plaintiff had better go into the witness box.

Francis Stillfried, sworn, stated:—I am an Austrian subject and a photographer carrying on business in Yokohama. (The witness repeated the evidence he gave at the previous hearing and produced the photographs). I took the boy twice and the woman three times. My prices were advertised in the paper at eight dollars per dozen photographs for each person. I am ready to take the portraits over again on condition that the defendant has to choose one lot.

Cross-examined by defendant:—I did not send you an account. I sent you the proofs, and you said you were not satisfied. I asked for payment verbally. I did offer to take the photographs over again. You objected that the colour was too red, and I replied that all my photographs are at first red and darken in colour day by day. You did not give me any definite reason for refusing to accept the pictures. You said you were going to Andersen. I told you that, unless the photographs lost their red colour and became dark in three or four weeks, I did not want any payment for them.

By the Court:—These photographs are good ones and good likenesses. I only printed the proofs. The negatives and proofs were of good average quality. It is a peculiarity of my pictures that they are red at first and darken afterwards. I do not advertise that fact. The *Photographic Monthly* has an article on the subject. Photographs taken in that way are better than those which are gray at first. The defendant offered to take half-a-dozen, but I refused because my prices are so low. The pictures produced are in exactly the same condition now as when the defendant had them.

This closed the plaintiff's case.

William Waggott, sworn, stated:—I am the defendant in this action. (The witness repeated the evidence he gave at the former hearing). I told the plaintiff that I could not wait a month to see whether the proofs would change colour, and that I could go elsewhere and get the pictures in a couple of days. Plaintiff replied: "that's the best I can take, if you don't like them leave them." I heard nothing more of the matter until I was summoned. I went to plaintiff because he promised to give me a situation. He charges \$8.00 for the first dozen pictures, and Stillfried and Andersen charge \$12.00. I thought I would get as good an article from him for the \$8.00 as from the other firm for \$12.00. The proofs did not satisfy me, because, in addition to the colour, they were not good likenesses. I do think that if there were half-a-dozen photographers in Yokohama I could go round and get pictures taken by the whole six and then choose the best likeness and pay nothing for the others.

Plaintiff declined to ask the witness any questions.

By the Court:—Defendant refused to accept my offer to take six photographs and said he would summon me to Court.

This closed the defendant's case.

His Honour Judge Rennie instructed the defendant to forward to the Registrar of the Court the photographs taken by Andersen, and stated that judgment would be delivered in a few days.

## MY WIFE'S INHERITANCE.

### IN THREE CHAPTERS.

#### CHAPTER I.—THE INHERITANCE.

Mr Charles Russel, once the most noted lawyer of Kinton, was dead. He had passed away in the night, full of years and honour—passed away so calmly and peacefully, that even the nurse could not tell at what precise hour the spirit had left the worn-out body.

I am, or rather was, a village doctor. At the time of which I write, I was about six-and-twenty years of age, and three years previously had bought a practice in the village of Cottam. It was not a large village; but being only about five miles from the important seaport of Kinton, it could boast of a good many somewhat pretentious villa residences. These were inhabited, some by merchants of Kinton, who travelled to and fro morning and evening; others by men who had ceased to take an active part in business, and had retired to the country to enjoy a well-earned repose. To this latter class belonged the Mr Charles Russel whose death I have just recorded. To a small inherited competence he had added the savings of a successful professional career, and retiring to Cottam, had bought a small mansion on the outskirts of the village, called 'The Willows.' 'Willis,' the country people got to call it, referring—with a vague idea of wit—to the proprietor's previous fame as a conveyancer and maker of wills. Mr Russel had never been married, but had adopted the orphan daughter of his sister. Ellen Saunders at the time of my story was about twenty-one years of age.

It was not until I had been two years at Cottam, that I was introduced to Mr Russel. During this time he had more than once required professional attendance, but had always sent for the family

doctor from Kinton. One day, however, a servant came in great haste for me to go to the Willows; 'for,' said she, 'master has fallen and broken his leg.' Of course I went immediately; but fortunately found matters not so bad as represented. Mr Russel had been walking in the garden, as was his wont, when he accidentally stepped sideways upon a stone, and his ankle twisting, he fell heavily forward. The result was a very bad sprain, aggravated by the age and weight of the sufferer. I soon had the boot off, and applied the usual remedies; and before I left he was very much easier. On my next visit he was still better; but I forbade him to use his foot in any way. Day by day I called, and each day found him improving, although he chafed considerably at the confinement, as he missed his usual walks. Gradually he began to talk of other matters—politics, literature, &c.: I found him to be an unusually well-read man; and as reading had always been one of my chief delights, we got on very well together. Mutual esteem quickly ripened into mutual friendship; and at length I was invited to visit him one evening, an invitation of which I was not slow to take advantage. When I arrived, I found him sitting in an easy-chair, with his foot on the leg-rest; for as yet he was unable to get about. Beside him was a small chess-table, with the men all in their places.

'I was just about,' he observed, 'to have a game of chess with my niece; but she has been called away for a little while. By-the-bye, do you play?'

'A little,' I answered; the fact being that chess used to be a very favourite game of mine; but not having played for years, I was somewhat doubtful of my powers, and therefore answered cautiously: 'A little—not much.'

'Do you mind playing with me? It would be quite a charity, I assure you, for I am heartily weary of sitting here alone.'

'I will try with pleasure,' I replied; and with that we commenced.

I soon found that, good player as I was, he was slightly better; and at the end of the evening, he was two games ahead. This put him in great good-humour, especially as his niece, who had now joined us, had witnessed the old gentleman's victory.

'There is some satisfaction,' he was pleased to say, 'in playing with you, as you are difficult to beat. I sometimes play with Ellen here; but it is almost like playing with the right hand against the left, where all the schemes originate in the same mind. I know all her moves almost before she takes them. She always opens in the same way, and hardly ever originates a fresh attack.'

'Well, uncle dear, you cannot expect me to be as deep as you are. You know you often used to say: "Girls never *can* reason."'

Hitherto I have hardly mentioned Ellen Saunders, although I had often seen her. Perhaps some of my readers would like a full description of her, the colour of her hair and eyes, the shape of her nose and ears. If so, I am afraid I must disappoint them. I really cannot describe her; and yet in my eyes she was one of the most beautiful creatures I had ever seen. I say in my eyes. Perhaps in yours, dear reader, she would not have appeared so; it depends on your taste and sex. I, however, had no doubt at all on the matter.

Well, that first evening at chess was followed by a good many more. Two or three times a week I would find my way to the Willows, and always received a hearty welcome from the old gentleman. So things went on for three or four months. During my visits, Ellen was constantly in and out of the room, ready to attend to her uncle; and when leisure permitted, she would bring her work, and sitting opposite the chess-table, would occasionally watch the game. Sometimes she was accompanied by another young lady, who I afterwards learned was her hired companion. Miss Leclerc—for that was her name—had entered Mr. Russel's family as governess when Ellen was about fourteen years of age, she herself being only seventeen. When Ellen's education was completed, the governess was transformed into the companion, and such she still remained at the time of my visits. I, however, did not see much of her, as she did not often come into Mr. Russel's sanctum.

I have said that Ellen often watched the game; and I cannot tell how it was, but whenever she did so, I was almost invariably checkmated. I suppose I was nervous, and played badly. At any rate, lose I did; and yet I would not have had her away for the world; for by this time—I may as well confess it—I was deeply in love with her; and what if I did lose a few paltry games of chess! As long as her sweet eyes watched my proceedings with interest, I was well repaid. I may say parenthetically that I always took my revenge when she was not present; for by this time I had regained my old play, and was Mr. Russel's master at it.

Up to this period no word of love had passed between us; and sooth to say, I knew not whether it would be agreeable either to her or her uncle. Nay, I was almost inclined to think that it was wrong for me to entertain such a feeling, under the circumstances in which I had been introduced to the family. Right or wrong, however, I felt it to be a settled fact, and I could no more help it than I could help breathing. This deep feeling, joined to the uncertainty of its propriety and to a vague sense of its hopelessness, quite unsettled me; indeed, so much so that I resolved to stay away from the Willows at least for a time. I think I should have persevered in my resolve to stay away; but by the end of the week I received so kind a letter—remonstrating at my absence—from Mr. Russel, that my determination gave way, or rather, I may say, gave place to another. This was to speak to him, to admit my affection for his niece, and to crave his permission to address her. 'By so doing,' I said myself, 'one source of uncertainty will at any rate be removed.'

The same evening found me again at the Willows; and taking advantage of Ellen's absence, I told Mr. Russel all—in a nervous disjointed manner, I have no doubt, but still plainly and simply. I did not praise myself, nor did I in a mock-modest style speak of 'unworthiness, &c. &c.'

The old gentleman heard me to the end, speaking never a word,

but looking with half-closed eyes straight into my face; a habit acquired no doubt in his professional career.

'I am pleased, Mr. Wallis,' he said at length when I had finished, 'to hear this confession, because I have seen for some time "how the land lay," as the sailors have it.'

'You have noticed it!' I exclaimed in surprise.

'Yes,' he repeated. 'We lawyers are trained to observe little signs. Many a time an almost imperceptible look of surprise, or the faintest shadow of dismay on a man's face, has given me the clue in a difficult case. Can you think then, that signs so plain as you have given could be overlooked by me? No: my friend. I needed not your present confession to tell me that you love my niece; and yet, as I have said, I am pleased to hear it, because it confirms the estimate I had formed of your character. What that estimate is, I need not say, except that I am quite willing that you should try to win her affections. Had it not been so, I should not have written the letter of yesterday, but have found some means of causing you to cease your visits entirely.'

On hearing this my heart was almost too full for utterance; I grasped him by the hand, and thanked him most heartily for his great kindness.

'Mind,' he continued, 'I can say nothing about Ellen. You have my consent to try to win her; but beyond this I cannot go. She must please herself. My advice, however, is, do not hurry matters; continue your visits as heretofore, and you may perhaps find opportunities of observing how her inclinations tend—But there! Whenever was the advice of a practical old lawyer—and a bachelor to boot—taken by a young fellow in love! So go and do whatever your heart, tempered by gentlemanly feeling, dictates.'

But I must hasten on; this is not a love-story, and I have very much more to tell. I took Mr Russel's advice in one respect—that is, I continued my visits to the Willows, and was happy to perceive that they were agreeable to Ellen. In short, I gradually won her regard, confessed my love, asked her to be mine; and before a year was out we were fully engaged. Had I had my way, we should have been married at once; but just at this time Mr Russel's health began seriously to fail. He never seemed to be quite himself again after the shock of his fall, and now appeared to be failing very fast. But as his health became feebler, his affection for Ellen seemed to increase, and in a minor degree for me also. I can hardly explain the liking he had taken to me, except that having no relation in the world but Ellen—at least not to my knowledge—he centered all his affection upon her; and as I loved her also, he loved me too for loving her. This may not be the correct explanation; but at any rate it was the only one that occurred to me.

One day—I shall never forget it—a servant brought me a message that Mr Russel wished to see me in his bedroom. When I arrived there I found him still in bed, where I had seen him in the morning, for this was one of the days—occurring pretty frequently now—when he found himself too unwell to get up.

'I am sorry to see you like this, uncle,' I said—for by this time we had become very familiar, I calling him uncle, and he addressing me as Alfred—'I thought you looked better this morning.'

'Ah, Alfred! these east winds are too much for me; they go through me, as people say, and I find myself best in bed.—Well now, I have sent for you because I have something particular to say to you. I may not be long for this world; I sometimes think I shall never get about again. At any rate, I thought it advisable to make my will. Of course, in doing so I, as you may well suppose, needed no assistance. Having made scores of wills for other people, it would be strange if I let any one else make mine. Now, as I have great faith in your integrity and honesty, I am about to adopt the unusual course of showing it to you. There it is; read it carefully through.' Not a little surprised, I took the paper, and read as follows:

'I, Charles Russel, of the Willows, Cottam, declare this to be my last will and testament. I bequeath to Elizabeth Watkins, my housekeeper, the sum of one hundred pounds. I bequeath to Jeanette Leclerc, the companion of my niece, the sum of fifty pounds. I also bequeath to my nephew, Charles Russel, the sum of two hundred and fifty pounds. And as to all the rest, residue, and remainder of my real and personal estate, I devise and bequeath the same to my niece, Ellen Saunders, her heirs, executors, administrators, and assigns absolutely and for ever. And I hereby appoint my said niece sole executrix of this my will. In witness whereof I have hereunder set my hand, this 2nd day of February 1870.

CHARLES RUSSEL.'

Then followed the attestation clause, signed by two witnesses.

When I had finished, I remained silent a few moments, and seeing an inquiring look on my face, he said: 'I have let you know this because, loving no one in the world as I do Ellen, I have left all to her. At the same time, I think she ought to have the advice and assistance of some one who knows more of the world than she does. This advice and assistance I have every confidence that you will render, especially when I consider the relation in which you stand to each other.'

'But what of this nephew?' I asked. 'I have never heard of him before.'

The old man's face grew dark as he interrupted: 'Do not mention him, I pray. I have forced myself to leave him a little, but I never wish to see or hear of him again.' Then, after a pause, he continued: 'There: put the will back in its envelope and seal it up; you will find my seal on the table.' This done, he said: 'Now, place it in the desk, and then come here again. I have another paper to show you.'

The desk referred to was one I had often noticed standing on a table at the other side of the room; it was not a large one, only about eighteen inches long, twelve inches wide, and at the back nine inches high, with a lid sloping down to about three inches in the front. It was made of some dark wood, and was evidently very

old. Having placed the will therein, I said; 'Had I not better lock it?'

'Yes; it would perhaps be as well. But lately I have not done so, as I have only kept writing materials in it; and now I am afraid the key is lost. I have not seen it for a long time. But—with an appearance of sudden recollection—if you wish to keep the will safe, I will tell you a secret: in that desk there is a compartment known only to myself; follow my instructions carefully, and I will tell you how to open it.'

'I am all attention,' I replied.

'Well first raise the front lid, and you will see before you, at the back, six small drawers arranged in three rows of two each. Now pull the middle top drawer quite out of its place.'

'Done!' I said, peering into the cavity thus formed. 'But I see nothing except the back of the desk.'

'Ah! what you see is not quite the back, although very near it. Now feel with your finger in the top right-hand corner of the cavity, and you will find a small hole, as though a little knot had broken out of the wood.—Nay, it is no use looking; you cannot see it; it is too small, and too near the top.'

'I have found it now; but it is not large enough even for my little finger.'

'No. So take one of the long pen-holders you see at the bottom of the desk, and push it through, pressing pretty hard.—Now look behind the desk,' he continued, when I had done so.

I looked, and was surprised to see a little door, projecting about half an inch. I took hold of it, and with some difficulty—for the hinges were very stiff—opened it completely. This done, a cavity was exposed about nine inches long, but only one inch deep. Still there was plenty of room for the will. I therefore placed it therein, closed the door, put the inside drawer back in its place, let down the front lid of the desk, and reported all to Mr Russel.

'That is all right then,' he said. 'You may depend upon the will being safe, and only we two know of its hiding-place. But you must not forget—top middle drawer, top right-hand corner.—Now the other paper I wished to show you was this; holding one towards me. "All my securities are in the hands of my bankers at Kinton; but this is a list of them. Take it, and look it through, and then you will understand better what you have to deal with. And now, goodnight, for I am very tired; but just one word—do not mention anything of this to Ellen. I think it better not."

Of course I promised; and bidding the dear old gentleman good-night, I took my leave. In my own room at home, I examined the paper he had given me, and found the securities to consist of dock, railway, gas, and water shares, with a few mortgages on house-property at Kinton—the whole amounting to more than thirty thousand pounds, and bringing in an income of very little short of two thousand pounds a year. I had no idea he was so rich; and according to the will I had just seen, this thirty thousand pounds would at some future time be MY WIFE'S INHERITANCE.

#### CHAPTER II.—HOW IT WAS LOST.

After the incidents mentioned in the last chapter, nothing particular occurred for more than a month. I had several conversations with Mr Russel; but the will was never brought out again. I also cautiously sounded Ellen as to her cousin Charles; but she could tell me very little about him, except that he was the son of her uncle David, and on his father's death—which occurred when Charles was about fourteen years of age—his uncle took him to his office and home. He was a fine bright clever lad; but when he was about eighteen, he seemed to fall into evil courses. His uncle bore with his irregularities for some time, but at length could do so no longer, and therefore requested him to find apartments for himself in some other quarter of the town. 'From this time,' continued she, 'I saw very little of him, although he still continued his attendance at the office. It appears, however, that his conduct, instead of getting better, became worse; and shortly afterwards I heard that he had been sent away altogether. I never rightly understood the exact cause of this, as dear uncle would never talk about it, and was always angry when it was mentioned. I believe, however, it was some forgery, which would have brought disgrace on the office had not uncle paid a considerable sum of money to hush it up. "That," said Ellen in conclusion, 'is now four years ago; and since then I have heard nothing of him, except that he is living in London: but how I have no idea.'

This was all I could learn of the nephew at that time, though I had reason to know more of him afterwards.

My readers may perhaps wonder why Ellen and I did not get married forthwith, as everybody seemed in favour of it; but Mr Russel's state gave us great anxiety, and we certainly could not think of our own happiness while his health was so precarious. It would have been really unkind to have taken her from him just at that time, and my professional duties obliged me to live in the village. We were now in the middle of March, and all hoped that as spring advanced the old gentleman would rally; but alas! our hopes were doomed to disappointment. He gradually became weaker; and by the end of April it was plain to me that his end was approaching. I now hardly left the Willows, except in the daytime, just to run round to other patients. We had engaged a nurse to wait upon him at night, Ellen performing that service during the day. For the last few nights I slept in a chair in a small adjoining-room. At length it seemed to me that the last night had come, and Ellen and I remained in anxious expectancy together in the same little room. Mr Russel was asleep, but we gave strict orders to the nurse to call us when he awoke. We waited till daylight, but the call never came. He had passed calmly and peacefully away—the loving heart and once active brain were for ever at rest.

According to his request, we buried him in the quiet country

churchyard, in a plain and simple manner. There were very few mourners. Ellen and myself, together with a Mr Benson from Kinton, occupied one coach; and Mrs Watkins and Miss Leclerc another. At the grave, however, the funeral cortege was joined by a tall dark young man, and Ellen whispered to me that it was her cousin Charles. He was dressed in complete black, and behaved in a proper becoming manner. When all was over, and we had returned to the house, I was much surprised to see him also enter. His temerity and coolness astonished me, as certainly he dared not have done so during his uncle's lifetime. As, however, he really belonged to the family, and as the will was about to be read, in which knew he was mentioned, I told Ellen to speak to him, and invite him to stay. 'Perhaps,' I said to myself, 'his presence here may be taken as a token of repentance.' It did not occur to me just then that it was somewhat strange that he, without intimation, should have known the exact day and hour of the funeral.

Leaving them all seated in the drawing-room, I went up-stairs, opened the secret receptacle and brought out the will. It was in the long envelope, sealed as I had sealed it, and endorsed: 'The will of Charles Russel, February 2, 1870.' Returning, I passed it over to Mr. Benson, requesting him, as an old friend of the family, to break the seal and read it. He took it, and holding it up in full view, asked if we were all willing that he should do so. As no one objected, he opened the envelope and drew it forth. I daresay it was an anxious moment for some there—Ellen, Charles, Mrs. Watkins, and Miss Leclerc; but as for me, knowing already the contents, I was quite calm. 'I, Charles Russel, of the Willows, Cottam,' began Mr. Benson in a steady voice, 'declare this to be my last will and testament. I bequeath to Elizabeth Watkins, my housekeeper, the sum of one hundred pounds. I bequeath to Jeannette Leclerc, the companion of my niece, the sum of fifty pounds. I also bequeath to my niece, Ellen Saunders, the sum of two hundred and fifty pounds.'—

'What!' I interrupted. 'Read that again, please.' Mr. Benson, with a look of surprise, did so, and went on: 'And as to all the rest, residue, and remainder of my real and personal estate, I devise and bequeath the same to my nephew, Charles Russel, his heirs, executors, administrators and assigns, absolutely and for ever. And I hereby appoint my said nephew sole executor of this my will. In witness whereof I have hereunder set my hand, this 2d of February 1870.'

I was thunder-struck. Again I requested him to repeat; and once more it came out clear and plain, that with the exception of the legacies named, all the property was left to Charles, and he also was left sole executor. I was dumb-founded, and at last exclaimed: 'That cannot be the true will. I have seen another, the real will, and it is just the reverse of that. Let me see it myself.'—

'Not so fast, if you please,' interposed Charles. 'It seems that I am sole executor; that will therefore now belongs to me, and I do not intend that you shall have it in your hands.'

'But,' I contended, 'that cannot be the real will, as I have seen another.'

'Then perhaps you will produce that other which you pretend you have seen. You cannot, of course, because there is no other; and this gentleman—turning to Mr. Benson—'will bear witness that the seal was unbroken. Perhaps you know Mr. Russel's seal, sir, and handwriting?'

'Yes,' replied Mr. Benson; 'as it happens, I know both, as I have had many dealings with him.'

'Then what is your opinion of the genuineness of the will which this gentleman—with a sneer towards me—seems to question?'

'Oh, as to that, I cannot see the shadow of a doubt. At the same time, knowing what I do—with a significant look at Charles—I confess I am somewhat surprised.'

'Indeed! Well, I don't see anything surprising in it. My uncle probably discovered that I was innocent of the crime laid to my charge, and took this method of making amends; and I must say it was very handsome of him. Besides, I am the son of his brother, and of the same name as himself, and he, no doubt, wished to keep everything in the family.'

All this sounded very plausible; but it was to me only the more aggravating, as I knew perfectly well that his uncle was as bitter against him at the end as ever he was, and I said so. At this Charles lost his temper, or pretended to do so, and exclaimed: 'Look here, sir; I don't know who you are, and I don't want to know. I only know that you are not one of the family, nor is your name mentioned in the will. It seems to me that you have meddled in this affair long enough. Let me remind you that this house is now mine—mine, sir; mark that; and I must request you to take your departure at once. If uncle's will has not been made as I daresay, you would have made it, and you think you can upset it, I can only say, you know your course; the law is equally open to you as to me. I tell you plainly I shall take the will to a solicitor at Kinton to-morrow and get it proved at once; and you can take whatever steps may seem to you fitting. At present I decline to hold any further communication with you.'

I was almost speechless, as much with rage at the cool way in which I was turned out, as at the disappointment I felt both for Ellen and myself; but, seeing nothing could be done, I left the room, beckoning Ellen to follow me.

'This is a severe blow,' I said when we were alone; 'and I am very sorry for you.'

'Don't say that dear: I too am sorry; for it is a severe and totally unexpected blow; so inexplicable too. But my sorrow is more for you than myself. You will have to take me now as an almost penniless girl, instead of the rich heiress you were led to expect.'

'Oh, my darling, you know I shall only be too pleased to have you, rich or poor; but do you not think it would be well for you to leave this house and take apartments in the village, until I can arrange for our marriage? It is not likely you will be very comfortable here.'

'Nay; I do not quite see the necessity for that. Charles will not

turn me out; he was never unkind, though wild and, I am afraid, wicked. But dear, is it not too soon after uncle's death to talk of our marriage?'

'I know what you mean, Ellen; you think "What will the world say?" Well, under ordinary circumstances, I should not urge it; but these are not ordinary circumstances. You have no home here but on sufferance, and so the sooner you come to mine the better.'

'Well, we will talk of that to-morrow, when we have had a little time to think.'

I bade her good-night, for in truth I wanted a little time to think. That Mr Russel had really made another will totally altering the disposal of his property, I could not believe; his whole conduct and conversation forbade it, and yet how else explain the will as it was read that afternoon? To be sure he might have done so, without saying anything to me about it; but I could not bring myself to think so.

When I retired to rest, I fell asleep, no nearer a solution. The last thing I remember was that I determined to go to Kinton the first thing in the morning and consult Mr Sparks, a legal friend of mine. This resolution I duly carried into effect, and luckily found him at his office and disengaged. After the usual greetings and a little ordinary conversation, I opened the subject uppermost in my mind; and that he might clearly understand it, I gave a detailed account of my connection with the Russel family. I recounted the old man's affection for his niece, and the confidence he reposed in me; and then narrated the incidents of the interview in which Mr Russel showed me the will and its contents. I then dwelt upon the death, funeral, and reading of the will; the contents of which were so totally different from what I had expected. This done, I asked his advice and opinion.

'As to my opinion,' he said, 'I must have time to consider; but my advice is, that you leave the matter in my hands for a few days and I will see his solicitor and examine the will myself. I suppose there is no question of the validity of the signature? Who were the witnesses?'

'Their names are James Dobson and William Green.'

'Ah! Well, come to me three days, and bring then with you; or if they cannot come, bring a specimen of their handwriting. By-the-by, who were the witnesses of the will which you read in the presence of the old gentleman?'

'Unfortunately, I cannot remember.'

'That's a pity; still, it does not matter much. The chances are that Mr Russel had the same men, and you can easily find out if they witnessed his signature at two different times; or if not, Cottam is not such a large place that it would be difficult to find out if any other two men ever acted as witnesses.'

'Then you think two wills were really made?'

'Why, what else can I think? You yourself saw one, and another was produced.'

'But could not the one I saw be altered?'

'Ah! that is an exceedingly difficult matter, and almost certain to be detected. Besides, who was to do it? You say it was kept in a secret receptacle, known only to Mr Russel and yourself; so that it really does seem to me on the face of it that he changed his mind, and made another will some time between his conversation with you and his death. The old will he would doubtless destroy at the same time. But leave the matter in my hands, and I will look into it.'

As this was all that could be done, I took my leave, and returned to Cottam. The next day I sought out Dobson and Green and as they could not go to Kinton, I asked them to give me a specimen of their usual signature. They both remembered witnessing Mr. Russel's signature to a paper; but neither had done so more than once. With this information I waited upon Mr Sparks at the time appointed. He was ready to receive me, and entered upon the matter at once.

'I have seen the will,' he said, 'and I am bound to say it seems correct in every particular—not a sign of an erasure or alteration in any part. Everything is written in the clear concise style for which Mr. Russel was so noted. We lawyers of Kinton have had many opportunities of seeing wills made by the same hand, and I for one have no doubt that the one shown me is the genuine work of Mr. Russel. Whether it was made before or after the one you say you saw, is another question, which can only be decided by the production of—what I may style—your will, if still in existence. Until you can produce that, I see no help for it but to let things take their course.'

'But can we not oppose the proving of the will?' I said with some heat, not being pleased at the idea of giving up the fight so easily.

'My dear sir, I should only be too happy to enter a caveat for you, or rather in the name of Miss Saunders, for you can have no standing in the matter, not being of kin or a legatee; but what should we gain unless we can support it in a court of law? and I confess at present I see no grounds to act upon. We cannot say on account of undue influence, when, by our own showing, all the influence, if any, was on the other side. Nor can we bring evidence to prove that Mr. Russel was incapable of making a will; the very clearness and precision of it prove that he was.'

'But,' I still persisted, 'what do you make of the will which I read with Mr. Russel's sanction and in his presence?'

'Well, in truth I cannot make anything of it. Produce it, and I daresay I shall do better. But I'll tell you what I think an opposing counsel would say. He would first say that doubtless Mr. Russel altered his mind, made another will, and put it in the desk without telling you. Or he might suggest that you read it after dinner, possibly after sundry glasses of wine; and that, in fact, you misread it, reversing the names, the "wish being father to the thought".'

'Then is there no side on which we can attack it?'

'No; I am afraid not; and I am too much your friend to advise

you to take proceedings in law with no better ground than you have. We might perhaps say that the purport of the will is against the weight of evidence as to his intentions: but what proof have we that it is so? Principally his conversations with you; and it would certainly be pointed out that your evidence could hardly be disinterested, as it is well known that you are engaged to the niece, the other devisee. Besides, a man's intentions are very difficult to gauge; what he intends to-day, he may *not* intend to-morrow. No; my friend. This plea, as against a will so properly drawn up and executed as this is, would count as absolutely nothing. Moreover, it is counterbalanced by the plea set up by the nephew, that most probably his uncle, when looking over his papers, and finding that said nephew was not so guilty as was thought, had taken this means of making amends. Again, his nephew bearing the same name as himself, he may have wished to perpetuate it in a much more effectual manner than would be done by leaving his property to a niece, who was about to marry an alien to his blood. I have more than once known such considerations have much weight.

Plausible as all this sounded, I neither could nor would believe it, although it was evident that Mr. Sparks' faith in *my* will, as he called it, was very considerably shaken. However, seeing no help for it, I was obliged to submit; and this is how my wife's inheritance was lost.

(To be continued.)

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XLIII.

#### PARTING.

Yoritomo was not left long in ignorance of his agent's fate. So far as the immediate object of his mission was concerned Friar Tosa had failed completely, but his success can never have been really anticipated at Kamakura, and for the rest the circumstances of his death furnished Yoritomo with the pretext he desired. If the friar had fallen in the attack on the castle of Horikawa no possible exception could have been taken to his punishment, but his execution by Yoshitsune's order after he had confessed himself Yoritomo's envoy, was a fact capable of more than one construction. Yoritomo, giving it the interpretation that suited his own convenience, declared his brother an open rebel and despatched a force of sixty thousand men to destroy him.

Would Yoshitsune take the field against this army or would he await its onset in the capital? His dashing habit of warfare seemed to predict the former course, but on the other hand both strategic and political considerations recommended the latter. At Kiyoto he might certainly count on the support of every knight and noble within reach—not those alone who loved him for his own sake but those also who would be constrained to make common cause with the guardian of the place—while the emperor himself would have no choice but to lend his support to the man by whose prowess peace had been restored to the country, and its dignity to the crown. In the provinces, on the other hand, the chances of accord and alienation were about equally balanced. Those who might be attracted by the reputation of achievement would not be more numerous than those swayed by the reality of power, and after all Yoritomo, holding the emperor's commission of Lord High Constable, was in effect the executive sovereign of Japan.

It was thus that men discussed the chances of the coming campaign in the winter of the year 1185. The prospect was a terrible one under any aspect, for with Yoshitsune in the field it was difficult to anticipate defeat or even repulse, while with Yoritomo opposed to him, it was impossible to expect submission. All the horrors of a protracted war were again in store for the unhappy people, and in this respect it seemed a matter of little moment whether the white or the red pennon was triumphant.

But there was one contingency omitted from this desponding forecast; a contingency that appeared incredible until it had become an accomplished fact.

Yoshitsune receiving unequivocal evidence of his brother's intentions, desired permission to lay a petition at the emperor's feet. Plainly he was about to solicit the Imperial sanction for his just cause, and the right of summoning all loyal knights to his standard. This was of course a preliminary that everyone had foreseen, but still, as the first step in the impending struggle, its result was observed with keen anxiety.

Yoshitsune was introduced to the palace by his step-father and staunch friend the Lord Treasurer. He was

asked no question about his designs nor yet about the purpose of his visit. Both seemed sufficiently plain and indeed the exact course to be pursued by the Court had been already determined, not without discussion, since Yoritomo's interests were powerfully represented at Kiyoto, but still with sufficient unanimity to shew distinctly in which direction the balance of sympathy swayed. Yoshitsune too, was not ignorant of the disposition he might expect to find. He knew that the success of his petition was already assured, whatever might be its nature, and certainly the knowledge was not calculated to modify his demands. Let him be ever so loyally disposed towards his brother, or ever so loyal to their common cause, neither patience nor devotion is without limit, and though the wrongs he had suffered might not suffice to provoke him, the prospect of their redress could scarcely fail to do so. It would be difficult therefore to find anything more admirable in his career than his conduct under these circumstances. Instead of seeking the Imperial commission to punish his brother's injustice and treachery, he announced his intention of retiring at once from Kiyoto. The people had already been more than sufficiently harassed by the feuds of their rulers, and since no common principle was involved in this new struggle, it was not fitting that it should be the cause of any common suffering. His own death was the one object of his enemies and he was resolved that others should not be unnecessarily sacrificed for his sake. This visit to the palace was not then for the purpose of claiming the support of his fellow-nobles, but merely to take leave of his sovereign, and the only request he had to prefer was, that his memory might be guarded from the imputation of rebellion.

Such magnanimity was indeed rare in those times of selfish feud and ambitious contention, so rare that men refused to credit its reality until the day that witnessed Yoshitsune's departure from among them. Thousands had declared themselves ready to follow his pennon wherever he might lead, but he resolutely declined any escort save that of his own tried liegemen, a little band of five and twenty knights. These, with the troops of his uncle Yukiyo who shared his flight, made a total of about five hundred swords, and since to be weak is to invite attack, there seemed but little probability that the fugitives would reach the sea-coast alive. Twice indeed they were assailed on their way; for not a few barons were fain to establish a claim on the Lord High Constable's gratitude by destroying his now apparently helpless foe, but they easily dispersed these half-hearted opponents, and passing southward struck the beach near the mouth of the river Yedo at the same place where Yoshitsune had embarked on the eve of the battle of Dan no Ura.

Here ships sufficient to contain the whole force had been prepared and in the largest of these Yoshitsune himself with his liegemen embarked. Their destination was the Island of the Nine Provinces on the extreme South of Japan, but they had scarcely gained the open sea when a furious gale springing up drove them hither and thither a day and a night, so that at dawn on the following morning they found themselves on an unknown shore, only three of the vessels remaining together, and these so disabled that to continue the voyage immediately was out of the question. Their first desire was, of course, to discover where they were, and with this aim Benkei landed and made his way towards a little village of salt-burners' hovels that lay a few furlongs inland. The sun had not yet climbed high enough, however, to rouse the inmates of the hamlets, and finding none to answer his inquiries, Benkei pushed on towards, a temple, where the booming of a matin bell seemed to promise more success. Here beside the portal that marked the entrance to the avenue of the shrine, he found an old man seated as if in expectation of his coming. The bitter cold of the early winter's morning seemed to have no effect upon this loiterer. A single garment was wrapped loosely about his body, leaving his legs and arms almost entirely exposed, and over his head he had drawn a hood of silk crape, intended rather to conceal his features than to protect them from the frosty air. Benkei indeed, being entirely bent upon obtaining the information he desired, did not remark these details at the moment. He saw only that the other's stature was even more in excess of the common than his own, and that he carried a pair of colossal swords in his girdle, while for the rest his mien and bearing were so little calculated to invite confidence, that the glaivesman was about to pass him by without inquiry, when to his astonishment the old man addressed him by his name:—

"You need go no further in search of tidings, Benkei, no further. This is the province of Setsu and the place where your ships lie is called Sumiyoshi. It was an evil wind that blew you hither, for in the bay beyond yonder headland are anchored thirty galleys full of armed men whose leaders seek your chief's life, the leaders of the thirty galleys. Stout warriors though you be, you would do well, I ween, to turn your prows seaward again, for these are heavy odds, five hundred to four-score; very heavy odds."

Benkei, bewildered beyond the power of speech by the other's unaccountable knowledge of himself and his concerns, stood hesitating whether to obey at once, or to seek more accurate information from one evidently so capable of affording it, when the old man rose from his seat and stretching out his long sinewy arm in the direction of the salt-burners' hamlets, said, somewhat impatiently:—

"They are not wise who loiter when warned to be alert; not wise by any means. If your master hesitate to follow my counsel, tell him it comes from one with whom he kept trust twenty years ago among the ruins of the Dragon God's shrine. You too may find in that reminiscence some reason to be more trusting."

Now Benkei had heard from Yoshitsune all the story of his early life and of the strange fencing master whose acquaintance he had formed in the Valley of the Spring Blossoms. He therefore bowed his head in respectful acknowledgment of this service, and retraced his steps with all speed to the ships, convinced that the old man's suggestion could not be carried out too soon.

Yoshitsune also, when he received the glaivesman's account of what had passed, did not fail to recognize his well-remembered fencing master of the ruined shrine in this white-haired giant who had appeared so opportunely. He therefore issued orders for immediate departure, observing that the wind which had driven them shoreward with such violence was now blowing steadily in the opposite direction.

But here an unexpected difficulty presented itself. The falling of the tide had left the ships firm aground and all the sailor's efforts to get them afloat proved inadequate, there was nothing for it, therefore, but to wait quietly in their places. Between the city and the shore they had already encountered and overcome an enemy not less strong than these men of Setsu, and for the rest they were so accustomed to be victorious that the idea of defeat was slow to present itself.

Three hours before noon the hostile galleys hove in sight. Their numbers and equipment showed that the old man's estimate had not been excessive, but the shallow water prevented them from coming within bowshot. Their inmates were obliged to land and conduct the attack from the shore, where they found Yoshitsune and the flower of his knights waiting to receive them.

The fight lasted but a very short time. To be outnumbered seemed only to give renewed strength to the followers of the white pennon, and with scarcely any loss to themselves they utterly routed their foes, killing or capturing their principal leaders. The victory was indeed so signal that it carried with it assurance of immunity from fresh attacks for the present at any rate, and Yoshitsune resolved to seek a sanctuary among the mountains of Setsu, rather than by proceeding southwards to subject his followers to unnecessary dangers on his own account, and, at the same time carry disturbance into provinces, which had enjoyed so short a respite from the miseries of war.

This resolution once taken was acted upon without delay. That night the Genji men remained in their ships, and landing at daybreak the following morning, turned their faces towards the distant hills. Having started from the capital with the idea of finding a permanent asylum in the Island of the Nine Provinces, many of them were accompanied by their wives and families. From these they were now constrained to part, and provision of suitable escorts to guard the women on their several ways so reduced the numbers of the already scanty band, that Yoshitsune ultimately found himself at the head of only a score and a-half of knights. He had not yet been able to endure the idea of separating from Shidzuka. Her love was associated with all the triumphant reminiscences of his life, and for this reason no less than for her own sake, he clung to her with a yearning not easily overcome. The girl herself, too, prayed so passionately for permission to accompany him, that even more cogent considerations must have yielded to her instance, and not one of his knights saw

any just cause to gainsay the entreaties of the saviour of the castle of Horikawa.

Dismounting from their horses at the foot of the mountain of Yoshino, they commenced the steep ascent on foot. The snow lay piled in deep masses on either side of the narrow path, or slipping from the trees overhead produced the only sound that disturbed the deathlike stillness of the glens. Yoshitsune no longer occupied his accustomed place at the head of his liegemen. He had ceded that post to Washino-O, the young hunter of the valley of Ichi, and now not the least renowned among the knights of the white pennon. The object of this change was sufficiently apparent, and certainly these veteran soldiers did not love their leader the less because they saw him yield for once to the impulse of his heart and place himself beside the fair girl who had proved herself so worthy of his affection.

Shidzuka was indeed supporting the fatigues of the journey with a fortitude that elicited many exclamations of admiration from her stalwart companions. Slight and delicately formed as the snow flakes upon which she trod, neither the bitter wind that drove the raw air against her pale face, nor the treacherous drifts that so often engulfed her tiny feet, had as yet wrung from her the smallest evidence of suffering or weariness. Benkei, whose huge frame covered a heart as tender as a child's, often offered to support her on her way, and in truth it would have cost the giant but a slight effort to take her up bodily and carry her in his arms across the steepest passes of the mountain, but she refused his aid with an almost terrified denial of its necessity. The agonizing dread of separation from the man she loved made her completely insensible to all physical suffering, and gave her force to overcome difficulties that cost Yoshitsune himself no small effort.

They had made their way after this fashion far into the heart of the mountains, when they reached a point where the road widened into a plateau overhanging a deep gorge on one side, and overhung by a precipitous cliff on the other. Here stood a rustic shrine scarcely sheltering the stone images it contained from rain and rime, and beyond it, under the shadow of two stunted pine trees, a massive portal marked the entrance to the sacred recesses of the hills. Before this portal the little band of knights halted as if by common consent. No word was spoken and for a moment the silence was only broken by Shidzuka's smothered sobbing, for she knew that beyond this point the foot of woman had never passed, nor might ever pass so long as the fear of the gods made their mandates powerful in Japan.

Presently Yoshitsune coming closer to her side said:—"Shidzuka, we must part here. If our passage were barred by any lesser obstacle than the curse of heaven, I think we had found means to remain together a little longer, but it may not be. I do not seek to hide from you the pain this parting causes me, nor indeed might I at all endure it had I not a certain hope of seeing your face again in happier times whether on this side of the grave or beyond it, for I know that you will be faithful to my memory whatever fate may have in store for us. What your love has been to me I need not seek to tell you now, but if haply you should think at any future moment that these my words of farewell were too brief or too cold, I pray you then to believe that such as they are, they cost me more to speak than I dare again deem it within the limit of my strength to suffer."

Shidzuka did not venture to look up while Yoshitsune spoke. Her ear alone detected in his voice that almost imperceptible tremor which like the quivering of the pine-spray gives notice of the coming storm, and much as she yearned to see his face once again before they parted, she dared not raise her eyes to his lest his manhood should be to put to shame in the presence of his knights and liegemen. Little by little she had sank down upon the snow, and kneeling there with her face buried in her hands, she strove in vain to curb the throes of grief that convulsed her. Presently she was conscious that Yoshitsune gave some directions to his followers, and then turning he addressed to her the last words she was destined ever to hear his voice utter:—

"I were most unhappy, Shidzuka, did I doubt that in this interval of separation your thoughts will be often with me as mine own shall be with you. I leave you therefore this mirror in which my features have been reflected morning and evening since my boyhood. There is indeed neither trace nor cloud upon its surface now, yet I know well that looking into it, your love will have strength to recall the image its

brightness has so often made visible. Thus, perchance, at morn or eve our hearts may be enabled to hold commune with each other, across this space the will of the Gods has judged it fit to place between us."

For one instant Shidzuka felt her husband's lingering touch as he placed the mirror in her hand, and the next, raising her tear-blurred eyes, she saw him pass with lowered head under the sacred portal. She sprang to her feet and in the delirium of her grief would have called upon his name or even followed him at all hazards, but strength and sense alike failing her, the sad comfort of unconsciousness came to her aid.

When she recovered from her swoon the red rays of the setting sun were almost level with the western hill-tops. She found herself lying within the road-side shrine, at the entrance of which five men sat cowering over a fire of pine boughs and withered twigs. Three of these were men-at-arms totally unknown to Shidzuka, and the other two, knights whom she remembered to have seen among Yoshitsune's followers after they left the ships. They were in fact the escort her husband had appointed to guide her to Kiyoto, and seeing her again in possession of her senses, they asked whether she desired to set out at once, or whether she would prefer to remain in the shrine until daylight.

Shidzuka felt that her strength was completely exhausted, and that without rest she could not possibly support the fatigues of a journey through the snow, but on the other hand she reflected that a protracted stay in the shrine might be the means of betraying the direction her husband had taken. This thought gave her a feverish energy which she mistook for restored force, and she therefore signified her readiness to commence the descent forthwith.

At first the return journey did not present any serious difficulty. The path though steep was sufficiently lighted by the moon-beams, and a sharp frost had already hardened the surface of the snow drifts, so that they easily supported Shidzuka's light weight. But on the other hand she was no longer borne up by the hope that had before made her unconscious of toil or suffering, and by degrees her weary limbs became more and more incapable of obeying her volition. Her companions rendered her what aid they might, but the path was so narrow that two could not walk abreast, and thus after a time, though every step caused her almost unendurable anguish, she saw that the patience of her escort was well nigh exhausted.

Just then they reached a group of tall pine trees, and one of the knights proposed that Shidzuka should rest there for a time, while they themselves went in search of some shelter for the night. At this rate of progression, he said, the daylight would find them still wandering among the mountains, and he believed that in the recess of a neighbouring valley there was a temple where they might hope to receive hospitality.

To this suggestion Shidzuka offered no objection. Utter weariness of mind and body had rendered her indifferent to everything, and though she remembered afterwards that she thought it strange the five men should leave her entirely alone at such a time and in such a place, she had neither strength nor wish at the moment to remonstrate.

She must have fallen into a sort of stupor where she sat, for when the intense cold recalled her to a sense of her position, the moon was high in the sky and she knew that some hours had passed since her companions left her. Still she could not immediately credit the fact that they had wilfully deserted her. It was sufficiently terrible to find herself alone at midnight among solitudes scarcely ever disturbed by the foot of man, without the miserable thought that the knights chosen by her husband to protect her had scarcely proved a moment faithful to their charge. Others there were indeed at his side on whom he might rely even as confidently as upon himself, but if five had so easily consented to be false, how many could be certainly counted incorruptible? It was characteristic of Shidzuka's great love that, even in that moment of extreme peril, this reflection caused her more anguish than the hopelessness of her own condition.

She rose painfully to her feet and listened for a moment in the vain hope that the footsteps or voices of her returning companions would rescue her from the terror she felt gradually stealing upon her. But neither from the distant darkness where the frost fogs brooded, nor yet from the pallid wastes of snowy hill and hollow that stretched away on every side, did there come to her ear any sound save the fitful clashing

of the sapless pine branches overhead as they shivered at the touch of the icy wind. Conscious that another moment's inaction would deprive her of the power of reasoning, she forced her numb limbs to reluctant obedience, and creeping out from the shadow of the pines, began to ascend a hill that rose abruptly from the margin of the grove. She reached the summit with infinite pain, and stood for a moment gazing breathlessly into the dark shadows that seemed to creep hither and thither like shapeless monsters among the windings of the valleys. Nowhere could she discern any light or sign of life, and this immensity of solitude became presently so unendurable, that she hastened frantically back to the companionship of the pine trees, avoiding even the traces her own feet had left in the snow, as though they offered some fresh evidence of her solitude.

What was she now to do? All her sense of weariness had vanished, and every event of her journey both before and after Yoshitsune's farewell came back to her mind with marvellous distinctness, but of the path she had traversed in the ascent she could recall nothing. To return by it would be a hopeless attempt, while to lie down under the shadow of the pines and await the insensibility to suffering this piercing cold must soon induce, though it seemed to her the most welcome course, would be at the same time finally to abandon her still cherished hope of seeing Yoshitsune's face once more before she died. She stood for a few moments irresolute, watching the moon as with mocking placidity it threaded its way among the stars, careless of all the tearful eyes that were turned towards it from the lands it illumined. She had lost her sandals in her headlong descent from the hill, and the jagged heaps of frozen snow had wounded her tender feet so sorely that her blood stained the ground on which she stood; but of this she took no heed, for despair was fast deadening her heart to everything that concerned life and time. Here among these lonely mountains and beyond the reach of all human sympathy she was doomed to say farewell to the world love had rendered so dear, nor dare she even hope to win a resting place in some quiet cemetery where the hand whose parting touch still seemed to linger on her own, might one day perchance strew flowers on her not untended grave. Was it possible that the great gods should suffer such things to be; the gods who had made her husband the most peerless knight and the most blameless noble in all Japan? She lifted up her voice and in a passion of grief invoked Yoshitsune's aid. Immediately from vast places among the mountains and caverns and in dark ravines, a thousand weird echoes caught up the sound and banded it about hither and thither, sometimes in accents of fierce strength, sometimes in prolonged whispers of hate and treachery, until Shidzuka was overwhelmed by the appalling fancy that she had betrayed her husband and that by every path among the hills his enemies, guided by her indiscretion, were rushing on to his destruction.

She turned and forgetting everything in her anxiety to undo this mischief, set herself to reascend the mountain with headlong rapidity. Staggering and at first scarcely able to follow the path—for the cold had already begun to do its cruel work—she still found sufficient strength to abate nothing of her speed until she reached the plateau of the sacred portal, but there—as though heaven had interposed to prevent the sacrilege of her passage—the memory of her desertion and of the things that had subsequently befallen her came back in all its grievous reality. At the feet of the stone images within the shrine, she saw the still smouldering embers of the fire her false-hearted guides had kindled, and visited once more by some feeble hope of refuge or rescue, she crept into the presence of the un pitying gods and with a half uttered prayer upon her lips, lay down to wait for the dawn.

(To be continued.)

## LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship; flag B. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

## ACROSTIC.

Out hideous object! wherefore at my door,  
Stand moping, mowing, howling, "want some more!"  
More thought to engulge from my wearied brain:  
O'er wrought endeavours further still to strain!  
Take these scrawled sheets, and vanish from my sight;  
Nor venture near my presence more to night!  
In vain the mandate. 'Tis too well I know  
Another of the species, Oh! Oh!! Oh!!!

1.

Often in glade a bough or bole is found,  
Of aspect picturesque perhaps unsound.

2.

An adjective quite frequently employed  
Of things much sought for, but not oft enjoyed.

3.

Some poet, I believe, of this has said  
It makes the ruin upon which it fed.

4.

To us, in Italy, it has seemed funny,  
So much disposed of for so little money.

5.

Oft in the silent night my tranquil rest  
Has been swift broken by this cause unblest.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, MARCH 26TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

Dashed line—represents velocity of wind

.....percentage of humidity

Max. velocity of wind 28 miles per hour on Thursday, at 3 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.079 inches on Friday at 7 a.m.—and the lowest was 29.415 inches on Wednesday at 10 p.m., the range being .664 inches. An unusually low barometer has prevailed during the week. The fluctuation in temperature has been considerable. A total of 2.303 inches of rain fell during the week.

## TELEGRAPH REPORT.

(Corrected to 9 a.m.)

All lines in working order.

## SHIPPING INTELLIGENCE.

## INWARDS.

Mar. 28, French steamer *Tanais*, De la Marcelle, 1,735, from Hongkong, Mails and General, to M. M. Co.  
 Mar. 28, British steamer *Malacca*, Seaton, 1,709, from Hongkong, Mails and General, to P. & O. Co.  
 Mar. 28, Japanese steamer *Tsuruga Maru*, Steadman, 661, from Hakodate, Mails and General, to M. B. Co.  
 Mar. 28, American ship *Columbia*, Furnell, 1,490, from New York, Oil, &c., to R. Isaacs and Brother.  
 Mar. 29, Japanese steamer *Genkai Maru*, Conner, 1,260, from Shanghai and ports, Mails and General, to M. B. Co.  
 Mar. 30, American steamer *City of Peking*, Morse, 5,079, from Hongkong, Mails and General, to P. M. Co.  
 Mar. 30, Japanese steamer *Tokai Maru*, Hogg, 1,042, from Kobe, Mails and General, to M. B. Co.  
 Mar. 30, Japanese steamer *Tamama Maru*, Carrew, 558, from the North, General, to M. B. Co.  
 Mar. 30, Japanese steamer *Sumida Maru*, Hubenet, 896, from Hongkong via Kobe, Mails and General, to M. B. Co.  
 April 1, Japanese schooner *Aoyahima Maru*, Cheetham, 660, from Nagasaki, Coals, Mails and General, to M. B. Co.  
 April 1, Japanese steamer *Toyoshima Maru*, Hubbard, 597, from Kobe, Mails and General, to M. B. Co.  
 April 1, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, from Shanghai and way ports, Mails and General, to M. B. Co.  
 April 1, British barque, *Crossfeld*, Ewart, 774, from London, General, to M. Raspe.  
 April 2, Japanese steamer *Kiushin Maru*, Davidson, 690, from Yokkaichi, General, to M. B. Co.  
 April 3, American Whaling barque *Rainbow*, Cogan, 351, from Bonin Islands, 75 Barrels Oil and Whaling Gear, to Captain.

## PASSENGERS.

Per French steamer *Tanais* from Hongkong:—Mrs. Livingstone and daughter, Mr. and Mrs. Elwell, Messrs. Dueret, Takoshima, Tsuchiya, and Noshima.

Per Japanese steamer *Genkai Maru* from Shanghai and ports:—Lieutenant and Mrs. Cowles, Mrs. Halcomb, Miss Hudson, Mrs. J. J. Henderson and child, Mr. and Mrs. Hellyer and 2 children, Mrs. Aldrich, Mrs. Porter, Messrs. Casill, Bogel, F. Reid, J. Reid, Hartley, Lieut. Freeman, R.N., Lieut. Behr, I.R.N., Messrs. R. T. Reunite, H. Kniffier, C. D. Bottemley, J. Russell, A. W. Glennie, T. Brewer, F. A. Cope, J. Gorham, W. Heise, D. Reynolds, Dr. Harris, Mr. and Mrs. Nagasaka, Miss Nodake, Messrs. Sakagami, Idsumiya, Terashima, Murai, Kamiyo, O. Smith, and Miwa; 4 Europeans, 165 Japanese and 9 Chinese in steerage.

Per British steamer *Malacca* from Hongkong:—Miss Leslie and Mr. Fraser from Southampton. From Hongkong: Acheong and child, Ah Tye, Ah Kun, 2 Chinese women, Ah Pye, 14 Chinese and 1 boy.

Per American steamer *City of Peking* from Hongkong:—Messrs. F. V. Whitney and J. Gillingham in cabin; and 3 in steerage. For San Francisco: Messrs. F. A. Miller, U.S.N., F. J. Sprague, U.S.N., W. C. Caulfield, U.S.N., A. S. Rogers, U.S.N., Jno. B. Quimby, U.S.N., J. H. Hetherington, U.S.N., C. N. Atwater, U.S.N., J. W. Ryan, U.S.N., H. Woodin, H. O'Neil, H. Greenough, R. Blackwell, Rev. J. N. Plum, Mrs. Plum, 2 children, Rev. J. B. Blakely, Mrs. Blakely, 3 children and Lieut. Drummond, R.E. in cabin; 2 Europeans and 516 Chinese in steerage.

Per Japanese steamer *Sumida Maru* from Hongkong via Kobe:—1 European, 8 Chinese and 45 Japanese.

Per Japanese steamer *Hiroshima Maru* from Shanghai and way ports:—Mr. and Mrs. Illies and 2 children, H. E. Chevalier Hoffman de Hoffenfels, Prince Date, Prince Nabeshima, Prince Senke, Messrs. J. C. Smith, F. Marty, H. W. Martiu, E. C. Kirby, A. Platt, Funakoshi, Kaufmann, Tazuki, Grangier, Tronchin, Chin Kai San, and Ten Sen in cabin; 170 Japanese and 5 Chinese in steerage.

## OUTWARDS.

Mar. 28, Japanese steamer *Wakanoura Maru*, Christensen, 1,343, for Nagasaki, Mails and General, despatched by M. B. Co.  
 Mar. 28, American ship *Centennial*, Bearse, 1,287, for Kobe, General.  
 Mar. 29, Japanese steamer *Shario Maru*, Kilgour, 524, for Kobe, Mails and General, despatched by M. B. Co.  
 Mar. 30, British barque *West Glen*, Thompson, 699, for Kobe, General, despatched by L. Kniffier & Co.  
 Mar. 30, British barque, *Alexander Joss*, 342 for Nagasaki, General, despatched by Walsh, Hall & Co.  
 Mar. 30, British schooner *Floral Star*, Davison, 244, for Newchang, despatched by Chinese.  
 Mar. 31, American sloop *Alert*, Com. Huntington, 1,050, 4 guns, for Kobe.  
 Mar. 31, Japanese steamer, *Tsuruga Maru*, Steadman, 661, for Kobe, Mails and General, M. B. Co.  
 Mar. 31, Japanese steamer *Genkai Maru*, Conner, 1,260, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 April 1, Japanese steamer *Akiohima Maru*, Frahm, 1,146, for Nagasaki, Mails and General, despatched by M. B. Co.  
 April 1, American steamer *City of Peking*, Berry, 5,079, for San Francisco, Mails and General, despatched by P. M. S. S. Co.  
 April 3, Japanese steamer *Sumida Maru*, Hubenet, 896, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Per Japanese steamer *Genkai Maru* for Shanghai and ports:—Rev. Mr. and Mrs. C. S. Long, Mme. Uyeno, Miss Morota, Miss Tani, Mrs. Kasano, Messrs. R. S. Sloan, Uyeno, Konoki, L. L. Folies, Soga, Yebihara, Notori, Kasano, W. A. Thorn, C. S. Bland, F. D'Ifanger, M. Baring, Miimi, Ishiro, Mikami, Kawano, Miyoshi, Isaacs, Imai, Komaki, Tamura, Uchida, Milne, Dr. Divers, and Mrs. Uyeno Yuki.

Per American steamer *City of Peking* for San Francisco:—For Europe: Mrs. P. Aldrich, Lieut. J. H. Freeman, R. N., Messrs. Thos. Wood, C. J. Stewart, J. Russell, and C. D. Bottomley. Japan Rice ... „	\$2.70 to \$2.90
Kerosene Oil ... „	\$1.60
Newchwang Peas ... „	\$2.20

## EXPORTS.

SILK.—During the past week our Silk market has on the whole remained very inanimate. We have had a trifle more business than in the week preceding and more especially as regards purchases for the American market, but all transactions do not after all exceed 230 shipping bales, and a general feeling of uncertainty and hesitation seems to prevail on the market.

Prices are to great extent nominal but for the first-class Silks, it is clear holders still insist on high rates.

Total shipments to date, 16,806 bales against 17,318 bales at the corresponding period last season.

	In London at 3/10 per lb.	In Lyons at fr. 4.85. per kilo.		In London at 3/10. per lb.	In Lyons at fr. 4.85. per kilo.

## THE GREATEST

**WONDER OF MODERN TIMES**  
**HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing an unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!**  
**HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1878.

tf.

**JOSEPH GILLOTT'S**  
**CELEBRATED**  
**STEEL PENS.**

Sold by all Dealers throughout the World.

May 3, 1879.

tf.

## JAPANESE PAPER CURRENCY.

THE depreciation of yen satsu is becoming so excessive that we must again refer to a question which, at this moment, occupies the thoughts of all well-wishers of Japan. During the past month, and more particularly during the last ten days of it, the fall has been out of all proportion to anything that could have been caused solely by the presence of a superabundance of paper money. Imports have been reduced almost to a standstill: and the demand for dollars, represented in most cases by bank notes, principally of the so-called Yokohama Bank, for clearance of yarns, &c., has been but small; and even these notes return to the hands of the Japanese almost immediately in payment for silk and other exports. Again, those concerned in the tea trade, who anticipated the usual recovery in the currency at this period of the year, had commenced to buy a certain amount of paper to meet their requirements for the coming season. This should, at any rate, have retarded the decline; but, contrary to all expectation, a most serious and appalling fall has taken place.

On the 29th of September last we wrote in reference to the gambling on the exchange thus: "It is admitted that these operations have assisted, probably more than any other causes, in bringing about the present crisis," and we can only repeat now what we then said. Speculation on the most enormous scale has been indulged in by a few unscrupulous persons to the detriment of the whole nation, not only causing the small capitalists, farmers, traders, and others throughout the empire to lose at a moment a great portion of the value of their savings, and producing the greatest distrust as to the future value

of the only money they hold, but reluctance to part with produce, which may cause, if nothing worse, the greatest inconvenience to the Government, should it have to enter into any great undertaking which will tax the resources of the country. Provisions of all kinds, especially the great staple of the country, rice, have risen to what may almost be termed famine prices, and this in face of last year's most abundant harvest. What would happen, if the many years of plenty which we have now seen should be followed by one or two of dearth? Few thinking men might like to contemplate the results.

It is rumoured that it is to the interest of certain people in authority to maintain this state of affairs; but we dismiss the idea that those responsible for the safety of the empire could encourage such a suicidal course as the indefinite depreciation of that credit of a country which, in times not long remote, stood higher than that of any but the most firmly established nations. Again, it may be that advice has been given that the reduction of satsu to a heavy discount will have the effect of placing a commensurate duty on imports; but surely the exclusion of a few articles that have become necessities to the people, such as yarns, kerosene oil, blankets, cloth, &c., which cannot at present be produced in Japan, will not counterbalance a loss of fifty-four millions in the purchasing power of the paper issued by the Government and National Banks, assuming that to be about 160,000,000 yen, as shewn by the returns of the Finance Department and the National Banks. That the issue of paper money by the Government has not swept away all the silver coin is clear from the fact that there is a sufficient supply of silver yen to meet ordinary wants of business.

The balance of trade here only requires a small amount of actual coin, as shewn during the silk excitement in 1876, when the large quantities of dollars, attracted from other countries by the high rates of exchange ruling, proved superfluous and were almost immediately reshipped to China. The late fall having been caused more by speculation than by any other cause, we would suggest that all the places at which such speculative operations are carried on should be at once closed,—all time bargains and purchases for delivery during the next three months being cancelled, and settled at the rate of the day: that all transactions shall in future be for cash only, the satsu and dollars, or bank notes for the same, being produced at properly authorized exchange marts, supervised by Government officials; and that heavy fines shall be imposed on any persons detected in the breach of such regulations.

That such control can be imposed has been shewn by sundry Government notifications; and we are of opinion that it is quite time that the authorities should interpose in a more decided manner than they have hitherto done. The gambling operations referred to are not only a disgrace, but a source of positive danger to the country; and the safety of the nation should not be jeopardized for the sake of any persons whatever, regardless of the sta-

tion or influence they may possibly have; and the present state of affairs imperatively demands that prompt action be taken.

Let us imagine the remote possibility that Japan should at some time or other be dragged into a foreign war. How then could she possibly enter into the struggle with any hope of success, with an exchequer impoverished by a depreciated currency, and a populace which the diminished value of that medium had rendered distrustful.

#### MODERN STATESMANSHIP AND ARMAMENTS.

THE experience of late years seems to warrant the conclusion that it is an inherent tendency of modern society the higher it rises in the scale of civilization the greater becomes the danger of its deterioration, if not extinction, by the curse of war. The great statesmen who have controlled the destinies of the world during the last quarter of a century cannot be supposed to be ignorant of history, and the Napoleons, Bismarcks and Gortschakoffs of our times can have known nothing with greater certainty than that military establishments and warlike enterprises have alone neutralized the vast benefits to the inhabitants of the globe arising from the unparalleled material progress of the past fifty years. It will be found on examination that, in proportion as science and invention have increased the sources of national wealth and human enjoyment, so have the rulers and statesmen succeeded in appropriating these resources for increasing the means at their disposal for obliterating wealth, destroying human life and sweeping away in a few months or weeks the results of decades of peaceful industry. In fact it has come to be considered in some directions the crowning achievement of a statesman's labours that he has made every male citizen a soldier; and the world at large has learnt to estimate the greatness of a nation by its success in destroying. The plain conclusion to be drawn is that, while the men of science and commerce have succeeded in multiplying the sources of human progress and human happiness, and have thereby made possible a vast advance in civilization, men of state have either failed or declined to understand these possibilities of social elevation, and by maintaining the barbarous supremacy of the sword have prevented the age we live in from being a glorious millenium to the human race. Measured by the standard of results, statesmen have disastrously failed, while all other men have succeeded in their contributions to the welfare and advancement of humanity as it has never been the fortune of man to succeed before. It is evident therefore that what the world supremely needs for its progress, and to avert the defeat of the elevating forces which the present century has brought into play, is a new order of statesmen, inspired with a truer appreciation of the expanding spirit of the age.

The question of a universal reduction in national armaments, now exciting so much attention in Europe, has not arisen too soon; and yet it would unfortunately appear that no good result can be hoped for, so long as governments are controlled by statesmen of the "blood and iron" type. An able German journal, the *Frankfort Gazette*, applies the financial test to the present military policy of Europe with startling results, which may well prove a warning to the statesmen of Japan and other Oriental nations who appear to be rapidly developing the prevailing mania for expensive armaments.

The writer has evidently bestowed great pains in making his test as accurate and exhaustive as possible, and, as is natural, he first takes the case of Germany, and draws

the following comparison between the annual budgets in 1865 and 1879; the figures representing millions of marks:—

	1865. Marks.	1879. Marks.
Prussia.....	812.4	
Hanover .....	89.9	
Electoral Hesse .....	16.3	
Schleswig Holstein.....	14.0	
Nassau .....	6.5	
Frankfort .....	4.8	
Total .....	889.2	446.9
Bavaria .....	80.1	129.8
Saxony .....	84.5	71.5
Wurtemberg.....	80.8	53.7
Baden .....	27.4	34.8
Hesse .....	8.2	17.1
Other States.....	66.1	103.7
German Empire .....	...	455.5
Total German States .....	637.0	1,821.0

Thus, within the last fifteen years of the much vaunted consolidation of the German Empire, the taxation of all the German states for the maintenance of Government and defensive purposes, has arisen from 637,000,000 marks to 1,821,000,000 marks—an increase of 107 per cent. It accordingly appears that a coalition of states which should, by all the ordinary canons of common sense, have economized the expense of administration, and contracted military armaments and the expenditure, has thus been made a pretext for more than doubling the burdens of the German people. What wonder then can be felt that the inhabitants of the most powerful military empire the world has ever witnessed are groaning under the incidence of taxation: that industrial enterprise is paralyzed; discontent rampant; socialism assuming formidable proportions; and, measured by every just and humane standard of judgment, Bismarck's boasted achievement openly pronounced a disastrous failure and a curse to the Fatherland.

Bad, however, as Germany is in its extravagance of expenditure, it by no means stands alone. The insidious disease, the outcome of ruinous rivalry, has been common to all Europe, as will appear from the following comparison of the budgets of all the states in Europe, as presented by the *Gazette*:—

	1865. Millions of marks.	1879. Millions of marks.
Germany.....	637	1,821
Austro-Hungary .....	1,041	1,225
France .....	1,890	2,884
Great Britain .....	1,850	1,710
Russia .....	1,032	2,150
Italy .....	720	1,180
Spain .....	525	602
Netherlands .....	148	204
Belgium .....	186	217
Denmark .....	80	40
Sweden .....	42	90
Norway .....	22	56
Portugal .....	90	140
Greece .....	21	43
Turkey .....	243	260
Turkish dependencies (former)	23	105
Switzerland .....	15	34
Total Europe .....	7,976	11,717

The countries which have most largely increased their expenditure are those of whose bellicose tendencies we are hearing every day,—Germany and Russia,—the latter having, like the former, more than doubled its expenditure during the past fourteen years. Taking the whole of Europe we find that its combined budgets have risen from

7,976,000,000 marks in 1865, to 11,717,000,000 marks in 1879, which is equal to an average increase of forty-seven per cent. Omitting Germany and Russia, the increase in all the other states averages about thirty per cent. The following comparison of exclusively military expenditures, in 1865 and 1879, will serve to indicate how large a portion of this increase in the collective budgets is due to martial jealousies and ambitions :—

	1865. Millions of marks.	1879. Millions of marks.
Germany .....	198	427
Austro-Hungary .....	280	228
France .....	856	540
Great Britain .....	540	645
Russia .....	438	780
Italy .....	231	185
Spain .....	120	120
Netherlands .....	87	59
Belgium .....	29	88
Denmark .....	9	18
Sweden .....	16	26
Norway .....	7	11
Portugal .....	20	80
Greece .....	6	12
Turkey .....	96	100
Turkish States (former) .....	12	88
Switzerland .....	7	11
<b>Total Europe .....</b>	<b>2,852</b>	<b>8,219</b>

The *Gazette* gives some further interesting details which serve to shew, in a clearer light, if that be possible, the suicidal policy of the huge national armaments which are now the rule in Europe. Thus, we find that the expenditure on military establishments (exclusive of specific war expenses) has increased from 2,852,000,000 marks in 1865 to 8,219,000,000 in 1879, or at the average rate of thirty-seven and one half per cent. Of the total increase of 867,000,000 marks, 229,000,000 is due to Germany, and 292,000,000 to Russia, leaving 346,000,000 to be distributed among all the other states. If the number of subjects in the case of each country be considered, it will be found that the increase in army expenditures has been especially disproportionate in the case of Germany, France, Russia and many of the minor states, which have found themselves compelled to follow the threatening policy of the larger. Italy, Austria and Spain present a contrast to the general rule; but, as the writer from whom we quote shows, what extravagance fails to appear in their budgets finds its place in their debts. In all these comparisons it must be borne in mind that both 1865 and 1879 were years of peace in Europe, and that therefore these figures fail to measure the normal military expenditures.

Military budgets, however, afford a very imperfect criterion of the actual cost of military establishments. They rather measure the expense of maintaining armed hosts in idleness. When war comes, enormous expenditures arise which are not provided for in budgets, and have to be covered by loans, which become a permanent charge upon the resources of the country. A notable instance of the truth of this position is shewn in the experience of France as regards the war with Germany. The losses to the vanquished country have recently been stated by one of the present Ministry at over fourteen milliards of francs, not one son of which vast sum was contemplated by Olivier when he boasted upon entering on the disastrous campaign with that "light heart" now become historical. In order to arrive at a true estimate of the financial embarrassments resulting from these vast armaments, it becomes necessary to compare the state debts of the various na-

tions; and of these the *Gazette* gives the following statement for the two periods :—

	1865. Millions of marks.	1879. Millions of marks.
Germany .....	2,565	4,400
Austro-Hungary .....	6,190	8,423
France .....	11,120	16,500
Great Britain .....	10,170	15,565
Russia .....	4,160	12,000
Italy .....	8,000	8,170
Spain .....	4,200	10,500
Netherlands .....	1,740	1,640
Belgium .....	500	1,244
Denmark .....	190	205
Sweden .....	90	240
Norway .....	88	105
Portugal .....	800	1,050
Greece .....	145	400
Turkey .....	960	5,000
Turkish (former) States .....	4	420
Switzerland .....	3	28
<b>Total Europe .....</b>	<b>52,535</b>	<b>86,492</b>

Thus, we find that within the short period of fourteen years, a term which in the life of a nation may be likened to an hour in that of a man, Europe has increased the indebtedness of its governments from 52,535,000,000 marks to 86,492,000,000 marks, or by sixty-four per cent. To go into details, Russia has nearly trebled her debt; Italy has more than doubled hers; that of Spain is two and a-half times what it was in 1865; the same ratio of increase applies to Belgium; the "sick man" of the Bosphorus has augmented his in the utterly hopeless ratio of five-fold; even peaceable and insignificant little Portugal has doubled her national obligations; France has increased hers by fifty per cent; Germany by seventy-one per cent; and Austro-Hungary by thirty-six per cent; while Great Britain and the Netherlands alone shew any reduction of debt, although as far as the former country is concerned, we are strongly inclined to believe that, if the floating Exchequer bills so freely issued by the present Ministry to carry out their "spirited" policy in South Africa and Afghanistan were taken in consideration, Great Britain would have to be classed with the majority of financial unfortunates, thus leaving the Netherlands in the enviable position of being the only state which has reduced its national indebtedness since the year 1865.

Taking the average interest paid on the national debts of Europe at four per cent, we find that it amounts to an annual charge of £178,000,000, and that of this enormous burden sixty-four per cent has arisen within the last fourteen years, and very largely represents the cost of warlike enterprises and military establishments. A bare statement of these appalling facts is sufficient to forebadow frightful social disasters unless a speedy and sweeping change takes place in the barbarous system which has made such a miserable condition of affairs not only possible but imperative. Without some radical alteration, the collapse of industrial enterprise; the poverty and degradation of the masses of the people; and the disgraceful bankruptcies of some governments, loom in the not far distant future with terrible distinctness. In fact it would seem inevitable that the correction of the madness of the military ambitions from which the ruinous burdens have arisen, must come at no remote period through a determined resistance of the peoples who are now apparently weighted down beyond the point of further endurance, and are willing to welcome any scheme, how apparently chimerical or desperate, which holds out the slightest hope of relief from burdens which have become well-nigh insupportable.

## GOVERNMENT CONTROL OF POLITICAL MEETINGS.

THAT the Government was right in restricting the number, and exercising some control over the nature, of written discussions and treatises on the difficult subject of popular representation has been proved by results. In an article on this subject in the *Japan Weekly Mail* of the 27th of March, we indicated the class of people whence the agitation sprung and by whom it has been maintained. It is now asserted in vernacular papers that the most ardent partisans in a town of Shimane, in Shikoku, of the establishment of a national parliament, have issued as many as fifty thousand circulars in the adjoining provinces. The document in question calls upon all persons of whatever rank to assemble at a public meeting for the purpose of drawing up and signing a petition to be conveyed and presented to the Government by a numerous delegation. Now, in the present condition of Japan, there can be no question that the broad-cast dissemination of such invitations as these is very undesirable; or that the authorities are more than justified, in the very interests of the people themselves, to prevent them from being disquieted in their minds, and interrupted in their peaceful avocations, by the declamatory nonsense which is pretty certain to form the substance of the communications proposed to be addressed to them. It will hardly be asserted that it is advisable, even if the agitators were allowed to distribute their letters or hand-bills convening crowded assemblies in every part of the empire, that such should be permitted to gather uncontrolled, and to listen to the perfervid and highly coloured narratives or orations of a number of discontented and more than half ignorant demagogues, who have not the welfare of their country or compatriots, but the advancement of their own schemes and interests, in view. And thus it has been found expedient not only to establish a censorship of becoming rigour over the emanations from the pens of the perturbators, but to check them in another part of their scheme for, according to their own false lights, enlightening the public. Some of the so-called patriotic clubs of indolent and not too honest young men, sprung from the old samurai class, have possibly many adherents. The resolution imparted by one of their chiefs to hold an assembly on a certain day is rapidly spread among them orally, and in the same manner made widely known to the curious and idle in the ranks of the public. A method of this kind can be made almost as effective as the distribution of written summonses in drawing a multitude. And, under whatever circumstances convened, considering the objects and character of the conveners, it is positive that those who are disorderly and undisciplined in the réunions of their own organizations would not be likely to exercise serious restraint over a mob which their conceit and violence might have excited to passion. The directors of the Aikokusha appear to be already experiencing the difficulty of guiding forces which they have once let loose. Osaka journals aver that the debates of the body are characterized by great clamor and disorder, and that the President has much difficulty in governing the speakers. The *Manichi Shimbun* says that it frequently receives anonymous letters announcing that, while many of the members of the association really desire to arrive at the end proposed, others are nothing but ambitious schemers, who make use of their membership, in the hope to create for themselves some remunerative position in the service of the Government, to which they secretly supply information of all that passes in the meetings of their brethren.

In the interest of the public safety, and in view of the real welfare of Japan, it was as necessary that some curb should be placed upon the spoken as upon the written utterances of the discontented classes of the empire, who are only dangerous in proportion as they are uncontrolled. When they find that there is no sympathy with their action, and no available outlet for their exuberant and factitious patriotism, they will probably betake themselves to legitimate means of earning their daily living, and may thus gain a measure of self-respect, and the esteem of the limited circle of the compatriots among whom their lot, more fortunate than their present one, may be cast.

THE columns of the vernacular press have of late been singularly void of matter of interest. The subject of a national representative assembly has been the *pièce de résistance*, and, in fact, all but the sole fare at the literary banquet provided. The convives begin to tire of the sameness of their diet. Still a trifle of variety has been introduced of late in the shape of a not very erudite discussion, between the *Nichi Nichi* and *Hochi Shimbun* on one side, and the *Akebono* and *Komon Shimbun* on the other. The honour of originating the contention belongs to the first-mentioned journal, which, having headed a leading article with words to the effect that *Min-ken* (the right of the people) is identical with *O-do* (Imperial authority), endeavoured to prove the proposition by reference to the original meaning of the Chinese characters representing the latter word. This fancy served to introduce the real argument of the writer, which was to the point that, when the people of a country find it necessary to urge their rights and to maintain their liberties, it is always at some unhappy moment, as when, for instance, they are oppressed by their sovereign. So long as the latter exercises his authority with moderation, and forbears to tyrannize over his subjects, there is no necessity for the latter to clamor for an inheritance which is not withheld, or to rise in defence of liberties which are not endangered. "To insist upon the rights of the people" is then a watchword which should only be used in times when the phrase has any significance. As the Emperor of Japan is not despotic, but has proved the contrary by his oath to introduce a constitution in due time, it would be more becoming for the people to ask him not to refrain from the exercise of his legitimate authority, rather than to agitate for privileges for themselves. The *Hochi Shimbun* and those who argue on the same side, ridicule the supposed identity, founded on an obscure derivation, of the imperial power with the right of subjects. They insist upon the necessity of a representative assembly, legislating under a constitutional monarchy, in order that the exercise of the supreme authority may be controlled by the will of the nation; and they say that it is impossible to predict that the present mild form of government may not, under a system of absolutism, at any time be altered. Admitting this, the *Nichi Nichi Shimbun* replies that the necessary progress towards full constitutional freedom must be made step by step, and that such a gradual advancement is implied in the terms of the imperial promise, which is actually in course of fulfillment. And this is the only correct solution of the question, which is taken up in the absence of better subjects for discussion. When Japan has attained her political maturity, and is capable of appreciating and using the privileges of full constitutional liberty, she will be put in possession of them. To this end most of the reforms introduced by the present Government are gradually but surely and evidently tending.

IN a native journal we find mention of a phenomenon in the province of Fukushima, which, although not altogether uncommon, is still sufficiently rare to excite comment. We learn from the *Choya Shimbun*, the paper in question, that "last year a resident of Taiayeki, in the province of Fukushima, sunk a well on his premises, but the water obtained was found to be undrinkable and emitted a very offensive odour. When investigating the cause of this, the man was struck with the similarity between the smell of coal gas and that so noticeable in the well. To test the matter, he sunk two bamboos in the ground alongside the well, and ascertained that vapour was discharged at the orifice. On a light being applied, it was at once made apparent that this vapour was inflammable, as it burned readily. By joining other bamboo tubes to those in the ground, the man was enabled to illuminate his house with natural gas." In a memoir on the coal-fields of China by R. C. Taylor, in the journal of the Franklin Institute, it is stated that the Chinese use, to this day, for economical purposes, the gas which escapes spontaneously from beds of bituminous coal. Within thirty miles of Peking, says the same authority, is a coal-field having beds of salt associated with the coal, and streams of gas rising naturally from the coal are conveyed to the salt-works by means of bamboo tubes, and there used for the boiling and evaporation of the salt. Other pipes convey the gas intended for lighting the streets and houses. There are different other instances where these inflammable gases issue spontaneously from the earth. The phenomenon is witnessed at several places in the Apennines, and in a mountain of Lycia, near the shore of the Gulf of Adalia. In the village of Fredoula, New York gas issued from a small stream some years ago, and a gas-holder was erected for collecting it, but we believe the supply ceased in time. There can be little doubt that most of these phenomena arise from coal or other bituminous substances, which by some convulsion of nature have been buried at such a depth as to be distilled by the heat from the interior of our globe, so that the gas is expelled, and escapes through the fissures of the earth.

A LEADING politician in the House of Parliament, when referring to a debate upon a well-worn subject, remarked that it was like "flogging a dead horse." Comment upon the sins of omission of Renter's telegraphic company or its agents, against subscribers here in Yokohama, is almost as useful a proceeding as that designated by the member of Parliament, but our last files of Shanghai papers have demonstrated so forcibly and conclusively the scandalous neglect of some one connected with this telegraphic agency, that we cannot avoid recurring to the subject once more, although we have but very slight hopes that our latest remonstrance will be more effectual than those which have so repeatedly appeared in this and the other local journals. To place beyond question the well-founded nature of our complaint, we reproduce here the telegrams supplied by the company to its subscribers in Shanghai between the 21st and the 29th of last month:—

21st.—The Oxford and Cambridge Boat Race has been postponed until Monday, on account of Fog.

22nd.—The Russian Ambassador at Paris has been recalled, in consequence of the refusal of the French Government to extradite Hartmann, who is charged with complicity in the attempt to assassinate the Czar.

Disturbances have broken out between the Mussulmans and the Christians at Smyrna, and the Consuls have summoned the Ironclads.

The Grand Shereef of Mecca has been assassinated.

23rd.—The Oxford and Cambridge Boat Race was won by Oxford.

26th.—The Chinese Government has ordered twenty millions cartridges in the United States.

Colonel Synges who was captured by Brigands at Salonica has been released.

The "Times" expects that there will be an equal balance of parties in the next Parliament.

Mr. Angell has been nominated United States Minister to China.

Two United States Commissioners have been appointed to negotiate a new Treaty with China.

28th.—A Russian Army Corps of observation will be placed on the Frontier in the vicinity of Kuldja.

29th.—Lord Hartington, in a speech, said that the Liberal party would not stake British interests on the maintenance of Turkish integrity and independence, but would endeavour to establish a European concert to coerce Turkey.

Prince Leopold intends shortly to visit Canada and the United States.

Now, of these numerous messages, which are, almost without exception, of great interest; we here in Yokohama were only favoured with those portions which are printed in italics, one out of the three being curtailed in such a stupid manner as to alter the sense, and thus make it actually misleading. We believe the agent in Shanghai is entrusted with the duty of forwarding the messages to Yokohama, but we should be sorry to assert that upon his shoulders rests the blame for the wanton disregard of the interests of the Yokohama subscribers, so conclusively proved by the examples we have published. One thing, however, is quite certain, that, so long as the business is conducted in the way it is at present, there is no adequate cause for surprise in the paucity of subscribers; indeed the wonder will soon be that anyone can be found foolish enough to waste money upon an association which has, in Japan, developed a remarkable capacity for getting as much as possible, and giving little or nothing in exchange.

THE Yangtze, in the lower part of its enormous length, or in the seven hundred miles between Hankow and Shanghai, is fairly well known to the captains of English and American steamers of large tonnage. For four hundred miles further, or to Ichang, this eastern rival of the Mississippi is now navigable by the big river steamers of the China Merchants' Steam Navigation Company. And at Ichang, eleven hundred miles from the embouchure,—the mighty river offers to the visitor "scenery of surpassing grandeur, which even to the most superficial must prove awe-inspiring." This testimony by Dr. Macgowan, tendered in a recent lecture on the subject of the Middle Yangtze, before a meeting of the North China Branch of the Royal Asiatic Society is confirmatory of that of previous visitors. The passage from Ichang in Hupe towards Szechuen, or "ultra-China" as Dr. Macgowan calls it, is for one hundred miles in gorges cut by the stream through mountain ranges at right angles with its course. The navigation of the rapids thus caused is extremely dangerous; and a life boat service has long been in existence, and maintains a high state of efficiency. The extreme western province of "Szechuen is a third larger than the United Kingdom, and to say nothing of the waters that pour in from Yunnan and Kueichow and from the eastern portion of the Tibetan plateau, what must it be when it is obliged to force its way through a contracted passage about a hundred miles in length, as narrow in some places as the creek that divides our Settlements (the English and American at Shanghai) at the Garden! How impetuous must be its torrent! Besides this, its rocky bed is ribbed with ledges, which give rise to the rapids which you shoot at no small risk, and which you ascend with infinite toil by hugging the shore; at times a hundred or more men straining to move you, at the pace of the minute hand of a clock. Consider this, and you will be able to form some conception of the impediments which the rapids of the gorges present to the navigation of the Middle Yangtze. Nevertheless, a combination of the means that are employed on the Upper Missis-

issippi and the Danube, may, after a few tons of dynamite have been expended in blasting, unite the two Chinas together, and prove as beneficial to commerce as has been the spade of De Lesseps." The country is well policed; the people are well conducted, though not partial to foreigners; and the provincial contingents furnish some of the best troops of the empire. These results appear to accrue naturally from the exceptional advantages of the region. Our author says:—

On casting his eyes about him, the foreign traveller finds much in Szechuen to remind him of the home that he has quitted, wherever that home may be. Maize and buckwheat remind the American of breakfasts that were breakfasts—good square meals. Irish mountain water at the sight of mealy potatoes. If the Welshman cannot find all the leeks that he wants, he may make amends by the garlic that is in the air. A Scotchman may "pu" the gowans fine," and find mountain and flood enough and to spare; there is beef for Englishmen, grapes for Frenchmen, oranges for Spaniards, vermicelli for Italians, and sour-kraut for Germans, while palms and cacti will remind the traveller from the tropics of his torrid home. Abstainers from pork must often desire a dispensation, while ichthiophagi need never want a meal, and the most daring of Nimrods will find in wild animals ample scope for his powers, with poultry as a recompense.

It is strange to read that opium-smoking is more prevalent here than in most other parts of China; the favored district indeed producing more of the consolidated juice of the poppy, it is said, than Hindustan. To quote briefly again from Dr. Macgowan:—

In a word, this ultra-China, which is secluded within great natural barriers, is self-contained, through its agricultural, manufacturing and mining resources—it has so much to spare, that it will be well able to purchase outside commodities to an enormous extent when those can be transported at a reasonable charge. Unfortunately, the curse of opium rests on this, the fairest portion of the Flowery Land, to a greater degree than elsewhere. Mr. Baber has ascertained and reported to his Government the astounding fact, not astounding however to those who have been in Szechuen, that there is more opium produced in that province than in India. As a consequence, opium-smoking prevails more there than elsewhere. Elsewhere in China, opium-smoking is regarded as disreputable, just as drunkenness in other countries, but in Szechuen it is regarded as venial as tobacco-smoking, yet it will be news to all the inhabitants when they are informed that, according to the teaching of physiological and economic science lately promulgated, opium is an undisguised blessing. I doubt if the proletariat, or political economists of ultra-China, will give in their adhesion to that view of the case. . . . I saw proclamations forbidding the cultivation of poppy, but the people had declared they would refuse to pay taxes if attempts were made to enforce the prohibition. It would require an army to suppress that profitable industry.

Tobacco is largely cultivated and smoked in this country which has been explored by Baron Richtofen, and by Mr. Baber of H. M. Consular service, of whom Dr. Macgowan says that "he squeezes dry every subject that he handles." A book from his pen on the subject of Western China will probably be published shortly, and is more than likely to contain matter of exceptional interest and instructiveness.

IF the Chinese workmen were all and invariably moral, thrifty, industrious, sober, and thoroughly honest, they would have attained a standard of perfection not yet achieved by any class of human beings, and rarely, if ever, by favoured individuals of the race. Generally, however, their possession of the attributes of morality, as they understand it, frugality, assiduity, temperance, and integrity, is more than in excess of that which mechanics of a whiter complexion and higher order of humanity would care to boast. Of course there are exceptions even to celestial excellence; and it is probably the exception and not the rule to which Mr. R. G. Alford refers

in a recent article in the *Builder*. He says, having no doubt a typical case in view:—

If a man of ordinary ability, the Chinese workman soon sets up for himself, and invariably devotes his whole time and energy to the successful accomplishment of his first few jobs. He is a needy man, working on borrowed capital, and so all goes well. After a while, his first success leads to more work. He pays off his debit, and by-and-by makes a little money, and then comes a change. As he grows prosperous, so he grows careless. As he makes profits so he desires to increase those profits by subtlety. As he rises in the world, so, too often, he thinks lightly of his earlier friend. Having made himself a name, he straightway proceeds to lose it as fast as he can. He takes an excess of opium, marries many wives, drinks native spirit in abundance, and finally he finds himself but one in the great body of pushing, struggling seekers after foreign prey, with which such places as Hongkong abound. The spirit of swindling is rampant among the Chinese, and the carpenters and builders are considered the lowest in the moral scale of tradesmen by all their countrymen. But of all kinds of Chinese workmen the greatest rogues are the painters. To give details of their mixtures of pig's blood and lime to serve for sizing, or soot and chalk for distemper, would be too ridiculous. Such things as brushes are unknown among Chinese painters, and hand-daubing with rags is universal. The mixture of groundnut oil, a native production of a light muddy colour, with linseed oil, and the use of half-boiled oil to produce stickiness in varnish, and enforce early repetition of the painting, are everyday practices.

Some time since a very graphic series of sketches appeared in one of the London comic papers. They were entitled, we believe, "The British workman, by one who knows him;" and the artist, in the text of Mr. Alford's contribution, might find subject matter for a set of companion drawings to his earlier cartoons. But, as it would be manifestly unjust to condemn the whole body of hardworking, badly paid, and not too well used, English mechanics and laborers, on account of the shortcomings of the worst specimens selected from their class, so it is unfair to judge of the majority of Chinese people in an analogous rank of life by the rascality and fraud of the no'er-do-weels among them. And this consideration is quite apart from the fact that Hongkong is notoriously an unsatisfactory place in which to observe the better phases of the Chinese character.

AS gross ignorance appears to prevail in France upon Far Eastern affairs and locality, as is frequently noticed among those who often pose as well informed themselves, and informants of the public, in England and America. The *Indépendant de Saigon* draws attention to an amazing mass of error on even the geography of Tonquin, propounded by two leading French papers which pretend to speak with authority. It seems also that the Parisian press has not been well-advised on the subject of the alleged difficulty with Annam. The *Indépendant*, however, finds comfort even in the mistakes formulated. It says that "all the noise, made about the Tonquin question in the European press, which noise has found an echo in the journals of China and Japan, will result in attracting attention to Cochin China, her riches, her future and her urgent need for vast reforms." Our contemporary asserts, with reference to the matter requiring adjustment between France and Annam, that there is no longer any question of military action. The French Government will confine itself to giving to the treaty of 1874 all the extension of which it is susceptible, and seeing that its provisions are thoroughly applied. This is what the position is said to be:—

In virtue of that treaty an actual French protectorate is already in existence, if not over the whole of Tonquin, at least in the ports open to European commerce. This protectorate will be rendered effective and efficacious. On the other hand the treaty of 1874 acknowledges that France has the right to navigate the Song-ca, which entails the right of

policing the stream and causing her flag to be respected upon it. Also, and for the form of insuring the execution of a part of this convention, France might be inclined to send a fleet of gunboats,—similar to those employed in preserving order on the rivers of Cochin-China,—which would be specially charged with the *surveillance* and survey of the Song-ca and its affluents.

The writer says that such a course as is here traced would merit applause; “for in place of an armed expedition, always subject to reverse, and involving an incalculable expense in men and money, we shall see a gradual and continuous action, habituating the populations to ourselves, our power, and our civilization; and in a near future, without a blow being struck and by the simple force of events, we shall have established in Tonquin what we may honestly desire to find there; that is to say, French influence and the French flag.” This is the sort of peaceful conquest to which the world is not much accustomed; and of which it will be highly satisfactory to witness a triumphant example.

THE days of enormous profits in the American petroleum trade would appear to have vanished for ever. An industry which has rewarded enterprise, and often mere luck, with astounding results, is being brought within the limits of the most unromantic transactions, and returns perhaps about as much on the capital invested as is derived from any average business of fair standing. And European rivalry now threatens the Pennsylvanian oil region, which though it will doubtless long continue to have the command of the Australian and Far Eastern markets, in addition to its own, cannot hope to maintain its hold upon those of Europe. An extensive and highly productive petroleum supply has been struck in Hanover, which, from the centrality of its geographical position, should be able to furnish all the demands of the old world for the illuminant.

CAPTAINS of all steamers trading to and from the port of Shanghai can testify to the loss and inconvenience occasioned by the Woosung bar. And this is not the worst that can be said of the obstruction. It is asserted on competent authority that it seriously imperils the prosperity of Shanghai, which, if no measures are adopted to reduce the bar and to prevent the constant accumulation of fresh deposits, will at some no far distant day cease to be a port. A meeting of the mercantile community of the settlement was convened to be held in the Shanghai Club on the 2nd instant, “for the purpose of considering a memorial to the Foreign Ministers at Peking with reference to the river conservancy dues.” This action has been taken at the suggestion of the Shanghai Chamber of Commerce; and all who are interested in trade with China must desire that the ultimate result of the meeting will be, that the Government will direct the necessary operations to clear and keep unobstructed the navigation of the Woosung River.

NO indications, either from Europe or China, point to an improvement in the relations between the latter empire and Russia. The St. Petersburg press is very indignant at the refusal or delay of the Court at Peking to ratify the treaty made at Livadia; and official feeling in China is more than ever dissatisfied with the bargain. In view of the disagreement between the two countries, a notification, issued by the Russian Consul at Shanghai, is not without a certain significance. This document informs Chinese subjects that they will not be allowed to land at Vladivostok unless they are provided with a passport from their own authorities, countersigned at the Russian Consulate. Although this measure

of itself, may not indicate an impression that war is imminent, and may not even be intended as precautionary in case of the outbreak of hostilities, yet it is eminently unfriendly, the rather that a great portion of the trade of the eastern Siberian port is in the hands of Chinese merchants. Meanwhile, in that district of Central Asia which has been the source of the negotiations that have terminated so unsatisfactorily, matters are in such a state of confusion that a collision may take place at any moment, if it has not already occurred. “It is reported from Kuldja that the Russian authorities are making preparations for the evacuation of the portion of the province ceded to the Chinese, but that the Governor of Kashgaria has received no instructions from Peking yet to carry out the provisions of the treaty signed last year. On the one hand, the Russians in Turkestan are calling out at the loss of prestige they are experiencing through the cession of the Trans-Ili district; while on the other, the Chinese are bitterly complaining at receiving only a fraction of their demands. The clamour of the Turkestan officials arises only from their disappointment at not being able to accomplish the designs they had in view of invading and annexing Kashgaria.” Tso is known to be accumulating large forces, and what stores and munitions he can acquire; and certainly his movements will not pass unwatched or unchecked if necessary, by General Kaufmann and his lieutenants. As for the unhappy envoy, whose conduct of the conference on behalf of China with the government of the Czar, immediately produced the disagreement, his condition is not improved, nor is his life likely to be spared. A decree from the two Emperresses has approved the sentence of his decapitation.

MR. Cesar Celso Moreno does not mean to allow his scheme for a trans-Pacific telegraph cable to fade out of sight, if he can keep it before the public. It is known that his efforts to obtain the concurrence of the Chinese Government with the undertaking were eminently unsuccessful. He is now, or was at the beginning of the current year, in Honolulu, where he was supposed to be moving the Hawaiian authorities to enter into “direct commercial and postal communication” with the great Asiatic empire, his main object being to make some progress towards the attainment of his ultimate desire. Mr. Moreno’s plan is, broadly, to connect some important point in the Pacific States with the Far East by a telegraph line via the Sandwich or the Aleutian Islands. Although there is little doubt that the communication spoken of will be established at some time or other, yet that time will not be until the demands of commerce have announced its advent. At present no such demands exist; and, indeed, it must be evident to all those who are really familiar with the present conditions of foreign trade in the Orient that the projector, who is also an enthusiast, greatly overrates the advantages to be derived from the adoption of his proposals.

IT is probably too much to hope that the proposed extension of the Austrian Lloyd’s line of steam communication with Eastern Asia will be a source of much gain to the company. The most that seems to be expected as regards the direct enterprise, is that it will “pay sufficiently,” probably if supported by a handsome Government subsidy. The idea is to connect the large Adriatic port of Trieste with Singapore or Hongkong, with the principal object of “increasing the transit traffic with Germany, augmenting the trade of Trieste, and opening new, broad, perhaps quite unexpected prospects, to Austrian commerce in the East.” Of course it will be to the advantage of Austria that what goods she does export to Oriental or other regions should be conveyed in her own bottoms; but with the present prospects of trade here or in China, it is probable that the only persons who will

gain much by the additional means of communication are those who belong to the travelling public. They will have an additional route opened to them, and a fresh choice of conveyance between Europe and Singapore or Hongkong. If the scheme, as far as regards places still more remote than those ports, were very promising, it is probable that Yokohama would be the eastern terminus decided upon.

#### THE PALACE AT KIOTO.

THE yearly exhibition now being held at Kioto is drawing many former residents to revisit their favourite city, from which recent changes and the necessity of a more central capital have drawn them. Numerous are the nobles and gentry who have regretfully seen the ancient palace vacated by its Imperial inmate, and reluctantly did they themselves leave so lovely a spot to follow him to the modern capital, and join in the labours of national progress. It must be with no small relief that such individuals return to the locality of which it was said:—"This truly is the place when the gods do dwell,"—bidding farewell for a time to the busy centre of Government, with its devastating improvements and its motley array of novel constructions in all styles under the sun, from Gothic to Roman. In the nineteenth century, utilitarian considerations must take the lead; and, before them, all mere sentimental prejudices must be waived. Kioto was at first selected for the Imperial city for reasons quite apart from those which generally govern the choice of sites for large towns. It was never pretended that accessibility and commercial advantages had any weight in fixing the spot which, being made the residence of the Emperor, was honoured with the name of Miako.

Undisturbed natural loveliness of position and quiet seclusion were points which influenced the courtiers of Kuwammu Tenno, when, from a neighbouring hill, they looked down upon the verdant valley destined to become the sacred capital. Saikio has lost much of the wealth and prosperity that of necessity accumulated around the palace of a monarch. Apart from the absence of the higher classes, whom duty or fashion led to reside within its walls, many of the wealthier merchants and others have lost their gains and means of support. Still, with all these changes, it will always continue to be the favourite resort of seekers for pleasure and enjoyment, who find in it the comforts of a large town closely surrounded by all the beauties of natural scenery. Kioto now is the only city where one can enter fully into the spirit of the attractive old customs, and see occasionally some gay pageant recalling the pleasures which a changing civilization is rapidly converting into mere memories of the past.

The Imperial palace was the nucleus round which the city grew. It was built at the commencement of the fourteenth century, on an arrangement suggested by the palaces of China; and its walls were seven miles in circuit. On the occasion of the executive duties of government being assumed by the Shoguns, the edifices which had several times been destroyed by fire were much diminished in number, and the area occupied by them was reduced, the government offices being transferred to the eastern capital. The original buildings, then as now of one story only, surrounded by large walks, courts and gardens, including in fact two other separate palaces and eight large administrative departments, covered an immense space. The palace indeed formed a considerable city of itself, girt by high walls and entered through twelve gateways.

The visitor to Kioto will now observe wide public streets, cutting through what was once part of the Imperial grounds, and the remains of the former extensive erections confined in two separate enclosures. The palace proper, being the residence of the Emperor up to the time of his removal to Tokio, is generally known as the Okami Goshō; and the palace opposite to which the exhibition is now being held,—known as the Omiya Goshō,—was formerly occupied by the Empress Dowager. There is still another palace, once inhabited by the reigning sovereign, and called the Katsura Goshō. This mansion is situated some three miles from the city, upon the river side, amidst the most picturesque scenery at the base of the mountain. It

is hidden from view on the outside by thick groves of waving bamboo, and is chiefly interesting on account of its beautiful grounds, and a large expanse of clear water sprinkled with flower-clad islets and bowers, connected by fancy bridges. The buildings are very old and dilapidated, the wood-work being decayed, and the paintings upon the walls quite faded and dull. The Omiya Goshō, which has been mostly cleared of its fittings and furniture to be put to the use of an exhibition building, still retains several rooms fitted with the old decorative slides and wall pictures. One may here also see some fine specimens of Japanese art treasures in the way of lacquer-work and fine old bronze vases.

The grounds of the Emperor's private palace are now yearly open to view, and the construction and arrangement of the buildings is such that the interior plan and decoration of each can be well seen from the outside. The outer slides being removed, as they would be in the summer time, reveal between the supporting posts a vista of the handsome rooms within. The palace at present consists of seven independent blocks of buildings, connected by covered corridors, and arranged in an irregular manner so as to open different aspects to the wide gardens surrounding them. The first group reached is the Shishinden, a large ceremonial hall only used on special occasions. Upon the walls are old portraits, on silk, of the Chinese sages. The court in front of this hall contains several storehouses for the imperial cars and other ancient utensils; and immediately before the threshold are two sacred trees to which great antiquity is attributed. The next block reached is the Seirioden, or Summer palace; and next to this is the Kogoshō, or Small palace. These two structures were used as occasional residences of the Emperor or his household, or for private entertainments. The walls and slides are decorated in cream colour and gold, with paintings of landscapes, and figures in pale colours, and cloud shaped streaks of deep blue. The rooms contain the raised dais, recesses, and ornamental shelves, with lacquered and metal-work lavished upon the wooden beams and posts.

Another winding passage leads to the Gakumonshō, the name of which indicates a building for study; but it seems to have been also frequently used as a place of entertainment. The same idea of colour as was noticed in the last mentioned suite is here preserved in the adornment of the walls and screens, which are of a pale straw or cream coloured ground, spotted with gold, and painted with figure subjects, birds, rocks, and water, in bright colours. The prevailing tones are blue and emerald green upon the gold. Next in order comes the Tsunogoten, which is the largest building of the whole group, and is that now mostly occupied by the Emperor during his visits to Kioto. It consists of fourteen rooms, arranged in an oblong block, and surrounded by a wide passage, and an outer gallery thrown open in the summer time to the breezes. On the south side is a suite of three rooms, the floor of each successive room being raised above that of the other. The end room, which is the highest of the three, contains a small raised dais of mats in the centre, indicating the position of the imperial seat. The wall at the back of this raised seat is fitted with handsome slides having their frames heavily lacquered and fitted with bronze, the panels gilt, and painted with representations of the mythical bird called *hō-ō* with its gorgeous plumage. These slides open into a small room at the back, surrounded on all sides by other chambers arranged for purposes of protection; for here were kept the Emperor's regalia and personal treasures. The walls of this little room are decorated with the blossoming trees of spring and summer, painted on gold-sprinkled backgrounds. The larger rooms are furnished with handsome recesses, shelves and cupboards. The mural paintings represent scenes from Chinese history, landscapes, architectural groups, and animal life, the setting to all being rich gilding. At the side of, and approached from the Emperor's sitting room, is the sleeping apartment, which is placed so as to have rooms on every side of it. The panels of the walls and screens are painted with life-sized representations of tigers amidst bamboos, and rocks. The ceilings, like the posts and beams supporting them, are of clean white wood, ornamented with engraved metal nuts and clasps. Many buildings destined

for far less important uses are to be seen in Japan with gorgeously decorated ceilings; but a neat simplicity and elegance is all that these imperial chambers can boast.

From this chief building, one comes to the Koshunden, having small rooms decorated with large figures in monochrome, representing tigers, deer, horses and birds, upon a white and gold ground. The Noriodon is another small building, used for enjoying the cool breezes in the summer time; and the last block of all is a group of tiny chambers bearing the name of Chosetsutei and intended for the ceremony of tea-drinking. These rooms, in their miniature proportions and light construction, are a true type of the ordinary *Cha-no-ma* which one finds in most large Japanese buildings. The said ceremony of tea-drinking, which under the patronage of Taiko Sama became an important and complicated ceremonial pleasure, is now being revived among the wealthier families. The name of pleasurable idleness is to lounge in these fairy-like rooms, open to the spring winds and looking out upon the blossom-clad country; for facing each of the palatial buildings are gardens laid out in some different fancy manner, with lakes and bridges and all the peculiar charms of Japanese horticulture. Such is a description of what is left of the now all but deserted palace of the holy city.

#### REUTER'S TELEGRAMS.

LONDON, 5th April, 1880.

The recent elections shew a gain to the Liberal party of fifty. The *Times* supports the claims of Lord Granville to be Premier.

London, 8th April, 1880.

The returns, as far as known up to the present, shew that 283 Liberals and 163 Conservatives have been elected. Mr. Gladstone has been returned for Midlothian.

The telegram of the 1st instant should have read:—"Parliament will *reassemble* on the 29th of April."

### The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

#### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL, must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 10TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 4TH MONTH, 10TH DAY, DO-YO-NI.

#### NOTES OF THE WEEK.

##### BIRTH.

On April 6th, 1880, at No. 203, Bluff, Yokohama, the wife of E. J. Moss, of a son.

Since Saturday last two home mails have come to hand, one by the M.M. steamer *Volga*, on the 4th instant, and the other by the P. M. S.S. steamer *City of Tokio*, on yesterday afternoon.

The latest American dates are to the 20th ultimo. Home-ward despatches went forward in the P. & O. steamer *Malacca*, on the 8th instant.

The French frigate *Kerguelen* left Hongkong, for Shanghai, on the 27th of March.

The O. & O. steamer *Gaelic* made her last passage between Yokohama and Hongkong in five days and twenty hours.

The Ocean Steamship Company's steamer *Ajac* left Singapore for Hongkong on the 20th ultimo.

The *Strathmore* also left Singapore for Hongkong on the 20th of March.

The American frigate *Ticonderoga*, 11, Captain Cromwell, bearing the flag of Commodore Shufeldt, arrived in Hongkong on the 26th of March.

The *Shanghai Courier* states that the *Seas* from London, left Singapore for Shanghai direct, on the 23rd ultimo.

Archimandrite Nicolai, now in Russia, chief of the Russian Ecclesiastical Mission in Japan, has been appointed Orthodox Bishop of Tokio, where he may be expected to arrive shortly.

It having been stated in the China and India papers that the Chinese Government had made overtures to Colonel Gordon, who has just returned from Egypt, the *L. & C. Express* is in a position to contradict the announcement. The leader of the "ever victorious troops" will not renew his connection with either country.

In its statement that "not a single 'foreigner' fell a victim to the fury of the gale," in Hongkong, during the terrific typhoon of September, 1874, the *Shanghai Courier* is manifestly in error. The writer of this note has a vivid recollection of seeing the dead body of the captain of the Spanish steamer *Leonore*, on the morning which followed that destructive visitation. The deceased was found drowned in one of the steeply inclined alleys which connect the Praya, or Bund, with the Queen's Road. A Malay female passenger, certainly a "foreigner" in Hongkong, was also dead by the side of the master, who had, it was surmised, lost his life in the endeavor to preserve hers. Among the fifty or more bodies recovered from the wreck of the *Albay*, which vessel, in company with the *Leonore*, was wrecked close to Pedder's Wharf, the corpses of "foreigners" were easily distinguishable. Without files of the Hongkong daily papers of that period within our immediate reach, we will not presume to say how much of foreign life was absolutely sacrificed among the hundreds who fell victims, afloat and ashore, to that terrible blast in the few hours of its duration. Of course it was absurd that a telegram to England should have announced that the "whole island had been destroyed;" yet the calamity was one of tremendous magnitude of ruin; and the loss of life which it entailed cannot well be expressed in the phrase that "some natives were killed."

The effects of the typhoon above referred to were even more serious in Macao than in Hongkong. In the former place the ravage of wind and water was aided by the villainy of incendiary robbers. While the storm was at its height the town was ignited in several places by ruffians bent on plunder. In one of the conflagrations the cathedral suffered to a great extent. Next morning a telegram was received in Hongkong stating that Macao was in ruins. The actual damage was not quite so thorough as the concise description implied, but it was very wide-spread, notwithstanding, and the loss of life in a population of eighty thousand souls was vast. Indeed, it was found impossible to afford sepulture to the number of dead bodies which were collected in the harbour and on shore. From two to three thousand corpses were accordingly burned, by order of Governor San Juanario, in a furnace or furnaces specially erected without the city. Reference is casually made to these circumstances, not with the idea of magnifying the great typhoon of 1874. At the same time those who were anywhere within reach of its violence have reason not only to remember how fiercely severe it was, but to wonder that it did not work still wider destruction of life and property.

The "bill of lading" question is under consideration at the annual session of the Associated Chambers of Commerce, for the consideration of commercial questions needing legislative action, which was opened at the Westminster Palace Hotel in February. It was moved by Mr. Neil, of Greenock.—"That, looking to the great difference at present existing in the forms of bills of lading and to the unsatisfactory nature of clauses in some of these forms giving rise to disputes and often to litigation, this subject be remitted for consideration to the executive council with a view to securing the adoption of a satisfactory general form for bills of lading." The proposer of this resolution explained that its object "was to strike at a system of exceptions from liability inserted in bills of lading by the great steamship companies, they practically having the monopoly of carriage on certain lines of communication. What was wanted was a fair bill of lading, defining the rights of shippers and consignees, and what the action of that association was held to be. Mr. Moore (Plymouth) objected that the task was too herculean for the association to undertake without having a

special council appointed for the purpose of dealing with a draft bill of lading. After much debate, Mr. Plummer (Newcastle-on-Tyne) suggested that the only practical mode was to draft a bill of lading for the consideration of shipowners and shippers, and moved for a special committee to consider the matter before being submitted to the council of the association. Mr. Whitwell said it was proposed to appoint a maritime sub-committee to assist the council, and urged that the resolution should be submitted to the council with the assistance of that sub-committee. Mr. Monk, M.P., preferred Mr. Plummer's view, and suggested that the Greenock Chamber should draft a bill of lading to be submitted to the autumnal meeting." And here the matter apparently rests for the present.

Mr. Maury, Japanese Minister to the Court of St. James, was, among other distinguished guests, present at the annual dinner of the Associated Chambers of Commerce. Mr. Whitwell M.P., proposed the toast, "Success to our foreign and commercial relations with foreign countries and with our colonies." Among other themes he dwelt upon the great progress which Japan had made, and concluded by coupling the toast with the names of the Japanese Minister and Mr. Childers, M.P. Mr. Maury was enthusiastically applauded on rising to respond. He said:—

It is peculiarly pleasant to me that the occasion of my first attendance at any public dinner in this country should be one connected with so important an association as this now present. I need not say that the great value of Chambers of Commerce is known all over the world; they represent the vital interests of nations, and they promote international alliances. I am happy to say that the establishment of Chambers of Commerce in my country has already proved to be a vast benefit to my countrymen. (Cheers.) There are now in Japan several Chambers of Commerce, organised in nearly all the commercial centres of the country, instituted chiefly after the admirable models of this great commercial country of the West. (Cheers.) It is to be hoped that the Chambers of Commerce in Japan may soon become an important factor in the commercial progress of the world. I confidently trust that, when fresh arrangements for the commercial relations between England and Japan take place, all the Chambers of Commerce both in the East and West, especially this great institution of yours, will spare no effort in their power to bring about a satisfactory issue, equally just and beneficial to all the parties concerned. Speechmaking has not been introduced into Japan yet, and this is my first attempt. (Cheers.)

The following changes in the British consular service in China, although not yet gazetted, are said to be probable. Mr. Hughes will on the expiration of his leave proceed to Shanghai as Sir Brooke Robertson's successor. Mr. Alabaster, now officiating at Hankow, will be appointed Consul for that port, and Mr. Hewlett is confirmed as Consul at Canton. Among the other changes in the service we hear that Mr. Philipps will be appointed Consul at Taiwan, Mr. Forrest Consul at Amoy, Mr. Davenport Consul at Tientsin, Mr. McClatchie Consul at Chefoo, Mr. Jamieson Consul at Kiukiang, Mr. H. Allen Consul at Newchwang, Mr. C. Allen at Pakhoi, and Mr. B. C. G. Scott Vice-Consul at Shanghai.

Of Mr. F. A. Weld, C.M.G., late Governor of Tasmania, who has been appointed Governor of the Straits Settlements, it is recorded that he was a successful New Zealand politician, explorer and settler, and is also an author. He was appointed Governor of Western Australia in April, 1869, and of Tasmania in September, 1874. Mr. Weld was educated at Stonyhurst and Freiburg, Switzerland, and is a Roman Catholic. A North China contemporary says that, "by the exchange of Governments Mr. Weld will profit considerably in a pecuniary sense, the salary in Tasmania being, with allowances, £4,130 against some £6,000 in the Straits; but he will lose enormously so far as climate is concerned, that of Tasmania being simply unsurpassed in the world." The climate of Tasmania deserves the eulogium passed upon it. It very closely resembles that of this part of Japan.

The native papers seem determined to leave nothing undone to try to persuade their readers that there is a general desire among the people of this country for representative institutions. Having now pretty well exhausted every other class, one of our contemporaries gravely announces, only as a rumour however, that "several police sergeants and constables in the prefecture of Hiogo, have sent in an application to a certain authority demanding the establishment of a national assembly."

It is also announced that a society with two thousand members has been formed in Ibaraki. This new organization for "demanding the establishment of a national assembly" is styled the *Mimpu Shu*. It would be interesting to know what proportion the agitators for a constituent assembly bear to the thirty-three millions of inhabitants in Japan. Representative Government must be conceded to the people of this Empire in due time, but it will scarcely be seriously contended that the time has yet arrived.

Mr. Crane was greeted on Tuesday evening by a small but enthusiastic audience, on the occasion of his farewell concert before proceeding to "fresh fields and pastures new" in the United States. The programme was varied and admirably calculated to suit all tastes, from the classical purist, who found substantial food in the overtures and piano trio, to the ordinary lover of a "good song," who must have been thoroughly at home with the *Death of Nelson* and Rolandi's choice little romance in the first part. The overtures once more brought out our musical Siamese twins, and although one of them was evidently much out of health, the joyous *presti* flew along with undiminished vigor. A small choir of male voices gave an admirable rendering of Smart's *Legend of the Rhine*, while the *bénéficiaire* was heard to great advantage in the *Air varié* by De Beriot, in which all the mysteries of double-stopping, harmonics and playing in the shift, were finely displayed. Equally at home on the violoncello, Mr. Crane took the bass part in the two trios, and accompanied with beautiful feeling and expression the song, *A l'étoile confidente*. Mr. van Lissa, did good service as violinist in the trios; both being played with great precision, while the lion's share of work fell to the indefatigable Mr. Keil. Before the audience in every number, acting *kodukai* to remove music desks and arrange the platform generally, he seemed the very keystone of the whole affair. It is superfluous to "paint the lily" by speaking of his performances. Whether leading a trio, assisting in a *Duo brillante*, or in delicate accompaniments, his skill is unrivalled and invaluable. Indeed it is not too much to say that, without that gentleman's hearty coöperation, the concert would not have been brought off at all. Mr. Wagner delighted all hearers by his admirable rendering of some solos for the flute; and the vocal honors were equally divided between Mr. Black, an old favorite, and a young French amateur, of whose fine voice we have recently spoken. We can only regret once more that the attendance was so meagre: the absentees will certainly regret losing a performance the like of which will not soon be repeated.

We have to acknowledge the receipt of the programme of a race meeting to be held at Toyama Park, Tokio, on the 17th and 18th instant. These races are under the auspices of Mr. Kusunoto, president; Messrs. Hachisuka and Tanabe, manager and assistant-manager; Messrs. Fuji, Asada and Koike, treasurers; an executive committee, consisting of Messrs. Hirasu, Iwahita, Matsumura, Harada, Hayashi and Kobayashi; and a general committee of nine members. Seven events are announced for each day, the stakes on the first day varying from thirty to seventy yen, and on the second day from thirty to one hundred. Tickets of admission to the stand and saddling paddock are one yen and fifty sen for both days, or one yen for either day. These tickets are to be obtained at (amongst other places) the tailoring establishment No. 16, Ginza, the restaurant No. 8, Kanda Mitoshicho, and No. 22, Kojimachi. As there are a large number of entries for the different events, a good meeting is anticipated; at any rate visitors from Yokohama will undoubtedly enjoy themselves if the weather prove fine.

Between the 21st of February and the 13th of March only one vessel left New York for Anjer,—the *Timour* with 30,000 cases of kerosene. No vessel sailed for either China or Japan during the same period, but at the date of last advices there were two vessels on the berth for Shanghai, and three for Yokohama.

We notice in our San Francisco files that Dennis Kearney, the hero of the sand-lots, has been sentenced to six months imprisonment and a fine of \$1,000 for using threatening language, and that Mrs. Smith, another prominent leader of the rabble, is in durance vile. Matters appear likely to settle down quietly, as Kearney and his fellow-ruffians seem to have realized at last what it is to array all the respectable classes against them.

The *Hiogo News* says:—there was a tragedy on board the American ship *Centennial* on Saturday afternoon, the 3rd instant. It appears that the second and first mates had a fight, in which the former got the worst of it. He then got a pistol and fired five shots at his antagonist, three of which struck him, and the unfortunate man expired before medical assistance could be obtained. An inquest was held on Saturday night, but, at the request of the U. S. Consul, we refrain from publishing a report of it. The steward of the ship also received a bullet in the knee, and it is feared amputation will be necessary. The second mate now lies in the municipal gaol, awaiting trial.

It was subsequently announced that the pistol shot received by the steward is not likely to result so seriously as was at first expected, and that amputation will be unnecessary.

The telegraph has already informed us of the success of Oxford in the thirty-sixth aquatic contest between the two great seats of learning in England. The following table records the various races that have already taken place:—

Year.	Place of Rowing.	Winner.	M. S.	Won by
1836	Westmin. to Put.	Camb.	36 0	1 minute.
1839	do.	do.	31 0	1 minute 15 seconds.
1840	do.	do.	29 30	2-3ds. length.
1841	do.	do.	32 30	1 minute 28 seconds.
1842	do.	Oxford	30 45	13 seconds.
1843	Putney to Mort.	Camb.	23 30	30 seconds.
1846	Mortlake to Put.	do.	21 53	2 lengths.
1848	Putney to Mort.	do.	22 0	Many lengths.
1849	do.	Oxford	Foul	Foul.
1852	do.	do.	21 36	27 seconds.
1854	do.	do.	25 29	11 strokes.
1856	Mortlake to Put.	Camb.	25 50	Half length.
1857	Putney to Mort.	Oxford	22 50	35 seconds.
1858	do.	Camb.	21 23	22 seconds.
1859	do.	Oxford	24 30	Cambridge sank.

#### PARIS LETTER. (On Scientific Subjects).

FEBRUARY 14TH, 1880.

The Academy of Sciences invited Mr. Crookes to come and deliver before its members his remarkable lecture on "radiant matter," illustrated by a series of the most delicate physical experiments. As the academy building was insufficient to accommodate the immense crowd, the National Astronomer came to the aid of the body by giving a *soirée*, where Mr. Crookes obligingly delivered his attractive discourse and repeated his wonderful experiments. In both he was completely successful and created a profound impression. *Savants* differed about theories and conclusions, but none questioned the new and startling facts revealed by the lecturer's series of delicate experiments, palpable to sight and to test. We know matter under three forms, solid, liquid and gaseous. The process of passing to the latter stage is comprehensible, yet Faraday long ago surmised that matter existed in a form more simple, in a condition of more absolute unity beyond the state of gas, free from all trammels, and radiating without embarrassment. He called this, "radiating matter,"—a name retained by Mr. Crookes. The progress of science has confirmed Faraday's surmises. Gases are now viewed as composed of an immense quantity of tiny particles, animated by rapid and incessant move-

ments. The number of these particles has even been mathematically calculated; and in less space than one-third of a cubic inch, there are more than seven hundred millions. Now these atoms, when confined in a certain space, cannot move without knocking against each other. If a portion of the gas in this fixed limit be expelled, the particles which remain can move about more freely, even to the extent of never encountering, colossal as their number may be. It is like a crowd, closely pressed into a circumscribed spot. No one can stir; but let the crowd disperse, and then each individual can circulate freely, and resume his special volition. Now it is exactly this difference that the particles of gas display when heaped together, and when at liberty—a difference as sensible as that between matter in the liquid and the gaseous state, which, according to Mr. Crookes, justifies the belief in a fourth form of matter. That he calls "radiant," and to demonstrate that this fourth form possesses properties quite distinct from the gaseous condition with which we are familiar, was the object of his series of wonderful experiments. He rarefied gases in tubes hermetically closed. In the vacuum the isolated particles can move without obstruction, driven by electricity from the negative pole, radiating with an enormous rapidity from one end of the tube to the other. When they strike against the end of the tube, and bombard it, as it were, they cause the glass to become luminous. A diamond introduced into this vacuum, and exposed to the flow of radiant atoms, will become suffused with a light as brilliant as that of an ordinary candle. It is a beautiful experiment. Similarly, rubies, when subjected to the current of radiant matter, emitted a red light equal to that of incandescent charcoal. The air in the tubes is rarefied by a peculiar process. The pressure is reduced to the one-twenty-millionth of ordinary atmospheric pressure. It may be said "if this radiant matter possesses an impulsive force, why not test it by mechanical effects?" Mr. Crookes does so. He places, in a tube of rarefied air, two little parallel glass rods, on which rests a wheel made of mica spangles; in front of the wheel is the negative pole, which when rendered active impels the radiant matter, which causes the wheel to revolve, just as if on a railway, forcing it up the incline of the tube when held in a slanting position. Again the reader may say; "all these phenomena or movements are due to electric current." Let us see. Mr. Crookes fixes two negative poles side by side in the same tube. Down the length of the tube two currents of matter radiate, and sensibly, since they mark their presence along a fixed screen. It is an axiom in physics that two electric currents in the same sense, attract each other. Now if we were in the presence of two currents, since both are negative, the two brilliant lines of radiant matter ought to come together. Instead of this they repel each other. Hence, the effects are not due to electric currents. Collision produces heat. A ball fired at a target has often been picked up burning hot, and the heat will be the greater, as the motion of the ball has been more rapid. Mr. Crookes placed in a little tube, a morsel of platinum and subjected it to a veritable cross-fire of currents of radiant matter. The metal quickly acquired a white heat, and became so luminous that the eyes experienced pain in looking at it. Ultimately the platinum was melted. Now all these effects are new to scientists. In the case of Mr. Crookes's experiments, abnormal phenomena have been proved to be caused by the subtraction of matter. It is by reducing it almost to nothing, or varying it to a condition so tenuous as to be almost incomprehensible, that the action of matter becomes most striking. To give an idea of how far matter may be impalpable, the lecturer stated that if, after exhausting one of the tubes of air, he made a hole of the most microscopic dimensions in the glass with an electric spark, the external air would not the less rush in, and at the rate of one hundred millions of molecules per second. And of this speed to fill the tube with particles at the ordinary density of atmospheric air, would require four hundred million years—a period fixed by astronomers for the extinction of the heat producing power of the sun. Mr. Crookes left his audience under the impression that we are on the confines of a new world, where matter and force seem to confound themselves, or to be lost between the known and the unknown.

The manufacture of sweetmeats, until recently, was amongst

the most unhealthy of trades. An immense pan, one yard in diameter, was suspended from an iron bar over an intense charcoal fire, near which the baker stood, assiduously inclining from side to side and shaking the pan. He was never long-lived. The exhalations of carbonic acid and oxide did their work speedily. Yet strange to say, when Peysson invented machinery to replace the man, the trade resented the invention. The end of sugar-baking is, to cover the kernel—almonds, nut, caraway, or artificial cores containing special liqueurs or perfumes—with a thick coating of white and compact sugar; the surface must not only be firm, but smooth and glossy. The modern basin is whisked round by steam, the rapidity being graduated as required. On one side of the rim, is an air-valve, which admits a current to dry the contents. The baker has only from time to time to wet the mass with about one pound of sirup. The rotatory motion and the ventilation, cause a slender skin or layer to form round the kernel; and the wetting repeated one hundred times during twelve hours produces "almonds" and "confits," &c.; for all sizes can be made, from the "seed," employed to dredge gingerbread, up to "Spanish almonds," each weighing half an ounce. After leaving the pan, the sugar plums are ranged on shelves to be packed in boxes. It is to many like the fly-in-amber puzzle, to know how the inside of a hard, compact, bonbon can contain a drop of essence of coffee, roses, or some aromatic cordial. This is due to a peculiar property possessed by sugar in the form of sirup, not to wet starch. That is to say, if a drop of sirup be allowed to fall into a mass of starch, an analogous effect will be produced to that which ensues when water is spilled on a surface at white heat—the liquid assumes a spheroidal shape. In making sugar-plums starch is first placed in a square box; then a model is pressed into it and the cavities are formed; into these a drop of sirup is poured, and the box is carried to the drying room; in time a small film is formed on the surface of the cavities, sufficient to retain the sirup: the box is then emptied, and the delicate kernels separated, trembling like jelly, but becoming more and more consistent as they are dusted with gum, and dried. Later these artificial cores receive their first coating of sugar, and in twelve hours the whole operation can be terminated. It is to this property of sirup being run in a mould without adhering, that the whole category of "melling" sweetmeats can be prepared, in any shape or color. When the simulacra of doves, animals, edifices, &c., are in question, they are made almost in the same manner as that employed by a potter attaching the handle to a jug or pitcher. Sugar-sticks, lollies, drops, &c., are produced by machinery, not unlike the press for printing a newspaper. To conserve or fix the perfumes employed, a little tartaric or citric acid is added. Artificial perfumes are prepared from coal tar, but their duration is short and they are devoid of delicacy. One sugar baker in Paris manufactures annually, seven hundred tons of sweetmeats, a similar quantity of coal being consumed to work his machinery.

Many families object to embalming deceased relatives, because the necessary operations employed require, generally, twelve hours. The process for forty years has consisted in injecting some antiseptic solution into one of the principal arteries, and so distributing it throughout the body. The distribution not being always satisfactory, the desired preservation is not secured. M. Audigier has just patented an ingredient for embalming whose efficacy merits serious attention. He introduces into the mouth of the deceased two glass-fulls of a certain liquid, and covers the body with a vegetable powder impregnated with the same liquid. Twenty minutes suffice for the operation. A medical commission nominated in Marseilles, and another in Algiers, testify that some embalmed bodies, where decomposition had set in before they had seen treated by the Audigier method, were after two years found to be in a perfect state of preservation. They were completely mummified, and as hard as stone or wood. The skin had become brown, but the features were unchanged, and when covered with linen had retained a natural color.

Dr. Colin devotes much attention to the temperature of the body, as an indication and measure of disease. When the temperature of the various parts of the system is known, then only, he maintains, can be fixed the normal temperature of the

body and the law governing the distribution of animal heat. In the case of the horse for example; the temperature of its interior is always 38 degrees C., while the surface may be from 4 to 26 degrees lower. The same gentleman instituted some experiments last December at the Veterinary College of Alfort, on the cold-resisting power of animals. He exposed rats, rabbits and dogs during a whole day and night to a temperature of 10, 12, and 16 degrees below zero C. Some he buried in snow all but the head, others he enclosed in receptacles made of ice. These animals, while losing from a tenth to a sixteenth of their weight, none the less maintained almost their normal heat on the surface of the skin, but where once a certain inferior temperature was reached, paralysis set in. The snow acted as a protection, and M. Colin is of opinion that a man could live under an avalanche of snow, provided he could only respire. It was only when the cavity became humid, by the melting of the sides, that the animals enclosed in the ice receptacle suffered. Then while their trunk registered only three or four degrees of diminished temperature, the extremities recorded thirteen and fourteen less than their normal heat.

M. Perry has found that the potash contained in arable soils, whether they be of clay, lime, or almost of pure sand origin, contain from two to five and eight per cent of that alkali, and that vegetation derives its supply of potash more easily when it is contained in clay, than in sand.

M. Marié-Davy, the eminent meteorologist, has tested the presence of carbonic acid in the air daily, during four years, and finds that in 100,000 parts of air, the acid varies from 22 to 20. It is greatest it seems during humid weather and the predominance of the equatorial current. Rain has no very marked action on the presence of carbonic acid, while the latter neither affects the transparency of the air, nor the state of the atmosphere.

## SYLVAN SOUNDS.

(From the Japanese.)

### VI.

#### A FANCY.

Where mountain forests mingle  
Their dark with silver sheen  
Of filmy clouds that haunt them,  
With high-piled snows between,  
Shut up in some piny cloister,  
Hid from the golden day,  
Trees hoar with mossy tresses,  
Are hasting to decay.  
And, like to trees that wither  
In forest old and gray,  
Age touches us with wrinkled hand,  
And soon we pass away;  
But though they fade—these mortal powers,  
The Heart—may bear immortal flowers.

F. B. H.

Tokio, 10th April, 1880.

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

### COURT, POLITICAL AND OFFICIAL.

When Her Majesty the Empress Dowager takes her contemplated journey to Isé, she will make a *detour* for the purpose of visiting Kioto and the mausoleum of Komei Tenno.

His Royal Highness Prince Henry of Germany had an audience of His Majesty the Emperor on the 2nd instant, and was subsequently entertained at a banquet by the Princes of the Blood. His Royal Highness' vessel, the *Prinz Adalbert*, sailed Monday last for Shanghai and thence, visiting the various China ports and Hongkong, for Europe.

It is stated that General Yamada will accompany His Majesty the Emperor on his proposed visit to the provinces.

Mr. Nabeshima, the Governor of Okinawa Ken (Loochoo) who recently arrived in Tokio, has made a report on the state of his prefecture.

The appropriations for the Council of State are to be increased, and those for the Finance and Judicial Departments decreased.

Owing to the recent extension of the telegraph lines and further contemplated additions, the Authorities of the Department have decided to engage one hundred and seventy probationer-operators in a short time.

Their Imperial Highnesses Princes Arisugawa, (the Junior Prime Minister), the two Fushimi, and Kita-Shira-kawa, and Their Excellencies, Inouye, Minister for Foreign Affairs, General Oyama, Minister for War, Admiral Enomoto, Naval Minister, and Awoki, Minister to the Court of Berlin, &c., called upon His Royal Highness Prince Henry of Germany, on board the *Prinz Adalbert*, on the 3rd instant, for the purpose of bidding farewell.

Two naval officers, Messrs. Takata and Magaki, have been appointed second-class secretaries of the Foreign Affairs Department and attached to the Japanese Legation in St. Petersburg. Messrs. Ioriye and Yoshida, of the Foreign Office, have been made third-class secretaries of the same Department, the former as an attaché to the Japanese Consulate at Korsacoff, and the latter as an attaché to the Japanese Legation at Copenhagen.

Mr. Senator Hayashi, who was ordered to Niigata to report upon the state of public opinion in that prefecture, has telegraphed to Tokio his arrival at his destination, on the afternoon of the 1st instant.

It is stated that His Majesty's departure on his intended progress will take place about the 10th of next month. This is to enable the trip to be accomplished prior to the approaching season for the breeding of silk worms, so as not to injure the industry. In consequence, Mr. Yama-oka, the Secretary of the Household, and Mr. Nishimura, the Secretary of the Interior, will start from the capital to inspect the road to be traversed by His Majesty. They will first pass along the Koshiu road to Yamanashi, and thence to Nagoya, and then return to Yamanashi, where they will remain, awaiting the arrival of the Imperial procession. On the first day of the Imperial journey, His Majesty will proceed as far as Itochi and rest there, and on the morning of the fourth day His Majesty will arrive at Yamanashi, where he will remain for two days. It is also currently reported that His Imperial Highness Prince Arisugawa, the Junior Prime Minister, will also accompany His Majesty, but this has not yet been definitely decided.

Judge Kishira, the President of the *Dai-shin-in*, who has lately been suffering from ill health, resumed the duties of his office on the 1st instant. Judge Ozaki has accordingly retired from the position of Acting President of the Court.

Dr. P. Mayet, of the Fire Insurance Bureau in the Finance Department, was appointed advisor to the Financial Section of the Council of State, on the 31st ultimo. He will still retain his former position.

A notice has been issued by the Minister for Public Works that, after the fifth instant, telegraphic business, both public and private, may be transacted at the different police stations.

The Military, Naval and Public Works Departments, are going to establish an Iron Works at Sapporo. The requisite buildings are said to have been already commenced.

His Excellency Tanaka, the newly appointed Minister for Justice, has, in commemoration of his appointment, entertained the officers of his former and present Departments and the Foreign Representatives, at his private residence at Shin-hana-cho, Hongo.

A local court, under the name of the *Tokushima Saibansho*, will be established in the new prefecture of Tokushima.

The Foreign Department has forwarded a quantity of medicines to Corea, amounting in value, it is said, to the sum of one thousand yen.

Mr. Chida, Chief Secretary of Tokio *Fu*, has been appointed Governor of the prefecture of Hiroshima, and will probably be replaced by Mr. Hiroyama, Chief Secretary of the latter prefecture.

Her Majesty the Empress Dowager leaving the palace at 8 a.m., on Thursday last, proceeded to the village of Koganeri, in the prefecture of Kanagawa, to view the cherry trees now in full blossom.

The *Mainichi Shinbun* informs its readers that Generals Saigo and Yamagata, Privy Counsellors, have discontinued the use of an escort of cavalry when in the capital.

The same paper states that Mr. Hannbusa will not go to Corea as *Chargé d'Affaires*, on account of a Korean Ambassador being now on the way to Japan.

The *Hiroshima Maru*, which left here on the 7th instant, had on board ten police officers for Corea. Thirty more are to be conveyed by the next steamer. The sum of 50,000 yen was also forwarded, to pay for the construction of Police Stations.

Mr. Kanai, the secretary for the Cabinet, has been appointed an officer connected with the proposed Imperial progress.

Messrs. Asai and Hirano, officers of the Agricultural Bureau, proceeded to the Shimosa Farm on the 6th instant.

Mr. Ono, Superintendent of the Osaka Mint, and Mr. Kitagaki, Governor of the prefecture of Kochi, left for their posts in the *Hiroshima Maru* the day before yesterday.

The rules for the local assemblies in the different cities and prefectures, passed at the recent meeting of Local Governors, will be published in a few days.

His Majesty the Emperor will attend the race-meeting at Toyama Park, on the 17th instant.

Mr. Funakashi, the newly appointed Governor of the prefecture of Chiba, left for his post the day before yesterday.

Mr. Kondo, Vice-Consul for Corea, left for Fusan on the 7th instant, and Mr. Kobayashi, Vice-Consul for Korsacoff, will leave for his post about the 20th instant.

#### NAVAL AND MILITARY.

The Japanese man-of-war *Hiei Kan*, left on the 5th instant on the cruise to the Indian Seas, &c., of which mention has already been made. Mr. Yoshida Masaharu, Envoy to Persia was on board.

The Commanders of the different Japanese men-of-war under sailing orders, viz:—Captain Matsura and Commander Arai of the *Tankuba Kan*, Captain Ito and Commander Hattori of the *Hiei Kan*, and Commander Takino of the *Amaki Kan*, were presented in farewell audience to His Majesty the Emperor, at 10 a.m., on the 2nd instant.

The four torpedo boats ordered in England by the Japanese Naval Department last autumn, will arrive here in May or June next.

The rifle invented by Major Murata has been definitely adopted into the Japanese army, after undergoing exhaustive trial. It is known as the "Murata" rifle.

Mr. Hanegawa, an officer of the Navy Department, has been appointed Chief Superintendent of the Ship-building Bureau, and ordered to the Yokosuka dockyard.

The number of men drawn by conscription in Tokio *Fu* for the present year to serve in the army, were:—212 for the infantry, 14 for the cavalry, 35 for the artillery, 14 for the sappers, and 6 for the commissariat corps; in all, 437 men.

Lieutenant General Shijo, Commander of the Nagoya Garrison, who has been in Tokio attending the meeting of the commanding officers in the army, returned to his post yesterday.

It is considered that three years will be required for the completion of the Iwahana arsenal, in the province of Joshiu.

A sergeant and ten privates, belonging to the first battalion of the artillery force of the Imperial Guard, were suddenly arrested, and brought before the military Court, the day before yesterday. The cause of their arrest is as yet unknown.

General Oyama, Minister for War, has forwarded to His Majesty the Emperor the resolutions passed at the recent meeting of the commanding officers of the army.

#### INDUSTRIES, TRADE AND FINANCE.

Nine hundred and ninety-five persons visited the Competitive Exhibition of cotton and sugar at Osaka, during the week ending on the 27th of March ultimo.

On the 2nd instant, permission was granted for the establishment of a fish-market, at Hamacho, Tokio.

One of the native journals states that a Chinese merchant of Yokohama has purchased, for export to his native country, one thousand breech-loading rifles, sold by the Government.

The Osaka Chamber of Commerce is considering several measures connected with the Cotton and Sugar trades.

Mr. Yoshida, Envoy to Persia, who left here on the 5th

instant in the *Hiyei Kan*, was accompanied by Mr. Yokoyama (of Messrs. Okura and Co.), and an agent of the *Kunho Kwaisaku*, and Mikawayama, a fan maker at Horiyochō. It is understood that Mr. Yokoyama and other merchants will remain in Persia for a while, for the purpose of obtaining information on commercial subjects. Mr. Yoshida, on his way home, will visit Asia Minor and Constantinople.

A telegram, dated the 4th instant, from Sapporo, announces that, the snow having now decreased, agricultural work has been resumed.

The amount required to complete the organization of the Tokio fire brigade, under the Police authorities, is stated to be about 80,000 yen.

The usual meeting of the Tokio Chamber of Commerce was held last evening.

The *Mainichi Shimbun* gives as a rumour, for the truth of which it cannot vouch, that several police sergeants visited the premises of the Rice Guilds, at Kabuto-cho and Kakigara-cho, on the 7th instant, and a great disturbance ensued which lasted for some time. No cause for the proceeding is given.

A trading association has been formed at Kotaru, Yesso, under the name of *Taiyusha*, for the purpose of dealing in the products of Yesso, Yechigo, and the neighboring localities. It was at first proposed to fix the capital of the concern at 70,000 yen, divided into shares of 500 yen each, but so many persons showed a desire to join in the speculation that the capital has been increased to 100,000 yen. The company has already purchased a number of sailing vessels, and will commence operations at once. Mr. Horimoto has been appointed managing director, with Mr. Tanshiwa and several other assistant managers under his control.

The *Shokio Chosa Nippo* (a commercial paper) states that, in the settlement of commercial transactions, such as rice, salt, &c. in the central provinces, payment in specie is demanded, kinsatsu being at such a great discount. The farmers also have commenced to object to receive kinsatsu.

Prime rice from Akita has been selling at a good price, and several wealthy farmers in that prefecture have applied for permission to establish a Rice Company, under the name of the *Koen-ri-sha* (Improving Society) with a capital of 50,000 yen, for the purpose of improving the quality of the rice grown in the district.

#### MISCELLANEOUS.

The dockyard at Kagoshima is to be leased to the people of that prefecture for a term of thirty years.

The *Hochi Shimbun* mentions that the rivers in Kofu, in Yamanashi Ken, have become flooded, and carried away several bridges.

A native paper says that a number of Chinese gamblers in Yokohama have been arrested and punished by their Consul. The chief offender was fined four hundred yen and the others were whipped.

A telegram from Nagasaki announces that an explosion of fire-damp occurred in drive No. 2, in the Takashima coal-mine, at 9 a.m., on the 4th instant. About fifty-five miners were killed and sixty were seriously injured, but no particular damage was done to the workings.

During the month of March, 18,137 passengers were conveyed between Yokohama and Yokosuka.

Mr. Tsuruda, the sub-editor of the *Kofu Nichi Nichi Shimbun*, has been sentenced to forty days imprisonment under the 16th article of the Press Laws, for publishing a copy of a memorial forwarded to the Government by the people of Okayama, on the subject of a National Assembly.

A fire took place at 8 a.m., the day before yesterday, at Fukuzumi cho, Tokio, and was not extinguished until 9.15, after having destroyed twenty-five houses.

The works for the improvement of the Atami road were commenced by the Shizuoka people on the 1st instant. The road will be completed within four months.

#### IMPERIAL GOVERNMENT RAILWAYS.

##### TOKIO AND YOKOHAMA SECTION.

Merchandise, &c. ....	\$ 1,435.74

Total.....\$15,039.10

Miles open 47.

#### THE NEW REGULATIONS RESPECTING POLITICAL MEETINGS OR SOCIETIES.

(Came into force on the 5th of April, 1880.)

1.—If anyone shall desire to give a lecture on political subjects, or assemble a meeting to debate such subjects, the promoter, president or manager shall, three days at least before the lecture is to be given or meeting held, send in an application to the nearest police station for permission. Every such application shall state the subjects of the lecture or debate, and the names and addresses of the lecturers or speakers.

2.—Every person desirous of forming a political society shall, before doing so, make application for permission at the nearest police station. Every such application shall give the name of the proposed society, the rules for its government, the place of meeting of the society, and the names of the members. Any alterations in the rules of the society or in the members, after the establishment of the society has been authorised, shall be reported to the police authorities, who shall at all times have power to make such inquiries as they may deem expedient, respecting the affairs of the society.

3.—After the establishment of a society has been once authorised, three days previous notice of the first meeting must be given at the nearest police station. After the first meeting has been held, it shall not be necessary to give notice of the subsequent regular meetings, but any alterations must be notified as provided in article number 1 of these regulations.

4.—Whenever the police authorities consider that granting the applications referred to in the three preceding articles would be prejudicial to the interests of the public, they may decline to do so.

5.—Police officers in uniform, shall have power to visit all lectures or meetings, and demand the production of the license to hold the same.

6.—If the license shall not be produced when demanded, or if any subject not specified in the report shall be lectured upon or discussed, or if the lecture or debate is considered prejudicial to the public interest, or liable to incite the hearers to commit offences against the laws, or if persons are in attendance who ought not to have been admitted, and who refuse to leave when requested to do so, then and in every such case it shall be lawful for the police officers to close the meeting.

7.—The following persons are forbidden to attend or take part in political lectures or meetings, or to become members of political societies:—Men belonging to the army or navy, the first and second reserves, police officers, professors and students in government, public, or private schools, and students in the schools of art and agriculture.

8.—Every political society is prohibited from advertising the subject of its lectures or debates, or sending out agents or circulars to induce the public to attend its meetings. The combination of one society with another, and all communication between societies, are strictly forbidden.

9.—Open-air lectures or debates upon political subjects are hereby prohibited.

10.—If any lecture shall be given or meeting held, without the permission mentioned in article 1 being first obtained, the promoter of the lecture or meeting shall be liable to a fine not exceeding twenty and not less than two yen, or to imprisonment not exceeding three months and not less than eleven days. The person who lent or rented the place of meeting, the president, manager, lecturers and speakers, shall severally be liable to a fine not exceeding twenty and not less than two yen, and every breach of article 3 shall be punished in like manner.

11.—For every breach of the provisions of article 2, the president of a society shall be liable to a fine not exceeding twenty and not less than two yen. If false regulations or fraudulent lists of members of a society are forwarded to the police authorities, or incorrect answers returned to questions asked, the president of the society shall be liable, in addition to the monetary penalty hereinbefore provided, to imprisonment not exceeding three months and not less than eleven days.

12.—If a police officer is refused admission to any lecture or meeting, contrary to article 5, the promoter of the lecture or meeting, the president and the manager, shall each be liable to a fine not more than fifty and not less than five yen, or to be imprisoned of not more than one year and not less than one month. Every person who refuses to answer questions, or returns false answers, respecting any lecture or debate, shall be liable to a similar punishment to that hereinbefore mentioned. In the event of any person being guilty of a similar offence a second time, he shall be liable to a fine not exceeding one hundred and not less than ten yen, or to be imprisoned not more than two years and not less than two months.

13.—When the persons assembled at any meeting are ordered to disperse, everyone refusing to do so shall be liable to a fine not exceeding twenty and not less than two yen, or to be imprisoned for not more than six months and not less than eleven days.

14.—For every breach of article number 7, the conductors and president of a meeting, or the president and officers of a society, will be severally liable to a fine not exceeding twenty and not less than two yen, or to be imprisoned for not more than three months and not less than eleven days. If the offence committed shall be considered aggravated, the society may be suppressed altogether; and should any persons persist in holding a meeting after being prohibited from doing so, they shall each be liable to a fine not exceeding twenty and not less than two yen.

15.—For every breach of article number 8, the promoter of a meeting, the manager and president, and the president and officers of a society, shall each be liable to a fine not exceeding fifty and not less than five yen, or to be imprisoned not more than one year or less than one month. In addition, the society will be suppressed, and all persons found implicated in a breach of the said article will be liable to a similar punishment to that hereinbefore provided. Any person who shall compel another to join a society, or who has been previously convicted for a breach of article number 8, shall be liable to a fine not exceeding one hundred and not less than ten yen, or to be imprisoned for not more than two years and not less than two months. The president and director shall also be prohibited from forming or joining any other society for a term of not more than five years or less than one year.

16.—The foregoing regulations do not extend to meetings held in accordance with established custom.

#### THE JAPANESE PRESS.

#### THE EMPEROR'S ADDRESS TO THE LOCAL GOVERNORS.

(Translated from the *Fuso Shinshi*.)

AFTER the conclusion of the Local Governors' Assembly, His Majesty the Emperor entertained the members and their principal assistants at the palace. His Majesty delivered a speech on the occasion which was much

talked about, but as it was not officially made known at the time we did not think fit to refer to it, although we were fully acquainted with the reports current. Now, however, this important speech has been published in several of the papers, and this has caused us very great pleasure, because it shows very plainly that our Government has shaken off the detestable policy of secrecy so common among Eastern nations. The speech we refer to is as follows:—"When I ascended the throne I implored the aid of my illustrious forefathers to restore the former power of the dynasty, to establish great reforms in our country, and to promote the welfare of the inhabitants of Japan. Among the great changes carried out, the formation of the Empire into *fu* and *ken*, and the abolition of the feudal system, certainly occupy the first rank. The policy I adopted proved to be a good one; reforms prudently introduced, either in the Government or in the administration, lead us surely towards improvement, and I hope that I shall soon be enabled to grant to my people the benefits of constitutional Government. Much, however, remains to be done. The people, harassed by internal commotions had but seldom the opportunity to enjoy the advantages of peace. The nobility are getting instructed, but they are poor, while the wealthy men are, for the most part, to the great detriment of the country, still in a state of ignorance. I wish to alter this, and I hope that my officers will assist me with all their intellect and power to accomplish the difficult task. You, the Governors of the provinces, are well aware of the requirements of your districts, and I wish that you should apply yourselves to follow my instructions, and to carry out my schemes for the benefit of the whole country. If there are in your localities some noblemen, well educated, but without the means to take advantage of their knowledge, you will have to assist them and, if required, appoint them to suitable offices, and those who are wanting in knowledge you will try to engage to take advantage of the various means of instruction placed at their disposal. If some of my subjects, not sufficiently acquainted with the political necessities of the country, should come to criticize the actions of my Government, or express their dissatisfaction with the measures adopted, you will endeavour to correct any false impressions they may have adopted and impress upon them the necessity of the steps taken; but avoid all violence: use but the power of persuasion, and be good counsellors to them. Assist me in carrying out the great schemes I have formed for the welfare of my people, to increase the influence of our country and advance it in the path of civilization." Every Japanese subject who has read this gracious speech, cannot but admire the beneficent wishes of His Majesty. We have all long since been aware that the Emperor has, in his wisdom, been ever desirous of establishing a constitutional form of government and abolishing the old system of despotism, and it is very evident that His Majesty is now anxious to see the reform take place as early as possible, so that he can witness his subjects' participation in the enjoyment of tranquillity and prosperity. This fact gives us great cause for thankfulness, and we cannot, under the circumstances, avoid addressing a few words of advice to the Governors and officials who were honored with the foregoing exposition of the Imperial wishes, in order that they may not misunderstand the will of the Emperor.

We would point out that it is far preferable for the local Governors and functionaries, to endeavour to act within their instructions from the higher authorities, than to carry them out to the letter; because the injuries to the public good involved in the rigid fulfilment of all orders is infinitely greater than can possibly accrue from acting leniently. It is very noticeable that subordinate officers are only desirous of carrying into operation the instructions of their superiors as completely as possible, altogether regardless of consequences; and the result is that their zeal frequently outruns their discretion, and they exceed their duty without being actually aware of it themselves. It thus happens that they act against the wishes of the higher authorities and excite the anger and opposition of the people. Instances of this have hitherto been very common.

What guarantee is there that the Local Governors may not fall into the selfsame error after hearing the Emperor's gracious speech? His Majesty said, "the nobles are getting instructed but they are poor, while the wealthy men are for the most part, to the great detriment of the country, still in a state of ignorance, &c." These remarks

show great thoughtfulness on the part of His Majesty, but if the local functionaries, in their ardent desire to carry the Emperor's wishes into execution, should meddle excessively with the encouragement of education and industry, so that the people find themselves trammelled and hampered on every side, how can it be possible for the real objects of His Majesty to be accomplished, and peace and tranquillity preserved?

Again, the Emperor said, "If some of my subjects, not sufficiently acquainted with the political necessities of the country, should criticize the actions of my government, or express their dissatisfaction with the measures adopted, you will endeavour to correct any false impressions they may have adopted, and impress upon them the necessity of the steps taken; but avoid all violence: use but the power of persuasion, and be good counsellors to them." Now, these remarks have a very profound meaning, and if the local Governors, either through accident or design, misconstrue them in a single iota, the peace of the country and the lives of its inhabitants will be placed in the utmost jeopardy.

As His Majesty has well pointed out, there are many among those taking a warm interest in political matters who are without a proper understanding of the principles actually involved in many of the questions which arise, and they therefore rush into extremes. At the same time there are many patriotic men associated with them, who are fully imbued with a sense of the duty of obedience to the laws; and it is wholly impossible to distinguish between the law-abiding patriots, and those rash and turbulent spirits who are ready to carry out their desires at all hazards. It follows, therefore, that if the local authorities, in endeavouring to carry out His Majesty's ideas, confound one class with the other, it is hard to tell what dire results may ensue.

Rumours have lately been current that the Governor of one of the prefectures warned the President of the Local Assembly against joining in a petition for the establishment of representative government, and also that the Governor of one of the cities gave similar instructions to a number of the local politicians. We also read in the *Osaka Nippo*:—"Some time since we published a circular emanating from the *shizoku* of Miyazu, in Kioto *fu*, calling upon their associates to join in making an application for the granting of representative institutions. We now learn that the prominent members of the league were subsequently summoned to the office of the Kioto *fu*, and, as they insisted upon their right to address the Government as proposed, Governor Makimura invited them to his private residence and addressed them to the following effect:—"Now, gentlemen, when I was in Tokio lately, attending the Local Governors' Assembly, there were a number of politicians from Fukuoka, Okayama and other districts, who forwarded memorials similar to that you propose sending, but I understand His Majesty the Emperor considers that it would be premature to establish representative institutions in this country; therefore, I consider it quite useless for you to persevere in your present course, and that you are only throwing away valuable time and money. You had better postpone further action for the present; but if, notwithstanding the wishes of the Emperor, you still persist in arousing the passions of the people by forming a league and getting up these political manifestations, I, to whom the government of this prefecture is committed will have something to say in the matter." Now, what does Governor Makimura mean by this? If the persons he addressed were those to whom His Majesty alluded when he spoke of some of his subjects not being sufficiently acquainted with public affairs, and the Governor is trying to pacify them and prevent their doing mischief, then, of course, we have nothing to say; but no man, however clever, can always steer clear of mistakes, and if it should unfortunately turn out that these men are peaceful, law-abiding subjects, who are treated in this manner, then most assuredly the general public will come to the conclusion that His Majesty's speech was actuated by a desire to deprive the people of their inherent rights. Thus, instead of feeling grateful to the Emperor for his gracious words, the public will censure His Majesty. Who will be to blame for that unhappy result?

Oh! If the Governors and functionaries who had the honour to listen to the Imperial oration would only direct their attention to the questions we have raised, so as not to

discredit his Majesty on the one hand, nor excite the ill-will of the people on the other; then indeed would there be some probability of the happy visions being realized which we indulged in when we first perused the Emperor's magnanimous speech.

## THE OPENING OF COREA.

(Translated from the *Mainichi Shimbun*.)

IF the question is asked why we desire to open up Corea to trade, the answer will probably be that we wish to introduce our civilization to the country, and in so doing enlighten the inhabitants. Again, it may be remarked that it is a very fortunate circumstance for Japan that Corea is in a savage state, because in consequence we need not pay attention to the defence of the south-western coast, and therefore it is an unwise proceeding to strive to enlighten the Coreans. This is a very narrow and selfish view to take, and in opposition to any such argument we would remark:—It must be borne in mind that in bygone times, men struggled one with the other for food, and the powerful lived upon the flesh of the weak. Then again, in the middle ages, men went forth to fight in large armies; one country battled with another, and the vanquished became the prey of the victors. Such, however, is not the state of international relations at the present time. Every country is governed by its own laws, and nations are guided in their dealings with one another by a recognized code of international rules. But it is nevertheless true that, however well recognized these facts may be, the old feeling of the strong preying upon the weak is still very noticeable in many instances. The history of Europe for the past two hundred years affords numerous remarkable instances of the truth of this, and we find England, France, Russia, and other states, rising to wealth and power upon the ruins of vanquished nationalities. It is, however, unquestionable that Europe, as a whole, has wonderfully increased in strength and influence during the period referred to.

Let us now turn to Asia and see the condition of its two empires and six kingdoms. In the fifteenth century Portugal commenced intercourse with the great Empire of India, and since then the Dutch, the French, and the English have in succession traded there, and the ultimate result has been that the country has now fallen into the hands of Great Britain. Then look at China. Since that Empire entered into treaties with the Western Powers, several wars have taken place, notably about the opium trade, and the Chinese, being defeated, have been despoiled of territory and vast sums of money, and thus lost influence and prestige. This being the experience of the two powerful empires, how could the kingdoms hope to escape? Ever since the eighteenth century we find that Persia has been harassed by the Russians and English, and Afghanistan, Siam, Burmah, Annam, &c., have all had to endure the dismemberment of their country at the hands of either Great Britain or France. It is impossible to tell whether the whole of Asia will not sooner or later be absorbed by the European Powers, and it is certainly an important question, worthy of the gravest consideration at this particular juncture by all Oriental nationalities.

Fortunately, however, for the future of the East, the empire of Japan has survived, unimpaired, the effects of war with the West, and, during the last ten years, has made rapid strides along the path of civilization. Thus Heaven seems to have appointed Japan the chosen instrument for the salvation of the Orient from the dangers which menace it from the West; and if, the people of this country will only acknowledge the duty devolving upon them, they will find in it an irresistible argument in favour of guiding China and Corea to the haven of safety, by the benign light of the torch of civilization.

Then again, Corea is a small state, with Japan on the east, China on the west, and Russia on the north: it thus forms one of the most important positions in the east. Now what is the character of Russia, one of the neighbours of Corea? For over two hundred years, ever since the great Emperor Peter founded the policy of self-aggrandizement at the expense of other nations, this state has been perpetually engaged in foreign wars. Russia has despoiled Turkey, robbed Sweden, shared in the execrable dismemberment of Poland, and appropriated Siberia, Turkostan and several

portions of Chinese territory, upon various shallow pretends. Happily for Oriental nations, Russia has hitherto been so busily employed in the West that no time could be devoted to the East, but as soon as ever Russian designs in the West are either accomplished or definitely thwarted, then will that greedy, powerful and unscrupulous nation turn to the East for further conquests. How can Japan, Corea and China hope to maintain peace under such circumstances?

Russia has already plundered China of a large extent of territory, and established a strong garrison in the fortress of Vladivostock. This shows that the Colossus of the North entertains sinister designs in the Far East, and it is also a fact pregnant with meaning that this Russian stronghold is only fifteen or sixteen miles distant from Kan-kin-dai in Corea. It is evident that Russia wishes to absorb Corea into her vast domains, because six years since she wanted to establish a Russian Colony in the country, under the specious pretext of entering into commercial relations. Now, if Russia seized Corea and turned Fusan into a naval station, it would be very serious indeed for both China and Japan. Therefore, it is very easy to realize our desire to see Corea opened up to civilization and thus placed in a position to defend successfully any attempt at encroachment on her territory.

For the past five years we have been constantly advocating the same line of policy; and, as clouds are again gathering on the political horizon, we think this a fitting moment to bring this important subject once more to public notice.

#### THE NEW LAW FOR PUBLIC MEETINGS.

(Translated from the *Mainichi Shimbun*.)

A REPORT was circulated the other day that, at a secret meeting of the Senate, held on the 30th of March ultimo, a law was passed without opposition or comment, having for its object the regulation of public meetings. It was also said that Mr. Watanabe Hiromoto, as the representative of the cabinet, introduced the measure. We cannot vouch for the truth of either rumour, but there can be little doubt that, if correct, the result will soon be apparent in the promulgation of a set of regulations which will be binding upon the people of this country. It is well known that there are many different kinds of meetings or assemblies. A congregation of people listening to a priest expounding the tenets of religion, is a meeting. Is the Government about to restrict our religious liberty? We cannot believe it possible. Then again, agriculturists, artisans, and merchants, often assemble for the purpose of discussing matters connected with their several callings. Does the Government wish to prevent these meetings and thus hamper trade? It is scarcely to be imagined. Now, although we have no means of ascertaining what took place at the secret meeting of the Senate, still we cannot avoid coming to the conclusion that the Government, being aware of the frequency of lectures upon political subjects, and the great increase in political organizations all through the country, with the avowed object of securing the establishment of representative government and the enlargement of the power of the people, has come to the determination to pass a law regulating the proceedings of these associations, and the lectures given under their auspices. It is well known that numbers of politicians from the North, South, East and West, have assembled in the capital for the purpose of sending in memorials asking for the establishment of a national assembly, and that the Risshi-sha (Resolute Society) in the South, has planted the seeds of political aspirations in the minds of the people of that locality, while the Aikoku-sha (Patriotic Society) of Osaka, has despatched agents throughout the length and breadth of the land to disseminate the views of the society, thus making Osaka the centre of the national movement for the accomplishment of the great object—the establishment of representative institutions. It therefore appears reasonable that the new regulations are aimed at political societies and lecturers only.

Now, there are two sides to every question, and each has its advantages and disadvantages. A wise ruler balances these evenly, takes no heed of trifles, but unerringly chooses the course which presents fewest grave objections, and thus controls the country in harmony, and promotes its prosperity. Here, in Japan, the political societies number thousands and tens of thousands of adherents, and are to be found in every

part of the Empire. It may be that, at some of the meetings, expressions have been made use of occasionally by unthinking persons which have aroused the apprehensions of the authorities. But these people are like a current without a source. If left severely to themselves they will soon be relegated to obscurity, without having occasioned any damage, or even left any trace behind them. The existing police regulations are, we imagine, sufficiently stringent to effectually prevent anyone from long continuing a course which the authorities find obnoxious. If a man thinks otherwise, let him try it, he will soon find his mouth closed. Why then does the Government think it necessary to make fresh rules for the purpose of abridging the liberty of our public speakers and politicians?

Our Government is just and impartial, and should therefore discriminate between the few rash and turbulent demagogues and the true patriots. If laws, passed for the suppression of the former class, are applied also to the latter, what fruit will our political vines bear? Two very distasteful ones at least. In the first place, all concord and harmony between the Government and people will be destroyed, and the latter will come to look upon the former with hatred, and, in fact, as if they were suffering under the evils of foreign domination. And, secondly, the action of the authorities will interpose formidable obstacles to the progress of civilization in the country. Under the first of these evils peace may, perhaps, be maintained for a time, but disturbances will surely follow the second.

Let those who take an interest in the preservation of peace in our country, observe attentively the condition of the community in this present year of Meiji (1880). How can the passing of a mere law or regulation suppress the interest felt in political questions? The desire for liberty has now permeated all ranks of society, and we find even the ignorant farmers attending the political gatherings, and loudly expressing their anxiety for the establishment of a national assembly.

If we compare the present movement with that at the close of the Tokugawa domination, which had for its object the restoration of the imperial authority to its original position, we find that it is ten times greater both in power and intensity. Then the samurai and upper classes in the western provinces alone took part in the restoration; while the traders and farmers knew little and cared apparently less, about what was going on. But now the whole population of the country is actuated with one burning desire for representative institutions, and the movement has become as powerful and uncontrollable as a vast conflagration or the current of a mighty river. Under these circumstances, if the Government has promulgated these new regulations with a view to stifle the political aspirations of the people, we greatly fear, that instead of tranquillity and peace, the enforcement of these laws will result in fearful disturbances, with all their long train of attendant evils.

#### ARRIVAL OF THE FRENCH MAIL.

Berlin, March 2nd.—The German Army Bill has been referred to a select committee. A convention has been concluded between England and Germany, assuring the co-operation of the navies of the two countries in the suppression of the slave trade.

London, March 3rd.—Mr. Whitworth, the Liberal candidate, has been elected member of Parliament for Drogheda, in place of the deceased member.

Constantinople, March 3rd.—M. Commuraoff, who was lately fired at here and wounded, has since died from the injuries received.

London, March 4th.—Charles Edmund Grissell, who was arrested last year upon a warrant issued by the Speaker of the House of Commons for breach of privilege, and confined, has again been arrested and committed to Newgate.

Lord Mark Kerr, Colonel of the 54th Regiment, has been appointed Colonel of the 13th Foot, and Lieutenant-General John Stuart, has been appointed Colonel of the 54th Foot.

London, March 5th.—The President of the Board of Trade, replying to a question in the House of Commons, said that a lighthouse on the island of Galita in the Mediterranean had been promised, and that negotiations were progressing for the erection of others in the Red Sea and the Gulf of Aden.

Ismalia, March 4th.—The steamer *Athena*, from Bombay to Genoa, is seriously ashore in the Suez Canal, and is unloading. The passage is stopped.

Berlin, March 4th.—The Emperor William, at a dinner yesterday at which Count St. Viller, the French Ambassador, was present, expressed most friendly sentiments towards France, and said that there was no reason to fear any interruption in the friendly relations existing between Germany and France.

London, March 6th.—The *Times* publishes a letter received from Mr. Roper Lethbridge, the Press Commissioner, containing a defence of the Indian Vernacular Press Act, in reply to an article which appeared in the *Contemporary Review*.

Latest advices from the seat of war in South America state that the Chilean fleet attacked the town of Arica, and during the action the commander of the *Huascar* was killed.

Aden, March 8th.—The steamer *Bataria*, the first of the Cunard new line to the East, ran ashore on the island of Perim, but was towed off on the 6th March, by the gunboat *Philomel*, uninjured.

London, March 8th.—The Board of Trade Returns of Imports for the past month amount to £33,250,000, showing an increase of £4,562,500, as compared with the same period last year; and the Returns of Exports for the past month amount to £16,500,000, showing an increase £781,250, as compared with the same period last year.

Washington, March 8th.—President Hayes, in his message to the Senate, states that it is necessary that the proposed Panama Canal should be under the control of the United States.

London, March 9th.—The steamer *Travancore* is expected to become a total wreck. All the specie on board was saved and none of the ship's company were lost.

A manifesto has been issued by the Premier, addressed to the Lord Lieutenant of Ireland, pointing out the attempts made to dismember the Empire, and inviting the opinion of the country on the maintenance of the Union, as it is a necessity in the interests of peace that British influence should be predominant in the Councils of Europe.

Berlin, March 9th.—Prince Bismarck has expressed his approval of the action of the French Government in refusing the extradition of Hartmann, charged with complicity in the Moscow attempt on the life of the Czar.

London, March 10th.—Brigadier-Generals Keyes and Ross, of the Madras and Bengal Staff Corps, have been created Knights Commanders of the Bath.

London, March 11th.—A manifesto has been issued by Lord Hartington, in which he emphatically denies that the Liberals desire the severance of the colonies from the mother country. Whilst firmly opposing Home Rule, he promises to give attention to the reasonable demands of Ireland. As regards the foreign policy of the Government, he says it has everywhere failed, and immense responsibility remains. The Afghan nation has been destroyed, whose independence was admittedly important for the security of our North Western frontier. He then promises reform in the franchise, local Government and land laws, and finishes by stating that the Liberal party, while up-holding the power and integrity of the Empire, will avoid a policy of disturbance and needless annexation.

Sir Stafford Northcote, in his address to his constituents, trusts that the period of anxiety is terminating, and that the next Parliament will be able to devote its undivided energies to domestic improvements. The manifesto of the Home Rule party has been issued, and severely attacks the Government.

London, March 11th.—The Under-Secretary for India, in answer to a question in the House of Commons, said that communications are now being exchanged between the Viceroy and Lord Cranbrook, concerning the whole British policy in Afghanistan.

Colonel Stanley, replying to a question, said the proximate cost of bringing the Indian troops to Malta was £470,000.

Sir Stafford Northcote submitted the Budget to the House. The revenue for the past financial year amounts to £80,860,000, and the expenditure to £84,216,000. The

revenue for the ensuing financial year is estimated at £81,560,000, and the expenditure at £81,485,000. An alteration in the probate duties, raises the surplus to £774,000. Of accumulated eight million exchequer bills, it is proposed to convert six million into terminable annuities, the last to terminate in 1887, thus reducing the surplus to £178,000.

Sir Stafford Northcote, replying to a question, said that the Afghan war expenses were to be borne by India; therefore there was no intention of asking the House for a vote on that account.

The troopship *Jumna* has sailed for Bombay.

London, March 5th.—The House of Commons has read, a second time, the Army Discipline Bill.

Mr. Gladstone has issued his address, which follows close in the lines of Lord Hartington's.

In the House of Commons this evening, Mr. Fawcett's motion that England should contribute towards the Afghan war expenses was brought forward.

Mr. Stanhope said that the best guarantee for economy in India, was by letting her pay for her own wars and not by burdening England with the cost of the same. The motion was negatived without a division.

Aden, March 12th.—The *Zambezi*, with the mails of the 27th ultimo, sailed for Bombay at three this afternoon; and the *Cathay* for Gallo and Calcutta at seven this evening.

London, March 13th.—Mr. Gladstone, at a Liberal meeting held yesterday at Marylebone, expressed his firm belief that Lord Derby will henceforth associate himself definitely with the Liberal party.

The *Standard* publishes a paragraph stating that Sir Garnet Wolseley has been appointed Quarter-Master-General at head-quarters. Consols 97½.

Bombay, February 28th.—The Russian Government has appointed M. Vonillon, the Manager of the French Bank, Russian Consul at Bombay. This is the first appointment to a Russian Consulate in India.

Bombay, March 1st.—Further particulars regarding the loss of the *Vingoria* state that she sailed with eight saloon passengers, including three children, eight second-class, and ninety-five deck passengers. All went well, the sea being smooth, and the wind light, till half-past nine the same evening, when the officer on watch observed the ship settling down by the head. On opening the main hatch, water was found in the hold within five feet of the main deck. Every effort was made to discover the leak, but without success, and the water gained so rapidly that the pumps were unable to keep it under. Orders were then given to clear away the boats. The mail-boat was placed in charge of Mr. Wood, the second officer, and took all the saloon passengers and their servants, making a total of nineteen souls. The gig was lowered under the superintendence of Mr. Conroy, the chief officer, and was filled with women and children, but as it was being lowered a number of native passengers crowded on board, and the excessive weight broke the boat. All on board were drowned. The port life-boat was placed in charge of a tindal, and took one second-class, 15 native passengers, and 24 of the crew. The starboard life-boat, in charge of the sorang, took 35 native passengers, and 12 of the crew.

Under the captain's orders the boats lay to some distance from the ship, and the commander and chief officer and third officer, tried to ascertain the cause of the leak, but unsuccessfully; and with the exception of the third officer, who jumped overboard and swam to the boats, all five went down, the captain being seen, as the vessel foundered, standing on the bridge, and burning a blue light. The boats cruised over the place where the vessel sank, for two hours, in the hope of picking up some of those left on board the steamer when she foundered, but without success.

The survivors speak highly of the conduct of the captain and officers in maintaining discipline, and of the assistance rendered by the second-class passengers in clearing away the cargo, in order to discover the leak.

The cause of the sudden leak is unknown.

A Court of Inquiry will be held to-morrow.

The total loss of life is 68, including 56 native deck passengers.

## ARRIVAL OF THE AMERICAN MAIL.

## GREAT BRITAIN.

London, March 15th.—An unsuccessful attempt was made yesterday to haul the steamer *Montana* off the rocks.

London, March 15th.—The position of the *Montana* is unchanged. Receding tides lessen the chances of saving the vessel. Steam tugs and lighters are getting out her cargo.

Later.—The steamer's taffrail is covered at high water. A large part of the cargo, including all the meat and live stock, is saved. Salvage is proceeding. The vessel lies heavily on the rocks, which are under the boilers.

Dixon's colliery, near Glasgow, is on fire from an explosion. A thousand men are thrown out of employment. One death occurred.

London, March 15th.—Lord Derby writes that he will in future rank himself among the Liberals.

Lord Hartington, in an address, repels the charge made by Beaconsfield that the Liberals are endeavoring to separate the Colonies from England by the policy of decomposition.

London, March 15th.—The new British Arctic expedition sails May next.

London, March 16th.—Gladstone has started on an electioneering tour through Midlothian.

A meeting of the Radical Association of Lambeth, to support Henry Labouchere, editor of *Truth*, for Parliament, ended in a free fight. Lights were extinguished, and chairs and tables broken. Cheers, groans and hisses prevented speaking. An attempt to storm the platform was vigorously and successfully resisted with fists, sticks and chairs.

London, March 16th.—In addressing a crowd at a railway station, Gladstone said: "I am going to gain a victory. I expect to be supported with a zeal such as will make Scotland an example for the rest of the kingdom, and I will sweep out of their seats a great many men who now represent constituencies in Parliament, and consign them to that retirement for which they are more fitted."

London, March 16th.—Brand, Speaker of the House of Commons, after the announcement of dissolution, placed his resignation in the hands of the Premier on account of ill-health, but, through the solicitation of the Government, he consented to continue in the performance of his duties, if elected, during next Parliament.

London, March 17th.—It is rumored that the Duke of Connaught will succeed the Duke of Marlborough as Viceroy of Ireland.

It is said there will shortly be a change in the chief editorship of the *Times*.

London, March 17th.—Silver 52 1-16 per ounce.

London, March 18th.—Mauager Cafel denies that he is about to start for America.

The Council of the Irish Home Rule League has issued another manifesto to the Electors of Ireland, mainly attacking Lord Beaconsfield.

London, March 18th.—*Parole*, *Falsetto*, *Mistake* and *Wallerstein* are entered for the Manchester Cup Race.

Liverpool, March 19th.—*Parole* came in first to-day in the cup race; *Advance*, second; *Strathblane*, third. Eleven started. *Parole* was objected to on the ground of cross, [crossing the track in front of other horses] and disqualified. The race was awarded to Captain Machel's *Advance*.

The Grand National Steeple Chase was won by *Empress*; *The Liberator* second; *Downpatrick* third. Fourteen horses ran.

Liverpool, March 19th.—The Jockey Jaffrey rode *Parole*. The betting just before the start was 9 to 4 against *Advance*, 6 to 1 against *Chocolate*, 7 to 1 against *Parole*, and 10 to 1 against the others. *Parole* at the finish was half a length in front of *Advance*, with a length between the second and third horses.

New York, March 19th.—A Liverpool special says: *Parole* was not placed by the judges, who gave the race to *Advance*; *Strathblane*, second; *Emperor Titus*, third. The owner of *Advance* obtained the stakes. *Parole* swerved on the home stretch.

Dublin, March 19th.—The distress in the famine districts is deepening daily. The grants of money by the Mansion House Committee exceed the receipts. Land Leaguers say it is desirable that Parrell's arrival shall be marked by an expression of national feeling. Bonfires on the hills and bands of music in the towns throughout Ireland are suggested for Sunday evening next.

London, March 19th.—The House of Commons has adjourned until the 24th instant.

The *Times* says: The Ballot Act and the new registrations under the extended franchise have made a great change in the character of the constituency. Political organization cannot evade the effect of secret voting, and cannot make sure beforehand of results, in spite of the great change in population and public opinion.

## RUSSIA.

Berlin, March 15th.—A special revives the story of the retirement of Prince Gortchakoff.

St. Petersburg, March 15th.—Two officials of the Russian Embassy at Paris are expected to-day with documents explaining the refusal to extradite Hartmann. The Russian Government will be guided in its further conduct by the contents of these papers.

Warsaw, March 15th.—The police in surprising a meeting of Socialists, captured two civil engineers, one medical student and thirteen artisans.

St. Petersburg, March 16th.—The answer of the Municipal Council of Kharkoff to the Government communication urging the co-operation of the work of maintaining order, points out the impossibility of complying with the Government's request. It complains of restrictions upon the liberty of discussions, the bad system of education, and expresses the opinion that these circumstances tend to prevent the possibility of supporting the Government in their struggle against the revolutionary propaganda.

St. Petersburg, March 16th.—General Melikoff has taken under his control one division of the Privy Chancery, the Gendarmerie, leaving secret agents subject to the orders of the Minister of the Interior.

St. Petersburg, March 16th.—Gen. Gourko has been replaced by Gen. Kostander in command of the Guard and Military Districts of St. Petersburg, and Gen. Batiano, Commander of the Regiment of the Guard, has been appointed head of the police in place of Gen. Courtoff removed.

London, March 17th.—The winter sowing of wheat in South Russia suffered greatly from frost.

St. Petersburg, March 18th.—There is said to be so much disappointment and anger over the Hartmann affair that it is likely to lead to the displacement of those diplomatists responsible for raising the issue between Russia and France, without being sure of succeeding. If General Melikoff can maintain his position against the intrigues of officials surrounding the Czar, he will abolish the third section of the Police Department and its evil system of repressive and secret persecution.

St. Petersburg, March 18th.—The first sitting of the Executive Commission was held to-day, Gen. Melikoff presiding. Prince Lieowen, Minister of Domain; Makeoff, Minister of the Interior; Batianoff, Chief and others were present. Deputies from Town Councils will attend the next sitting.

## FRANCE.

Paris, March 15th.—Millaud and Vallier, Radicals, take the place in the Senate of Jules Favre and Valentin, Republicans. The supplementary elections for Deputies for Narbonne and Rambouillet resulted in the return of Labodie, Extreme Left, and Dreyfus, Republican.

Paris, March 15th.—Georges de Cassagnac, son of the late Garnier de Cassagnac, has been elected Deputy.

London, March 15th.—Information has been received of a rupture between France and Madagascar, in consequence of a misunderstanding between the French Consul and the Government. The Consul hauled down his flag, and appeals to his Government for support.

New York, March 16th.—A Paris special of this evening says: The great event of the season here was a grand reception and ball, given by the Chinese Ambassador and suite last night. It is doubtful whether Parisian society has ever had a similar surprise and such a novel treat. The affair came off at the magnificent hotel of the Embassy, within a short distance of the Arc de Triomphe. It was an event of the most unique and interesting character, and was attended by notables of the diplomatic, political, literary and artistic world. There could not have been less than 1,000 people present.

Paris, March 16th.—The *Temps* and *Pays* say, if the Porte cannot protect the Greek Boundary Commission, the Powers themselves can protect it by a joint escort of their own forces.

Paris, March 18th.—Fournier, the French Ambassador, has left Constantinople for Paris, to confer with Premier De Freycinet, respecting the disagreement between Turkey and Greece regarding the frontier. Prince Orloff merely takes a long projected leave of absence, and will return to Paris very soon.

## GERMANY.

Berlin, March 15th.—Queen Victoria, during her sojourn on the Continent, will meet the German Emperor.

Berlin, March 15th.—The Reichstag Committee on the military bill has approved its principal provisions.

Berlin, March 16th.—The Government is said to be elaborating a plan for a tobacco monopoly.

The lady to whom the eldest son of the Crown Prince is betrothed, is Princess Auguste Victoria, eldest daughter of the late Prince Frederick of Schleswig-Holstein.

Berlin, March 18th.—The committee of the Reichstag, to whom was referred the bill for the prolongation of the law against Socialism, have decided, ten to three, to report in favor of prolonging the operation of the law until September 30, 1884, instead of 1886, as proposed by the Government; and also in favor of declaring the law for the expulsion of members of the Reichstag and Landtag from Berlin, inoperative during the session.

Berlin, March 19th.—It is likely that diplomatic relations with the Vatican will be shortly resumed.

Berlin, March 19th.—Prince Alexander, of Hesse, the Czar's brother-in-law, has arrived at Berlin from St. Petersburg, with a mission from the Czar to Emperor William for completing the reconciliation between Russia and Germany.

#### ITALY.

Rome, March 17th.—During a speech in the Italian Chamber of Deputies last evening, Premier Crispienari inquired whether the Cabinet of the Right displayed great political wisdom in 1870, when they announced that they would respect the convention with France guaranteeing the integrity of the Papal territory, only a few days before the force of events drove them from Rome. Lanza, who was Premier when Rome was occupied by the French, denied that the government took that step unwillingly. A scene of wild confusion and uproar ensued. Furious attacks were bandied between the Right and Left, drowning the voice of the speakers. The declarations of Lanza, Sella and Visconti Venosta included some curious revelations regarding the Government's course toward France and the Pope; and, respecting the September convention, Crispienari asserted that there were differences of opinion in Lanza's Cabinet about occupying Rome. Lanza denied this absolutely, but Sella confirmed it, almost occasioning a quarrel between Lanza and Sella. The sitting was one of the most sensational in the annals of the Italian Parliament.

Rome, March 19th.—During a debate in the Italian Chamber of Deputies, Cavallotti of the Extreme Left, defended the Italia Irredenta Association. He admitted that the actual condition of affairs required their sentiments towards Austria to be kept in check, but a policy of fear was worse and more dangerous than a policy of adventure. He held the opinion that Austria was threatening Italy, not because of Irredenta agitation, but because of internal necessities. She had need of war against Italy, and her military party desired it. Premier Crispienari replied that the Government was pursuing a policy which had the full support of the country. The friendship between Italy and Austria is founded on respect for treaties and in sentiments of duty.

Vienna, March 19th.—The official *Gazette* says: The debate in the Italian Chamber of Deputies on foreign relations, has cleared up the situation in the most gratifying manner.

Trieste, March 19th.—An Austrian revenue cutter seized two Italian trading vessels in South Dalmatian waters, because they surreptitiously conveyed 6,000 breach-loading rifles and a quantity of ammunition, apparently destined for Albania or Herzegovina.

Rome, March 19th.—In the discussion in Parliament, to-day, the Premier said: "The recent Austrian arguments, the published reports of which were greatly exaggerated, were explained in cordial and spontaneous communications from the Austrian Government. We appreciate the good-will of that Government, and we intend to maintain the best relations with it."

Signor Bovio, of the Extreme Left, and a member of the Italia Irredenta Society, said the Irredenta Association did not desire war with Austria, but they would not allow National rights to be forgotten. Since 1881, men of note in all parts of Italy had affirmed Italy's right to Trieste and Isria. The democratic programme was, at home, an enlargement of the franchise, and, abroad, the maintenance of National dignity and rights.

#### SPAIN.

Madrid, March 16th.—The Court of Cassation rejected the appeal of Gonzalez, and sentenced him to death for attempted regicide.

Madrid, March 17th.—The Marquis of Orrovia, Minister of Finance, has resigned on the ground of ill health. It is expected that Canyayo will succeed him. It is reported that Elduayen will shortly take the portfolio of foreign affairs, and that Sanchez Castillejo will succeed as Minister of Colonies.

#### AUSTRIA.

Vienna, March 18th.—The Austrian and Servian Commissioners have signed a convention regarding a railway junction, two points of agreement, respecting the Bulgarian junction and the tariff of tolls, being reserved for the decision of the Servian Government.

#### TURKEY.

Constantinople, March 16th.—The Brigands who seized Captain Synges and wife demand, as a primary condition of their release, that the troops coming after them be recalled.

Constantinople, March 19th.—Field Marshal Fual Pasha is on trial before a special tribunal, charged with conspiracy against the Sultan.

#### SOUTH AFRICA.

Cape town, March 15th.—A committee of leaders of the Boer party have decided to adjourn *sine die*. It is proposed to hold a mass meeting in the Transvaal.

Affairs in Basuto Land are critical, in consequence of the determination of the Cape Government to insist upon the disarmament of the natives.

#### CENTRAL ASIA.

Tehran, March 15th.—Russian Troops with a large quantity of stores left Telihsar for Chatteroo.

Cabul, March 19th.—It is reported that twelve regiments of infantry and four of cavalry, from Herat, are marching on Ghuznee.

#### ALGERIA.

Algiers, March 15th.—A steamer burst her boiler in the harbor of Bona, and, driving into two feluccas, seriously injured twenty-five men. Two firemen and an engineer were killed.

#### LAW REPORT.

##### IN H. B. M.'s COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Thursday, the 8th day of April, 1880.

FRANCIS STILLFRIED versus WILLIAM WAGGOTT.

His Honour this day delivered the following judgment:—This is a re-hearing of a summary case, heard before the Acting Assistant Judge on the 11th ultimo, in which judgment was given for the defendant with costs.

The plaintiff claims \$16.00 for photographic portraits taken by him for defendant, at his (defendant's) request, but which he now refuses to pay for, on the ground that he did not consider the proofs sent him to be good. At the original hearing the defendant called a witness to prove that it was not customary for photographers in Yokohama to call upon their clients, to take and pay for photographs, if they (the clients) are not satisfied with the proofs sent to them, and on the re-hearing the plaintiff alleged that he was taken by surprise in regard to this evidence, and proposed to call further evidence in rebuttal of it.

As it appears to me, however, evidence of such a custom would be of little weight in law, in any case; and that in this particular instance, as it was proposed to give evidence only as to the practice of one other photographic business carried on by foreigners in Yokohama, I declined to receive this evidence, and re-heard the case upon that of the parties alone.

There is no important question of fact in dispute, and the issue is one of law only. It is admitted that the defendant, knowing the scale of the plaintiff's charges (\$8.00 per dozen for each portrait taken) went to his studio with a Japanese woman and her son, and requested plaintiff to take their portraits. Plaintiff accordingly did so, taking the boy twice and the woman three times. He subsequently sent the proofs to the defendant in the ordinary way, but the defendant returned them, saying that he was not satisfied with them—that the tint was too red, and that he would go to another photographer. The plaintiff told him that all his photographs had this red tint at the beginning, but darkened afterwards, and that, if these particular photographs did not acquire the desired tint in three or four weeks, he would not claim any payment for them. The defendant, however, declined to listen to the offer, and still maintains that he is entitled to reject the portraits, and to refuse payment to the plaintiff, on the ground that the proofs were not to his satisfaction.

In this contention I am of opinion he is wholly wrong. I think it is very likely that photographers, in what they consider the best interests of their business, do not often claim payment from their customers, in cases where the proofs do not please the latter, but this in no way affects their legal right to recover.

When the defendant, being aware of the plaintiff's terms, instructed him to take the portraits in question, the law implied an understanding on his part to pay for the work at the ordinary rate of plaintiff's charges, provided the plaintiff executed the order with reasonable photographic skill and diligence; whilst the plaintiff, in undertaking the commission, implicitly warranted that he was possessed of such reasonable skill, and would use due diligence in and about the matter. Now the proofs produced, which are those originally sent to the defendant by the plaintiff, appear to me to be very fair specimens of photographs; and indeed even the defendant does not allege that they were not so: he only says that, when originally sent to him, they had a red tint. I cannot think that he was justified in rejecting them, and refusing payment on this pretext alone, the more especially as the plaintiff guaranteed them darkening, and I am therefore of opinion that the defendant must pay the amount claimed,

with costs of both hearing and re-hearing, and there will be judgment to that effect. But the plaintiff must supply the defendant, should he desire it, with two dozen copies of such of the photographs as the defendant may select. As the plaintiff is out of the jurisdiction of the Court, he must bring the photographs into Court before receiving out the amount of the judgment.

## MY WIFE'S INHERITANCE.

IN THREE CHAPTERS.

### CHAPTER III.—HOW IT WAS REGAINED.

I returned to Cottam saddened and disappointed, but by no means convinced. I had, however, no choice but to leave the mystery to be solved by time. In due course Ellen and I were married. She received her two hundred and fifty pounds; and opportunity just then occurring, I bought a practice at Kinton, to which place we removed. We saw nothing of Charles, but heard that he had gone abroad. And so days and months passed on; I was happy in the love of my dear wife, and we both tried to forget 'what might have been,' or that we had ever looked forward to the possession of a fortune.

One evening about twelve months after I had settled at Kinton, I was called into the surgery to attend a lady. Of course I had no other thought than that it was a patient; nor was my opinion changed when I saw her, for her cheeks were hollow and her eyes sunken; but what was my surprise on looking closer to recognise in that wasted form the once passably fair, if not brilliant Miss Leclerc.

She saw I recognised her, and without waiting for me to speak, said: 'You are surprised to see me here, doctor; but I have something important to say to you. Can we be alone?'

'We shall not be disturbed here,' I said; and still not doubting that it was medical advice she required, I added: 'Well now, tell me your symptoms, and I will prescribe for you.'

'No, doctor; your medicines would do me no good in the purpose I have in view. I require your help, not medicine; and let me say, that in helping me, you will help yourself in a way you little expect.'

'Tell me how; and if I can do it, I will.'

'You can do it, I am sure; and equally sure you *will*, after you have heard my story.'

'I am all attention.'

'Well then, listen. I must go back to the time of Mr. Russel's death. You were very much surprised and disappointed at the disposition of his property; were you not?'

I bowed assent.

'In fact the will was a complete mystery to you?'

'It was indeed a deep mystery.'

'I can explain it.'

'You? I said, springing to my feet—you! Why, you had very little communication with Mr. Russel in his last illness.'

'No; and yet I tell you I can explain the mystery; and on two conditions, I will.'

'Name them. They must be onerous indeed if I fail to comply with them.'

'Oh, they are not difficult; they are simply these. First, that in consideration of this my assistance in obtaining your rights, you will not have me punished for the part I myself took in the matter; and secondly, that you will supply me with money enough to go to America, where I have friends.'

'But if a crime was committed, have I the power to promise you immunity from punishment?'

'Be content. You have; for the crime—and I won't deny that there *was* a crime—injured no one but you and Miss Ellen; and if I make restitution by enabling you to secure the real culprit, you can surely let the tool go free.'

'Well, I promise,' I said, after a few moments' consideration. 'Do what you have said, and I pledge my word that neither I nor any one on my behalf shall bring you to justice for your share in the transaction. That being granted, the other condition is easily fulfilled.'

'That is enough. I will now proceed. But first I must tell you why I do this.' It is not, as you might suppose, out of consideration for you, or even for Miss Ellen, although my conscience has often troubled me for my ingratitude towards her. No, she said: 'I have a purpose to serve, and that purpose is—*Revenge*. Nay; start not. It is the desire for revenge that nerves me to the confession. You remember what I once was. Look at me now. See my hollow cheek and wasted form; hear of my blighted life, and then cease to wonder that I crave for revenge on the cause. But pardon me; I must begin at the beginning. Soon after Mr. Russel's death, and the affairs were all settled, Charles left England for Paris. This you knew; but you did not know that I went with him.—As his wife, do you ask? No! Poor silly fool that I was; I trusted to his promise, that we would be married in Paris. Well, we lived gaily enough for two or three months; the marriage was put off on one pretext or another, until one day he went out, and never returned. He had left me—left me almost penniless—to starve or die, not caring which. It was some days before I could realise the fact that I was indeed deserted. I thought some accident had befallen him, and made inquiries in all directions. I even visited the dreadful Morgue, but without avail. At length I learnt that he had gone to Lyons, on his way to Venice; and thither I determined to follow him, but on the road was struck down by illness. When I recovered, all trace of him was lost. How I got back to England, I hardly know; but I was buoyed up by the hope that after all there might be some mistake, and that I should find him here, glad to receive me back.

I did find him; but how! The Willows has now both master and mistress. Yes; he is married, notwithstanding all his promises to me. Another reign in the house where I ought to be supreme. Oh, but he shall regret it. Little did he know my power, or he would have sacrificed his right hand ere he offended me. I did not tell him, because I wanted his love, not his fear; and when I would have told him, it was too late, for he had gone, and left me the wreck you see; married another, after the most sacred promises to me. But I will be revenged. Yes; revenged to the uttermost. He has known my love; now he shall learn my hate. I will drag him down—down, even as he has dragged me. It is impossible to convey the emphasis with which all this, especially the latter part, was said. I could see that the spirit of revenge was in her, its fire burning her very life out.

'Still,' I said, 'you have not yet told me anything about the will. I am anxious to hear about that.'

'I am coming to it now; but I cannot talk any more to-night. See here; in this packet I have written a full history of the transaction. Take it and read it, and I will come again to-morrow at this time to complete the evidence. Now let me go, for I am very weak.'

In truth she appeared weak and almost ready to faint; so I gave her a cordial, and sending for a conveyance, handed her to it, and bade her good-night.

Need I say that I hastened to my room to peruse the packet. I was far too anxious to delay. I found it addressed to myself, and inside headed: 'The History of the Will of Mr. Charles Russel, as related by Jeannette Leclerc.'

Miss Leclerc's History of the Will ran as follows:

'In order that you may comprehend all the circumstances of the case, I must go back nearly seven years, to the time when I first entered the family of Mr. Russel, as governess to his niece Ellen. I was then only seventeen years of age, and my pupil fourteen. The family consisted of Mr. Russel, Ellen, and a nephew Charles. This nephew was about a year younger than myself, and a fine handsome lad. There were whispers that young as he was, his habits were very irregular; and it may have been so. I had no means of judging. I only know that to my girlish mind he seemed all that a young man ought to be, and so when he began to take notice of me and make love to me, I lent a very willing ear. This went on with more and more warmth, until, for some reason or other, he was compelled to leave his uncle's roof; but even after this we managed to meet at frequent intervals, although of course all unknown to Mr. Russel or Ellen; indeed they neither of them had the slightest idea of there being anything between us. At length Charles left his uncle's office altogether, and decided to go to London. I will remember the last night before he went away. People said he was wild and wicked; but I only knew that I loved him, and he declared that he also loved me. He said that when he got a situation in London, he would send for me; in the meantime, he wished me to remain in Mr. Russel's service, and keep him informed of all that occurred. I faithfully promised; and when on the completion of Ellen's education, I was asked to remain as her companion, I gladly agreed, for Charles's sake. Well, time passed on, and nothing particular occurred. Mr. Russel retired from business, and we removed to Cottam; then came his illness, and your introduction to the family. I was ever on the watch for any scrap of information that might be interesting to Charles, and I did not fail to tell him of the growing intimacy between you and Ellen, as well as Mr. Russel's partiality for you. These last items seemed to give him considerable annoyance, and he requested me to redouble my vigilance.'

'One day I heard a servant tell you, that Mr. Russel wished to see you in his bedroom. You remember how these rooms were arranged; that opening out of the bedroom was a small dressing-room, which itself communicated with the servants' staircase, to afford facilities for lighting the fire, bringing water, &c. Now, as you went up the main stairs, I very quietly slipped into the dressing-room by the others, as I thought it possible that something might be said touching the interests of my dear Charles. I thus managed to overhear enough of the conversation to gather its import; especially did I take note of the directions for opening the secret place in the desk; and when I got to my own room I wrote them down, lest I should forget. Well, I immediately wrote off to Charles; and the news must have troubled him considerably, for in a very short time I had a letter saying that he would arrive at Kinton the next day, and appointing a time and place for me to meet him. I did so; and after making me repeat as well as I could all that I had heard, he boldly proposed that I should get possession of the will and bring it to him. He proposed (to facilitate matters) that as he was quite unknown in Cottam, he would go there and engage rooms at an obscure inn called the *Red Lion*, and I should find him there any evening. I confess this proposal startled me, partly because of its difficulty, and partly because it was my first step in crime. However, he overcame my scruples, and I promised to do what I could; at any rate I would visit him at the *Red Lion* at seven the next evening. Fortune favoured me. The next day, just at dusk—it was the latter end of February—Ellen asked me to sit by the bedside a few minutes until the night-nurse arrived; of course I agreed, secretly delighted, for Mr. Russel being asleep, I had little difficulty in securing the will. I remembered perfectly the directions: "Top middle drawer, and a penholder through the top right-hand corner, then look at the back." In fact, I had opened the secret panel more than once, to see if I had heard aright. Soon after the nurse arriving, I was at liberty, and hastened to meet Charles. I found him alone in an upper room of the *Red Lion*, and the table strewn with papers.

'Have you got it?' he eagerly inquired, the instant the door closed behind me.

'My only reply was to hand it to him. Without a word he broke the seal, and having read the contents, said: "You were quite right. It is as you supposed. He has left the whole of his pro-

perty to Ellen, except a few paltry legacies. Now, you shall see what I will do."

"Do. Why, I suppose you will burn it, and then you will come in for an equal share with Ellen. But mind, there is something left to me in that will, and it is only because we are to be married that I agree to its being destroyed."

"Fear not; you shall be made all right. But I think I can do better than what you suggest. I was not five years in my uncle's office for nothing."

"He then searched amongst the papers until he found a blank sheet as near like the one the will was written on as possible. "You see," he continued, "the old fellow was so methodical in all his ways, that I was pretty sure he would make his will on a certain sort of paper and in a certain way. I provided myself accordingly; obtained similar paper, wax, &c, to that which he always used, and had a copy of his seal made—I had plenty of impressions by me—you know you can get anything in London. Now see me write."

"He then began to copy the will, word for word, and I was astonished at the similitude. Five years' practice under his uncle's eye and with his uncle's writing constantly before him, joined to a natural aptitude for imitation, enabled him to copy every stroke and turn exactly. "There," he said, when he had finished. "A fair exchange is no robbery. I have written everything as it was before, except that Ellen's name now occupies my place, while I have taken hers. Not a very great change, but one that will make considerable difference to us both, I reckon. Now for the most difficult part, and that is to copy the signatures of the witnesses. I have practised uncle's often enough; but of course I did not know theirs; however, I must try."

"He did try, and succeeded so well that I could see no difference."

"There now," said he; "just you compare these two, while I go and get a glass of brandy."

"He left the room; and I, placing the two side by side, could only distinguish the one from the other by the change of names."

"Well," he said as he re-entered—"will it do?"

"Excellently well," I replied. "I cannot tell which was written by you and which by your uncle."

"Well, then; now to fold them;" and from a heap of various sorts of envelopes, choosing two, he took up the original will, sealed and indorsed it as before, but putting a small, almost imperceptible mark in the corner. He then took the new will and did the same, but without the mark."

"Now," said he, "listen carefully to my instructions. When you get home, replace the original will in the desk. You will know which it is by this mark;" pointing to the corner. "It is extremely unlikely that Mr. Russel has been out of bed and missed it during the two hours you have been absent, so that will be all right. This other envelope you must keep by you until he is actually dead, and then take the very first opportunity of changing them. The old will you may bring to me, and I will destroy it."

"But why not make the change at once? I could as easily put one in the desk as the other."

"No; no. We must not risk it. There is just a chance that uncle may get about again and take it into his head to open the will, and then where should we be? No; make the change when that is impossible, and we are all right."

"I see, I see," said I, half-sickening at the dreadful deception, and yet too far committed to draw back: "as I shall gain equally with yourself, I promise to do all you wish."

"When I arrived at home, all was quiet, so I presently went into the sick-room. "Nurse, I said, "supper is ready. If you would like to go down, I will sit here half an hour for you."

"She gladly accepted my offer; and as Mr. Russel was dozing with the curtains drawn and the lamp turned down, I silently and quickly replaced the old gentleman's will."

"Well, time went on. Mr. Russel, as you know, got gradually worse, and towards the end was more than half his time unconscious. One day you gave it as your opinion that he could not possibly live till the next, and it was during that last night that I stealthily made the change. In the morning he was dead; and so far our plot had succeeded completely. The result I need say nothing about, as you are so well acquainted with it."

"But now I must tell you of a little scheme of my own. I loved Charles, and would have done anything for him, and had no compunction in helping him, as I thought doing so was a means to love, marriage, and fortune. Still, he had taught me to be almost as wily as himself, and to take every precaution; so I determined to have a hold upon him, in case he should endeavour to play me false. To this end, when I got possession of the original will, I went into my bedroom, and with a sharp penknife, cut carefully the end of the envelope, drew out the contents, which I carefully transferred to my pocket, and then replaced them with blank paper the same size and thickness, gumming the edges of the envelope together again with pale gum. I daresay it was not very skilfully done, but it answered my purpose very well. Afterwards, when I gave it to Charles, he glanced at it, saw the seal was unbroken, and suspecting nothing, committed it to the flames. We both watched it until it was consumed, Charles exclaiming: "Now I am really master of the Willows."

"And I soon shall be the mistress," I added.

"Oh, that of course," he replied.

"I have told you how he kept his promise—villain that he is!"

Thus finished this remarkable confession—a confession which to me was as acceptable as unexpected. Of course there was now no mystery, and I am only surprised that something of the sort had not occurred to me before; but it must be remembered that I knew very little of Charles, and no one had even hinted—even if they knew—of any connection between him and Miss Leclerc. I read the confession all over again to Ellen, and we both rejoiced at the turn events had taken. Miss Leclerc came in for a certain amount of pity; yet we could not but remember that had it not been for

her connivance and assistance, Charles would have been unable to carry out his nefarious scheme.

"Still," Ellen said, "I am not sorry that you promised to allow her to escape punishment. If we get our own again, we can well afford to let her go."

In the morning I called upon Mr. Sparks, my legal friend, and somewhat triumphantly laid the matter before him. He was very pleased, and at once offered to assist me all he could. We both agreed that after my promise to Miss Leclerc, it would be better to try to settle the matter amicably with Charles too. We therefore decided to wait upon him and tell him that all was discovered; and if he confessed and gave up the property, we would then arrange without publicity or exposure. If, however, he resisted, we determined at once to proceed to law. It was Ellen's wish that, for the sake of the relationship between them, we should be as lenient as possible in case he yielded.

Miss Leclerc duly kept her appointment, and brought the oft-mentioned will with her. The conditions were again insisted on, and again agreed to: in fact I gave her fifty pounds on the spot, and promised another fifty pounds when all was settled. She then gave me the will, and was about to go, when I said: "There is just one difficulty. Suppose Charles to defend the case, he might say this confession was altogether a trumped-up tale, this will a forgery; and as he has possession, I am not sure but that with a good lawyer he would beat us."

"Ah! I don't think he will attempt to stand when he knows that I have told you all. But in case he does, then—with sudden energy—then, will I attend and give evidence against him, ay, even if I have to stand in the dock beside him. No; no. He must and shall disgorge his wealth. Yes; that shall be my revenge."

Next morning Mr. Sparks and myself went over to Cottam, and were ushered into the presence of Charles. He was not too well pleased to see us, and his manner towards us was brusque and abrupt.

"May I ask why I am favoured with a call so early in the morning?" he said with an attempt at hauteur, although I thought that in reality he was not quite at his ease.

"We have called on a very serious matter, Mr. Charles Russel," I said gravely.

"State it then please, as quickly as may be, or I cannot stay to hear you, as my time is precious."

"Not more precious than your liberty, I presume?"

"My liberty! What do you mean? What has your presence here to do with my liberty?"

"Simply this. If you refuse to hear us, we shall have you arrested at once."

"Arrested! Are you mad? On what charge?"

"On the charge of forging your uncle's signature and changing the wills."

"I—I—don't understand you." These were his words; but they were belied by his ashy-pale face and staring eyes.

"Oh, you don't understand. Perhaps you have forgotten. Then let me remind you of that night at the *Red Lion*, of the new will you made, and of the instructions you gave to Miss Leclerc—instructions which she so well carried out."

"It is false! I know nothing of what you are taking about. You have evidently come here to insult me. If so, you have come to the wrong place, I can tell you; and the sooner you pack off to Kinton again, the better." All this with an attempt at bravado, which, however, did not deceive either of us, as we saw in his face plenty of evidence of the real terror behind.

"Ah well, perhaps you do not remember these things. Then I have only one other bit of information for you, and that is—looking him straight in the face—we have possession of the original will."

"It's a lie—an infamous lie! for I myself saw it bur—" But here his courage failed him, and he could hold out no longer, he saw the fatal admission he had made; and after that we had very little trouble with him. He whined for mercy, and prayed that he might not be sent to prison. As it was not our wish to proceed to extremes, we were as lenient with him as possible; and it was eventually arranged that the two hundred and fifty pounds paid to Ellen should be returned to him, and that he should emigrate to Australia. This he did; and I think that not the least bitter portion of his punishment was the knowledge that it all came about through the instrumentality of the girl he had first tempted, and then so cruelly deserted.

Miss Leclerc was paid another fifty pounds, and joined her friends in America. We were never troubled with either of them again.

All that the world knew of the matter was, that a new will had been discovered leaving the property to Ellen. All the legal formalities were complied with, and we took possession; happy that at length my Wife's Inheritance was regained—*Chamber's Journal*.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XLIV.

#### THE FRIARS OF YOSHINO.

When the level beams of morning came on the following day to light up the impassive faces of the deities in the shrine of Mount Yoshino, they found there an inmate fair enough to be one of the gods themselves, but not less insensible to the pitying caresses of the sunshine than the stone effigies at whose feet she lay. Obedient to the instinct

of self-preservation, Shidzuka had done what she might, during the first watches of the night, to feed and foster such scanty embers as remained of the fire her companions had kindled, and when everything capable of being converted into fuel was exhausted, she had shrunk in terror from the frosts' breath as it stole in across the moonlight, wrapping about her an icy shroud that seemed to cling closer and closer till the pulses of her heart grew faint and the shadow of death began to hide the past from her sight. It was a hapless thing, she thought, to perish thus among the lonely snow-drifts; to lie unwept and untended, until men coming months hence to gather spring-flowers on the hill-sides, should find her there deformed by decay, and cast her body perchance into some pit or tarn, knowing nothing of the love it had once been her blessing to win.

Little by little, however, she had grown indifferent to these considerations, and yielded almost gladly to the lethargy that overpowered her. Whether this were death or sleep, it was at any rate a gain to escape from the fellowship of sharp sorrow and the sadness of constantly recurring memories that could never now be renewed, and so at last she had sunk down beside the ashes of the lifeless fire; and the moonlight, looking in, found that it could add nothing to the pallor of her face nor the bitter wind wring any fresh moan from her blanched lips.

She lay thus until the day was some hours old, only recovering consciousness just as the sunshine, failing in its efforts to rouse her, was beginning to give place to shadows in which the spirit of the frost brooded even at noontide. She knew now beyond a doubt that she had been wilfully deserted by the men chosen to guide her, and that whatever chance she had of seeing Yoshitsune's face again depended entirely on her own efforts. No other thought could have nerved her to venture forth into the mountain solitudes, for her wounded feet and weary limbs made it well-nigh hopeless that she should achieve the descent without aid. Twice indeed she turned on her way, thinking to creep back to the shrine before her strength utterly failed and lie down there to die in peace, but life is dear under any aspect to those that are still upon its threshold. Slowly, and sometimes with scarcely sufferable pain, she followed the rugged path, her eyes dazzled by the unchanging glare of the snow or dimmed by tears that welled up ever and anon despite her utmost efforts to restrain them, until at last as the gloaming was changing to darkness, she discovered a light in the valley before her and heard the chiming of pilgrims' bells in the distance.

It had been a festival day at the fane of Gongen, and the inhabitants of the mountain village were now assembled in the courtyard of the shrine to see the devotees dance by torchlight. Shidzuka would fain have avoided all this crowd and turmoil, but now that the dread of death was past, her strength had completely deserted her, and she knew that unless she found speedy rest and shelter it would be impossible for her to hold out any longer. Fortunately, however, the peoples' attention was for the moment entirely engrossed by the dancing, which had just commenced, so that Shidzuka was enabled to creep round the outskirts of the crowd and reach the back of the fane unobserved. Here she lay down until the silence told her that the pilgrims and their peasant observers had dispersed, and then once more stealing forth, she mounted the steps of the shrine, thinking to invoke the protection of the god before she sought the hospitality of the cenobites. Her prayer, however, lasted longer than she had proposed, for when she found herself standing with clasped hands before the fane, she forgot everything but her loneliness and with many and oft repeated supplications, besought heaven to shorten her separation from the man she loved.

Just then a party of cenobites passed through the courtyard on their way to the village, and seeing Shidzuka as she knelt upon the steps, the moonbeams lighting up her lovely face, they stopped in astonished contemplation of her beauty. It needed no second scrutiny to tell them that she had nothing in common with the peasant girls who so often came to lay the burthen of their little sorrows at Gongen's feet, or purchase amulets against illness and inconstancy. For all her travel-stained garb and unattended state, she was evidently a worshipper such as seldom visited the cloisters of Yoshino, and the friars, marvelling at her comeliness, knew not whether to wonder more at the girl herself, or at the strange circumstances of her coming.

Shidzuka, meanwhile, was too much absorbed in the memories her prayer had awakened to take any heed of what was going on around, and it was not till she turned to descend the steps that she became conscious of the cenobites' presence. Not knowing how much of her thoughts she might have betrayed by word or gesture, and shrinking from the curious looks of which she was the object, she drew her hood across her face and would fain have turned back by the way she had come, so fearful was she of affording some clue to Yoshitsune's retreat, when the eldest of the friars, stepping forward, prevented her from accomplishing her purpose. He had no desire, he said courteously, to seem inquisitive, but neither he nor his companions had failed to remark the fervour of her prayer, and since it was part of their sacred office to give what help they might to all faithful worshippers, they had not chosen to pass without teaching her how certainly to enlist the sympathy of the god whose shrine they tended.

Shidzuka looked half timidly, half wonderingly, into the speaker's grave face, but reading there only a benevolent purpose, bowed her head in acknowledgment of his kindly interest. "You do not perhaps know," the friar resumed, "that this fane was founded by men who desired that its divinity should be propitiated not merely by incense or litanies, but also by the exhibition of some of those accomplishments in which they had themselves learned to excel, as for example, music, dancing and poetry. No prayer unsupported by one or other of these adjuncts can hope to meet with a favourable response here, while on the contrary, petitions thus supplemented, have seldom, if ever, been unsuccessful. Other fanes there are indeed, where a hundred vigils or a thousand pilgrimages are sufficient to merit mercy, but here it is not so. The place has been consecrated under certain conditions, and he that fails to comply with them need not look for the aid of our deity."

"Alas! Sir, if that be so," said Shidzuka sadly, "I fear that such as I have little to expect, being, as I am, but a country girl and possessed of no skill in any of the arts you mention."

"Nay, child," the priest replied, "such comeliness can scarcely have been left entirely without those graces so easily accessible by a little training and a slight effort. It is a small matter to us, in truth, yet were it better for your own sake and the sake of those you love, that you had never raised your hands to this altar than that you should mock the gods by asking of them so much more than you are willing yourself to give."

Too weary and heart-sick to offer any further objection, and feeling that it was least of all things likely she should be recognized by any of the spectators, Shidzuka prepared at once to follow the friar's suggestion. She remembered too, that it was when dancing before the shrine of Kumano she had first attracted Yoshitsune's attention, and it seemed a not unfitting thing to commemorate her parting with him in a similar fashion. Thus though her eyes were blinded by tears and her tired limbs might scarcely adapt themselves to the conventional postures, she essayed to recall something of the art in which she had once so signally excelled, chaunting the while a few simple lines, spoken rather by her heart than by her lips. Much as the music of her motions must have been marred by exhaustion and pain, she was still the fairest and most graceful being that had ever entered these mountain-cloisters or been imagined by their inmates, and at the conclusion of the dance the cenobites greeted her performance with an applause that sounded in her ears like a mocking echo of happier days.

It was the last effort of which her strength was capable, and even while these approving voices were at their loudest, she sank down at the foot of the steps insensible. The friars raised her gently, and then for the first time observing her wounded feet and the traces of bitter suffering in her face, carried her in to the abbot's house, and tended her with all care and patience. They were no longer in any doubt as to her identity, for the abbot at once recognized the girl whose beauty and grace had been the common theme of remark at Kiyoto in the spring when the gods themselves acknowledged her charms by granting the much needed rain at her request. Shidzuka could not indeed have chosen a more unfortunate asylum, for the temple's most puissant patron had been the very baron who led the thirty galleys against Yoshitsune's stranded vessels and lost his own life in the unsuccessful attack. So soon therefore as it became known that the Minamoto Chief's well-beloved wife had wandered to the fane

unattended and wayworn, not only was Yoshitsune's presence in the neighbourhood immediately divined, but also the scanty nature of his following made apparent, else surely he had not left Shidzuka to roam alone among the mountains at such a season.

It may well be supposed that under any other circumstances the friars, so far from courting a contest with such an enemy, would have sacrificed a good deal to avoid it, but since they could muster fully three hundred stout soldiers while they did not give Yoshitsune credit for a tithe of that number, and since the patron their shrine had lost would be replaced a thousand-fold could they but carry the proscribed man's head to Yoritomo at Kamakura, they determined unanimously to make the attempt without delay.

Not indeed quite unanimously, for the abbot did everything in his power to dissuade them from their attempt. He pointed out to them that Yoshitsune was neither their enemy nor the enemy of Japan. That his whole fault consisted in having incurred the jealousy of a despotic nobleman, and that instead of fostering a feud so unnatural and unjust, it ought to be their aim as peaceful friars to aid him in his never to be too much lauded flight. But the cenobites were not to be turned from their purpose by any such considerations. It was easy for them to persuade themselves that they were upholding the law since Yoritomo as Lord High Constable was chief of the executive in the Empire, and for the rest, when has not greed been more powerful than good?

But first it was essential to ascertain exactly where Yoshitsune was. These men knew their mountain passes sufficiently well to foresee that an uncertain quest was in all probability destined to be an unsuccessful one, and having the means of avoiding this embarrassment at hand, they resolved to utilize them forth with. Shidzuka should be questioned; gently if moderation sufficed, but if otherwise, with whatever severity the occasion demanded.

Here again the abbot vainly essayed to shield his gentle guest. Accustomed to see and sympathize with every form of grief, he had not failed to perceive that Shidzuka's exhaustion was the result of mental rather than of physical suffering, and while he knew from his fellows' mood that they would shrink from nothing which might compass their end, he felt equally assured that, child though she was, this fainting girl would die rather than betray her love. But his authority was again set at naught, and that so unceremoniously that fearing to find himself completely powerless at a time of even greater need, he was constrained to withdraw his opposition for the moment. What he might do, however, to prepare Shidzuka for her grievous trial by supplying her with food and afterwards warning her of the things that were on foot, he did not leave undone.

Foremost among the friars interested in the carriage of this affair was one Kakuhau, a man who stood a head and shoulders above all his fellows, and drew a bow that three ordinary soldiers could scarcely string. To him, by common consent, was entrusted the leading part in Shidzuka's examination, for while these holy friars were willing to postpone extreme measures in deference to the cloth they wore, they were not sorry to let their victim foresee from the first the consequences of obstinacy. She was therefore led in as a prisoner with her hands tied behind her back, but for the rest the solemn mien of her inquisitors and the preparations they had made to overawe her proved of no avail, for she never once raised her eyes nor seemed to take any note of what was in progress about her.

It cannot be that the cenobites were unmoved by the sight of her beauty and helplessness or that they were entirely without sympathy for her sufferings, but they had well chosen their leader. Completely beyond the reach of life's gentler influences, Kakuhau only saw in Shidzuka's pallid face and fragile frame a promise of speedy submission, and even though her plight had been doubly pitiful—if that indeed were possible—it had failed to waken any feeling of ruth in a heart that only vibrated to influences of brutality and lust.

He prefaced the inquiry by declaring that the friars' only object was to obtain Yoshitsune's departure from their vicinity. It was out of the question to suppose that he would be left unmolested, and they had no desire to see their cloisters converted into a fortress by either party. All they asked of Shidzuka was to let them know where her husband had taken refuge, that they might send him a message praying him to choose some other asylum, and warning him of their hostility in the event of refusal. If Shidzuka gave them the informa-

tion they desired, they pledged themselves to provide her with a safe escort to Kiyoto, but if she declined to do so, they were resolved to elicit it by any means in their power, since the sacrifice of her one life might be the means of preserving many others.

The import of this terrible threat was not to be mistaken, neither did it seem possible that one of Shidzuka's gentle nurture and tender years could for a moment brave the consequences of resistance. Those indeed who had seen her tearful supplication before the shrine of Gongen, and afterwards helped to carry her childlike form from the courtyard, deemed that Kakuhau had framed his question in terms needlessly severe. But they were soon undeceived. In a low voice, but yet without any symptom of perturbation, Shidzuka replied, that she had parted from her husband after the battle on the seashore and that of his subsequent movements she knew nothing. To this simple statement she added neither remonstrance nor entreaty, and when Kakuhau, rising from his place, took in his hand a heavy faggot of split bamboos that lay beside him, she only bowed her head on her bosom, and gave one broken sob, such as that which the memory of pain wrings from the lips of a weary child.

Resting the cruel weapon on his shoulder, the friar advanced to her side and sternly repeated his question, but Shidzuka made no answer, and in that interval of anxious silence many a stout man turned away his face from the horror that was about to be perpetrated. Those who had strength to look said afterwards, that the girl seemed like one in a trance, and that from first to last the merciless strokes Kakuhau dealt her, elicited no evidence of suffering nor indeed produced any effect other than the mere mechanical result of their weight and force. Between each blow the same inquiry was repeated, and to the surprise of all the abbot himself coming forward, applauded Kakuhau's zeal and urged Shidzuka to confess. For a moment it appeared as though the loss of this her only friend was more than the unhappy girl could endure. She raised her eyes to the old man's face with a glance of piteous despair and her lips moved slightly, but neither word nor wail was audible. Immediately afterwards she fell into her former attitude, her head drooping more and more upon her bosom, until at last as the bamboos descended heavily on her shoulders, she sank quietly to the ground in happy unconsciousness of her misery.

The friars were disappointed but not discouraged. Many of them indeed would have been content to proceed no further with the examination, but Kakuhau had a hundred other expedients to propose. Shidzuka had borne herself staunchly enough up to the present, he said, but when she recovered from her fainting fit they would probably find her in a very different mood. Moreover, whatever it cost to elicit a confession, they must remember that nothing but a successful result could justify the measures they were adopting, and consequently to stop short would be at once unwise and inexpedient. All this the abbot endorsed, offering himself to supply medicaments which would speedily restore Shidzuka to consciousness. He had been averse to the inquiry at first, but now that it was irrevocably commenced, he declared himself as much concerned as any in the issue, for it would be a grievous thing if they gave men cause to say that they had tortured a helpless woman to no purpose.

This action of their chiefs was not inconsistent with his previous conduct, and the cenobites were by no means sorry to have the sanction of his authority for what they had undertaken. Once more, then, Shidzuka was entrusted to his care, but this time with a very different result, for the kind-hearted old man was now resolved at all hazards to save her from her persecutors. From the commencement of the examination he had pursued a preconceived plan and no sooner did he succeed in persuading the cenobites to leave Shidzuka in his charge, than he caused her to be placed in a litter and carried to the house of a trusty friend in the village.

Meanwhile the friars, at Kakuhau's instigation, were preparing some more effectual means of extracting a confession. They were determined that their second attempt should be of such a nature as to preclude the possibility of failure, for they were impatient of delay, which might be the means of baulking their designs altogether. If their disappointment then was extreme on receiving the abbot's report that his patient had fallen into a second swoon from which all his skill was ineffectual to restore her, they were equally rejoiced at the false news that in her brief interval of consciousness she had furnished the desired information. Yoshitsune was hiding

in the Valley of Chiuiu, and his whole force only amounted to a score and a half of men.

Then followed a noisy discussion in which a multitude of strange schemes were proposed and considered by these tyro warriors. Should the assault be delivered at one point by their total force, or would it be more expedient to enter the valley from either end simultaneously, so as to prevent all chance of the enemy's escape? Some were for a night attack, others opposed to it, and a few advised that they should content themselves with observing the approaches to the valley until more experienced guidance could be obtained. The abbot, whose conduct during Shidzuka's examination had won him considerable favour, did not directly approve or oppose anything, but by a few skillful suggestions succeeded in preventing unanimity of counsel, so that the dawn of day found them still undecided.

Kakuhian, who saw that this hesitation might easily end in a total abandonment of the enterprise, now put a period to the discussion by causing an alarm to be rung on the great bell of the temple and ordering the friars to arm themselves forthwith. He counted on arousing some enthusiastic impulse sufficient to dispel his comrades' vacillation, and his device was successful, for so many of the cenobites obeyed his summons that even without the concurrence of the rest he felt himself strong enough to commence the attack at once.

Now when the abbot said that Yoshitsune was lying concealed in the valley of Chiuiu, he had spoken with just so much calculation as was needed to make his statement plausible. He had of course no certain knowledge of the Genji chief's retreat, but of all places among the neighbouring mountains, none was more likely to have been chosen by the fugitives than this, while at the same time none was more difficult of access.

And it fell out strangely enough that the old man's conjecture was right. Yoshitsune had resolved, if possible, to remain among the mountains until the army sent against him from Kamakura should have reached Kiyoto, when he proposed to attempt a retreat to Oshiu by the routes over which his enemies had just passed. Benkei, whose boyhood had been passed among these hills, knew every copse and dell for miles round, and at his suggestion the Valley of Chiuiu had been selected; most wisely too as it seemed, for while a little fane buried deep in the forest afforded a retreat on whose one approach the dead leaves and ice spikelets rested well nigh undisturbed by pilgrim's foot from autumn to spring, the defile leading from the crest of the hill to the village below was of such a nature that it could be at once easily observed and successfully defended by a very small force.

On the evening of the day that followed his parting with Shidzuka Yoshitsune had reached this fane, and at daybreak the next morning, he and his knights were roused from their slumbers by the clanging of the alarm bell in the cloisters of Yoshino. The deep notes came booming through the still frosty air with such distinctness that at their first sound everyone was on foot, and long before the friars had begun to buckle on their harness, the men they meant to surprise were holding quiet council at the head of the defile that overlooked the village. There was no mistaking the import of this signal. Some hostile movement was certainly in progress, but who were their assailants and what was to be the fashion of the assault? Without a knowledge of these things they might not determine whether to attempt a retreat or await the worst where they stood, while at the same time no feasible method of procuring intelligence suggested itself.

It was truly a momentous decision they were called on to make, since its issue was nothing less than life or death. For such men as these the nature of the fight or the odds they were destined to encounter were matters of very secondary moment, but none the less did their martial habits constrain them to consider all the contingencies of the combat. Now the position they had chosen—or rather which they were obliged to occupy, since it was the only point of vantage in the valley—although admirably suited to oppose an advance from the direction of Yoshino, was at the same time commanded by the hills on either side, so that a skillful enemy, provided his numbers sufficed, might annihilate the defenders of the plateau by a easy combination of front and flank attack. To fall into such a trap as this would ill beseeem these veteran campaigners, while on the other hand, should their foes find them anywhere else in the defile, they could only hope to make the very briefest resistance. How then

was their resolve to be guided or who might accept its responsibility?

Yoshitsune himself had already made his election. Nothing remained to him now in the world but the approval of brave men, and this thought forbade him to preface his death by flight. Before announcing this determination, however, he looked round his little band of followers, careful not to anticipate any expression of their desire, and then he saw that Benkei had laid aside his greaves and girt up his loins like one preparing for a journey.

Since his departure from Kiyoto the glavesman had not shaved his head or beard, so that his huge face was surrounded by a forest of black bristles, and these contrasted with a red kerchief knotted round his brows, gave him an appearance of almost appalling ferocity. It was his fancy, also, to wear armour with black points, and over this he had now thrown a bearskin cloak looped up to his girdle on the left side, so as to leave the hilt of his sword unimpeded: a sword that measured more than four feet from point to rivet, and in Benkei's hands could bite its way through casque and cranium as easily as a mattock can divide a bean-stalk.

"Tis many a day, master," he said, "since I last visited the village of Yoshino, and I would fain find out who these varlets are that have set the cloister bell ringing. With your good leave therefore I will e'en become a spy for the nonce, and if you will bide my coming here a little space, I doubt not I shall bring you the intelligence we need."

"But you do not surely propose to go down to the village and into the midst of our enemies alone, Benkei?" asked Yoshitsune in amazement.

"That do I, master," replied the glavesman stoutly, "and if any in the village remember my face, I warrant you he will not bar my path. As for the friars, if it be they indeed who are causing this disturbance, I think I can unravel their purpose without much peril, unless they are governed by shrewder counsels than they were fifteen years ago."

"And what if by awaiting your return, Benkei, we should forfeit our opportunity of escape?" Yoshitsune suggested, for while secretly approving and admiring the other's brave purpose, he could not consent to let his old comrade incur such an apparently hopeless risk.

"Nay, master, twere scarcely fair to make me bear that burthen," Benkei laughingly remonstrated. "Whether I go or stay, you are not likely, I ween, to turn your back on yonder knaves, and the worst injury I can do you is to be before hand, perchance, in the tussle."

"And to separate me, perchance, from one I had hoped to have beside me at the last: one whom I can least of all afford to part with now."

"Sir," the glavesman said, coming forward and kneeling before Yoshitsune, "Should you not see me again before the sun has passed the pine tops, you may know that I am waiting for you on the road to the Happy Mountains, but unless I am much mistaken the Gods have not willed that we should part yet."

So saying he sprang to his feet, and using the handle of his long glaive as a staff, strode off down the mountain side, scattering the snow like withered leaves from his path.

(To be continued.)

## LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship: flag R. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag F. (white ball on red ground) all commercial colts, with the vessel's national flag below as soon as it can be made out.

## DOUBLE ACROSTIC.

When earthquake shock and typhoon blast  
Are o'er, and all their terrors past,  
'Tis then thy worst defects I scan  
And wish I'd called some better man.

1.

Much of the money that just now I've got  
Has never been near the melting pot

2.

It is not hexagonal : not certainly less,  
And not a felicitous word to guess.

3.

Bright flash of plumage darting swift along,  
With chirp or whistle, but not quite a song,

4.

An epithet by Shakespeare well applied,  
Old age is merciless to beauty's pride.

5.

You hurt me with your bitterness of speech.  
With much less pungency you'd better teach.

6.

If you possess this, you may solve my riddle.  
You have it also if you play the fiddle.

7.

What is the preacher who those truths makes plain,  
Whose hidden meaning I had sought in vain?

8.

Read, mark, learn, ponder, inwardly digest :—  
All in two words are happily expressed.

9.

To these my couplets, it applies not quite,  
If they were otherwise, perhaps it might.

QUAM.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, APRIL 2ND, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

-----represents velocity of wind

.....percentage of humidity

Max. velocity of wind 22 miles per hour on Monday, at 8 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.350 inches on Thursday at 10 p.m.—and the lowest was 29.783 inches on Sunday at 2 p.m. The first half of the week was characterized by a low barometer, but during the remainder it was steadily high. A considerable rise in the temperature also took place during the latter part of the week. The total amount of rain-fall was 1.472 inches.

Daitong ... .. per picul	\$4.00 to \$4.40
Japan Rice ... ..	\$2.70 to \$2.90
Kerosene Oil ... ..	\$1.60
Newchwang Peas ... ..	\$2.20

## EXPORTS.

**SILK.**—Very little business was done in Silk for the first part of the week under review; during the past few days, however, there has been rather more activity and altogether about 300 shipping bales have changed hands. Buying is only confined to a few firms, however, one house alone has transacted about half the business reported.

Prices in some cases about \$10 per picul lower than last week, but the business done has been so irregular that it is difficult to estimate them exactly.

Total Export to date 16,927 bales against 17,522 bales at the corresponding period last season.

## RAILWAY EXTENSION.

A SHORT time since\* we shewed from the returns published by the Imperial Railway Department that the short lines now open for traffic in Japan are giving a very handsome revenue as compared with railways in most other countries : in fact, that, with the exception of the lines in Great Britain and Ireland, no equally favourable gross earnings are to be found in any country under British rule. This is in itself a very strong argument for the extension of railway communication in this empire, because it proves that the traffic necessary to make a line remunerative exists, and that the people of the country avail themselves with avidity of the advantages afforded by an expeditious, certain, cheap and safe method of travelling and conveying merchandize from one locality to another. If, however, any further arguments are necessary in order to impress upon the authorities the necessity which exists under the circumstances of the country for increasing the means of internal communication, the memorial presented by the Osaka Chamber of Commerce to the Government on the subject of treaty revision, will be found to supply them in abundance. In the document referred to, which is a remarkably clear, moderate, and well considered statement of the views of the Chamber upon the many vital questions affecting the future prosperity of the commercial interests of Japan, it will be found that facilities of communication in the interior of the country occupy, as they undoubtedly deserve, a very prominent place. We feel sure that we cannot do better than quote at length the views of the native merchants of the commercial capital

of Japan upon this subject. Their memorial states :—"The greater the exports (of Japan) the greater will be the imports, and the increase of exports is accordingly the only hope we have for a prosperous trade in future. The most important step to be taken towards developing trade is the opening of facilities for communication with the interior. Japan is naturally a mountainous country, and the principal object kept in view in road-making during the time of the feudal system was to lead the roads over as difficult a country as possible, in order that they might afford numerous places easy of defence in time of war. So far indeed was this principle carried, that the highways in a flat country were purposely made winding. This plan was uniformly followed for over five hundred years, or until the abolition of the feudal system in 1871 and the formation of the provinces into prefectures. Since then, several of the principal roads have been improved, but the time has been so short and funds so scarce, that nothing of much consequence has yet been done. Now, unless easy communication with the interior is provided, the expense of transporting all produce is materially increased, and this is especially noticeable in the case of bulky articles such as raw silk, tea, &c. It is evident, therefore, that this want of communication exercises a very serious effect upon the development of our industries and thus checks the increase of foreign trade. To give one instance of the prejudicial result of this want of proper roads, we may mention the vast quantities of tea growing wild in the mountains of Shikoku, Kinaihu, &c. As the roads (or rather tracks), are only accessible for men and pack-horses, the produce can only be obtained at an enormous expense for transit which leaves no profit, and all this vast quantity of tea is therefore allowed to go to waste. It must also be evident that when an article produced spontaneously, without care or cultivation, cannot be utilised, it is ridiculous to talk of expending capital in establishing industries which would be subject to the same drawback. It seems to us questionable if the government is not to some extent to blame for not devoting more of the public revenue to the improvement of the country roads. The same state of things exists in the silk producing districts—except perhaps Kodzuke and Shimotsuke—they are all crying out for better means of communication and complaining of the high price of carriage. The exports of Japan are almost entirely natural products, but few of them being the result of manufacture. Natural products are almost always bulky and when, as here, a very high price has to be paid for carriage, the profit of the native producer is lessened and the price to the foreign purchaser materially increased. This want of good roads also affects imports. About seven or eight-tenths of the articles now imported are intended for the lower class who principally reside in remote places. The difficulties of transit from the port to the consumer increases the price and lessens the consumption. It is therefore apparent, that if good means of communication were provided, the price of imports and exports would de-

\* Japan Weekly Mail, April 3rd, 1880.

crease and both natives and foreigners derive a great benefit. This is especially the case with imported goods. Their beauty, utility and comfort, already recommend them to the people, and if the price was only reduced, an enormous increase in the consumption would inevitably follow."

The Chamber's allusion to the roads in this country, coupled with a slight experience of them, is sufficient to recall the descriptions given of the roads, or rather tracks in England up to the close of the last century before the time when Macadam, Rennie and Telford revolutionized the land traffic of the country, and made possible the enormous expansion of the commercial interests of the British Empire. Then, as now in Japan, pack-horses were almost entirely used for the conveyance of merchandize; the whole of the cloth brought to Leeds market came on mens' and horses' backs. Coals were in like manner carried from the pits on horseback, the stated weight of a "horse-pack" being eighteen stone. In the rural districts of Yorkshire manure was also carried a-field on horses' backs, and sometimes on women's backs, while the men sat at home knitting. We are informed that pack-horses only ceased to travel about the year 1794. In Scotland matters were no better. "Nothing" says the author of "Rural Recollections," in an interesting memoir, "can be a greater contrast with the roads of modern times. In some places where there was a space for taking room, it was not spared. There might be seen four or five or more tracks, all collateral to one another, as each in its turn had to be abandoned and another chosen and all at last equally impassible. In wet weather they became mere sloughs, in which the carts or carriages had to slumber through in a half swimming state, whilst in time of drought it was a continued jolting out of one hole into another." It is evident, therefore, that our grandfathers had little to boast of in the way of facilities for communication, and it is little to be wondered at that the resources and capabilities of the country slumbered until the enchanter's wand—the genius of the early engineers—instilled life, hope, activity, into the commercial heart of the nation. Similar results, if not to so great an extent, may be reasonably expected to be repeated in this Empire. Circumstances, however, render a different course of procedure necessary. No object is now to be gained by the construction of a road where a line of railway might just as well be laid. The initial expense is not so much as may at first be thought; the cost of maintenance is infinitely less, and the encouragement to commerce beyond all comparison. The great bugbear in the case of railways has generally been the expense which it is supposed they entail; and too frequently this outlay has been assumed as inevitable, without taking into consideration any of the exceptional circumstances of the particular case under notice. For instance, the cost of land and the enormous sums given to proprietors as compensation for severance, &c., parliamentary expenses for getting acts passed, and the insane competition between rival companies to obtain legislative sanction for the construction of their lines, were all important factors in running up the average cost of English railways to the startling sum of £39,000 per mile. The experience of late years has shewn that these figures afford no guide to similar undertakings in other countries and under different conditions. Here in Japan, for example, there would be no vast sums to pay for land or parliamentary expenses. High speed, always a cause of increased cost, is wholly unnecessary. It is evident, from the memorial of the Osaka Chamber, that the prime necessity here is to go at all, and it should always be borne in mind that, both in first cost and in maintenance, expenditure is indispensable if speed be demanded. The

example of America in this particular should be followed rather than that of Great Britain, and we believe that an adoption of the system pursued in the United States will be found the best solution of the difficulty of establishing a satisfactory means of communication between the different districts of this country. We notice in the *Philadelphia Press* a striking instance of what may be accomplished in railway enterprise by a judicious employment of the resources at disposal to the end desired. A narrow-gauge road is being built from Bloomington to the Elkgarden coal region for the purpose of opening up the bituminous coal-fields in that locality, and the whole cost of the line, including rolling stock, will not exceed £1,700 per mile. It is very probable that in the case of this line there exist some exceptionally favourable conditions, but still it shews at how low a cost a railway can now be constructed, as compared with the expenditure thought imperatively necessary a few years since. Japan, we consider, enjoys considerable advantages in the matter of railway construction, labour is abundant, cheap and reliable, sleepers can be obtained in any quantity and at fair prices, ballast is almost everywhere at hand, and there really appears to be no reason why a judicious expenditure, carried over comparatively few years, should not relieve the country from that want of internal communication which has proved so great an obstacle to its increased prosperity.

#### THE FOREIGN TRADE OF CHINA.\*

IN a bulky volume the reports of foreign inspectors of Chinese Customs are here collated from all the Treaty Ports with the exception of Tientsin. In view of the amount of information given and the number of statistics to be consulted, connected, and compared, it is not surprising that no general report on the trade of the whole empire for the period, details of which are here reviewed, has yet been published. But in the special tables, which are first encountered in the compilation before us, there is much of considerable interest.

The approximate value of the entire foreign commerce of China in 1865 was estimated at one hundred and ten million Haikwan taels. In 1878 it was one hundred and thirty-eight million. The largest annual amount was in 1872, reaching one hundred and forty-three million. Of the total imports,—more than seventy million,—in 1878, sixty-five million's worth was from British possessions. From North and South America they were Tls. 2,848,712: from the whole continent of Europe, Russia excepted, they only amounted to Tls. 826,128. Russian Manchuria supplied Tls. 148,626: Japan, Tls. 4,050,558; and less than a million taels worth of produce was brought from the Philippines, Cochin China, Siam, Java and Suez. Of sixty-seven million taels of exports, forty-six went to Great Britain or her possessions: six and a half million to North and South America, eight and a half million to the continent of Europe, exclusive of Russia, to which country and Siberia three million's worth went by way of Kiakhta. Japan received to the value of Tls. 1,682,718; and the Philippines and other countries Tls. 1,084,056. These figures will show how enormously preponderant British trade and interests are in China. In other words, English possessions supply the inhabitants of China with 88.74 per cent of their imports: take 68.51 per cent of their exports; and participate in the total foreign trade to the

\* Imperial Maritime Customs. 1.—Statistical series: No. 4. Reports on trade at the Treaty Ports, for the year 1878. Published by order of the Inspector General of Customs.

extent of 79.06 per cent. Again, of 2,070 vessels inward in 1878, 1,534 were British: of 2,016 outward 1,543 belonged to the same nationality. Of the coast trade the percentage carried under the British flag varied between 37.29 per cent in 1873 and 45.26 per cent in 1878. Two curious statistical facts are, the decline of the American and the almost corresponding rise of the Chinese carrying trade on the coast. The percentages for six years are as follows. American:—1873, 52.76; 1872, 45.02; 1875, 34.49; 1876, 33.64; 1877, 5.80; 1878, 2.75. Chinese:—1873, 3.20; 1874, 8.15; 1875, 12.02; 1876, 42.86; 1878, 44.51. German vessels carried about five and a half per cent: French 0.89. Thus it may be said that at the present day England and China almost divide the coast trade of the empire between them.

The port where the most extensive foreign trade is done is of course Shanghai. Transactions there in 1878, were of the value of Tls. 47,883,945. This shows a decline of two million from the previous year and of twelve million from 1876. The foreign trade of Pakhoi, for which, notwithstanding, the Assistant Commissioner in charge, Mr. Piry, foretells a prosperous future, was nil. In 1877, when it was first opened, it only realized Tls. 11,714. As regards other places opened at or about the same period, the commerce of Wenchow has slightly retrograded, while that of Ichang, on the Yang-tse-kiang, and of Wuhu and Kiung-chow, has slightly developed. Tientsin, Hankow, and Canton have each a business of upwards of twenty million: Kinkiang, Chinkiang, Ningpo, Foochow, and Swatow, respectively, more than ten million: Chefoo and Amoy rather less; while Tamsui and Takow are represented by Tls. 8,048,351 and Tls. 2,493,883 respectively.

Coming to the table of percentages borne by the chief classes of imports to the total value of imports, we find in 1878, opium 45.57, a marked increase from 1869, when it was 36.80. In the same interval, other imports, with the exception of metals and sundries, had fallen off. In the twelve months of 1878, cotton goods were 22.87 per cent of the whole importation: in 1869, they were 33.65. Woollens 0.89 in 1878: 8.72 in 1869. The net opium trade stands, in piculs, for three years, as follows:—1878, 72,424; 1877, 70,179; 1876, 69,851. Malwa is the principal source of supply, though it appears to be ceding something to both Patna and Benares, the import from which centres is increasing while that from the first named place is declining. The local consumption of the drug is greatest at Shanghai which consumed 14,735 piculs. Chinkiang follows closely with nearly eleven thousand, and Amoy with nine and a-half thousand piculs. The import into Canton was only 771 piculs, an increase certainly over the transactions of the previous year, but a quantity small in comparison with that passed through the customs in other ports, as—for instance Tamsui and Takao in Formosa,—when the population of the different places is taken into consideration. We shall probably have occasion to refer to the peculiar circumstances of Canton in this respect, when we come to consider the literary portion of the reports before us. At present we can only deal with the statistical records, and that, we fear, but imperfectly. We trust, however, that the subject is not without interest for many of our readers. From 1864, when the import was only fifty-two thousand piculs, to 1878, when, as we have above seen, it had reached a total of seventy-two thousand, the augmentation has been almost steady. Prices, however, have fluctuated within wide limits. Malwa, for instance, which brought Shanghai Tls. 500 (the lowest figure) in January 1878,

was quoted at 635 (highest) in July. As for the native opium exported from Hankow, the business, though varying much in different years, has, on the whole, augmented. In 1868 it was only 110 piculs: in 1876 it was 1,696; and in 1878, 880. Under any circumstances it is not important, at any rate as compared with the import of the drug, the value of which we think we are within the mark in estimating at not less than forty million of dollars annually.

The value of cotton goods, including yarn and thread, imported in 1878, was twenty million dollars, of which amount, as far as can be ascertained, Tls. 2,263,662 were paid for American fabrics, showing a considerable advance in favor of those articles from the previous year, when sales to the amount of only Tls. 1,601,076 were reported. Of woollen stuffs, principally British, including woollen and cotton mixtures, the value was Tls. 5,299,851. Metals arrived to the extent of Tls. 4,178,876.

The amount of rice received at Tientsin from the treaty ports and Hongkong was considerable in 1878, being estimated to be worth Tls. 5,906,518. In previous years the figures stood thus:—1877, Tls. 7,975,661; 1876, Tls. 2,128,809; 1875, Tls. 1,481,821. The import of foreign rice at Foochow, Amoy, and Swatow was, during three years, in piculs:—1876, 568,093; 1877, 1,048,859; 1878, 223,101. During the same periods, the native rice brought to the principal receiving ports was 8,196,721; 8,286,863; 8,994,495. The import trade in coal has augmented from 113,430 tons in 1867 to 203,746 in 1878.

In exports the percentages of value were, in 1878:—Tea, 47.06; Silk, 37.40; Sugar, 2.78; Sundries (chiefly *Cassia lignia*, matting, China-ware, paper and crackers) 12.16. The last class has increased in value. Tea shows a decline from the average of former years. In 1867-70 it was 54.57. England is, of course, China's best customer for the leaf. Of 227 millions of pounds, the average yearly export during eleven years, Great Britain took nearly 138: Australia and Hongkong between them 28: United States about 81½: Russia and Siberia, via Kiakhta, 19; and other countries 10½. The average value of this entire trade may be estimated at from thirty-three to thirty-five million taels annually. That of silk for 1878 was twenty-five millions: in 1876 it was thirty-five million. Of a total 50,490 piculs expedited from Shanghai, 16,502 went to England; 23,195 to France; 5,823 to America, and the remainder to other countries. If we include the amount sent to Hongkong from Canton, we shall find that England, in this staple again, has the largest dealings.

Of 1,897,578 piculs of sugar sent from the principal ports only 532,494 "went to foreign countries and Hongkong," the remainder being shipped to Chinese ports. Ningpo straw hats are now a considerable item in the outward trade; and if the demand continues there will be a head-gear of this description to every male in Europe and America. In 1873 only 1,214,043 pieces were exported: in 1878 the figure had reached 11,938,646, of which more than eight and a half million went to Great Britain and nearly three million to the United States. Curiously enough Japan, who in the first mentioned year took 65,863, continued to receive the hats in much diminished numbers in following years, thus:—114; 280; 130; 404; and 485.

Passing over other interesting information on exports we come in these exhaustive tables to statements of transit trade and revenue. The transit dues collected in 1878 were Tls. 273,102, on a value of Tls. 11,119,532, a sum in excess of that of the previous year but less than that of

1872. British percentage of interest in this is 61.89: American 11.39: German 1.09: French 0.10: Spanish 2.42: Swedish 0.11: Russian 5.16: Chinese 17.84. The proportion of percentage paid to the revenue by the powers named is of course in much the same proportion. Of Tls. 7,697,586, contributed by import and export duties and tonnage dues, British subjects pay the handsome amount of Tls. 6,240,863, not a bad average even in the total collection of Customs revenue, which is derived from coast trade and transit dues, as well as from the sources above-named.

#### SANSKRIT VESTIGES IN JAPAN.

**A**LTHOUGH it is not yet established that the much found long lost ten tribes of Israel did wander as far as Japan, and there made their home, yet an authentic discovery of scarcely, if any, less interest has lately been made by Orientalists. Search instituted under the auspices of Professor H. H. Wilson, nearly twenty years ago, for Sanskrit texts in the enormous masses of old literature stored in Buddhist monasteries and temples in China having proved practically fruitless,—though the missing scrolls had left evident traces in translations,—the investigation has extended to Japan. One result has been already attained, and it is much to be desired that the attention of priests and recluses in the religious institutions of this country should be directed to an interesting object of research. An article in the *Times* runs as follows:—

Japan has had many surprises in store for us, but certainly none, it would seem, more astounding than the discovery of Sanskrit texts in its ancient libraries; and yet we are told that Sanskrit scholars had long been upon the alert, and had for years been making inquiries as to the whereabouts of these literary treasures that are now coming to light in Japan. Japan is Buddhist. Out of its 84,888,300 inhabitants, 100,000 only seem to belong to the old Shinto religion. The rest are all followers of Buddha, though divided into numerous sects. The heart of Buddhism beat in India, and it was from India that the life-blood of that religion flowed in all directions to the very extremities of the Asiatic continent. About the time when Nero was bent on exterminating Christianity in the West, the Emperor of China opened his vast empire to the religion of Buddha, and received its missionaries with open arms. From that time onward—i.e., from the middle of the first century of our era—India became the Holy Land of China. In spite of the difficulties, which even now seem insurmountable to our most adventurous travellers, ambassadors and pilgrims made their way from China to India undismayed by the dangers of the road, and they brought back to their native country, not only statues of Buddha and sacred relics, but thousands of Sanskrit MSS., which were translated into Chinese by the combined labours of Indian and Chinese scholars. Several of those Chinese pilgrims have left us accurate descriptions of their travels, and it was the translation into French by the late Stanislas Julien of the Travels of Hiouen-tsang (629-645 A. D.), published in 1853, which filled Sanskrit scholars with the conviction that some of the masses of MSS., which had been carried from India to China must still be in existence in the temples and monasteries of that country. It was chiefly due to the late Professor H. H. Wilson that a systematic search was instituted in China for the recovery of Sanskrit MSS. Sir John Bowring and Dr. Edkins did all in their power to carry out Professor Wilson's instructions. The whole correspondence on the subject is published in the "Journal of the Royal Asiatic Society," 1856. But, unfortunately, the result was *nil*. Though there was an enormous amount of Buddhist literature, translated from Sanskrit into Chinese, the Sanskrit MSS. seemed all to have vanished. Sanskrit scholars, however, were not disheartened. On the contrary, they turned their eyes from China to

Japan, as the last hiding place of those MSS. which, 1,800 years ago, had been carried away from India to China. Though Buddhism did not reach Japan direct from China, but from Corea, it was known that Buddhist priests came from Japan to study in China, and that several of them had been pupils of that very Hiouen-tsang whose travels in India, as translated by Stanislas Julien, had given the first impulse to the search for Sanskrit MSS. in China. Some years ago Dr. Edkins, the learned Chinese scholar, who had formerly assisted Professor Wilson, sent a small vocabulary printed in Japan to Professor Max Müller. It contained Sanskrit words, explained in Chinese, and transliterated in Japanese. This proved at one time or other Sanskrit had been studied in Japan. Another piece of good luck followed soon after. One of the greatest Buddhist communities in Japan sent a young Buddhist priest, Mr. Bunyiu Nanjio, to Professor Max Müller at Oxford, in order that he might learn Sanskrit and Pali, and thus be able to read the sacred writings of Buddha in the original. Professor Max Müller urged his pupil to make inquiries through his friends at home for Sanskrit MSS., and in December last a learned priest, Shuntai Tashikawa, sent the Professor a book containing one of the sacred texts of their religion in the original Sanskrit. The Sanskrit was written in the old Nepalese alphabet, each word transliterated with Japanese letters, and translated into Chinese. He requested Professor Max Müller to read the text, correct it, and send it back to Japan. Though the Sanskrit was written in a difficult alphabet and full of mistakes, Professor Max Müller was able to lay a correct copy, with translation and notes, before the members of the Royal Asiatic Society at their meeting on Monday. It turned out to be the hitherto unknown Sanskrit original of a Sutra, translated into Chinese 400 A. D., possibly 200 A. D., and contained a description of the Buddhist Paradise, which with the Northern Buddhists took the place of Buddha's Nirvana. It may be hoped that new treasures will be forthcoming from the same quarter. Anyhow, this one discovery has proved two important points—first, that the Chinese translations of Buddhist texts, when compared with their Sanskrit originals, are full of misunderstandings, sometimes affecting the very essence of Buddha's teaching; secondly, that the Buddhism of Japan, being chiefly founded on the Mahayana school, is on many points in direct opposition to the original teaching of Buddha, and that no greater boon could be conferred on the 80,000,000 of Buddhists in that country than to have the simple words of Buddha translated for them into Japanese direct from Sanskrit and Pali.

The above quoted article having attracted the notice of Orientalists, the following letter was addressed to the *Times*:—

Sir,—The interest of your article on the discovery of Sanskrit texts in Japan, read and corrected by Professor Max Müller, is enhanced by the fact that the first missionaries arrived in China, not about the time of Nero, but as early as B. C. 250, when "a number of 18 Buddhist emissaries reached China where they are held in remembrance to the present day, their images occupying a conspicuous place in every larger temple" (Eitel, "Buddhism," p. 20). A remarkable, though indirect confirmation of this fact has lately come to light. Professor Beal, author of "The Romantic History of Buddha," has last year published in p. 142 f. of his Chinese version of "The Dhammapadam, or Texts from Buddhist Canon" (Trübner's Oriental Series II.), Buddha's sermon on falsehood, which is alluded to by Asoka in the second Bairat rock inscription. This Indian King, who had become a Buddhist ("Tainism, or the Early Faith of Asoka," by Thomas) convoked the first Buddhist general council and established a Board for foreign missions, the Dharmamahamatra, in B. C. 250, and his son Mahinda, accompanied by monks, went to Ceylon. Asoka caused several of his edicts to be engraved in different Prakrit dialects on pillars or rocks, "whose wide distance from one another is sufficient to show the great extent of Asoka's empire" (Rhys David, "Buddhism.")

In one of these rock edicts, addressed to the Buddhist monks in council assembled, the King, who saw in Buddhism the safeguard of his dynasty, enumerates the

principal Buddhist records of what was "spoken by the blessed Buddha," and what he declares to regard "as authority." Among these then existing records is mentioned "the exhortations to Rahula regarding falsehood." Of this document nothing was known, till last year Professor Deal pointed out in one of his lectures that he had found and translated it "from the great body of books comprising the Chinese Buddhist Canon." These are indeed stones crying out, for they prove that in the middle of the third pre-Christian century, records existed of the sayings of Buddha, while the Chinese texts from the Buddhist Canon prove that one of these Buddhist Scriptures, to which an existing stone-cut edict refers, and which Asoka, the Constantine of Buddhism, solemnly declared to regard as authoritative, was preserved in China. It cannot be determined whether or not it had been introduced into China already by the first Buddhist missionaries in B. C. 250, in which year, according to Mr. Rhys David, the 18th year of his reign, the rock-cut edict had referred to this same Scripture.

Yours respectfully,

ERNEST DE BUNSEN.

IT is with great satisfaction that we greet the publication, by the German Asiatic Society, of an Index to the first ten volumes of their transactions (1873-1876). This index is very complete, containing all the terms occurring in the transactions, be they names of men, places or otherwise, with an indication of the page on which each is found, and it thus forms a most important addition to the valuable publications of the Society. We are pleased to see that the Japanese words occurring in the various articles, and there spelt in different ways, have in the index all been reduced to one uniform system of transliteration. The principle followed is in every respect satisfactory, being in fact the phonetic system found in the Second edition of Dr. Hepburn's dictionary, with one or two slight modifications, which consistency demanded. Thus in analogy to *cha, chi, cho, sha, shi, sho, shu*, the German Society writes *chu*,—not *chin*; *kuea* is rendered by *ka* from which in the Tokio pronunciation it cannot be distinguished; and *y* before *e* is dropped as superfluous, in such words as *Ebi, Echigo, Eta*. The publication shows that there is no lack of vitality within the Society, the work entailed in its compilation being of such a nature as would require the serious consideration and co-operation of several members. The Society should now go a step further, and take measures to have the system of transliteration, here adopted, followed out in all future contributions to its journal. We hope that the English sister Society will not overlook the importance of having a similar index drawn up for its transactions published to date.

CENTRAL ASIA, which should be a land of prosperity and fertility, is overburdened with the presence of armies which impoverish it. A writer in the North China *Daily News* shows that the country, already more than fully populated, is unable to bear the extra burden. It is held that "the feeling of exhaustion produced is at the foundation of the aggressive propensities of the Russian commanders" in those territories. This suggestion may have some truth in it. "General Kaufmann views with envy the rich countries surrounding the arid plains of Turkestan. Once in occupation he would have no more requisitions to make on an impoverished treasury, and would meet none of the repulses to which he had to submit from time to time from the Government at St. Petersburg. The latter in its way has been urging him onward; has been suggesting to him that he should make his wars self-supporting, and has never grumbled at any action of his so long as it did not entail further expenditure from the imperial treasury."

Now it is undeniable that the position of Russia amongst the tribes of Central Asia is one upheld merely by force of arms. There is no friendly feeling nor any desire to assimilate to Russian ways and Russian ideas on the part of the population. However benevolent may be the march of the Muscovite, it involves the maintenance of large armies of occupation, the harsh oppressiveness of military rule, and a sullen submission by the conquered. These latter neglect both industry and thrift in fear of being robbed of the results of either, and so have a measure of revenge upon their victors by rendering the fruits of their conquests not only unprofitable but costly.

THERE is not much to choose between Russia and China, in the ability of either to attract and assimilate subject nations: witness the modern history of Western and Eastern Turkestan. Each invasion has circumscribed the resources of the country; and the desert has encroached on grounds once fertile and supporting comparatively large populations. Of China's rule in the provinces subdued and held by her armies, it is well said that it was of a nature to desiccate the soil. As has been well remarked, there has been no attempt to civilise the people and unite them under one polity. On the contrary, tribe has been set against tribe, and each in turn was crushed when it seemed likely to be becoming too strong for the feeble foreign garrisons to control. If such a system of government has a tendency to keep a country in subjection so long as the different constituents in its population can be induced to waste their strength in internecine conflict, it has no tendency to promote good feeling on the part of any towards the ruling power; and Chinese government in Turkestan has proved no exception to the rule. The different tribes inhabiting the country could only say that, however much they hated each other, they hated their victor more. Hence the one point in common in the uprisings was that, whatever was the object of the rebellion, the alien troops were destroyed with perfect impartiality. Hence, likewise, in the recent reconquest of the Altai-Shahr, China has entered a land from which she can derive no strength for future conquests. In fine, those who are responsible for the military policy of the Middle Kingdom in the heart of Asia are now in presence of the harvest which their cruelty in aggression has sown. If their conquered subjects were well affected they could make a better stand than they now can against probable Russian inroads; "but the dislike of the populations to Chinese rule is so excessive, and the destruction of life and property has been so wholesale, that China hesitates to make use of the most obvious measures of reform in her administration, fearing that the inevitable recoil would result in a second extinction of her domination."

#### SPRING PASTIMES.

THERE is a natural tendency among many writers, in dealing with the history and character of a country and its people, to attempt broad generalisations, and to strive as it were, by razing the heights and filling up the depressions which impart to human nature its charm of variety, to reduce everything by sweeping assertions to a dead level of sameness and consistency. Nations are often dealt with in the same summary manner that is followed by the authors of school histories in passing verdict upon our kings, whom every school boy is led to suppose have been consistently good or bad. This peculiarity somewhat resembles that of the old novelists, preceding the more modern naturalistic romancers. They made their artificial heroes and heroines either paragons of spotless virtue or mere demons in disguise. Japan, like other countries, has received its full share of notice in this respect, and its people have been the butt of no small number of ungrounded statements and erring descriptions. The Empire of the Mikado has been the topic of a large

effusion of worthless literature, both of the kind which is purely sentimental and ignorant, and also of the sort which betrays a superficial acquaintance, biassed by prejudice and led astray by misunderstanding.

Various commentators, from the travelling diarist, to whom everything is fraught with the attractiveness of novelty, and whom good and bad alike pleases, to the most arrogant resident whose observation though extended is blinded by his own egotism and want of tact;—these and other writers have in their own manner described and dismissed a people whom they have but little understood. The stolid, indomitable endurance of the running coolie or the betto, or, may be, the close, careful labour of the artizan, content to spend long hours of care upon some delicate piece of minute workmanship that no modern European workman could approach, may in one case be sufficient to obtain for the native a reputation of thrifty industry and rigorous consecration to toil. To another visitor, whose daily observation shews him the outdoor resorts thronged at all times with gay holiday-makers of all ages; the native appears an idle, listless, pleasure-seeker. The fact, however, remains that human nature is nearly the same all the world over, and all people find alike that labour and amusement are both equally necessary to existence.

The toys and pleasures of children in Japan are strikingly similar to those of Europe; the chief point of distinction seeming to be, that here seasonable pastimes are consecrated and converted into festivals, and old and young unite in their observance. The spring-time which opens with the new year and is ushered in by the plum blossoms, has first its out-door games of battlelore and kite-flying; these pursuits giving way at length to other sports and pleasures.

Even dolls have their appointed season, the universal children's habit of enacting in fancy by the help of small dolls the events of daily life, having become converted into one of the chief festivals of spring-time. At the commencement of March, all the shops are gay with these pretty dressed images called *Hina*, which are sold for the yearly display it has been the fashion for all wealthy families to make on the third day of the month. Ancient writings, in explaining this custom, state how it was the habit of young girls among the nobles to act with little carved and clothed images the ceremonial receptions at the palace, at which fathers, brothers and lovers were present.

At the present time a lady's treasures are not complete without a valuable set of these doll-like images, representing the Emperor, Empress and courtiers in full dress. On the third of March each year these are spread out, with a fancy feast on miniature trays before them, whilst friends and relatives join in real festivities. The same day is the opening of another amusement, which lasts throughout the month and originated in the habit of putting shell fish upon the *Hina* in the fancy feast. This sport is the counterpart of the seaside paddling that western children so delight in at our own coast watering places. The beaches of Yedo bay, bared by the ebb of the tide, may be seen thronged with merry crowds of barefooted holiday makers with dress and sleeves tucked up, and cloth round the head to keep the precious hair from ruffling, scooping up the shell fish that lie hidden in the sand and mud. Further on, up the mouth of Sumida river, one can reach the famous cherry trees of Mukojima walk, with its avenue of trees with blossom clad-boughs meeting over the heads of happy promenaders. There is an almost religious duty attached to a yearly visit to these fashionable haunts, and the most pressing work must be laid aside once in a time to accomplish it. At the resorts may be seen alike the graceful gentlefolk with their pretty dresses and mincing ways; and the merry rowdy roisterers with their rough noisy fun. The outdoor pleasures of the spring-time followed by those of summer and autumn are now observed as they were of old, though perhaps with not quite the same heartiness and with a certain loss of color in the costume. But though the gentler recreations and seasonable amusements remain, the rougher and more manly games and sports of youth and manhood have passed away. The constant exercise with horse and sword and bow, which formed part of the daily training of the samurai youth, is a thing of the past. The ladies have, too, no longer those exercises, which by training them in self defence, relieved the monotony and obviated some of the evils of a comparatively recluse life.

The youth of to-day is a drudge to the passion for foreign learning, and his close literary studies, unrelieved by manly sports or recreation, are not seldom responsible for sickness

and premature death. Sports and exercises, which were once compulsory to the training of every samurai, have as yet no equivalent to replace them. The games and physical exercises of a nation have as much to do with the greatness of its men as have the industry of its students. What indeed would our universities be and what would the men, whose after success is their honour and glory be, without their cricket elevens and their boat crews? May it not be that, as Japan has forgotten them in her modern colleges, she has as yet instituted but one portion of the training that goes to rear up strong and intelligent men and patriots?

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

#### A QUOTATION.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR,—Can you inform me whether there is any good authority for the word "fields" in the quotation so often taken from the last line of "Lycidas"? In Dr. Mapon's edition of Milton's Poems and in the edition of the Clarendon Press edited by Mr. Browne, the poem ends with

"At last he rose, and twitch'd his mantle blue :  
"To-morrow to fresh woods, and pastures new."

Your's obediently,

STUDIOSUS.

Yokohama, 11th April, 1880.

[There is no good authority for the transposition of "fields" for "woods" in the quotation referred to by "Studiosus." The fact, however, seems to be, that a popular vitiation of the original, in this as in other instances, has displaced the correct version.—Ed. J. W. M.]

#### REUTER'S TELEGRAMS.

London, 14th April, 1880.

Lord Hartington, the Liberal candidate, has been elected by a large majority for north-east Lancashire. Liberal gain 108.

(From the *N. C. Daily Press*.)

London, April 5th.—It is reported that Chinese troops have crossed the Amoor River.

London, April 6th.—The Parliamentary Returns to the latest date give 261 Liberals to 157 Conservatives.

### The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

#### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 17TH, 1880.

JAPANESE ERA 2510, MEIJI 13TH YEAR, 4TH MONTH, 17TH DAY, DO-YO-BI.

#### NOTES OF THE WEEK.

On Tuesday last the P. & O. steamer *Sunla* arrived from Hongkong with the European Mails. The O. & O. steamer *Gaelic* came into port the same day and left for San Francisco, this morning at daylight. The M. M. steamer *Tanis* was despatched for Hongkong on Wednesday morning last.

The M. M. steamer *Tibre*, with the European Mails of the 7th of March, left Hongkong for this port on the 15th instant, at 11 a.m.

The O. & O. steamer *Belyic*, left San Francisco for this port on Saturday, the 10th instant, and may be expected here about the 1st of May.

The Ocean Steamship Company's steamer *Sintur*, left Singapore for Hongkong on the 2nd instant, and the *Glencoe* on the 31st of March.

The British barque *Parmenio*, Captain Abbott, has been on shore for a considerable time near San O Bay, East coast of Formosa, and has now become a total wreck.

The *W. H. Marcy* and *Sea King* have arrived in Kobe from Philadelphia with kerosene.

The U. S. frigate *Ticonderoga*, 11, Captain Cromwell, was to leave Hongkong for this port on the 5th instant. The *Ticonderoga* will also visit Looschoo and Corea.

The Marquis de Sayre has been appointed Minister from France at the Court of the Emperor of Japan.

The *Pioneer* states that the Burmese Envoy, who has been waiting at Thayetnyo for permission to pay his respects on behalf of his master to the Government of India, has proposed a draft of a treaty to which the Burmese Government is willing to become a party. It is added, however, that the terms of the draft do not recommend themselves to the Government, and that the envoy has got a hint to return whence he came. We do not know how much truth there may be in this report; but we hear from other sources that King Theebaw is really desirous of renewing relations with this Government, and that it is not unlikely that he might be persuaded to agree to any reasonable concessions demanded of him. But it is a question whether, after the barbarities of which Theebaw has been guilty, the Government of India can enter into close friendly relations with him, and whether the character of his government is such as to render such relations possible. At the same time, the inconvenience of the present state of affairs—the interruption to trade, for example—is such as to render it almost imperative that steps of some kind should be taken soon. The *laissez-faire* policy cannot last in regard to Upper Burma without great injury to our own province. The position is a difficult one; but a difficult position should serve only to call forth the resources of our statesmanship. Does Afghanistan drain these resources dry?

From a New York paper we learn that representatives of the oleomargarine industry appeared before the Committee on Agriculture and Manufactures on the 10th of March last, in opposition to any legislation injuriously affecting their product. They claimed that oleomargarine is identical with butter, that both substances are simple animal fat, and that the difference in the process of manufacture makes no difference in the substance. They said that the factory in New York is now making 40,000 pounds of oleomargarine butter per day, and there are eleven such factories in Baltimore, Louisville, Chicago and other cities; that the exports of oleomargarine oil from the port of New York alone amount to 5,000 tierces per month. They asserted that their product is a genuine food product and a fit substitute for butter. The two committees were invited to name a congress of chemists and microscopists to test the qualities of the article by every device and appliance known to science, the manufacturers offering to defray the expense. The result of the investigation will be interesting to most of us, as there is a very general, if not well founded, belief that a great deal of the "butter" consumed in the East is nothing more or less than the oleomargarine so extensively manufactured in America and elsewhere.

A number of experiments have been made this week in Tokio with dynamite, in the presence of General Oyama, the War Minister, Admiral Enomoto, the Naval Minister, His Excellency Yamao, the Minister for Public Works, Admirals Kawamura and Ito, General Saigo, and a number of other gentlemen. The vast power of the explosive and its safety under almost all conditions, was abundantly proved by the representative of Nobel's Explosives Company, who are the proprietors and manufacturers of this dynamite. It is roughly calculated that the explosive will exercise the same amount of power as gunpowder at about half the price, but one great feature in the employment of dynamite is worthy of particular mention, it requires no tamping and a much smaller hole than powder, which would further increase the comparison in favor of dynamite. To anyone acquainted with mining, these advantages are apparent, as, besides the extra expense involved, it is well known that most, in fact we may say all, of the powder accidents in mining, occur from carelessness in tamping, or drilling out missed shots. All this is entirely avoided with

dynamite, which has certainly an assured future in this country. We understand that every particular respecting this valuable adjunct in all cases where an explosive is required, can be obtained from Messrs. Mollison, Fraser & Co., the Agents in Japan.

In "Pottery and Porcelain: a guide to collectors" by Mr. Frederick Litchfield, the author remarks under the heading of Haint, and Cautions, that:—"One of the most fashionable classes of decoration in our modern porcelain is the representation of Japanese subjects; and though at first sight one may be struck with its cleverness as an adaptation and its quaintness as a device, it surely can be but a short-lived taste; and a return must come before long to the more classic forms and suitable decorations in which there is alone a positive repose and perpetual charm."

As appears in our advertising columns, Messrs. Sargent, Farsari & Co. have introduced to this community the "fifteen" puzzle which is exciting so much attention in America. Ostensibly, the solution of the puzzle is the simplest thing imaginable; but when a person has essayed to accomplish it for about half an hour it dawns upon him that the proprietors are not perhaps altogether unwarranted in feeling pretty confident of there being no applicant for the \$100.00 reward promised for a successful solution. The success of this latest toy for the amusement of an idle hour has been wonderful in America: in fact people seem to have gone crazy about it, to judge from the newspapers. One of the San Francisco journals in an account of an interview with Count de Lesseps, says the reporter, "in response to the 'entree,' entered and found the engineer intently gazing at some object on the table. Thinking the Count might be working out some intricate engineering problem, the reporter hesitated at the threshold, fearing lest he might upset some elaborate calculation, upon the result of which the successful culmination of the Panama Canal depended. A few moments of silence and Mr. de Lesseps exclaimed, 'Mon Dieu, but there is absolutely terrible, c'est impossible.' A glance at the table, from between which and the reporter the gentleman had risen, displayed in a studied confusion the beautifully symmetrical little blocks indicative of the puzzle of Fifteen." *Harper's Bazaar*, too, is full of this fascinating game and has several capital illustrations on the subject. In one, two men pass along a street, their heads bent down, intently studying the little blocks; and they are shown in the act of collision; in another, a man is sitting up in bed attempting to elucidate the mystery; and his wife is vainly urging him to lie down and sleep; and in the third, a steam-boat is blowing up and it is remarked "they have solved the great mystery."

An occasional correspondent writes to us from Osaka:—"For a longtime we have had miserable weather in this locality but just now a change has arrived, and the spring is coming on us with suddenness. The cherry-trees at Sakura Miya and all around this neighborhood are in full bloom,—and the change which has set in has its full effect on the people, who flock in crowds to the open country to enjoy themselves. The schools have had their Spring holidays and all the the drowsiness of the winter months has passed away."

"The British *Chargé d'Affaires*, with Mrs. Kennedy, and the Consul from Kobe, with Mrs. Aston, have been staying for a few days at the Imperial Mint, where the apartments devoted to distinguished visitors have been placed at their disposal."

"The foreign community has had an addition to its numbers in the arrival of Dr. Dyce Fraser, from Scotland. He comes to take up his appointment as Professor of Anatomy and Physiology in the Government Special School here. Dr. Fraser is the son of the Professor of Logic and Metaphysics in Edinburgh, and one may anticipate some good results from the organization of a medical school, and hospital in connection with it, in this city under his direction."

"The depression in the paper currency and the consequent high price of rice and other things has a chilling effect upon trade; but the return of fine weather and greater general activity may produce a reaction."

"The port of Osaka is now more frequented than it used to be. Steamers belonging to native companies ply between this town and places on the Inland Sea. It is a goodly sight on a fine

afternoon to see many vessels fresh painted and displaying their ensigns on the river close to the Foreign Concession. If Osaka were made an open port, the stimulus of foreign shipping would certainly be beneficial to Japan."

The following is a list of the Bluff and Swamp lots, sold at public auction, on Monday last.

BLUFF LOTS.			
No. of Lot.	Tsmbos.	Price.	Purchaser.
260	256	\$3.10	Mr. Bower.

On the 10th of last March eight of the advance guard of "The Salvation Army" arrived at Castle Garden, New York, by the steamer *Australia*, from London. The *World* states that the band consisted of George Railton, "High Commissioner," and seven young women, one of whom styles herself "captain" and the others "lieutenants." All wore what is described as the regulation uniform of the Salvation Army. High Commissioner Railton had on a suit of dark blue, a cutaway coat and a high peaked hat. The women, who were apparently about thirty, and all stout and hale, did not wish to tell their names. They wore short blue dresses, blue Ulsters trimmed with yellow braid, and Derby hats marked "Salvation Army" in gilt letters in front. The new-comers had evidently made every preparation for their arrival in America by adapting the words of their hymns to more or less national airs. A few moments after they were settled in Castle Garden, High Commissioner Railton pro-

posed to hold religious services, and a solemn hymn was sung to the tune of "Way Down the Suwanee River." A curious throng at once gathered around the little army, and more hymns were sung. Then the drill was cut short by the arrival of a brother from Philadelphia who had endeavored to found a colony of missionary workers in the Quaker City, but had failed. High Commissioner Railton, we are informed, "greeted the Philadelphian rather coldly." Commissioner Railton travelled all over the city during the afternoon trying to get some one to print his posters free. In the meanwhile the captain and lieutenants sang hymns.

Whitehall says in one of its late issues that in consequence of the recent attempts made upon his life the Czar finds himself forced to take every possible precaution. His carriage and sledge are lined with sheets of steel; he himself endeavored for some time to wear a small chain armour cuirass under his shirt, but, notwithstanding that it was a marvel of workmanship and as flexible as a piece of linen, the weight was so great that it only increased the nervous disorder from which His Majesty is suffering, and had therefore to be abandoned. The following substitute, however, has been invented. A certain kind of wadding is firmly pressed between heavy cylinders, and then dipped in a preparation of iron-glue, which gives it a reassuring and satisfactory consistency. The uniform of the Czar is lined with this wadding, which would effectually prevent an ordinary bullet from doing much damage. The agents of the Secret Police who accompany the Czar when he leaves the Palace have no idea whether His Majesty is going until half an hour before they start, and they are especially forbidden to make known when the Czar goes out or where he is to go. The cook in the Imperial Palace is the object of constant attention and supervision, two secret police agents being constantly by his side while the meal is being cooked. When a dish is at length ready (everything is now cooked in the most simple way, and no sauces are allowed) it is tasted by two police officials before being served to the Czar. His Majesty will no longer receive in his private apartments, nor will he open or read a letter, despatch, or newspaper himself. His linen and, in fact, all his garments, are most carefully watched and attended to by trusty servants lest they should be poisoned, and His Majesty, who was a great smoker formerly, has now been forced to give up the use of nicotine, for fear cigars or cigarettes should be chosen by the Nihilists as offering the greatest facility for the accomplishment of their deadly purpose.

We learn with much pleasure that Mr. Sheppard's work on Extra-territoriality, which first appeared as a series of articles in the *Weekly Mail*, is being translated into Chinese by Dr. Martin, President of the Imperial College at Peking. Dr. Martin's qualifications for the task will be evident when we mention that he has already translated Wheaton's work on International Law into Chinese.

There was a sharp shock of earthquake on the morning of the 4th instant at nine minutes past four o'clock which lasted about five seconds. Glasses rattled, swing-lamps were in motion, and it almost seemed as if we were about to experience a repetition of the visitation of the 22nd of February.

From the following paragraph in the *Hongkong Daily Press*, it appears that the rebel Li Yung-Choi is still alive.

"A memorial appears in the *Peking Gazette* of the 1st inst. from the Governor of Kwang-si announcing the execution of the rebel leader Li Yung-choi. The capture and execution are detailed as follows:—In due course, the officers, civil and military, who were sent by the Commander-in-Chief to convey the rebel Li Yung-choi to the provincial capital, arrived with their prisoner. They also brought with them the so-called seal that had been found at the capture of Ché Ya. The memorialist at once had the prisoner before him in the presence of the Commissioners and the Taotai, and subjected him to a searching examination, upon which occasion the statement made by the prisoner agreed with the copies of the depositions earlier forwarded by the Commander-in-Chief. The memorialist accordingly, in obedience to his instructions, directed Sung Chun, the Provincial Judge, in concert with Wang Shih-ch'ing Colonel of the memorialist's brigade, on the 8th of January, to take the criminal Li Yung-choi to a public place and decapitate him. On the same day the memorialist made choice of certain civil and military officers, whom he directed

to take the head of the criminal to Tai-ping Fu for identification, after which it was to be passed on beyond the frontier and handed over to the Governor of Liang-ping, in Annam, who, in his turn, was to send it to the scene of the rebel's operations for exhibition there. Now, almost simultaneously with the reception of this news, taken from the latest issue of our Shanghai morning contemporary, we have received intelligence from Tonquin that the whole story of the capture of the rebel chieftain has been concocted in order to satisfy the Central Government, who were impatient at the protracted resistance offered by this redoubtable rebel to their authority. We are assured most positively that Li Yung-Choi is still in secure retreat in the Kwangsi mountains, and has never been in danger of falling into the hands of the Imperialists. The prisoner who has been executed as Li Yung-Choi was either a mere coolie or else at most a petty officer in the insurgent army. The truth could not long be suppressed, though the Imperialist General and the mandarins in Kwang-si are reported to have tried hard to keep up the deception. But it is probably known by this time to the officials in Canton, and must shortly reach Peking, if it has not done so already. Some few heads will probably follow that of Li's counterfeit, should this report prove correct, as we have excellent reasons for believing it to be, and many vacancies will be made in the service. It is said that Li's following is still numerous, and that he is biding his time to make a descent from his present lair. The movement he commenced would consequently appear to be still existing, though for a time held in check."

The new buildings of the German Legation at Nagata-cho, Tokio, having been completed, His Excellency The German Minister invited the Princes of the Blood, the Prime Ministers, and the Privy Councillors, to an entertainment on the 13th instant. The Foreign Representatives and the Japanese Ministers to Foreign Courts, were similarly fêted on the following day, and the Ministers and Assistant Ministers of the different Departments, on the day following. During these successive evenings the buildings were illuminated with gas, and the gardens decorated with lanterns.

A compilation styled "A Forbidden Land. Voyages to the Corea," has just been published by Mr. Ernest Oppert in London. The author adds nothing new, which is reliable, to what has been known of the country written about, and in illustration of the comprehensiveness of his ignorance, when he travels out of the beaten path left for his guidance by previous writers on the same subject, it is sufficient to mention that he assures his readers that "the Chinese and Japanese are as much in the dark as to what happens in the country as we are ourselves." This is the face of Japanese treaties with Corea, resident Consuls, and Settlements!

Advices from New York, says the *World*, announce the complete success of Messrs. Sullivan and Gilbert's new comic opera, *The Pirates of Penzance*. The funniest bit of the libretto seems to be the following, sung by policemen. The sergeant leads, and the chorus echoes the last syllables of the lines:—

"When the enterprising burglar isn't burgling,  
     *Chorus*: isn't burgling,  
 When the cut-throat isn't occupied with crimes,  
     *Chorus*: 'Pied with crimes,  
 He loves to hear the little brooks a-gurgling,  
     *Chorus*: Brooks a-gurgling,  
 And listen to the merry village chimcs,  
     *Chorus*: Village chimcs.  
 When the ooster's finished jumping on his mother,  
     *Chorus*: On his mother,  
 He loves to lie a-basking in the sun,  
     *Chorus*: In the sun,  
 O, take one consideration with another,  
     *Chorus*: With another,  
 The policeman's lot is not a happy one,  
     *Chorus*: Happy one!

#### PARIS LETTER.

FEBRUARY 28TH, 1880.

The Nihilist "Monsieur" Hartmann, according to some journals, and "Hartmann" quite short in others, is giving us a sea of troubles. One paper suggests that he be supplied with a packet of strychnine and so in mercy be allowed to perform the "happy despatch" before being handed over to the Russians, who, previous to hanging prisoners, cut off the tips of their fingers and the ends of their toes to try and wring a denunciation out of them before they enter their second purgatory. Opinion is very heated about the subject; there is no extradition treaty be-

tween France and Russia, because the latter not being within the pale of civilization could not guarantee that an accused, if once surrendered, would have a fair trial, if any at all. It is optional with France to give up the prisoner, who admits he is a revolutionist, desires the overthrow of the imperial despotism to make way for liberty, and holds that, in that kind of warfare, every mode of fight is fair. He is a very able man; admits that France can refuse him a refuge by ordering him to leave the country within twenty-four hours, but he hopes she will not be an assistant executioner with the Czar, especially as he has never conspired here. He takes his position very tranquilly; sings Russian songs in his stone jug, in favor of the three republican Graces, Liberty, Equality, and Fraternity, and, when he is tired of warbling, plunges into the mysteries of the French grammar, notably of the past participles and their gender. To keep him under bolts and bars till he comprehended them, might be sufficient punishment for him. He is not destitute of Russian friends or funds in Paris; and both have come to the front to assist in his defence; and opinion, timid and cautious, while abhorring murder in every form, desires that he be fairly dealt with. It is possible to read the French character through this event. The radical journals demand, in no dulcet tones, that he be liberated and the Minister of Police who arrested him dismissed, in order to save France from a stain on her independence, and her renown for sheltering the politically oppressed—a protection by the by not so comfortable as Switzerland, England, or the United States provides. The reactionist journals insist on Hartmann being given up; not on account of his misdeeds, or to please the Czar, but because the step would affect the Republic and bring it into dis-grace. Moderate liberal opinion bats about the bush, but says nothing, while the diplomatically inclined people ignore the matter altogether. The foreigner mis-es—save in the radical papers—that glorious out-burst of opinion one way or other, which the press of free countries would fearlessly echo.

In the multitude of "cases in point" adduced, that conspiring to kill your sovereign is no murder, is that of Ledru Rollin, who was condemned in 1857 for joining in a plot to slay Napoleon III. After the latter's downfall Rollin entered France, became a deputy, and a statue is to be erected to his memory, while the semblances of the ex-emperor are being demolished. Well, the leaders of the French Bar were convoked to give their opinion, "was conspiring to kill Napoleon III. a common or political murder?" They decided that it belonged to the latter category. Who were the lawyers that maintained this doctrine? Jules Favre, the late Cremieux, Arago, Audral, and last not least, Jules Grévy, now president of the republic, and Jules Ferry, the ablest member of the present cabinet.

A much more agreeable subject is the Presidential ball on Thursday evening last. It eclipsed the first in brilliancy; the only fault was its being too crowded; but what's to be done when 32,000 persons demand invitations on pain of shaking off the dust of their shoes against France, and only 8,000 can obtain the open sesame? In the way of decorations, the flowers were more numerous and perhaps more choice. The dapper and intelligent gentlemen of the Japanese embassy, must have felt quite at home in the bowers of camellias. The state wardrobe must have been ransacked for its best specimens of tap-stry: no two rooms were hung alike, even to those cosy ante-chambers and boudoirs, where half-a-dozen friends could retire to laugh, chat, and repose. And the colors were so harmoniously blended, the decorative furniture was so artistically disposed that one might believe Professor Charles Blade had arranged the whole, as a comprehensive illustration of the true and the beautiful. The band was excellent, and sufficient to make a gouty limb inclined to join in a waltz, or flirt round to the soft and moving Havana polka. The young ladies were very pretty and very merry, and their mammae, sedate without being haughty or severe. As usual, the artillery officers danced best, and their partners felt themselves sure in a whirl with these sons of guns. The tribe of attachés to embassies as a rule do not dance well, they never throw themselves into the thing, believing perhaps that they might compromise their country. Young ladies were simply dressed, in white satin, silk or craps; not many ornaments save a few flowers in the hair, a good-luck bracelet and their own pretty features.

On the other hand the mammas wore all the family diamonds and the lace; on their stamped velvets, or ornamental foulards. There was no stint of refreshments for the heated dancers, and the bead-drops were plentiful on brave as well as fair brows. About one in the morning the doors to the magnificent supper room were thrown open, and each of the five doors had two cuirassiers leaning on their swords, to bar the famished upper ten from rushing at the feast of good things before an admitted batch had cleared away. Nothing so odd after you have entered the promised land, and with your supper finished, say of salmon, galantine, a little macedoine in honor of holy Russia, a strengthening glass of claret, followed by a ditto of invigorating champagne,—and the wines were genuine,—than to turn round, and look at the entrance doors, behind which was a dense crowd of be-diamonded and be-laced ladies; civilians covered with decorations, or *militaires* arrayed like Solomon in all his glory, waiting their turn of admission. And the wit that is exchanged and the jokes cracked, while the guards endeavor to suppress their smiles, to look as grave and motionless as Hermione in the Winter's Tale. The Chinese Embassy mustered strong; they never raise their hats on passing the President and his lady: the chief member of the Embassy wears a kind of pacha's tail from the centre of his episcopal *coiffure*: in the middle of the back of his gala dressing gown, a centre piece of silk with a kind of landscape language, perhaps a kind of *noli me tangere*, for the benefit of outer barbarians. I observed Mr. Egger, the celebrated linguist, casting sheep's eyes at this philological patch-work, perhaps he may give us a reading of it, when he is tired of deciphering carbonised rolls from Pompeii or inscribed chips from Grecian temples. The Persian Minister looks the most un-oriental of orientals. Were his black quart hat removed, and his blue merino waist-band, worn to keep his loins warm in a room where the degrees were in the nineties, he would pass for a well-to-do tradesman. His wife has the real Persian eyes, but as she is rapidly becoming as fat as a favorite Moorish sultana, unless she takes a course of Vichy, she will very likely bring about her husband's recall. The Shah must always be represented here by a houri, as in the other world by a peri. The most melancholy of individuals was the Turkish ambassador, or first secretary, for the ambassadorship has been going a begging for a year, in default of funds. This individual, as small as the ex-king of Spain, and like that monarch of other days when in full dress, in gold lace, moved with the precision and the *abandon* of a marionnette. He had the real expression of Mahomedan sadness; that countenance could never be lit up with a smile, even were he informed, that the sultan had contracted a loan without infidel aid! I pity poor President Grévy, compelled for two mortal hours to remain standing and bowing, shaking hands, and fluting a compliment for those expecting it. He did look fatigued, and must have longed for his quiet game of billiards or his dog and his gun. Then Mme. and Mlle. Grévy, some distance behind him, had to stand out the same ceremony. Mlle. Grévy had a bevy of her comrades, who came to her like cherubim and seraphim from time to time, to tell her how the dancing went on, and the havoc made in love and flirtation. Mme. Grévy had, on her side, ladies who I verily believe had no other mission than to colloquially collar those who felt inclined to pass the evening in a *tête-à-tête* with the kind hostess who belonged to every guest. In point of taste Mme. Grévy cannot be surpassed in her toilette. She wore a black robe, with orange tablier, trimmed with black lace: *coiffure*, camellias and ivy leaves. Mlle. Grévy is sure to follow her mother's example in simple elegance: her toilette was composed of white satin and crape, with lilac in her hair; a few roses fell negligently on her shoulder, and a diamond locket hung from her neck.

The Academy has elected two new immortals, Labiche, the dramatist, and Maxime du Camp, a publicist. Of the first, merit *oblige*: the second is a political election, and he is in anything but the odor of sanctity with the republicans. He had a finger in all the Macmahon regime, and many accuse him of having denounced communists to the attention of the Courts the courts martial. His principal work is a very elaborate description, and as entertaining as practical, of the life of Paris, its organism, as to how it is provisioned, cleansed, lighted and guarded. In any case he is superior to that nonentity recently

installed, the Duc Pasquier, who is positively a fraud in literature. The Duc d'Aumale came to vote; he looks a dandy, with his hand on one ear, a smart cane, and a paletot buttoned as if he was going on parade: I was sorry to observe that John Lemoine of the *Débats*, just elected a life-senator, had to be carried in a chair to vote; gout has seized him when honours came thickly upon him. It is another proof of the observation, that all the editors of the *Débats* go to glory through gout. A celebrity of another kind, suffering from gout also, is Prince Pierre Bonaparte, whose career is only remarkable by his shooting Victor Noir, an event that had much to do in giving a last push to the tottering throne of his cousin Napoleon III. He also distinguished himself by marrying a sempstress, and when the emperor frowned on the union, he married twice over again to clinch the ceremony. Old Jérôme Napoleon of Wurtemberg had not the courage to so act towards Mme. Patterson. *Eh bien*, Prince Pierre is so reduced in circumstances, that he lives alone in a humble eating house at Versailles, the proprietor of which is a marquis; and the head waiter has claims to be a count. The prince has to pay cash down for what he orders—the cash is supplied out of the lean purse of Prince Jérôme—which is only wine and water and a sea biscuit: he makes up for the rest in piety. His wife occupies a small back room in Paris, lives partly by her needle, drawing lessons given by her daughter, and a pittance allowed by the Princess Mathilde. Their son is a lieutenant. There is news from Bazaine: he lives a "dribbler and a show" in a secluded street in Madrid. He is preparing his memoirs, said to be an exposure of Marshal Macmahon, and expects France one day to call him back—to tar and feather him it must be.

The Municipal Council will not continue the experiment of lighting the streets with electricity: it pronounces no opinion on the scheme: it simply returns to gas, and awaits any good time coming. The French Atlantic Cable Company has given so far signs of life as to publish, in reply to some shareholders, a statement of what it has expended, and to announce a dividend of 5 per cent. Whence does the profit come, as no statement of receipts is given, and since the opening of the line in January, it cannot have been burthened with messages, as the Anglo-American Company transmits such at a tariff six times cheaper per word.

A Parisian journal states, in an article on Prince Demidoff's wealth, that most of it is derived from "brass mines," in Russia.

A favorite plan for Monarchists to express their political spite, is to teach parrots to utter nasty phrases against the Republic. A plumber wrung the neck of one of these birds of freedom lately, and is to be sued for damages. Can poor Poll provoke a breach of the peace?

When a person now arrives late at dinner, he excuses himself by saying, he was afraid of the first course, dynamite.

#### LONDON LETTER.

LONDON, 19th February, 1880.

I have often hoped, rather than believed, that the "intelligent foreigner" was too well occupied to trouble himself much about our so-called politics. More especially, since my own party have stooped to political prostitution, has the ostrich-like feeling strongly possessed my mind, that at any rate foreigners were not taking any notice of us or our doings. For how could the boiling invective of Gladstone, the ponderous hatred of Bright, or the harlequinade of Vernon Harcourt interest those who had neither part nor lot in our family squabbles? Yet I was wrong. The eyes not only of Europe but of the world are upon us. Travelling by the underground railway on Monday last, and reading as my custom is the roseate evening organ of the Tories, my eye caught an eager-looking figure sitting opposite me and apparently straining his sight trying to read the back of the paper I held in hand. I had the curiosity to turn the paper over as soon as I could do so in an easy and natural manner, in order that I might see the object which seemed to engross my neighbour's attention. It was Dr. J. Collis Brown's Chlorodyne, the wonderful remedy for coughs, colds, bronchitis and old age. I dropped my paper listlessly by my side and contemplated my *vis-à-vis* more leisurely. There was something

peculiar about his appearance which provoked study. His hair, a most important race characteristic, was black and straight: his features were curt, his cheeks prominent, and his eyes small and keen. His complexion baffles description, and his age might be anything from 20 to 40. He seemed to have been brought to the verge of the grave by hard work or dissipation. In fact he was a highly complex character. When I had time to note his costume I perceived that it was from the crown of the head to the sole of the foot of a somewhat outlandish cut and looked as if bought in a ready-made shop in Whitechapel. It was easy to see that he was not an Englishman, nor even a European; consequently it was quite permissible to address him without an introduction, and I resolved to gratify my curiosity. My friend—for we soon became familiar—answered me in good but stiff and stilted English. He told me he was a native of Japan, by name —, of the ken of Kakimoda in the province of Suruga, twenty-years of age, and had been in Germany, France and England for five years. When I questioned him as to his object in coming to Europe, how he lived and what was his occupation, he became fluent but vague; and without making him go all over his story again, which politeness forbade I could not make out any very clear or consecutive account. He was much more anxious to get than to impart information, I found, and he evinced the greatest interest in the political struggles now going on in different parts of the country. At the very first lull in our conversation he asked me for a look at my newspaper, and I soon saw that it was not Dr. Collis Browne at all that interested him, but the Southwark election to which he turned with an eagerness which quite took me by surprise. And greatly elated was my friend at the decided victory gained by the conservatives of that radical constituency. "What's Hecuba to him or he to Hecuba?" I thought; and I was really curious to discover the *rationale* of my friend's political sentiments. When he once got warmed up he became as communicative as if he had drunk half a bottle of Champagne, and he discoursed as volubly as his teeth and tongue would let him. Contrary to many, perhaps most of his educated countrymen, he told me he was an intense lover of peace. Some of the hand-to-mouth politicians of Japan, he said, secretly longed for a quarrel to break out among some of the Great Powers, because they thought that in the turmoil Japan could safely assert herself and play her own game as an independent power, none making her afraid. What that game was I could not very well make out, and I suspect that either my friend had not a very clear conception of it himself, or else he did not particularly desire to impart it to me. In either case he had no sympathy with the presumed Machiavellianism of his countrymen, and, as I have said, his voice was still for peace. And peace, he considered, was intimately bound up with the continuance in power of "Lord Beaconsford" as he called the Premier. He observed that the Great Powers of Europe—and one power in particular, Russia—were watching anxiously the development of English policy. The disturber *par excellence* of the peace of the world counted on a change of Government in England for the safe prosecution of her schemes of aggression both in Europe and Asia. The attitude of France and Germany towards each other was such that any movement in Europe might disturb the equilibrium which held them in their places. Great Britain held the key of the position, and being beyond all doubt peaceably disposed, it was felt that so long as Great Britain maintained a firm hand and the European powers could depend on her policy, so long would their warlike forces remain quiescent. There was no doubt in the minds of anybody what the present English Government would do if they had their way; but their term has almost expired, and the Liberal party have so deeply committed themselves to a reversal of all that that their opponents have done, that for consistency's sake they might be tempted to trifle with the foundations of the European equilibrium by withdrawing the support which England has lent to it. The one thing necessary to secure peace is a renewal of the existing administration, which would resume office with the certain prospect of five or six years tenure during which time they could carry out their own programme boldly and firmly.

I was rather struck with these comments by a stranger, and

was sorry when we reached his station, Gower Street, as I wished to hear more of his discourse. He very kindly invited me to call upon him at Tavistock Square; and it is more than likely that I shall avail myself of this invitation to improve my acquaintance with so intelligent a man.

After we had parted I began to wonder why it did not occur to me to ask — to call on me; and I have been wondering ever since without coming to any conclusion upon the matter.

Life has not been worth living in London this winter by reason of the intense cold and the fogs. Fogs have been more or less prevalent in many parts of the country; but as you are aware the "London" fog is *sui generis*, a compound of wet vapour and carbon with various poisonous acids. It was so dense at times that people lost their way crossing streets that were perfectly familiar to them. I myself lost myself in Fleet-Street. Some times you could not see across the pavement. If you walked on the middle you could neither see the railings on the one side nor the kerb stone on the other. At night, after groping hopelessly in the black darkness, you would suddenly descry a light very distant and very high. After taking two steps towards it you would collide with the iron lamp-post. Many people died suddenly in the streets, and hundreds more by a slower process from the effects of exposure and fright. Indeed our wise physicians comfort us by saying that the effect of these continuous fogs will be apparent in the death rate for a considerable time to come. Mercifully the fogs seem to be over now, and it is possible to feel warm again. Really during the reign of cold and darkness clothing seemed to have lost its virtue; one felt a metallic chill through all the internal passages and cavities, and seemed to want warm flamed in one's stomach. The weather now is stormy with incessant rain, but that seems Paradise itself by contrast with the weather we have lately experienced.

#### SYLVAN SOUNDS.

(From the Japanese.)

##### VII.

##### EVENING SONG.

The scene is fair as fair can be,  
For the moonlit night is rare to see.  
Far and near—Far and near,  
And the river's sound is sweet to hear,  
Crystal-clear, crystal-clear!  
Whether I go, or whether I stay,  
'Tis like a joyful holiday.

F. B. H.

Tokio, 17th April, 1880.

#### JAPANESE PERSONAGES.

##### VI.

##### HIS EXCELLENCY TANAKA FUJIMARU.

TANAKA Fujimaru, the Minister of Justice, is a native of Owari, and therefore a member of one of the three great Shōgunate clans:—Mito, Owari and Kishiu from whom the shōgun was invariably selected. Tanaka has the reputation of having received an excellent education and possessing great wisdom and penetration in matters of business, together with a gentle and equable temperament.

Although his early proclivities were naturally with the Shōgunate party, Tanaka's sense of justice and right soon recoiled from the usurpation of that clique, and he joined the movement having for its object the reestablishment of the imperial authority. When the war of the restoration broke out, it was owing to his influence and untiring exertions that the Owari clan was dissuaded from rising in support of the Shōgunate, thus following a course suggested no less by natural inclination than the memory of old associations.

When quiet was at last restored to the empire, Tanaka was appointed chief secretary of the Department of Education. He was sent to Europe and America, in 1871, for purposes of study and observation. On his return, the result of his travels was soon made apparent in a great improvement in the system of education throughout the country, attendance at school being made compulsory upon the youth of both sexes. Indeed, it is not too much to say, that to Tanaka is generally ascribed

the credit of having raised the present school system of Japan to its present excellence.

In recognition of his services which, if not so brilliant and attractive to the popular mind as those of the warriors whose histories we have already recorded, are probably more solid and enduring in their results, Tanaka was made a knight of the Japanese Order of merit, and appointed Assistant Minister of Education.

From the experience of Tanaka in a department which he had made a special study, and his consequent great success in its administration, it was confidently expected that any ministerial changes would find him promoted to Minister of Education; however, to the surprise of many, he has recently been appointed Minister for Justice in the room of His Excellency Oki Takato.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

##### GOVERNMENT NOTIFICATIONS.

To the Tokio Stock Exchange Office.

It is hereby notified that an inquiry being about to be held, all contracts for the purchase and sale of gold or silver coin are forbidden until further notice.

N.B.—Contracts already made may be carried into effect according to the rules of the Office.

SANO TSUNETAMI,  
Minister for Finance.

April 12th, 1880.

TO THE TOKIO STOCK EXCHANGE OFFICE.

It is hereby notified that all contracts for the purchase and sale of gold or silver having now been prohibited, now contracts for the purchase and sale of gold or silver are forbidden to be made in connection with the office, either within or outside the premises.

MATSUDA MICHIOYUKI,  
Governor of Tokio Fu.

April 12th, 1880.

TO THE RICE GUILDS AT KAHUTO-CHO, AND KAKIGARA-CHO, TOKIO.

It is hereby notified that all contracts for the purchase and sale of rice are forbidden until further notice.

N.B.—Contracts already entered into may be carried into effect according to the regulations of the Guilds. But all further contracts are strictly prohibited to be entered into in connection with the Guilds, either within or outside the offices.

MATSUDA MICHIOYUKI,  
Governor of Tokio Fu.

April 12th, 1880.

The foregoing notifications have been transmitted to every part of the Empire by telegraph, and the Stock Exchange Offices in Tokio and Yokohama, and the two Rice Guilds in the former city, were at once closed on receipt of the Notifications.

##### COURT, POLITICAL AND OFFICIAL.

His Excellency Oki, one of the Privy Council, has discontinued having an escort of cavalry.

A native paper states that Prince Shotai, the ex-King of Looschoo, has forwarded a sketch of his life to the authorities, in which he recounts the principal events which have happened to him, from the time of his birth until the present day. A stone monument is to be erected at the entrance to the Okinawa Kencho, on which will be inscribed the most notable occurrences in the history of the prefecture from the very earliest times, and also the distances from the spot to the different Fu and Ken in the main islands of Japan.

Mr. Watanabe, the Governor of Osaka, has been ordered to arrive in Tokio before the 15th instant. It is rumoured that he will be appointed to another office of more importance.

A meeting of police officers from Tokio and the neighbouring prefectures is to be held in Chiba.

Mr. Sato, Superintendent of the Mining Bureau, has left the capital for the northern provinces on a tour of inspection of the different mines.

One thousand and seven of the police officers and men who

were sent to the southern provinces to protect the inhabitants after the Satsuma rebellion was over, were rewarded on the 30th ultimo and 7th instant, with sums of money varying from five to one hundred yen.

The *Nichi Nichi Shimbun* issued an extra on Tuesday morning which states that "we received a telegram from our correspondent in Osaka, last night (Sunday, the 10th instant) informing us that the Regulations for Public Meetings having come into force, the meeting of the Aikokuha (Patriotic Society), has been closed by order of the Osaka Fuchō Authorities."

Messrs. Arakawa and Urushima, two members of the Hoku-shin-sha, proceeded to the private residence of His Excellency Sanjo, the Prime Minister, on the 10th instant, and presented a petition respecting the new regulations for public meetings.

Mr. Hachisuka has been appointed Superintendent of the Custom House Bureau of the Finance Department.

It is reported that His Majesty the Emperor will return from Ise by sea. The *Fuso Kan* is being prepared with all speed for the purpose.

The horse presented by General Grant to the Emperor, is shortly to be ridden by Mr. Hakodate, in the presence of His Majesty.

It is said that two hundred police constables are to be sent to Corea. They will be enlisted for five years and placed under the command of Assist. Inspector Kawaji.

Their Excellencies Sanjo, Prime Minister; and Ito, Yamada, and Terashima, members of the Privy Council; Hijikata, the Vice Assistant Minister of the Imperial Household; Mr. Ishi-i Assistant Police Inspector, and the six Secretaries of the Daijo Kuwan and the Imperial Household Department, were on the 10th instant appointed to accompany His Majesty the Emperor on his tour through the country.

His Excellency Shinagawa, Vice-Assistant Minister for Home Affairs, was appointed, on the 10th instant, Chief of the Commission for carrying out the second National Industrial Exhibition.

Judges Nomura and Sugimura, have been transferred to the Dai-shin-in from the Judicial Department, and Judge Wada, from the Dai-shin-in to the Joto Saibansho. Judge Sakamoto has been appointed President of the Miyagi Joto Saibansho.

Mr. Wakizaka has been made an attaché of the Judicial Department.

Thirty officers are to be sent from the Foreign Department to Corea.

A telegram has been received in Tokio, stating that His Excellency Matsukata, the Minister of the Interior, arrived at the prefecture of Miye on the afternoon of the 12th instant.

The Public Works Department is going to purchase timber and stone at Izu-shima, in the prefecture of Okayama, to the value of about fifty thousand yen. The material will be used in the construction of the new Imperial Palace.

Local Courts are to be established in different places in Yesso. The localities of these courts are now under consideration.

We (*Mainichi Shimbun*) hear that animated discussions took place in the cabinet on Monday and Tuesday among the Prime Ministers and Privy Councillors respecting the rise in the price of specie and rice, and also about the recently issued Regulations for Political Societies and Meetings.

Judge Kishira, the President of the Dai-shin-in, has been again compelled to retire from the active duties of his office, in consequence of another attack of illness.

The alterations made in the Regulations for Rice Guilds and Stock Exchange Offices, were notified by the Prime Minister on the 15th instant. According to the new Regulations, the guarantee money of a broker in the Rice Guilds is fixed at one thousand yen, which may be deposited either in money or Government bonds. The brokers of the Stock Exchange Offices are divided into two classes, namely, stock brokers and specie brokers; the former are to deposit two hundred yen as a guarantee, and the latter one thousand.

The telegram from Osaka announcing that the meeting of the Aikokuha had been abruptly closed by order, was incorrect. The meeting terminated, as previously arranged, on the day after official intimation was received that the proceedings of the society would no longer be permitted under the existing organization, so that the authorities did not interfere with the

programme determined upon. Messrs. Kataoka and Kono, were elected to forward a memorial to the Government, urging the establishment of a National Assembly, and left Osaka for the capital on the 14th instant.

On the 13th instant, Mr. Shibusawa, President, and Mr. Masuda, Vice-President, of the Tokio Chamber of Commerce, proceeded to the Finance Department, and had an interview with the Minister of Finance. They were questioned by the Minister about the advantages and disadvantages of fixing the price of rice and specie for a certain period. In order to discuss the subject thoroughly, a meeting was held in the Department with closed doors at 5 o'clock in the evening, when some of those present said that speculation is just the same as gambling, and therefore it would be better abolished altogether, while others explained their ideas of the difference between speculation and gambling, and affirmed that there was no necessity to control speculation. A very warm discussion ensued for a time; but at last it was agreed that speculation is different from gambling, and that if it be advisable to prevent false reports about the state of the market, it would be better to allow matters to revert to their former position. The officers of the Rice Guilds and Stock Exchange Office were not present at the meeting.

Messrs. Hashimoto, and Yamataka, under Secretaries of the Home Department, and Messrs. Suzuki, under Secretary, and Ishiwara, an attaché of the Finance Department, were appointed Commissioners for the second National Exhibition, the day before yesterday.

It is said that the Imperial Progress will probably commence on the 20th of next month.

#### NAVAL AND MILITARY.

Thirty military cadets entered the Primary Military School, on Monday last.

A rifle competition lasting three days, commenced at Mukogawa, on Sunday last. This shooting match was between persons attached to the Police Department.

Major Tashima has been appointed an attaché to the Japanese Legation in France, and will proceed to Europe on the 17th instant.

Lieutenant Isobayashi has been appointed Aide-de-Camp and attached to the Imperial Guard.

The first company of the Imperial Guard left for Nikko on the 10th instant, under the command of Lieutenant Yamaoka, and the fourth company for Takasaki, under the command of Lieutenant Wada.

A native paper states that, if war breaks out between Russia and China, a number of officers in the Japanese army will be sent to both armies to witness the operations.

Thirteen thousand rifles, valued at \$123,500, ordered in America, by the Japanese War Department were brought here by the *City of Tokio* on the 9th instant. The remainder will arrive by the next mail steamer.

Lieutenant-General Takashima, who had lately returned from visiting France and Germany, was received everywhere while abroad with the greatest cordiality and hospitality. In France he was decorated with the order of the Legion of Honour; and, while he was in Germany, a review was held for the purpose of enabling him to witness the famous soldiery of that Empire manoeuvred in the field. After the review, the visitor was entertained at a banquet by Field Marshal, Count Von Moltke. The reason assigned for the unusual attention paid to Lieut.-General Takashima in both France and Germany, is the fact of his being the first Japanese General who has visited either country. He now proposes to give a lecture before the officers and cadets, at the Kaikoshu, at Kudan, on the 21st or 25th instant. The subject of the lecture will be his experience of military matters abroad.

Major Kajiyama proceeded to Peking on the 7th instant; and Captain Fukukawa left for Persia on the 5th instant in the *Hiei Kan*.

The *Taka-o Maru*, which was sold by the Navy Department to Mr. Sano, a resident of Fukuoka Ken, realized fifty thousand yen.

Lieutenant-Colonel Kuroda, Vice-Director of the Military College, has retired and been replaced by Lieutenant-Colonel Hirooka.

As the War Department is anxious to use, as far as possible, ammunition manufactured in the country, instructions have been issued to plant the *kaori-yasagi* (willow tree) in several places under the control of the Department, in order to procure a supply of the best charcoal for the manufacture of gunpowder.

Captain Ito, representing Rear Admiral Hayashi, Commander of the Eastern Admiralty Office, visited H. M. S. *Swinger* on Wednesday last.

The War Department is going to purchase the premises of Kwazoku Miura's *yashiki*, at Komagomi mura, and establish a new rifle range there.

Colonel Watanabe, who was the Acting Commander of the Kiododan during the absence of Lieutenant-General Takashima in Europe, has been relieved from that office.

#### INDUSTRIES, TRADE, AND FINANCE.

The *Hiroshima Maru*, on her last trip, took \$15,000 and 7,000 yen in paper money from Yokohama, and 231,293 silver *ichibu* from the Expenditure Bureau of the Finance Department for Kobe. The *Tokio Maru* brought here on the 8th instant, 200,000 gold yen, 1,900 yen in *ichibu* silver, and 11,000 silver yen from Kobe, and 3,000 Japanese trade dollars and 3,000 Mexican dollars from Nagasaki.

A horse fair was held at the Nursery gardens, Mita, Tokio, for five days from the 11th instant.

The Competitive Exhibition of Cotton and Sugar in Osaka, was closed on the 5th instant. His Excellency Matsukata, Minister for the Interior, delivered a speech, which was replied to by Mr. Godai, President of the Chamber of Commerce in that city. The closing ceremony was attended by the Governor, his subalterns, the local officers, the exhibitors and their representatives, and the committee, and was concluded about 3 o'clock.

A native contemporary states that, on the 10th instant, there was great speculation at the two Rice Guilds in Tokio, and prices were rapidly run up to ten yen and forty-two sen per *koku*. A telegram then arrived that the value in *Isé* was low; which was followed by a report that the Government was about to place a quantity of silver in the market. Upon this the price of rice receded to ten yen and twenty-three sen per *koku*, and "the two gambling houses exhibited a state of confusion and excitement similar to what occurs at a fire."

A native journal mentions that the Navy Department finds its estimate of expenditure deficient by about two hundred and fifty thousand yen. This discrepancy is accounted for by the great fall in the value of the paper currency, and the necessity of paying the foreign employés of the Department in specie, and also of finding coin for the purchase of machinery, &c., ordered abroad.

The *Hochi Shimbun* writing on the all-important topic says:—"Our readers may remember the market price of goods mentioned in our daily supplement on the 4th of January last, when business commenced for this year. *Kinsatsu* were then at a discount of thirty-eight sen against gold, and thirty-one and a half sen against silver. The discount varied from time to time, but at present it has reached the extraordinary rate of sixty sen against gold, and fifty sen against silver. It is said that the Authorities deeply regret the circumstance, and have taken the matter into consideration so as to provide a remedy for such a disastrous state of things. We earnestly hope that both specie and rice will decline in price."

Again referring to the existing state of the money-market, the *Hochi Shimbun* says that "the widespread speculation in both rice and money has re-acted disastrously on business. In fact this species of gambling (for it is nothing else) which is everywhere prevalent, has been the cause of great losses to legitimate traders. Although tacitly permitted both by the laws and the community, this obnoxious practice has now exceeded all reasonable limits. The result has been that, in consequence of the authorities taking no steps to check them in their evil courses, the speculators have grown bolder and more influential, until at last they jeopardize the welfare of the whole community, a state of affairs which has attracted much attention and provoked comment. On Monday evening last, we were informed that instructions had been sent that day from the Daij-Kuwan to the Finance Department, and that on the same evening orders were despatched by telegraph to

all parts of the empire, forbidding any further speculation of the description which has become so common latterly, in either rice or money. As it was late when we received the information we were unable to verify it until the following day, when we found on inquiry that such was the case. This will result in the closing of the fourteen Rice Guilds, and the Stock Exchange Offices in Tokio and Yokohama, for a time. The action of the Government will probably cause some of the speculators to experience great losses, and loudly deplore their misfortune; but that cannot be helped, and, if the authorities have succeeded in punishing these reckless gamblers, it will be a good thing for the community at large. As for ourselves, we will contemplate their losses, their weeping and their wailing, with the utmost equanimity; believing as we do that the misfortune of the minority is far preferable to the ruin of the whole nation. If the decision of the Government is not consistently carried into effect, of course more evil than good will result, but we are firmly of opinion that the course adopted will prove eminently successful, and we shall deal with the question at length in a future issue."

The usual meeting of the Tokio Chamber of Commerce was held on the evening of the 13th instant.

A new Chamber of Commerce has been formed at Sendai, in the prefecture of Miyagi, and held its first meeting on the 11th instant. Mr. Endo was elected Chairman, and Mr. Tachibana, Vice-Chairman.

A telegram from Osaka, dated the 13th instant at 3.20 p.m., states that "last night, speculation in both money and rice was stopped, and a great disturbance ensued."

His Excellency Sano, Minister for Finance, and Mr. Matsuda, Governor of Tokio, inspected the books of the two Rice Guilds the day before yesterday. As speculation has been suddenly suppressed, great consternation has been created among the habitués, although they try to appear unconcerned.

It is rumoured that the Guilds will be closed for at least three weeks.

The Exhibition to be held of native produce in the Swanp Gardens will be opened on the 18th instant. An entertainment will be given by the exhibitors to Their Excellencies Sano, the Finance Minister, and Shinagawa, Vice-Assistant Home Minister. In the evening there will be a display of fireworks.

The *Chugai Bukka Shimpo* says: "The price of black tea has risen in the London market, and consequently Japanese black tea has also risen, and the best quality now costs \$50 per picul. We cannot tell whether such a high price will be maintained, but if it only lasts until the new tea is brought to market and sold, our black tea manufacturers will be enormously benefited."

Sixty men employed by the firm of Okura & Company left here yesterday for the port of Gensan, Corea, to establish a branch office of the firm.

Three thousand two hundred and twenty-six yen have been subscribed for the relief of the sufferers by the fire which occurred at Tachi-bana-cho on the 4th of February last, and will be distributed to-day.

Mr. Kameyama, editor of the *Hochi Shimban*, having published a copy of the memorial forwarded to the *Genro-in* by the people of Fukushima Ken, has been fined 100 yen in conformity with the 16th Article of the Press Laws.

A fire took place on Sunday last, in Yanagishima, Tokio, and destroyed about eighty houses before it was extinguished.

Mr. Yamamoto Shigejiro, a resident of Nishi-Ogawa-machi, informed the Tokio *Fu* authorities, on the 10th instant, that he wished to sell his mines in the prefecture of Chiba to the Government.

The Garrisons and local Governments in all cities and prefectures are to be placed in telegraphic communication.

The province of Hidaka, Yesso, was visited by a severe storm on the 19th of last month. Great damage was done to houses, &c., and the rivers overflowed their banks and interrupted traffic.

In consequence of the great increase in the passenger traffic between Ohashi, Tokio, and Giotoku, Chiba, another steamer is to be placed on the line.

Mr. Okashima, the editor of the *Miyagi Nippo*, was tried before the local Court, on the 7th instant, for publishing certain

objectionable correspondence and sentenced to thirty days imprisonment. Mr. Okashima appealed against the decision and was released on bail.

The new brigade for the protection of the capital from fire has been organized under the Police Department. According to the system recently introduced, an inspector will have charge of four hundred men, a sub-inspector of eighty, and an assistant sub-inspector of forty-five. The first drill of the brigade took place on the 14th instant, in the premises of the Police Department, and the firemen were instructed in the use of the pumps and different apparatus.

A new periodical, to be called the *Kotsu Shimban*, will shortly be published at Tsukiji, Tokio.

Prince Shotai, ex-King of Loochoo, is said to have given ten thousand yen to the fund for keeping in repair the temple of Tenkai-ji, one of the burial places of his family. The Prince has also applied for permission to purchase the old Loochoo Yashiki, near the Mannen-bashi, Fukugawa, with the object of establishing a depôt for the sale of produce from his former possessions.

There are 72,482 Buddhist temples in Japan at present.

The Chigaku-Kiokwai, or Geographical Society of Tokio, proposed to hold its first annual meeting on the 22nd instant, in the premises of the Tokio Normal School. The Society will avail itself of the gathering of members which will then take place, to give a farewell banquet to Mr. Nabeshima, Minister to the Court of Rome, and the other members of the Society who are going abroad.

A fire took place at Ishizaki-cho, in the town of Kanazawa, Kaga, at 7 p.m. on the 14th instant, and destroyed about two hundred houses before it was extinguished.

The port of Shimoda is to be deepened in order to facilitate the anchorage of ships.

The sugar making machinery ordered in England by the Agricultural Bureau, arrived here on the 14th instant in the *Gaelic*.

A telegram has been received at the branch office of the Colonial Department in Tokio, stating that a great catch of herrings has been made on the coast of Fukuyama, Matsumai.

#### IMPERIAL GOVERNMENT RAILWAYS.

##### TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts for the week ending Sunday, April 11th, 1880.

Passengers, parcels, &c. ....	\$10,430.54

Miles open, 47.

#### NAGASAKI.

(From the *Rising Sun* and *Nagasaki Express*.)

Almost entirely depending, as Nagasaki undoubtedly is, upon the prosperity and safe working of the various coal mines in the district, more especially the valuable and extensive one at Takasima, the vague report, which reached here on Sunday afternoon last, to the effect that a serious explosion had occurred at the latter place, caused considerable anxiety, and further

particulars were anxiously awaited. Owing to it being Sunday, the *S. S. Meishin Maru* did not expect to make her usual trips, but steam was got up and she proceeded to the island shortly after six o'clock, returning in the course of a few hours, bringing full particulars, which were to the effect that the explosion, which had occurred in what is known as the Middle Panels, was not so serious as at first anticipated: the damage sustained by the mine was comparatively trifling, and the deaths were few. Unfortunately, however, a great number of workmen from other parts of the mine, upon hearing the report, rushed indiscriminately to the spot, in search of friends and relatives, and were suffocated by the after-damp. The total number of deaths is reported to be about sixty. The cause of the explosion is, without doubt, attributable, in the first instance, to the carelessness of several doorkeepers, in leaving open the ventilating doors left in their charge, and thus misdirecting the current of air necessary for safe working; and, secondly, to the fact of a miner having trespassed with a lighted lamp on forbidden ground, made dangerous by the neglect of the said door-keepers. No blame whatever is attached to the European staff, who are all thoroughly experienced, and are consequently aware of the dangers attending neglect. Every possible precaution had been adopted by them for the insurance of safety, and it was very fortunate that none were in the vicinity at the time of the explosion. It is most sincerely to be hoped that this disaster will be a lesson to the survivors, which will not easily be forgotten; and also that it will teach them that the penalty for neglect and disobedience in the execution of their dangerous occupation will probably be not only death to themselves, but to hundreds of their fellow-workmen.

"All is fish that comes to the net" with Japanese fishermen. Every variety, from the smallest sprat to the largest whale, is eagerly caught, and as eagerly bought and eaten. A rather agreeable surprise awaited a party of fishermen belonging to the island of Koyagi, who had set their net opposite to Iwoshima on Monday morning last, and upon returning to haul it in the same evening, found they had netted a young whale. It was with some difficulty towed ashore, speared, and cut up. The head was preserved intact, and brought to Nagasaki. Its extreme length was thirty-five feet, seventeen feet circumference, and six feet broad across the head.

Pheasants still continue to be a prominent feature in the native market, notwithstanding these birds have been pairing for the last month. The season, according to Japanese law, does not close until the 15th of the present month, but game is not so plentiful here as to justify indiscriminate shooting, and it is an acknowledged custom amongst residents to discontinue as soon as pairing commences. We trust that non-resident sports will kindly take the hint, and observe the same.

From the *Saikui Shimbun* we learn that a number of *Geishas*, from the celebrated eating-house known as "Aburaya," will be in attendance at the exhibition daily, commencing from to-morrow.

A farewell dinner, to which the Consuls were invited, was given at the Fukuya Hotel on Wednesday last, by A. E. Olarovsky, Esq., who for a number of years has held the position of Russian Consul at this port, and who is about to take his departure for Russia, on leave-of-absence. He will take his passage for Vladivostock in the gun-boat *Tongous* on Tuesday next.

The Mitsui Bishi Co.'s steamship *Wakanoura Maru* is at present in Dock for general repairs. She will be followed in a few days by the Co.'s steamer *Akitsuishima Maru*, which vessel arrived here on Monday last.

The American ship *H. H. McGilvery* arrived from Philadelphia yesterday, one hundred and forty-five days out, with a full cargo of Kerosene Oil, consisting of 45,000 cases, consigned to the C. & J. Trading Co. The whole of the cargo is believed to be in splendid condition; fine weather having been experienced throughout the voyage.

The repairs to the British schooner *Mary* having been completed, efforts are now being made to float her off the beach, which, it is anticipated, will be accomplished either to-day or to-morrow.

Five vessels took their departure on Tuesday last, and for some time the harbour presented a most discouraging and

desolate appearance. For two days there was not a single merchant vessel present, excepting the *Mary*, under repairs.

## SHANGHAI.

(From the *North China Daily News*.)

We hear that "a double set of hands" is now employed at the Leong-wha Powder Factory, and that the manufactory has been in operation night and day during the last week.

Tseng Kwo-tsun, recently Futai of Shanse and brother of the celebrated Tsên Kwo-fan, Viceroy of Liang Kiang (Nanking) is, we hear, now appointed Viceroy of the Liang Kiang, in the stead of Lo, Viceroy of Canton, who was previously appointed to Nanking.

A correspondent informs us that a rising has taken place on the southern confines of Shantung, about twenty li from Chinkiang, owing to the authorities insisting on the destruction of the poppy plants. A body of cavalry was sent down the river from Chinkiang on the night of the 29th ult., with instructions to proceed as quickly as possible to the seat of the disturbance. The digging out of the canal at Chinkiang proceeds rapidly, the troops engaged in the undertaking and those stated to be on the way to join them, numbering in all about 5,000 men. This large number concentrated on this one spot seems to point to other engagements besides the plausible one put forward of the deepening of the canal being a work of actual necessity.

The effects of the state of affairs at the capital are felt at Newchwang as well as at Tientsin. We are informed that, although it was the opening of the season, native merchants there display an unwillingness to transact business, and that it was difficult to find accommodation for the cargo arriving from Shanghai.

We hear that during the next few days large quantities of shot and shell are to be shipped to Tientsin and Newchwang by the Chinese authorities.

The Chinese man-of-war commonly known as the "Terror of Western Nations" steamed down the Harbour yesterday, bearing a high mandarin's flag. Salutes were fired by the war-junks anchored off the city, and we understand that the mandarin on board had been to inspect the Kianguan Arsenal.

## CANTON.

(From the *Hongkong Daily Press*.)

30th March.

The revenue cruiser *Li-shé*, Captain Reid, arrived here to-day, towing a junk which she had captured after a desperate fight. The *Li-shé* is a vessel of 80 tons, carrying 4 guns, and in the engagement had her funnel and foremast shot away, and sustained other minor damage, but none of her crew received any injury. The captured junk had a consort which managed to escape, but the severity of the action between the gunboat and the junk can be best imagined by the crippled condition of the former and by the fact that the latter had no less than 16 of her crew killed or mortally wounded.

The Russian gunboat which recently favoured us with a visit, was rather busy between the time she left Hongkong and returned to it. She took soundings of the river from Ma-chow to Shameen, and on arriving here went through the manoeuvre of taking up a position to shell the city. She then purchased two Hakka boats and used them for sounding, taking a very careful survey of the whole of the Shameen bend. Bearings from aloft were also taken of different points in the city and the distances measured by instruments. There is a rumour amongst the Chinese to the effect that as soon as the *Vigilant* hove in sight the Russian whipped up her mud-hook and cleared.

## ARRIVAL OF THE ENGLISH MAIL.

Silvatore, 13th March.—The total number of oysters brought in on the second day was one million and odd, the Government share being 770,000. They were sold for about five thousand four hundred rupees to the same Moor-man as previously. Nearly twelve thousand rupees have thus far been netted. The weather seems against fishing operations but for that there would be double the amount now. Nothing that the Superintendent and his staff could

do would induce the boats and divers to start yesterday; the weather was so unsettled, and is still unchanged. A few hours more will decide whether the boats go out or not to-day. There is plenty of money in the market. Oysters sold for seven rupees the thousand. Place quite healthy.

London, 15th March.—Parliament will be dissolved on the 24th inst., and writs will be issued on the same day.

London, 16th March.—It is stated that Prince Frederick William, eldest son of the Imperial Prince and the Princess of Germany, is betrothed to the eldest daughter of the late brother of Prince Christian.

The *Bacchante*, with the Royal princes on board, arrived at Jamaica on the 16th.

A Socialist meeting has been held at Warsaw.

Rome, 16th March.—In the speech made by Signor Cairoli in the Italian Chamber of Deputies, he characterized the Italian Irredenta movement as ridiculous, and said the Italian Government would inexorably quell any attempts to disturb the satisfactory relations existing between Italy and Austria.

London, 18th March.—It is stated that the Egyptian Government has decided to erect lighthouses on Capes Guardafui and Ras Haffoon.

The Queen leaves for the Continent on the 25th instant.

Constantinople, 17th March.—The Russian Government threatens to cease diplomatic relations with the Porte unless the assassin of M. Commeroff is executed.

Aden, 18th March.—The *Teheran*, with the outward English Mails of the 5th March, left here for Bombay at eight last night.

Rome, 18th March.—The conflict between the Vatican and the Prussian Government is ended, the Pope having consented to the Prussian Government confirming clerical appointments.

London, 17th March.—Consols, 97½. Five per Cent Rentes, 117. Bar Silver, 52 to 52½. Paris Exchange on London, 25.29.

Allahabad, 9th March.—Our spies from Kohidaman report that Mahomed Rasul arrived there a few days ago from Ghuzni with a proclamation from Mahomed Jan, ordering the Kohistanis to be on the alert for the new demonstration against the British to take place on the 31st March. The spies report that Mir Sikander Shah sent a proclamation on northwards. Division orders have been issued at Kabul on the 5th, which contain a letter from the Viceroy, congratulating General Roberts and the troops on the actions of December, and endorsing the Commander-in-Chief's praise. General Roberts says he feels sure that all under his command will share the pride that he himself feels in the high encomium passed by the Viceroy on the late operations.

Allahabad, 8th March.—The roads south and west of Arganda Kotal are again closed by bands of tribesmen, whose object is to prevent supplies of sheep reaching Sherpur. As our daily consumption is only a little over a hundred, and we have 5000 head of sheep now here, the closing of the roads will matter little.

It is reported from Ghuzni that the Mustafi altogether failed to induce Mahomed Jan to surrender Musa. Mahomed said he had taken arms against the British solely to secure Musa's right to the throne of Kabul, and that he intends to continue the war till that purpose is accomplished. His reply is regarded as final.

It is rumoured at Kabul that Ayoub Khan has written to the Russian Government requesting aid in negotiations with the British to surrender Kabul to Abdool Rahman on terms mutually satisfactory to both Governments. It is also stated that the Russians have given Abdool Rahman a large sum and sent him to Kabul to open negotiations. Abdool is attended by many influential chiefs in the Russian interest, including Aziz Khan, and he has reached within a short distance of Balkh, where he was visited by the principal chiefs. The Khan of Bokhara has sent him money.

Kurrachee, 6th March.—The F Battery 2nd Brigade R.A. march this day *en route* to Hyderabad. A wing of the 11th Regiment is also ordered to proceed to Hyderabad. The 15th Regiment on arrival will occupy the Nagier Lines with one company at Ghizres.

Kabul, 8th March.—General Mir Syed Khan of Istalif has called on old and young to come there armed. He has 300 men in Kila i-Khan on the hills above and 200 men in Kilai-Sohrab Khan below. 200 men of Argandi and Maidan now

occupy Kotal-i-Sufed Khan and Kotal-i-Tahit under Abdul Wahab, formerly adjutant of one of Sher Ali's regiments. These men stop all supplies from that direction. Abdul Wahab is a brother of Malik Arzandi. The Logar people having represented to him and Hussan Khan that they cannot pay revenue unless allowed to send produce to Kabul, it is so allowed them. Hussan Khan is now at Padkhow, south-east of Rushi. The weather is mild, with slight showers.

Our military movements are still unknown, but it is not improbable that a brigade will be detached before the end of the month to Kohistan. Any movement upon Ghuzni cannot be made before the third week in April, when the force from the Kurram Valley side would probably co-operate, as well as the column from Kandahar; that is, of course, if a satisfactory arrangement is not made with the chiefs in the meantime through the agency of the Mustafi. Rain is now falling and the weather is milder.

Allahabad, 8th March.—The insurgent Kohistanis have occupied Charikar and all villages to Istalif. Sameh Khan and Shahbaz Khan have left the district. Mir Butcha is advancing to Kohistan with three guns, 20,000 sowars, and 400 infantry. Tahir Khan, from Ghuzni, with four guns and a large force, has arrived at Sher Muhammad's Fort Maidan. There are reports that Gholam Hyder has met Abdool Rahman at Taktipul. The failure of the Mustafi's mission is confirmed.

Kabul, 10th March.—There is a very well-founded rumour that a relative of Mir Butcha has heard from that chief that he, with Mahomed Jan, has met the Mustafi Habibulla, and that both chiefs have agreed to order their future course of action as the Mustafi may direct. Mir Butcha was staying with Mahomed Jan in a village in the Wardak country. The news from Kohistan is that the people of Charikar having sent a deputation to Sameh Khan at Baijan, complaining of the oppression they were suffering from Butcha-i-Ishan, Martuza Sameh Khan collected his followers, and being joined by Jalandor Khan of Titum durra with his following, proceeded to and attacked Charikar on the afternoon of the 7th instant. Butcha-i-Ishan and his men fled, losing 27 killed, besides many wounded and prisoners. Sameh Khan lost only twenty killed, and now holds Charikar. A large convoy of sheep and oil was seized by the Argandi and Mardan men two days ago, but Wahi Mahomed having sent out men to Argandi, an arrangement has been made by which supplies are now allowed to come in. The piequet placed beyond Charasia in the Logar by Mir Hussein Khan has not mounted for the last two or three days. We are enjoying magnificent spring weather.

Allahabad, 11th March.—Mahomed Jan's reported presence in Wardak with the Mustafi is expected to have important results. Either he will once for all declare his continued hostility to the British and try a new *jekad*, or he will come into Sherpur and take part in arranging a scheme for the speedy settlement of Kabul affairs. He still keeps men on the roads between Ghuzni and Kabul; and until he has decided upon his course of action he is not likely to discard such measures.

Kotal-i-Takht and Kotal-i-Safex are again occupied by bands of armed men, who have plundered and assaulted Hazaras coming into Kabul. There are no supplies from that direction. Large quantities of ammunition are at Safed Sang awaiting transport to Kabul. Up to Monday seventy Europeans and 157 natives had been sent down to India. One convoy was to have left on Tuesday night last and another convoy to-day.

Allahabad, 11th March.—Messengers from Ghuzni to Kabul state that the insurgents there consist of six regiments of infantry, two of cavalry, and twelve guns. Tahir Khan, with two hundred cavalry and three guns, has arrived at Logar. Mir Butcha is at Shushago, one march from the Kabul side of Ghuzni, with four hundred cavalry. He has received orders to advance to Kabul collecting Ghazis on the way. Letters of instruction signed by Musa and Mahomed Jan have been sent to the principal khans and maliks of Kohistan, desiring the collection of supplies and revenue, and the levy of Ghazis to join Mir Butcha on his march to Kabul. The Mustafi is reported ill at Ghuzni, although endeavouring to effect a settlement with Mahomed Jan, who professes his intention not to return to Kabul. Correspondence is passing between Yakool's mother and

Ghuzni, the nature of which is unknown. Tahir Khan has obtained from the maliks and khans of Logar, vows on the Koran of unremitting hostility to the British and the collection and surrender to him of war material, supplies, and the revenue of the country. The khans have already commenced the collection. Tahir Khan has placed a strong detachment at Tungi close to the entrance of the valley. The English politicals in Kabul have, it is said, been misled as to the character of the intentions of the Barakzai airdars in camp. All the latter have near relations with Mahomed Jan, and his communications with them and correspondence are not brought to the notice of the politicals.

Kurrachee, 10th March.—A wing of the 2nd Battalion 11th Foot, left yesterday for Hyderabad.

Kandahar, 10th March.—General Playro with siege train and headquarters Bombay Grenadiers arrived yesterday, all well. General Playro takes command of the Kandahar garrison, Captain Burnett as Brigado Major. The Bengal troops are still awaiting orders. Splendid weather here.

Bombay, 10th March.—Sir Richard Temple has wired for permission to go home on Saturday. The Byculla Club will give a dinner to him on Friday. Honourable Lionel Ashburner will be *ad interim* Governor.

### THE JAPANESE PRESS.

#### THE RISE IN THE PRICE OF RICE AND SPECIE.

(Translated from the *Nichi Nichi Shimbun*.)

ONE koku of rice now costs in paper currency ten yen, and one silver yen is worth one yen and fifty sen in paper, and yet there is great anxiety on the part of traders to purchase both rice and silver. When purchases are effected even at these exorbitant prices a profit is made, while sales result in loss, and this is not the case in Tokio alone but all over the country. In consequence great complaints are everywhere heard and it is much to be feared that the sufferings caused to the poorer classes by the high price of their principal article of food—rice—will cause them to commit excesses, and be guilty of acts of violence the outcome of their distress, which will only occasion them greater misery.

In the 2nd year of Meiji (1869) the price of rice rose to ten yen per koku, at which it also stood in the beginning of the present year. But it must be remembered in connection with this, that in 1869 we experienced a bad harvest and had to depend for our supplies upon importations from abroad. The high price in that year is therefore easily accounted for, but even then the extreme rate of ten yen per koku only lasted for three days in Tokio and then fell below that figure. This year, however, circumstances are entirely different. It is true that in 1878 the crops failed in some of the eastern provinces, but in 1879 the country was blessed with a more bountiful harvest than for many years past.

Now on looking back at the markets we find that, during last spring and summer, the price of rice rose from seven to eight yen per koku, and in September to nine yen and forty sen. Just at that time the public were gladdened with the favourable results of the harvest, and were in joyful expectation of a fall in price to below seven yen per koku when the new crop should be placed on the market. These sanguine hopes were, unfortunately, doomed to be utterly disappointed. Although the grain arrived in Tokio much earlier and in far great quantity than usual, the price remained steady at nine yen and forty sen until the close of the year, when it fell to a little over eight yen. After the new year, however, large purchases were made, and the price soon rose to over ten yen per koku, and it is now manifestly impossible to predict, with any degree of certainty, when there is a probability of the value of rice falling to seven yen, as was at one time confidently expected.

Until the present moment experienced merchants believed that the price of the grain would decline in consequence of the recent plentiful harvest, and they endeavoured to compel buyers to reduce the price. We are sorry to say that they have proved altogether mistaken: buyers still keep up the prices, and, notwithstanding the wealth and influence of the sellers, they have had to retire from the contest, leaving the field of speculation in the undisturbed possession of the buyer.

In Osaka, the influential merchants formed an alliance and succeeded in forcing down the price of rice for a time. Then

the buyers got the upper hand, but ultimately the league executed a grand *comp* in March, and broke down the high price. This may be called the Dojima Affair, and although the Osaka merchants are credibly reported to have gained no less than 140,000 yen by the transaction, yet no fall has taken place in the price of rice;—which they declared was their principal object—and, as far as Tokio is concerned, the operation in Osaka might just as well not have taken place at all.

A well-known political economist says, that the rise in the price of grain is usually due to one of the following causes:—1st, the wealth of the people in the interior; 2nd, the failure of the crops during some years past; 3rd, a bad wheat harvest during the year; and 4th, the export of grain to foreign countries. The same authority denies that the increased issue of paper money caused the rise in price in former years, but that this year and the year before, the fall in the value of the paper currency, was the cause of the increased rates. In our opinion, however, the true cause of the rise is to be sought and found in the increased issue of paper money which was announced. In other words; a rise occurred in the price of silver owing to the impending issue of more paper, and the grain is accompanied by the specie in its upward movement. This we consider had much more to do with the abnormal state of the market than any or all of the four causes mentioned by the "distinguished" political economist. It may be said:—How can this be? What connection can there possibly be between the price of silver and the price of rice? Well now, let us examine the market prices, and it will be found that silver has always controlled not only the price of rice, but every other commodity also. And this is very easily understood. Ten yen per koku certainly appears an extraordinarily high figure to pay for rice, but when we consider that one silver yen is now worth one yen and a half in paper, then the koku of rice is reduced to six yen and thirty-three sen, which cannot be considered at all unreasonable. It appears very evident to us that, before any decline can be expected in rice, a fall must first be witnessed in silver, and if any of our readers can enlighten us how this much to be desired consummation is to be arrived at, we shall feel extremely thankful to them for favouring us with the information.

### LAW REPORT.

#### IN H. B. M.'s COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Saturday, the 17th day of April, 1880.

A. CLARK vs. A. JAFFRAY.

The Court to-day delivered the following Judgment.

This is a suit by a landlord against his tenant for the recovery of land and rent due in respect thereof. The plaintiff bases his right to eject the defendant upon the ground of defendant's infraction of his lease by reason of nonpayment of rent. The defendant has paid into Court, with his amended answer, the amount of the rent up till the date of the answer, and contests the forfeiture on divers grounds of law and equity. I think it needless for me to discuss or give an opinion upon the various points which have been raised and argued with respect to the alleged forfeiture, or with regard to the effect of the endorsement on the lease, for it is clear that the defendant has acknowledged the plaintiff as his landlord both by the answer and payment of rent into Court, and it is also clear that even if a forfeiture has been incurred, this is a case in which equity must give relief. Even at Common Law it is specially provided that, if a tenant pay into Court all the rent and arrears, together with costs, all further proceedings in the case shall cease and be discontinued. Now this Court, it must be borne in mind, has to administer so far as possible, law and equity together, and although Mr. Kirkwood's contention that, because the costs have not been paid into Court under the abovementioned Common Law provisions, there should therefore be a decree of forfeiture against the defendant, might have been of some avail in a Common Law Court of former days, it cannot, I think, be allowed to prevail in a Court which has to administer equity. The learned counsel admits that if I were to act on his suggestion and decree possession to the plaintiff, I still ought to give leave to the defendant to move for relief, but it appears to me that if I

took this course, I should be only needlessly increasing the costs of the litigation which seems to be the main bone of contention in the case. I think, having regard to the provisions of the 54th rule of procedure of the Court, it would have been quite open to the plaintiff to accept the money paid into Court, to have discontinued his useless suit for ejectment, and to have proceeded for costs only; while on the other hand, I fail to see why the defendant should not have paid his rent down, or why, when he was at length paying the money into Court, he should not have paid the costs as well, or at an rate offered to pay them.

I shall therefore give judgment for the plaintiff for the amount paid into Court, viz., \$120, together with costs of suit up to the date of the payment into Court, and decree that on payment of said costs all further proceedings in the suit will be stayed. As regards the costs subsequent to the answer, each party must pay his own.

### CAUGHT IN HIS OWN TRAP.

#### AN ADVENTURE ON THE WEST COAST OF AFRICA.

In 1840, Walter Dixon, a young lieutenant in Her Majesty's Navy, found himself unexpectedly elevated to the command of a fleet little craft, brig rigged, and a perfect model of marine grace and architecture.

As a sailor the *Shadon* had sailed under a lucky star, defying capture, and regularly making trips to the coast of Africa in the pursuit of her nefarious trade.

By mere accident the flag-ship of the African squadron had crept upon the fleet craft during a fog, which, when the haze was dispelled 'neath the influence of the fierce rays of the sun, revealed the symmetrical craft in close proximity to the frigate.

The commodore was Walter Dixon's uncle, and glad to give his nephew an opportunity to create a record for himself, the appointment was made out subject to the approval of the Admiralty, and the young officer duly installed as commander of the *Shadon*, which had undergone numerous alterations, accommodating one hundred and fifty men on the berth deck, and rejoicing in a battery of twelve long thirty-twos, and a Long Tom as pivot, amidships.

His orders from the commodore were brief, and to the point: "Proceed to Havana, glean all the information you can regarding the movements of prominent slavers, capture all you can, and if necessary report to me at Gerer, should assistance be required."

It was a bright sunny morning in September that a sun-burnt, square-shouldered gentleman, with the unmistakable swing of a seaman, entered the office of Escudero & Co., a well-known rendezvous for slave speculators and men of a reckless stamp.

Dressed in a plain suit of white duck, the stranger bowed gravely to the only two inmates occupying the private office, and lighting a cigar, picked up a file of late English papers, which he proceeded to peruse.

Escudero, who had been conversing with a dark, swarthy gentleman, hastily approached the new comer and politely addressed him in Spanish; but with a slight gesture he shook his head, when the proprietor at once interrogated him in English.

"You are an Englishman, sir?"

"Yes: I am an Englishman. I was mate on board the schooner *Trigo*, but did not jibe well with the captain. We had a difficulty while loading at Sagua La Grande, and the captain took to his bunk, from which he never got up. I found it convenient to leave the first opportunity, and here I am looking for a job."

"You can navigate?"

"I am master of my profession, sir."

"But you do not speak Spanish?"

"I do not. I am no linguist, I regret to say."

"Humph! Well, I will see you again. I may secure a chance for you," and returning to the dark-complexioned gentleman, the animated conversation was resumed.

"Now, Captain Gaspario, to resume. What do you think of my proposition? Lightning seldom strikes twice in the same place you know: and although you lost your gallant craft last trip, the chances are all in your favor this."

"Por Dios! Escudero, you are indiscreet," and the Spaniard cast a hasty glance toward the stranger, who, surrounded in a cloud of blue, fleecy smoke, was serenely reading his papers.

"Carambo! captain, do you think I am a boy put out of school? I have had my bump of caution largely developed since keeping company with gentlemen like yourself," and he laughed softly, displaying his white teeth through his coal-black mustache. "That fellow is an English mate, with a head as thick as the top of a molasses punchbowl. He does not understand a word of Spanish."

"You can't be too careful, though, in these times. What is he—an Englishman?"

"So he says. I may be able to use him when the time comes."

"Morte de Dios! but I hate the whole money-grabbing race. They robbed me of the *Shadon*, the finest craft that ever run a cargo of blackbirds off the coast. You will never be able to match her. What a run of luck I had in her. Carrajo! to think that the English got her!"

"Well, well, Gaspario, you cannot complain. The *Estrilla* is a fine top-sail schooner, fast, and well fitted out. She can show her heels to any cruiser that ever carried a pennant. You shall have five thousand dollars for the round trip, and six dollars per head for every Congo you land in good order. The crew is now on board, everything in readiness, the vessel cleared, and —"

"I'll take her, Escudero, and all I pray for is an opportunity to pay off the English what I owe them. Por Dios! but I could cut

every one of their throats with a relish!" and a dark scowl of hatred contracted his low forehead as he glanced askance at the inoffensive stranger sitting quietly in his corner.

"We'll take a look at her, and before sunset you must be clear of the Morro."

"Short notice, Escudero, but I have nothing to keep me here," and arm-in-arm the two left the office, without taking further notice of the third occupant, who, as they disappeared, laid aside his paper with a slight smile of satisfaction playing around his finely-formed mouth.

"A good idea of mine, if I do say it—that pleading ignorance of the language. I thought I would pick up an item or two, and I may have a good report to make to my uncle yet, before the cruise is over. So that is Captain Gaspario, eh? A desperate villain, and as unscrupulous as he is reckless. He slipped out of our grasp in the bay when we boarded the *Shadon*, took to his boat, and pulled fully one hundred and fifty miles to the main land. We'll see if he is as lucky this time. So, so, Senor Escudero, you'll use me, will you. Well, turn about is fair play, so I'll use you first," and lighting a fresh cigar, Walter Dixon, for it was that enterprising officer, left the office walking rapidly to the British Consul's, from where he soon after took leave.

It was early in the evening when he walked down to the mole for the purpose of going on board the *Shadon*. He had kept a close watch upon the movements of his game, but for some reason the *Estrilla* had been delayed in sailing.

It was a dark unfrequented spot, with surroundings of low drinking dens, bordering on the edge of the harbor, the dark waters lapping up to the edge of the narrow planking.

Suddenly Walter halted and drew back in the shadow of a huge pile; he had recognized Gaspario, down the wharf.

"I tell you, Nina, it is impossible. You cannot accompany me. I am bound to the Gambia river, and the fever is dangerous. It might cost you your life."

"My life is no more precious than yours. If you are to be exposed, surely I can share the danger with you. Oh, Leon, be merciful; do not cast me off. Remember what I have sacrificed for you. I left my home, broke my parent's heart, sacrificed my good name, everything for your sake. I have trusted you, worshipped you, and I beg for the sake of our unborn child do not leave me here to meet the scorn and contempt of my former friends. At least keep your solemn vow, and marry me."

"Ha, ha, ha. Come now, Nina, that is too good. Marry, eh. Leon Gaspario marry! Are you crazy, girl? But enough of this. Let me go. You will soon find somebody to take my place. Your affections can be easily transferred. Let go of my coat, I say. Carrajo, must you have the police on top of us. Silence. No, then take this," and dealing the woman a savage blow with his clenched fist, the Spaniard leaped into his boat, which was waiting, and the next instant Walter heard the splash of oars as the light shallop darted rapidly onward, and was lost to view in the obscurity of the harbor.

In an instant Walter was by the side of the unfortunate woman; dashing some water into her face she revived, and thanking him for his kindness, she was about to move on, but was gently detained by the officer, who pressed a few gold pieces into her hand.

"Thanks, kind sir; may God bless you for your generosity. I am penniless and deserted by the man I loved and who has ruined me. But I live now for revenge. My love is changed to hate and he may yet rue the day he spurned the love of Nina. I have a plan which may answer my ends. Gaspario wants a cabin boy, and will wait till eleven o'clock for the owner to obtain one. I'll anticipate him, and with the gold you have given me, I shall obtain my disguise, which even the sharp eyes of the slave captain will fail to penetrate," and before the astonished officer could interpose an objection she had sped up the wharf.

Favored by fair winds the *Shadon* under easy sail proceeded for the mouth of the Gambia river on the coast of Africa. Running close in under the land, the light craft crossed the bar in safety, coming to an anchorage inside the line of breakers.

Scarcely had the *Shadon* swung to her anchor, when a canoe manned by natives pulled alongside to trade fruit for tobacco or liquor. In reply to the commander's inquiry, the steersman reported the arrival of the *Estrilla*, which vessel was lying up the river abreast of the barracoons, in readiness to load.

Detaining the darkies so that they could not carry the news of his arrival to the Spaniard, Walter had his gig manned by an armed crew, and buckling on his own side arms, hastily took his position in the stern sheets, after a hurried consultation with his first lieutenant.

The tall palms and cocoanut trees were casting long dismal shadows across the deep sluggish stream, as the boat slowly and cautiously crept up the river. Thousands of bright, flashing fire-flies whirled and buzzed through the air, while the occasional hoot of an owl, the splash of an alligator and the hiss of some water snake, disturbed by the advance of the boat, were sounds that greeted the officer's ears as he pushed deeper and deeper into the dark, dismal African jungle.

Turning a sharp bend in the river the dim twinkling of lamps could be seen in the distance. The dense foliage and undergrowth lining the banks of the river afforded ample protection for the boat, which soon arrived opposite to the negro quarters that form the settlement of Gambia.

Looming up through the darkness, and conspicuous above all other objects, were the tall tapering spars of the *Estrilla*. Pulling gently in under the counter, Walter peeped cautiously through the stern ports of the vessel, which were open, the curtains drawn aside to admit air the night being intensely hot and close.

A dim light was burning, which faintly illuminated the apartment, and the officer could scarcely repress an exclamation of astonishment, as with his hands tightly grasping the moulding and

ornamental work of the stern, he threw a hasty glance over the luxuriously furnished cabin.

Kneeling beside a velvet-covered lounge was a young lady, her fair hair streaming wildly around her matchless form. With hands clasped, and lips moving faintly, the girl's pale features were upturned toward heaven in prayer.

Terror and grief were alike imprinted on her beautiful countenance, while her eyes, suffused with tears, were heavy and dimmed for want of sleep.

Who the stranger could be sadly puzzled the young officer. That it was not Nina he was well assured. She was dark, where the stranger was light, and the form of Nina was more robust and developed.

Whispering softly to his coxswain, Walter swung himself lightly over the taffrail. Crouching low beneath the shadow of the bulwark, he crept forward, where an uninterrupted view of the main deck could be had. The slaver was moored securely to the bamboo wharf, and every available gun had been shifted over and brought to bear upon the channel. The guns were evidently loaded, ready for instant use, while numerous dark forms scattered about, revealed the fact that the slaver's crew were ready for action at a moment's notice.

A sudden commotion from the river, the splash of paddles, and the shout of negroes brought a dozen of the crew instantly to their feet. The clash of arms, the gleam of lanterns, and the shouts of angry men rang in the naval officer's ears, while he glided into the obscurity undecided how to act. His retreat had been cut off by Gaspardo and two companions, who had issued forth from the after-companion way, and were already hailing the occupants of the canoe.

They were negro scouts, or runners, employed by the owner of the barracoons. They brought the news of the arrival of an English man-of-war, and announced the alarming fact that an armed boat's crew had pulled up the river.

In an instant all was confusion. The crew rushed from point to point to perfect arrangements for the reception of the man-of-war's men, and the gleam of a lantern fell upon the buttons and bullion of Walter's uniform. He had used every effort to escape, to gain the rail, but in vain; hemmed in on all sides, he could not move, and the next instant he was surrounded by a jostling, cursing crowd of men, who, brandishing their arms, rushed upon their hated foe, all anxious to have their steel dyed in the officer's blood.

A dozen lives would not have sufficed to satisfy their clamorings, but Walter with his cutlass kept a wide circle around him, and with his back to the rail determined to sell his life dearly.

The deep-toned voice of Gaspardo was heard for a moment echoing above the din, at the same time the gig's crew, headed by the coxswain, made a gallant charge upon the solid front presented by the *Estrella's* crew.

A lasso, thrown by a skillful hand, caught the officer in its entangling folds. He gasped for breath, made an ineffectual attempt to cut the tough line with his sabre, and the next instant the commander of the *Shadow* was hurled head-long to the deck, with the din of the conflict and the sneering triumphant laugh of Gaspardo ringing in his ears.

Bound hand and foot, the unfortunate officer was thrown unceremoniously below.

With the return of consciousness he awoke to find himself in the forward cabin of the slaver, with the loud and exultant cries of the ruffians on deck ringing out on the close, sultry atmosphere. Before him stood Gaspardo, his tall form dilating with gratified triumph, while his right hand toyed nervously with the hilt of the cutlass.

"So, so, my bold British hero, you've reckoned without your host, eh? Thought to catch me asleep, I presume. But you have fallen into your own trap, and, carrajo! but you shall pay the penalty for your audacity. Do you hear those cries, you English dog? Look up and answer." And he dealt the helpless prisoner a savage blow. "Do you hear my men, I say? Your cowardly followers have been beaten off, and, like whipped curs, they return from whence they came, minus their leader. I could have had your life before this had I wanted it, but I reserve you for a fate I have long planned out, and held in reserve for the first one of your kind who might fall into my power. You shall be lashed to a stake at low water in the muddy flow of the river, and your dainty body left for the alligators to dine off. Ha, ha, ha! my bright-buttoned hero! how will that suit you? I may lose my vessel when your men return, but I shall make sure of you. You can have till daylight to think it all over. Adieu!"

And with a savage grin of triumph Walter was left alone to his reflections.

His hands and feet were firmly lashed, cutting deep into the flesh, and, as he thought of the terrible fate staring him in the face, a cold perspiration broke out all over his body. He knew Gaspardo would be as good as his word and he had no mercy to expect from his hands. To die such a horrible death, to be overtaken by an ignominious fate in the first flush of his career was terrible, and he tugged furiously at his bonds, which only cut deeper into his flesh.

A state-room door opened behind him, a light step was gliding by, and turning his body slightly he beheld the form of what he supposed at once to be the cabin-boy.

In a low voice he summoned the youngster to his side. One glance at the dark eyes, the closely-cut hair, the complexion artistically colored, and he was satisfied.

In a cautious tone he made himself known, recounted the adventure in Havana, where he befriended her, and besought her to cut his bonds, that he might have a chance for his life.

Quick as a flash, the disguised cabin-boy drew a knife from her bosom, and the keen blade soon severed the lashings.

"Gaspardo has another captive," she muttered, while her eyes flashed fire. "He took her off a wreck which he met a short dis-

tance from the entrance to the river. She, he rescued, leaving the survivors of the wreck to perish. I have not yet had an opportunity to deal with him, and he little suspects whom he has on board. If you would rescue her from a fate like mine, take her with you. There is a boat towing astern. You can crawl through the cabin windows, and you have yet a little darkness left. Now fly; you have no time to lose. Gaspardo may enter here any moment. Have no fears for me. I can protect myself. This way," and entering the cabin Walter stood in the presence of the fair captive.

In a few words he made himself known, and assisting her to pass through the window, the naval officer carefully lowered himself and her down into the water. The boat was gained without trouble, and severing the painter they were the next instant dropping down the river with the tide.

Into the black indistinctness of the jungle they silently glided, the spars and rigging of the *Estrella* fading into obscurity before Walter ventured to make use of the oars. Scarcely had he fitted them to the rowlocks when a hoarse cry of alarm was heard, followed by the report of a musket. The flight of the fugitives had been discovered, and the rattle of blocks, the splash of water, mingled with the oaths of angry men, were sufficient incentives to the naval officer to put forth his utmost strength. But his wrists were well nigh useless from the merciless manner in which the bonds had cut into the flesh, and his progress was necessarily slow.

The first straggling beams of daylight were struggling to penetrate the thick, luxuriant foliage of the jungle, and objects were rapidly becoming more and more distinct.

Urging his full boat's crew to put forth all their strength, swaying his body to and fro, and brandishing a pistol with all the extravagant gestures of a madman, Gaspardo uttered a yell of triumph as he rapidly lessened the distance between him and his prey.

The contest would have been promptly decided, for Walter weak and exhausted as he was, would have succumbed in a few moments more. Sweeping round a sharp bend of the river, he came suddenly upon the first and second cutter and gig, full of armed men, and pulling at a racing speed.

Gaspardo saw them, realized that the game was up, and with a shout of defiance plunged into the river, diving beneath the surface and swimming for the cover of the jungle. The balance of the crew quietly surrendered.

The first lieutenant silently pointed to what resembled a log of wood floating down the stream, but as Gaspardo came to the surface for a moment, it started with active life. A huge pair of jaws, filled with gleaming teeth, opened and shut with a snap like a steel trap; the dull, leaden eyes sparkled with a ferocious gleam, and, darting forward, it was soon on the trail of the doomed man.

The slaver saw his peril, but too late to avert it. He was yet a considerable distance from the bank, which he struggled in vain to reach. Like a flash of lightning, the alligator, raising half of his body out of the water, darted upon its prey. The water was lashed into foam, a slight tinge of blood mingled with the agitated waters, and when the commotion ceased not a vestige of Gaspardo could be detected.

The *Estrella* fell an easy prize to the man-o'-war's men. The men, disheartened at the loss of their commander, skulked below, and submitted to the irons in sullen silence.

In the cabin the dead body of the cabin-boy was found, a knife driven to the hilt in his bosom having accomplished the terrible deed. In all probability Gaspardo, when he discovered the flight of his victims, was taunted by his cast-off love; her discovery and identity followed, and the murder was no doubt the work of the desperate Spaniard.

The maiden whom Walter had rescued was of French descent, an orphan, going to Genoa as a nurse in the hospital there; but one of the lieutenants of the *Shadow* having fallen in love with her, offered his hand and was accepted.

The sale of the slaver netted both officers and crew a round sum, while Harry, somewhat elated at the success he had met with in his maiden cruise, hastened to report progress to his worthy relative.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XLV.

#### THE DEFENCE OF THE PLATEAU.

The most daring method is often the least dangerous, or such at least was Benkei's creed. To reach the cloisters without passing through the village he was obliged to make a short detour, but with this exception he took no precautions of any sort to avoid observation, not that he was purposely rash or even careless, but because he knew that by seeming to shun suspicion he would be the more likely to excite it.

Immediately behind the belfry, from which the booming of the great bell issued unceasingly, stood a watch-tower commanding a view of every part of the cloisters as well as of the surrounding country. This was Benkei's destination. To attain it the outer court of the fane had to be traversed, and a meeting with some of the friars was consequently well-nigh inevitable, but on the other hand a single glance from the tower would supply all the information desired, and celerity was not less essential than accuracy in the execution of such an undertaking as he had on hand.

When within a few paces of the cloister gates he was overtaken and passed by a party of men laden with arms and armour, but as Benkei had anticipated, the utter improbability of his enterprise protected him from scrutiny. He had now folded his kerchief about his head after the fashion of a hood, but his immense stature he might not conceal, and this he naturally believed to be his chief source of danger. So far, however, from inconveniently distinguishing him, his size and bearing constituted so close a resemblance to Friar Kakuhān that those he encountered in his path never for a moment supposed him to be any other than their leader, and it was no doubt in great part to this similarity that he owed his un molested passage.

Once within the tower he counted on being able to prosecute his investigations without interruption. The building was a stout wooden structure divided into three stages, each of which was approached by an almost perpendicular ladder and lighted by four narrow windows facing the four cardinal points. Except at these apertures the sunshine might not find access, so that the intervals between the stages were buried in almost complete obscurity.

Benkei ascended the first and then the second ladder without pausing, but he had no sooner reached the platform of the middle story than his progress was arrested by the sound of voices overhead. Drawing back into the shadow, he peered cautiously upwards and saw that the topmost stage was already occupied by two men clad in light armour and carrying glaives in their hands.

No trifling obstacle might suffice to turn Benkei from his purpose, but he knew that if he attempted the ascent of the last ladder he would be completely at the mercy of these two men. Had there been but one enemy to encounter, the issue would not have appeared quite hopeless, for Benkei's glaive, though wielded by one hand alone, was sufficient to keep any single opponent at bay, whatever position of vantage he occupied. But with two men standing above ready to strike him down the moment he ascended within range of their weapons, and able to repeat their strokes half a dozen times before he could gain firm footing, the odds were so terrible that even the giant glaivesman hesitated to face them. It was just possible that he might see everything he desired to see without mounting the last stage, and with this hope he gazed anxiously from the two apertures facing the cloisters, though memory told him the attempt was futile. And so indeed it proved. The view in this direction was intercepted by the branches of a pine tree so that no part of the inner court was visible.

Nothing therefore remained but to complete the ascent or abandon the enterprise altogether: an alternative which Benkei did not entertain for a moment. Readjusting his kerchief so as to hide his face completely and grasping his glaive firmly in his right hand, he began to mount the ladder, as silently as possible indeed, but yet neither faster nor slower than he would have done had he been assured of reaching the top unmolested. He had not taken two steps before he knew that his coming must be immediately perceived by those above, for plant his feet as firmly as he might, the ladder and with it the platform to which it led, shook perceptibly at each movement he made. To say that this discovery did not disturb him would be to give him credit for a degree of fortitude scarcely attainable by human being, but it certainly had not the effect of altering his gait. Round by round he mounted steadily and at a uniform pace until he knew by the increasing light that he must be within a few feet of the top, and then indeed a great longing came upon him to whirl his glaive about his head and traverse the remaining distance with all the speed he might. But he mastered this impulse by a mighty effort. So long as he remained unrecognized he was little likely to be attacked, and it was therefore plainly his wisest course to make no hostile demonstration till he was challenged, nor raise his face to his foes until he might no longer avoid doing so.

Meanwhile he could tell that the two men in the tower had moved to the top of the ladder and were examining him as he approached, though to his great surprise they had as yet addressed no comment to each other nor question to him. Either they mistook him for a comrade and saw nothing strange in his coming, or—which was much more probable—they had already discovered him to be an enemy and were only awaiting the most favorable opportunity to strike him down. Two, or at most three steps more would resolve this

doubt, and as he raised his foot Benkei's lips involuntarily shaped the formula of supplication that precedes death.

What happened however was entirely different from his expectations. The fact was that the two friars in the tower had been sent there by their leader Kakuhān, who mistrusted the abbot's intentions and desired to be assured that no attempt was made to warn Yoshitsune of his danger. To this end a guard had also been posted at the gates, and had Benkei's arrival been a few minutes later, he must not only have been perceived by the watchers but also prevented from entering by the wardens. As it was, however, he reached the gates just before these took post there, and passed through the court, while those were in the act of ascending the tower. The two friars, remembering the purpose for which they had been sent to the look-out, and seeing a man who closely resembled their leader in size and bearing follow them thither, were at no pains to identify him with Kakuhān, nor for an instant entertained the idea of opposing his advent.

Thus it was only when Benkei plucked the red kerchief from his head as he planted his foot on the last round of the ladder that they discovered their mistake. The glaivesman's appearance indeed was unknown to them but not his reputation and finding themselves suddenly confronted by a giant whose brandished weapon commanded every part of this narrow platform eighty feet above the ground, it is not strange that they thought rather of escape than resistance. Now Benkei, for his part, would have been well content to leave them both entirely unmolested, but on no account might he suffer them to descend before himself. Observing therefore that one of them had turned to fly, he stretched out his glaive to bar his passage, but the terrified friar mistook the import of this action. Any risk seemed preferable to the contact of that keen steel, and so, scarcely pausing to look before him, he sprang wildly towards the ladder, missed his footing and fell with a dull crash on the floor of the second stage.

For a moment Benkei and the remaining friar stood listening with baited breath and blanched faces, but no sound of moan or movement came from below. There could be no doubt about the unfortunate man's fate and his horrified comrade, casting aside his weapon, bowed his head to the ground in token of submission. Benkei, scarcely noting this action had addressed himself to achieve the purpose of his expedition, when as if struck by a sudden fancy, he turned rapidly and seizing the friar, suspended him over the aperture from which his companion had fallen. The man expecting a similar fate and not daring to move lest he should accelerate it, could only muster some broken words of terrified entreaty, or prayers to his patron deity, but Benkei sternly bade him hold his peace. "You are in no more danger now than you were before you ever saw my face," he said, "if you only answer my questions speedily and truly. Tell me for what purpose you are on watch here and what is the import of all this movement in the cloisters."

It may well be supposed that the friar did not hesitate in reply. Of Shidzuka's cruel treatment and her supposed confession indeed he said nothing, foreseeing that such a revelation would seriously diminish his already slender chance of escape, but for the rest Benkei was at once informed not only of the cenobites' design and their proposed method of carrying it out, but also of the fact, that Kakuhān, fearing the abbot's opposition might ultimately prevail, had despatched information of Yoshitsune's retreat to the hostile barons in the South of the province.

This last disclosure was even more important than the news of the cenobites' contemplated attack. With his diminished force Yoshitsune could not possibly hope to hold his own against trained warriors, however little he might be disposed to fly from a band of friars, and Benkei saw that not a moment was to be lost in transmitting the intelligence he had received. Binding the friar hand and foot so as to prevent him from giving the alarm, he descended rapidly from the tower, and took this way towards the gate by which he had entered.

He did not anticipate any particular peril on his return journey, more especially as he knew from what he had just heard, that the cenobites were now for the most part assembled in the inner court completing their dispositions for the attack; and so, though he had used his kerchief to bind the watchman's hands and had consequently no means of concealing his face, he advanced without taking much thought of what was before him.

On two sides of the court through which he had to pass stood a double row of stone pedestals with quaintly sculptured caps designed to receive the lamps placed there on occasions of festival or ceremony. Keeping between the wall and the inner of these rows he had come within a few paces of the entrance before he observed that the main gates were closed and that the postern, which alone stood open, was guarded by two friars. Almost at the instant he made this discovery, one of the two, turning round, shewed him the face of a man he at once recognized and by whom he saw that he was himself recognized.

He leaped forward with the intention of anticipating any attempt to close the postern but the other, knowing with whom he had to deal, at once abandoned all idea of opposing the glaivesman's passage, and leaving his comrade to fare for himself, ran rapidly towards the fane, evidently bent on giving the alarm.

Now if Benkei had considered his own safe exit alone, he might have been content to hold on his way, certain of baffling pursuit among the hills; but since the possibility of his companions' escape from the Valley of Chiun had now become entirely a question of time, he would have reckoned his expedition worse than a failure had it resulted in precipitating the cenobites' action. On the other hand, how could he possibly keep his visit concealed any longer? If he followed the flying friar he must of necessity leave the other free, while to restrain the latter and neglect the former would have been completely futile. There was scant time for reflection, and the glaivesman, scarcely conscious of what he did, seized the cap of the stone pillar beside which he happened to be standing, and hurled it after the retreating man. It was a block of granite of such size and weight that to raise it at all required no trifling exercise of strength, but in Benkei's hands it seemed nothing more than a pebble, and being cast with no less precision than force it struck the friar full between the shoulders and bore him to the ground a mangled and inanimate mass.

The other guardian of the gate was too much appalled by this marvellous feat either to fly or resist. He obeyed the glaivesman's order to follow him without a word of remonstrance, and the two started off rapidly towards the mountains.

Benkei was welcomed by his comrades with a delight that shewed how little they had hoped to see him return safely. He recounted what he learned at the cloisters with some further details elicited from his prisoner, and Yoshitsune immediately agreed that nothing remained but an immediate retreat. Even this was very far from an encouraging prospect. With whatever speed the glaivesman's return had been accomplished, it could only precede the cenobites' attack by a very short interval; far too short indeed to permit any reasonable hope of eluding pursuit: while if overtaken among the mountains, the little band of Genji knights could be easily held at bay, until the arrival of overwhelming reinforcements from the lately discomfited barons put an immediate end to the combat.

Nevertheless there was no choice in the matter. To retreat afforded some chance, albeit a slender one, of escape; to remain, was certain destruction. Once more then Benkei's services as guide were called into requisition, and the little band of devoted men reluctantly turned their backs upon Yoshino.

We have said that their numbers amounted to about a score and a half when they commenced the ascent of the mountain, but the detachment of Shidzuka's escort and subsequent changes had reduced this total to twenty-three. Amongst these was a certain knight, Tadanobu, the younger of two brothers who had been specially detailed by Hidehira to follow Yoshitsune's standard, and who had subsequently more than justified the great reputation on which the old earl's choice was founded. If their deeds have not hitherto been detailed in this history it has been rather from lack of space than occasion, for when the elder fell in the battle of Dan no Ura, the white pennon lost one of its staunchest warriors. With Tadanobu were six liegemen, all tried soldiers and not less eager than their leader to choose the post of greatest peril in the battle. For these Yoshitsune had intended to reserve the position of rear-guard in the proposed retreat, but when he was just about to direct this disposition, Tadanobu came forward and kneeling before him in the snow, said:—

"My lord, unless the last fight is to be fought among these hills, the friars must not pass the defile unopposed. Do you

therefore pursue your way at leisure. I will remain here and do what I may to hold the shavelings at bay."

Tadanobu said this very simply but in a tone that shewed his resolve might not be gainsaid. Yet that resolve, if carried out, meant nothing more or less than death for himself and his six liegemen. Probably not one of the Genji knights would have hesitated either to take his place or share his fate had the occasion demanded nevertheless since human devotion is capable of nothing nobler, Tadanobu's offer moved his comrades to no light admiration. They had learned from the friar, Benkei's prisoner, that the cenobites had no intention of dividing their force or making any flank attack. Not deeming such a precaution necessary against a more handful of opponents, they proposed to advance directly by the defile, and it was therefore certain that Tadanobu's scheme would achieve all that he desired. Experience had given ample proof of what things he was capable, and with death only to limit their efforts, it might not have been over much to predict that he and his liegemen would hold the whole of the enemy's force at bay until sunset. Yoshitsune understood all this not less clearly than the fact that without some such action his own chances of escape were exceedingly small, yet he earnestly cast about for some means of turning Tadanobu from his purpose.

"Since your brother, Tsuginobu, died for our cause before Yashima," he said, "I have schooled myself, not without pain, to find solace in the thought that you are still by my side. To part from you therefore is to reopen an old wound and to receive a fresh one at the same time. Neither are we now many days journey from Oshiu, where not Hidehira alone, but your young wife and child are waiting to welcome you home. Shall it be for me to tell your father that he is childless and your child that he is an orphan for my sake who live while you are still unavenged?"

Tadanobu did not trust himself to dwell upon the memories these words awakened. "I should find but a poor welcome in Oshiu," he said briefly, "did I suffer myself to be turned from my purpose by such motives. Seek not therefore, I pray you, to dissuade me lest that which I do in good faith should seem disloyal being without sanction."

The murmur of approval with which the Genji knights greeted this speech left Yoshitsune no choice but to consent. Drawing from his girdle the sword Hidehira had sent him as a token before he left the cloisters of Kurama, he placed it in Tadanobu's hands, saying that he well knew this its last achievement would not be the least of the deeds it had already helped to accomplish. After this, at Benkei's suggestion, he changed armour with the knight, to the end that the cenobites believing themselves confronted by the man they sought to destroy, might be content to prolong the fight in the defile until they were assured of victory.

Then Yoshitsune and his followers one by one took leave of Tadanobu, for they knew well that they should see his face no more, and wending their way slowly through the defile, with all the reluctance that brave soldiers feel to turn their backs on danger, left him standing with his six liegemen on the plateau destined to be his grave.

The booming of the great bell had now ceased, and for some time after the echo of their comrades' departing feet became inaudible, no sound disturbed the silence that reigned about the little band save the dripping of the icicles on the rocks as they melted slowly in the morning sunbeams, or the cry of the kestrel in the neighbouring pine grove. Presently however a murmur of subdued voices was borne upwards from the depths of the valley, and one of his liegemen, who had ascended a tree to watch for the enemy's approach, called out to Tadanobu that he could see a large body of men in the act of fording a stream at the foot of the mountain.

Then the knight, desiring his followers to stand their ground firmly until he rejoined them, took his bow in his hand and set out alone to meet the cenobites. His liegemen entreated him not to expose himself unnecessarily, but he told them with a laugh that there was nothing yet to fear, since his design was only to seek a little pastime before the sterner work they had before them commenced.

Through a distance of about half a furlong downward from the plateau, the path was straight and sufficiently broad to permit the passage of two and sometimes three men walking abreast, but beyond that point it became so devious, and was so often interrupted by spurs and jutting cliffs, that from below it was scarcely ever visible and from above only at rare intervals. Tadanobu was therefore able to be sure that his

## LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship; flag B. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

## TELEGRAPH REPORT.

(Corrected to 9.30 a.m.)

All lines in working order.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, APRIL 9TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

Dashed line—represents velocity of wind

.....percentage of humidity

Max. velocity of wind 26.5 miles per hour on Sunday, at 10 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.446 inches on Thursday, at 7 a.m., and the lowest was 29.765 inches on Sunday at 2 p.m., the range for the week being .681 inches. During the latter part of the week the barometer has been unusually high but in spite of this fact there have been almost continuous rains, the total rain fall being .868 inches. The rising temperature of the early part of the week culminated on Sunday at the height of 71°.5, being the highest for this year thus far. But this maximum was followed by a rapid and considerable decline.

## SHIPPING INTELLIGENCE.

## INWARDS.

- April 10, Japanese steamer *Tokai Maru*, Hogg, 652, from Kobe, Mails and General, to M. B. Co.
- April 10, American ship *Paul Revere*, J. Mullins, 1,782, from New York, 59,900 cases Kerosene and 125 tons Coals, to Smith, Baker & Co.
- April 11, British steamer *Glenfalloch*, Parkes, 1,443, from London via China ports, General, to Jardine, Matheson and Co.
- April 11, American ship *Mmanuel Llaguno*, Pendleton, 1732, from New York, Oil, and, General, to Frazer & Co.
- April 11, Japanese steamer *Kinshin Maru*, Davison, 690, from Yokkaichi, Mails and General, to M. B. Co.
- April 11, American barque *William Hales*, Hoyt, 816, from Melbourne, General, to J. Middleton.
- April 12, Japanese steamer *Niigata Maru*, Walker, 1,603, from Hongkong via Kobe, Mails and General, to M. B. Co.
- April 12, Japanese steamer *Saminoye Maru*, Frahm, 554, from Hakodate, Mails and General, to M. B. Co.
- April 13, Japanese steamer *Tyoshima Maru*, Hubbard, 597, from Kobe, Mails and General, to M. B. Co.
- April 13, British steamer *Sunda*, Reeves, 1,029, from Hongkong, Mails and General, to P. & O. Co.

April 13, British barque *Charlwood*, Hiscocks, 837, from London via Middleborough, General, to Hudson & Co.  
 April 13, British steamer *Garlic*, Kidley, 2,652, from Hongkong. Mail- and General, to O. & O. Co.  
 April 15, American sloop-of-war *Alert*. Commander Huntington, 1,020, 4-guns, from Kobe.  
 April 15, Japanese steamer *Shario Maru*, Kilgour, 524, from Kobe, Mails and General, to M. B. Co.  
 April 15, Japanese steamer *Meiji Maru*, Peters, 1010, from the South coast, stores, to Lighthouse Department.  
 April 15, Japanese steamer *Takasago Maru*, Young, 1,230, from Shanghai and way-ports, Mails and General, M. B. Co.  
 April 17, British steamer *Sestas*, Tilmouth, 784, from London via Shanghai, General, Walsh, Hall & Co.

## PASSENGERS.

Per Japanese steamer *Nigata Maru*, from Hongkong via Kobe:—Mrs. T. Walsh, Mrs. McDonald, Mr. and Mrs. Isome, Mr. A. Von Knoblock, Allman and 4 Japanese in cabin, and 1 European, 6 Chinese and 106 Japanese in steerage.  
 Per Japanese steamer *Toyoshima*, from Kobe:—Mrs. Adams and 2 children in cabin, 30 Japanese in steerage.  
 Per British steamer *Gaelic* from Hongkong:—Messrs. H. E. Falouner, J. Roberts and servant, J. G. F. Hassell and servant, Chas. Shanger, and F. Bryne for Yokohama, and 460 Chinese for San Francisco.  
 Per British steamer *Sunda* from Hongkong:—13 Chinese in steerage.  
 Per Japanese steamer *Takasago Maru* from Shanghai & way-ports:—Mrs. Bowman, Mr. and Mrs. J. S. Kendigs, Miss Mary Gordon, Gen. Stahel, Dr. H. Latham, Messrs. Ahrens, Porteus, Jantzen, C. H. Cobden, Seki, Ban, Watori, Kojima, Mori, Fujita, and Ikeda; 280 Japanese and 5 Chinese in steerage. For America: Mr. A. Davenport, H.B.M.'s Consul at Shanghai.

## OUTWARDS.

April 10, American Whaling barque *Rainbow*, Cogan, 351, for the Arctic Ocean, despatched by Captain.  
 April 11, American steamer *City of Tokio*, Maury, 5,050, for Hongkong, Mails and General, despatched by P. M. Co.  
 April 11, Russian schooner *Onome*, Capt. Hardie, 55, Otter Hunting, by H. Snow.  
 Mar. 17, Japanese steamer *Tokio Maru*, Swain, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 April 14, French steamer *Tanaia*, De la Marcelle, 1,735, for Hongkong, Mails and General, despatched by M. M. Co.  
 April 14, Japanese steamer *Kumamoto Maru*, Drummoud, 1,204, for Kobe, Mails and General, despatched by M. B. Co.  
 April 15, Japanese steamer *Tokui Maru*, Hogg, 652, for Kobe, Mails, and General, despatched by M. B. Co.  
 April 16, Japanese steamer *Kinshin Maru*, Davison, 690, for the North, General, M. B. Co.  
 April 16, Japanese steamer *Toyoshima Maru*, Hubbard, 597, for Kobe, Mails and General, despatched by M. B. Co.  
 April 17, British steamer *Gaelic*, Kidley, 2,652, for San Francisco, Mails and General, despatched by O. & O. Co.  
 April 17, Japanese steamer *Nigata Maru*, W. Walker, 1,603, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.  
 April 17, British steamer *Glenfallock*, Parkes, 1,480, for Kobe, Nagasaki and Hongkong, General, despatched by Jardine, Matheson & Co.

## PASSENGERS.

Per Japanese steamer *Tokio Maru* for Shanghai and ports:—Mr. and Mrs. H. McGregor, Mr. and Mrs. Livingston, Miss K. Brown, Miss G. Bell, Mr. A. G. Baxter, Mr. L. R. Winter, Mr. E. S. Potter, Mr. J. R. Moore, Mr. A. Walsh, Mr. Konecki, J. M. Reieger, Mr. J. J. Heemskeck, Mr. M. F. Evans, Mr. Takatsu, Mr. Hata, Mr. Ariga, Mr. Mamiya, Mr. Nikaido, Mr. J. R. Cunningham, Mr. A. W. Gillingham, Mr. Willoughby, Mr. E. Stone, Mr. J. Astun, Mr. G. Wilson and Mr. J. J. Laing.  
 Per French steamer *Tanaia*, for Hongkong.—Dr. Mourier and daughter, Messrs. C. Eymara, N. Makino, and Ch. Brown.  
 Per British steamer *Gaelic* for San Francisco:—Messrs. A. Kaufmann, L. Gowan, A. J. Costell, M. Alman, H. Smith, W. P. Alexander, J. Reid, and A. Davenport in cabin; three Europeans in steerage.

 " " San Francisco ... .. 8 "  
 Total ... .. 307 Bales.

## REPORTS.

The *Paul Herre* reports: Left New York on the 30th of November, 1879, and had moderate variable winds and a strong N.W. gale to the Equator, which was crossed in Long. 28 W., when 28 days out. Had the south-east trades moderate to lat. 40 South. Crossed the meridian of the Cape on the 24th of January, and ran the easting down between the 40th and 42nd parallels. Made Sandalwood Island when 89 days out. Came through the Ombaye Passage with unsettled squally weather. Had fresh N.E. trades in the Pacific, and a heavy head sea, and met with a succession of severe N.E. gales from Oosima to port. Passage, 130 days.

The American ship *Bullion* reports:—Sailed from New York Oct. 28th at 5 p.m. Had strong West winds for the first 3 days out. From thence to the Line very light variable winds. Nov. 26th, spoke ship *Nix Witch* of Boston from New York bound to Java all well; also, day, ship *Brown Frathers* of Boston from San Francisco bound for Antwerp. Dec. 2nd at 4 p.m. crossed the line in the Atlantic, longitude 30 degrees 10 West. Dec. 26th passed the Cape of Good Hope. Ran an Easting down between 40° and 45° South. January 28th, passed Tasmania being 92 days out. Feb. 6th at 7 p.m. latitude 40°30 South, longitude 158°32 East, Charles Brown, Cook, and Harriet Brown, Stewardess, separated as man and wife, with their own free will and accord dividing their clothes and signed clear of each other for ever as man and wife, each taking separate rooms. From Feb. 7th to the 12th, had very heavy gales, vessel labouring very severely doing a good deal of damage to sails, rigging and injured rudder, stores, hull, spars, etc. February 17th, passed Norfolk Island in the South Pacific. From thence to the line had very light baffling winds and calms. March 8th at 5 a.m. latitude 5 degrees 15 South, longitude 169 degrees 15 East, Robert Roberts, seaman, died of a consumption, which he had contracted long before he came on board and of which he was taken sick soon after leaving New York and he was buried on the same day at 9.15 a.m. it being very hot weather. March 11th, crossed the line in the Pacific in longitude 25 degrees East. Took the North East trades to Ualand Island and had them fresh to 20 degrees North. From 20 degrees to Rock Island strong gales from the Northward with thick rainy weather. Took pilot off Rock Island. 162 days out.

The Japanese steamer *Toyoshima* reports:—Left Kobe at 6.30 p.m. on the 10th instant, first part of passage experienced strong S.W. winds with heavy rain, and 11th at 9.45 a.m. went into Oosima harbour for shelter, strong S.E. Winds and much rain, at 3.30 p.m. clearing off with light easterly winds weighed anchor and proceeded, at 11 p.m. thence to port fresh N. winds with hazy weather arriving at 6.30 a.m. of 13th instant. At 3 p.m. of 12th passed the British barque *Charlwood* bound in from London, &c.

The British steamer *Gaelic* reports: Left Hongkong at 3 p.m. on the 7th April, had thick weather in the China sea, and until making the Japan Coast. Passed Oosima at 9 p.m. on the 12th instant and arrived here at 8.45 p.m. on the 13th. Signalled the U. S. S. *Teconderega* at noon on the 10th instant in Lat. 28°51' N Long. 125°55', all well; sighted the *City of Tokio* at 5 p.m. on the 12th instant.

Per Japanese steamer *Takasago Maru* reports: having passed the British ship *Clydeale* from New York, off Vries Islands. The vessel is reported by request.

Japan Rice ... ..	\$2.70 to \$2.90
Kerosene Oil ... ..	\$1.60
Newchwang Peas ... ..	\$2.20

## EXPORTS.

**SILK.**—The past week has again been a quiet one for Silk, and only about 180 shipping bales in all are reported sold.

The news from home has not been encouraging, and this, added to the fall in native paper currency, has made the Japanese anxious to meet buyers; they are now willing sellers at a reduction of about \$20 to \$30 per picul, but this does not seem sufficient to tempt buyers.

Total shipments to date 17,283 bales against 17,648 bales at the same period last season.

Stock 2,500 Japanese bales.

	In London at 3/11 per lb.	In Lyons at fr. 5.00 per kilo.		In London at 3/11 per lb.	In Lyons at fr. 5.00 per kilo.

MATSUZAKA HOTEL,  
KIGA,  
(Hakone Hot Springs.)

Yokohama, July 19, 1879.

## W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing *quality* and *measure*, and the *strength* also in the case of Spirits.

## THE GREATEST WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are 'most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value.'"

## SIMPLE, SAFE AND CERTAIN! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock!" Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1878.

## THE FINANCIAL SITUATION.

AT the Restoration in 1868 the present Government found itself in a very embarrassed financial position. The Treasury bequeathed to it by its predecessors, the Bakufu, was depleted: in every *Han* a local paper currency existed: large annual pensions to *Shizoku* and *Kwazoku* had to be paid: the expenses of the civil war succeeding the Restoration had to be borne; and the people, especially the farmers, were groaning under the weight of the oppressive taxes established by the Shogun's government. What was to be done? The authorities could not increase the taxes, and were therefore compelled to issue a paper currency to pay for the expenses of the civil war of 1868-9.

It is not very clearly or precisely known what these expenses were; but they could not have been less than thirty-five to forty million yen. In 1871-2, the paper money of the *Han* was capitalized by the Central Government, and replaced by a national currency. Subsequently, the pensions to *Kwazoku* and *Shizoku* were capitalized by the issue of national interest-bearing bonds to *Daimio* and *Samurai*. The old *Han* debts were recognized by the issue of national bonds to the creditors. Then came the Satsuma rebellion with its terrible cost of over forty million yen. In 1878, to extend railway construction, build roads, &c., a Public Works loan of 12,500,000 yen was negotiated locally. On the 22nd of July, 1879, the Prime Minister issued a notification that, according to the ledgers of the Finance Department, the total National Debt amounted to 375,250,356.50 yen, of which 120,927,209 yen was in Government paper money: 12,624,072 yen represented the Foreign Debt, and 241,699,075.50 yen, the Home Bonded Debt.

Of this latter sum 23,359,460.50 yen, is the indebtedness of the *Han* prior to 1871: 190,416,290 yen represents the capitalization of the pensions to the *Kwazoku* and *Shizoku*: 12,500,000 yen the Public Works Department Loan; 428,325 yen, capitalization of Religious Pensions. The balance of the Debt,—148,551,281 yen,—has practically been created:—

1.—To pay the expenses of the war of the Restoration 1868-9 (say forty millions.)

2.—To pay the cost of the Satsuma Rebellion—forty millions.

3.—The issue of national currency to replace the local *Han* or provincial currency, 88,551,182.81 yen, as well as to construct the Kioto-Kobe and Yokohama-Tokio railways, telegraphs and roads, and to make other public improvements; and the reserve in specie and notes in the vaults of the treasury.

On the 31st of October, 1879, an Imperial notification was issued stating that the amount of paper money issued by the National Banks was 88,104,780 yen. This paper money is guaranteed by the Imperial Government, and is secured by Government bonds, deposited with the Currency Bureau of the Finance Department. Therefore, the whole amount of paper money in circulation was as follows:—

July 22nd, 1879, Government currency...	120,927,209 yen
Oct. 31st, 1879, National Bank notes	} 88,104,780 „
guaranteed by Government.....	

Total currency in circulation...154,031,939 yen.

No paper money, Government or National Bank, can be issued without formal notification by the Prime Minister. No Government paper money has been issued since July 22nd, 1879; and, from time to time, since October 1879, the Prime Minister has notified the creation of additional National Banks with an authorized circulation of 1,824,905 yen.

The vernacular press expresses entire confidence in the Prime Minister's notifications of the amount of paper money in circulation; but a limited portion of the foreign press occasionally emits a doubt on the subject. In the face of the Imperial notifications that on October 31st, 1879, 154,031,939 yen of Government and National Bank paper money had been issued, and that since then 1,824,905 yen of National Bank notes had been issued, how can any one say that exact figures are wanting?

The issue of the above 154,031,939 yen of paper money has been gradual. First it replaced the gold and silver in circulation (as well as the *Han* paper money) and, of course, in accordance with a fixed law of political economy absolutely indisputable, no depreciation took place. It is impossible, perhaps, to know exactly the amount of gold and silver money actually in circulation prior to 1871; but we believe the amount was in the neighbourhood of sixty million yen. This corresponds with the amount of old

coins brought to the mint immediately for coinage. Therefore, adding the *Han* paper money, 98,551,182.31 yen, we have a circulation, in the nation, of 98,551,182.31 yen. No doubt the business of the country has increased since 1871; and we think fifteen million yen will represent the circulation required by this extension of commerce. Consequently, our opinion is that the actual requirements of the nation, of a circulating medium, is to-day 113,551,182 yen, 81 sen, or say, in round numbers, 113 million yen. Accordingly, every yen of paper money issued over and above this amount causes depreciation; and forty million yen has thus been over-issued. In consequence, we are brought face to face with a natural depreciation of the currency; and the fixed laws of science apply equally in this country as in Europe and America. Here is what John Stuart Mill says on the subject:—

"When metallic money has been entirely superseded and expelled from circulation, by the substitution of an equal amount of bank notes, any attempt to keep a still further quantity of paper in circulation must, if the notes are convertible, be a complete failure. The new issue would again set in motion the same train of consequences by which the gold coin had already been expelled. The metals would, as before, be required for exportation, and would be for that purpose demanded from the banks, to the full extent of the superfluous notes, which thus could not possibly be retained in circulation. If, indeed, the notes were inconvertible, there would be no such obstacle to the increase of their quantity. An inconvertible paper acts in the same way as a convertible, while there remains any coin for it to supersede; the difference begins to manifest itself when all the coin is driven from circulation (except what may be retained for the convenience of small change) and the issues still go on increasing. When the paper begins to exceed in quantity the metallic currency which it superseded, prices of course rise; things which were worth £5 in metallic money, become worth £6 in inconvertible paper, or more, as the case may be."

It has generally been thought in Japan, by both foreigners and Japanese, that the import trade would suffer by this depreciation of the currency. This idea is entirely erroneous. Mr. Mill says, decidedly, that both exports and imports will not be affected by a depreciated currency. "A depreciation of the currency does not affect the foreign trade of the country; this is carried on precisely as if the currency maintained its value." In 1879 the currency depreciation was great, and yet the import and export trade of Japan both increased. This trade was generally profitable to both Japanese and Europeans. Therefore the fixed law laid down by Mill has proved true in this country also. Fluctuations undoubtedly affect trade, but only temporarily. Business rights itself, and trade goes on smoothly eventually.

Japanese have sometimes thought—the wish was father to the thought—that a depreciated currency would stimulate industry. Such a delusion should be dispelled once and forever. Mill, in an able article on the subject, clearly dispels this illusion. He begins:—"Another of the fallacies from which the advocates of an inconvertible currency derive support, is the notion that an increase of the currency quickens industry." And then he goes on to demonstrate his statement in the most conclusive manner.

There is another grave cause of financial embarrassment to the nation. It lies in the import trade exceeding the export. The figures for the year 1879 shew that this excess is about 10 million yen. To the total of the imports, as published officially, we have added fifteen per cent for freight, insurance, commercial and other charges. This will bring up the figures to shew a total excess of ten million silver yen in imports over exports. This

coincides precisely with the net export of gold and silver for the year 1879. The excess of imports over exports will continue until either all the gold and silver has been drained from the country,—for the balance of trade must be paid in specie,—or the Government contracts the currency until the circulation is reduced to the amount actually required by the wants of the nation. We will again quote John Stuart Mill on this subject:—

"Let the country which has the balance to pay be England, and the country which receives it France. But we are now supposing that there is an excess of imports over exports, arising from the fact that the equation of international demand is not yet established, that there is, at the ordinary prices, a permanent demand in England for more French goods than the English goods required in France, at the ordinary prices, will pay for. When this is the case, if a change were not made in the prices, there would be a perpetually renewed balance to be paid in money. The imports require to be permanently diminished, or the exports to be increased; which can only be accomplished through prices: and hence, even if the balances are, at first, paid from hoards, or by the exportation of bullion, they will reach the circulation at last, for until they do nothing can stop the drain. When, therefore, the state of prices is such that the equation of international demand cannot establish itself, the country requiring more imports than can be paid for by the exports, it is a sign that the country has more of the precious metals, or their substitutes, in circulation, than can permanently circulate, and must necessarily part with some of them before the balance can be restored. The currency is accordingly contracted; prices fall, and, among the rest, the prices of exportable articles; for which accordingly there arises, in foreign countries, a greater demand: while imported commodities have possibly risen in price from the influx of money into foreign countries, and, at all events, have not participated in the general fall."

"But until the increased cheapness of English goods induces foreign countries to take a greater pecuniary value, or until the increased dearness (partially or comparatively) of foreign goods makes England take a less pecuniary value, the exports of England will be no nearer to paying for the imports than before, and the drain of the precious metals which had begun to flow out of England will still flow out. This efflux will continue until the fall of prices in England brings within reach of the foreign markets some commodity which England did not previously send thither; or until the reduced price of the things which she did send has forced a demand abroad for a sufficient quantity to pay for the imports, aided, perhaps, by a reduction of the English demand for foreign goods, through their enhanced price, either positively or comparatively."

Mill lays down a general law. This law is a fixed law, and has never been controverted. The Government and people of this country should take this closely to heart. That the Government can gradually contract its currency we fully believe. It will possibly take time, but it can be done. We know that, on July 31st, 1879, the Government had issued altogether 120,927,209 yen of paper money. The archives of the Currency Bureau of the Finance Department are accessible; and we happen to be aware that, on March 31st, 1880, the total issue of Government paper money was 118,176,562 yen, thus shewing that, between July 31st, 1879, and March 31st, 1880,—a period of eight months,—7,750,647 yen of paper money was retired from circulation by the Government. It is true that the National Bank currency had increased from October 31st, 1879, when it stood at 83,104,730 yen, to 84,429,635 yen on March 31st, 1880. This is an increase of 1,324,905 yen. This shews a net withdrawal from circulation of 6,425,742 yen paper money since July 31st, 1879. The Government should gradually withdraw its notes from circulation until the total amount of Government and National Bank notes

in circulation shall not exceed 113 million. This can readily be done within the next eight years, if not sooner; but it should only be done gradually, so as not to disturb trade. The Government should also bear well in mind that the substitution of paper for metallic currency is a "national gain; and further increase of paper beyond this is but a form of robbery."

The Government and National Bank notes read one yen. This does not mean one paper yen of an inconvertible currency. It means one silver yen, containing 416 grains and 900 fineness. This is the opinion of the Government as well as the belief of the people. The date of redemption may be unavoidably deferred; but it must come, for the nation has always exhibited most exemplary and thorough honesty in all its national financial affairs.

We have endeavoured to shew that the present administration could not, by reason of the embarrassed state of the finances at the time of the Restoration in 1868, with its natural train of consequences; and the national calamity of 1877, now called in history "The Satsuma Rebellion," be held responsible for the present condition of financial affairs. These were, practically, inheritances for which the present administration is no more responsible than the physician is for the disease of his patient, for whom he must prescribe and seek to find a remedy.

Time is the great physician and the healer of all things; and, with patience and perseverance, an honest and economical administration of affairs, and a gradual contraction of the currency, the Government can again, in a comparatively short time, bring the nation back to specie payments. With contraction, imports will diminish and exports will increase. We should be sorry to see all proper imports diminish; but we should be glad to see articles of luxury and wastefulness disappear from the list. Silk, tea, rice and porcelain exports, as well as all products of the sea, are capable of large development. These industries the people understand thoroughly and will increase naturally, if left to themselves. Above all, the Government and people should beware of false guides in questions of political economy, the laws of which are fixed and eternal. As a "guide, philosopher and friend" we commend to them John Stuart Mill. If his precepts are closely and clearly followed, error is impossible.

## MUSEUMS AND EXHIBITIONS IN JAPAN.

### I.

WITHIN the last decade Japan has adopted two institutions particularly calculated to diffuse general knowledge and information among all classes of the people. We refer to the newspaper press, and to the growth, in most of the large towns, of permanent museums and periodical exhibitions. Those who see daily, in the hands of all grades of the public, the productions of the press, cannot fail mentally to contrast the present with times when knowledge of events travelled slowly from mouth to mouth, and when the greatest ignorance prevailed as to internal changes of vital importance to all, still more as to the doings of the outside world.

And although the press labours under restrictions, they are not of a kind to retard any purely educational advantages to be derived from it. Every dispassionate observer would, we imagine, feel inclined to agree that in certain respects, considering the condition of this country, some curb is necessary for the present, in order to restrain the abuse of such a powerful engine. When we remember the crises through which the nation has passed since the restoration, the general diffusion of

the art of writing and expression among the old military class, the absence of any guiding or restraining public opinion of sufficient power to make itself felt by the press, and the danger of unrestricted publication in the hands of the numerous discontented left by the sudden sweeping away of the old order of things, we cannot but feel that, in Japan if anywhere, it was not prudent to accord to journalism the full measure of liberty which it enjoys in Anglo-Saxon countries.

Of equal, or perhaps greater, importance are the museums, which are the means of bringing before the eyes of all, specimens of the antiquities and treasures of the nation, thus imparting a general acquaintance with the history of the past. At the same time, the exhibits of modern native and foreign productions on view create interest and incite to enterprise in new industries. One sure sign of the educational good which is being accomplished by such institutions is the curiosity and pleasure evinced by the numbers of visitors that daily throng their galleries. Nor is the enlightenment of the spectator the only result attributable to them. They are a constant incentive to emulation. Manufacturers and artisans can, through them, compete for fame with their rivals in trade. The yearly exhibitions which take place in Kioto, and the triennial displays in Tokio, have the special object in view to gather together, from all parts of the country, local productions and fabrics for the purpose of encouraging and increasing trade and manufacture.

Apparently no very distinct line is drawn between a mere bazaar and a museum for objects of archaeological, botanical or zoological interest. One small institution forms at the same time a collection of antiquities, modern products, zoological and botanical gardens, all combined in a manner which strikes one as somewhat incongruous. The smallness of individual collections in any branch may account for this, for no one can fail to notice the paucity of specimens in many divisions. This is noticeably the case with regard to the antiquities, causing us almost to wish that the rapid efflux of the remnants of a past civilization into the hands of foreign merchants and museums could by some means be stopped. The student of ancient Japanese lore will get very little help from the exhibitions of the capital. There are no doubt still in the hands of many private individuals some valuable treasures of former art which have not yet, as is so often done, been reluctantly yielded up for more necessary gold; and if such inheritors of rich specimens could be induced to lend their treasures to the museums, the country would greatly benefit thereby. The example has been set by the Emperor himself, and many choice works of art from the palace have been shown in the exhibition at Kioto.

An exhibition of loan objects of considerable interest is now taking place at Uyeno, close to the Educational Museum. The articles here displayed consist of valuable old pictures, pottery, bronzes and lacquer work, forming the collections of certain noblemen and wealthy merchants who have lent their treasures for the purpose. It is, we think, the first loan exhibition of its kind in Tokio, and though the display is small, it is nevertheless very rich in unique and valuable specimens and will well repay a visit. The principal attractions are a valuable collection of old pictures and *kakimono*, and some beautiful specimens of gold lacquerware, in trays, writing boxes, cabinets and *shōdanus*. In addition to this there are some almost priceless treasures in the form of carved jade and crystal bowls. It is well known that many of the most valuable collections contained in the British and South Kensington Museums are the loan of private individuals.

Many of the old temple *kura* contain rare valuables

which are displayed within their own unfrequented precincts, or which remain buried away in the obscurity of the storehouses themselves. It is true that such examples as these have sometimes a special interest attached to their being seen upon the very spots with which their fame is associated. In the early part of last year an exhibition of curiosities was commenced in the great temple of Daibutsu, at Nara; the objects being contributed by all the religious foundations of the neighbourhood. It continued for a month or two, and was constantly crowded by visitors from far and near. At the conclusion it was decided to establish a kind of permanent museum of antiquities in the same place, and the collection thus opened forms one of the numerous interesting sights of this ancient capital.

Almost every ken or prefecture of the empire has some kind of domestic exhibition of its own, in which the productions and manufactures of the district, as well as many natural and artificial curiosities,—which occasionally degenerate into monstrosities,—are shown to visitors at a very trifling charge. As would be expected, however, the museums and exhibitions of Tokio are taken as an example by all these, and the object of the papers which will follow this, is to describe the chief public places of that nature in the metropolis. Few of the foreign residents of the capital, and still fewer of those residing at this port, know anything of these institutions, though in most cases they would well repay a visit of mere curiosity. To the students of many Japanese subjects an examination of them is indispensable. Moved by these considerations we propose to present to our readers a brief description of the principal of these establishments.

**A** NOTICE in our advertising columns informs those who are desirous of becoming members of the Nippon Race Club, newly formed, that they can obtain all the necessary information as to the rules of the society and conditions of membership, on application, in Yokohama, to Mr. J. J. Keswick, and in Tokio to His Excellency Wooyeno Kagenori. The former gentleman has undertaken to fill the office of Honorary Secretary and Clerk of the course: the latter to be Corresponding Secretary in the capital. The best feature of the new organization is, that it provides for and ensures the participation of Japanese gentlemen in the sport and proprietorship of the Club. On the list of original members are some of the highest officials of the Government, foreign representatives, and influential Japanese and foreign gentlemen. Whatever limited and necessary restrictions may be placed upon membership, there are none to the participation of the community in competition on the turf; as non-members, owning ponies, will find little difficulty in procuring nominations by the associates. The race-course at Negishi has been leased to the Club on conditions more favourable than those in virtue of which the former racing bodies held it; and thus the revenue will be in a condition to afford a larger margin than was possible under previous circumstances, for prizes to competitors. We have every reason to believe that metropolitan stables will be largely represented at the now rapidly approaching spring contest, and that the meeting generally, in spite of the demoralization which has been necessarily wrought in foreign-owned studs by the farcical racing of the past two or three meetings, will be of much interest and well-attended. To the future of the new Association we wish hearty success, and a complete absence of anything approaching to such discord as can render schism conceivable.

**M**EMBERS of the Seismological Society of Japan should be interested in a correspondence which has appeared in the *Times* of the 22nd of February on the sub-

ject. The writers are both specially well-known in scientific and literary circles in this vicinity. On the 27th of February Mr. Perry addressed the leading organ as follows:—

I have just received a telegram dated the 25th instant, 2 p.m., from my friend Professor John Milne, of Japan, to the effect that there has just occurred in Yedo a severe earthquake. I am quite sure that my friend would not have gone to the expense of sending this telegram unless the earthquake had been one of great severity, of immediate scientific interest of some kind for people in England. About two months ago occurred the most severe earthquake felt in Yedo for twenty years, so that we must regard the present as a period of great seismic intensity.

Mr. F. V. Dickens, having read the foregoing communication, wrote thus to the paper in which it appeared:—

With reference to Mr. Perry's letter in the *Times* of February 27th, calling attention to the occurrence of a great earthquake in Yedo, I may state that up to the end of 1878, when I left Japan, after some years' residence in that country, the natives constantly predicted severe and destructive earthquakes in this present year 1880. The Japanese are singularly accurate observers of natural phenomena and of their cyclical periods, and are also, according to the experience of residents among them, unrivalled weather prophets. Mr. Perry's news confirms in a remarkable manner the precision of their calculation, based no doubt upon a close observation of seismic periods.

With the assertion of Mr. Dickens as to the accuracy of Japanese prediction of approaching disturbances, Mr. Perry does not altogether agree. He replies:—

Mr. Milne has obtained translations of nearly all the Japanese writings on earthquakes, and he finds that the Japanese have no scientific notions on the subject further than the rule,—“When the tidal wave comes place yourself on a hill; when there is an earthquake run to the bamboo grove;” the inability of water to run up hill and the tenacious mattedness of the roots of the bamboo having obviously directed the wisdom of the discoverer. Anyone who undertakes the labour of going through Mr. Mallet's series of valuable British Association reports will find the absence of a periodic law in seismic manifestations, if he neglects such insignificant variations as may be better explainable by considering the habits of the observer rather than those of the heavenly bodies. I believe that no law will be discovered until we can deal with records of the minute earth tremours which Signor Palmieri's instrument takes no account of.

**A** SOCIETY has lately been established in Tokio under the name of Kō-jun-sha, which promises to become a very useful institution. Its object is to supply the members with information on any subject desired without any expense and with but little trouble. The Society has a salaried secretary and a staff of clerks; and any member, who is in want of information, of whatever nature it may be, has but to address the secretary, who in his turn communicates with those members who are likely to be well informed on the subject. There is generally no difficulty in obtaining replies to the questions asked, as the Society numbers eighteen hundred members. Among them are found leading men in all stations of life, scientific and literary persons, military officers, government officials, tradespeople, manufacturers and others. Such of the queries as are considered to be of general interest, together with the answers they elicit, are published in the pamphlets of the Association, which appear three times monthly. In the pamphlets already issued we find information about the origin of cattle in Japan, the ancient coinage, the history of the Shinsuisha Match Manufactory, etc. In fine, these publications promise to become a kind of Japanese “Notes and Queries,” which should be found of great interest to foreigners conversant with the language. Foreigners are admitted to the society, and we should think that those who take interest in the language or any other matters pertaining to Japan, would find it convenient to become affiliated. We

understand, further, that queries may be addressed to the secretary in English.

AUSTRALIAN papers of late date announce the sequel to an instance of missionary enterprise which occurred in the early part of 1878. Some natives of New Britain, an island of Western Polynesia, having killed and eaten several Fijian teachers stationed among them by the evangelists of the Wesleyan Missionary Society, threatened to act in an equally summary manner with their wives and children, and all the white people upon whom they could lay their hands. The chief of the proselytizers, however, the Reverend George Brown, believed that the church to which he belonged had occasionally militant duties to perform. It is asserted that, failing to bring his anthropophagist neighbours to reason by peaceful negotiations, he organized an expedition of white settlers and friendly natives against them, drove them into the interior, and burned their villages. Mr. Brown was subsequently arrested at the instance of Chief Justice Gorrie, acting, in the temporary absence of Sir Arthur Gordon, as High Commissioner of Western Polynesia, and charged with murder and manslaughter. The Governor, however, on his return from Europe, disapproved of the summary manner employed in proceeding against the missionary, and ordered Captain Purvis, R.N., commanding H.M.S. *Danaë*, to institute an inquiry into the circumstances which brought on the little war. The naval officer accordingly proceeded to New Britain, and afterwards reported the result of his investigations. In spite of some difficulty experienced in collecting evidence, owing to the length of time which had elapsed since the occurrence of the events, he yet obtained enough testimony to shew that the lives of the white residents had been in all probability saved by the energy of Mr. Brown. Two respectable white men,—one the master of a ketch: the other an American representing a German firm of merchants,—testified that the accused, previous to taking action, endeavoured to obtain some apology from the offending natives. Failing in this he returned to his post, and assembled all the available foreign residents. The council thus called together represented the various interests of the island, both English and German, and all urged Mr. Brown to take immediate steps to suppress the intended rising, of which they seemed assured. This evidence is borne out by a Fijian chief and missionary teacher who was in New Britain at the time of the murder, and who, in virtue of his rank as chief, was called to the council of war. Another gentleman, who is described as having been the means of saving the wives of the murdered and devoured men from sharing the fate of their husbands, but who had nothing to do with the expedition, corroborated the depositions of the other witnesses. He considered that, had no steps been taken to avenge the murder of the teachers, no white man's life would have been safe. He was also of opinion that it would have been impossible to have left the matter till the arrival of a man-of-war. Many aboriginal deponents also affirmed to the danger of the situation. Captain Purvis summed up his conclusions thus:—

"It does not appear to me that the Rev. Mr. Brown did, on his own responsibility, make war on the new Britain people—that the action taken was by the united voices of those persons who were best able to judge of the circumstances, several of whom had been a considerable time in the islands, and knew thoroughly the native character. The question now arises whether the Rev. Mr. Brown, in his capacity as clergyman and missionary, should have been present in the attack. This, I think, may be answered by the fact that the disturbance had commenced by the killing and eating of his teachers, and that the excitement of the natives in consequence placed the lives of the white men and the other native teachers in jeopardy, so that the Rev. Mr. Brown could not fail to

be present, in order to give the full weight of his authority to the proceedings. He, however, appears to have spent most of the time on the beach, trying to bring the natives of some of the other districts to reason, and was not personally in any of the places where most of the natives were killed. I therefore think Mr. Brown, having regard for the safety of those people entrusted to his care, could hardly have acted otherwise than he did."

We read further that Captain Werner, of the German war-ship *Ariadne*, also investigated the matter, and, in his report to his Government, requested that it would convey to the British Government its thanks for the steps taken by Mr. Brown to protect the lives of the German residents with others in New Britain. In accordance with his, Captain Werner's, request, a letter was addressed to the Marquis of Salisbury by Herr Von Munster, the German Ambassador in London. The document speaks in terms of the warmest commendation of, and gratitude for, the missionary's courageous conduct.

CHINESE in Singapore have spontaneously organized a subscription in aid of the distress in Ireland, thus following the example of those of their countrymen who have so liberally contributed to the relief fund originated in Hongkong under the auspices of Governor Hennessy. We have received a copy of a document containing the record of the proceedings of the committee in the latter colony to the 25th of March, when donations had already attained a total of more than \$28,000—a sum which recent local newspapers inform us has since been considerably exceeded. The principal feature of the list is the handsome sums given by Chinese firms and individuals. One hundred dollars is a contribution that frequently occurs. A single establishment gave \$2,000; another \$1,500. Among the Chinese benefactors is the Hoppo of Canton, whose name appears as the donor of \$300.

THE statement published in the *Nichi Nichi Shimbun*, to the effect that Mr. Inouye, of the Daijo Kuwan, who recently sailed for Shanghai, was charged with a reply to an alleged proposition by the Court of Peking, that Japan should enter into an offensive alliance with China, is peremptorily contradicted.

## The Japan Weekly Mail.

'FAIS CE QUE DOIR; ADVIENNE QUE POURRA.'

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL, must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 24TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 4TH MONTH, 24TH DAY, DO-YO-UI.

### NOTES OF THE WEEK.

On Thursday last the M. M. steamer *Tibre* came into port from Hongkong, with London dates to the 7th ultimo. The homeward mails were despatched on the same day, per the P. & O. steamer *Sunda*.

H. I. R. M. S. *Cragoe*, long in these waters, left Singapore en route for Crossstadt on the 29th of March, after a stay of only two days in the former port.

At the date of the last *London and China Express* (March 5th) the O. & O. Company's steamer *Oceanic* was stated to be

loading at Liverpool. News has now been received that the vessel arrived in Hongkong on the 22nd instant. It is very evident, therefore, that the recent alterations have not affected the speed for which this favourite steamer is so celebrated.

The *London and China Express* of March 5th states "that the *Yoritomo Maru*, a beautifully modelled screw-steamer, was launched on the Clyde on the 28th ultimo, by Mr. Robert Thompson, jun. Her dimensions are:—Length over all, 217 feet; breadth extreme, 32 feet; depth of hold, 15.6 feet. The vessel, which possesses all the most modern appliances, has been built to the order of the Japanese Government, and has been superintended during her building by Captains Morgan and Cotter." The *Express* is in error in saying that the steamer was built for the Government; it belongs to the Mitsui Bussan Kaisha.

According to the *Straits Times* the visit of the King of Siam to Europe and America has had to be postponed, owing to the illness of the ex-regent, who was to be left in charge of the government during the absence of His Majesty. The tour is now likely to be deferred until next spring.

Captain Palander, of the Swedish Navy, commanding the *Vega* under Professor Nordenskjöld, has contributed an admirable record of the voyage to the March number of *Blackwood's Magazine*.

It has for some years past been proposed to found a new episcopate of the Church of England in China, the head of the see being located at Chefoo. An endowment fund was opened at the suggestion of Admiral Ryder, R. N., by the Society for promoting Christian knowledge, and has recently received an important increment. The *Times* remarks:—"An anonymous donor has offered the sum of £10,000 as the nucleus of an endowment fund for a new bishopric in North China. The Archbishop of Canterbury has accepted the offer and approved the proposed new see, which is to be regarded as a missionary, and not a territorial one. In consequence of the expense of the necessities of life and travelling it has been decided that the minimum capital for endowment shall be £13,000, and to the offer of £10,000 the Society for Promoting Christian Knowledge and the Colonial Bishops' Fund will each probably add £1,000. The Primate will have the selection of the first Bishop, and it is anticipated that an appointment will soon be made."

We trust that strict inquiry will be made into the circumstances of the appalling catastrophe that occurred during the passage of the American ship *Charles Dennis*, from New York hither. The master's report is that on the morning of the 19th of February a seaman, named John E. Bland, was washed overboard. The usual measures were taken to save him: that is to say, a life buoy was thrown, the ship was brought up into the wind, and a boat lowered in charge of Mr. Robert Nelson, the second officer, and manned by four men. At this time the breeze was stiff; and twenty minutes after the boat had left the ship a heavy squall, with snow and hail, came on, and in its passage obscured the view of the small craft which it must also have capsized, as on the weather clearing it was nowhere to be seen. Here, again, it is stated that all that was possible was done by those on board: they wore ship and stood in the direction where the boat was last seen. Arrived on what was thought to be about the spot they hove to under the maintop-sail. At noon the wind and sea were increasing, and all chance of recovering any of the boat's crew was diminishing. Still, a look out aloft was kept constantly until one o'clock in the afternoon, when, in the captain's words, the vessel "shipping large bodies of water, filling cabin and half deck, we were compelled with regret to keep the ship before the wind for the safety of all concerned." The tale is a very sad one; and there is no reason to suppose that all was not done that could be done by those left on board to recover their unfortunate comrades. Still the responsibility of leaving six lives in doubt in mid-ocean is a very serious one; and those concerned should be anxious for the fullest public investigation in order to establish the fact that, when the *Charles Dennis* resumed her course, no vestige of hope of rescue remained.

We do not care to discuss further the mad riot and speculation which took place a fortnight ago in the Yokohama and Osaka

Silver Exchange markets, when 100 silver yen touched, for a moment, 162 yen in paper money. We believe that the proper price for 100 silver yen is in the neighbourhood of 130 paper yen, looking at the present issues of paper money. All above this is the result of speculation, and the desire for rapid wealth on the part of illegitimate traders. It is well known that the Finance Department has in its vaults a reserve in specie of about twenty million yen. This should be stated clearly, over the signature of the Finance Minister. The statement of the National Debt, the amount of Government currency and National Bank currency issued, the Specie reserve held by the Finance Department, together with an exact statement of currency-balances held by the same bureau, should be published monthly, as is done in the United States. The Bank of England statement is published weekly. By this means the Government would give confidence to the people, and strength to its supporters, among whom they may reckon all honest native traders, and nearly the whole of the foreign community.

In a late issue of the *China Mail*, we note the following:—"Many of our readers will learn with genuine regret of the death of Mr. Morland Kerr, formerly Manager of the Oriental Bank at this place. Mr. Kerr had retired from the Bank for some time, and had undertaken the duties of London Agent of the Chinese Insurance Company. Never of a very robust constitution, it is presumed that the severe winter in England must have tried him sorely. The bursting of a blood-vessel was the beginning of his illness; and the end came soon after that symptom showed itself. He was attending to his duties in the City after his strength was not equal to the exertion; and soon after giving up he quietly passed away. A telegram announcing the fact arrived here this morning. It may therefore be said, he died in harness. Mr. Kerr was one of those quiet, unassuming men who made lasting friends wherever he went, and those who knew him in this Colony and elsewhere in China will instinctively feel that there is now one less whom they can count up amongst their friendly memories of the past. He will be as much regretted as he was highly respected in this Colony."

We hear that the Japanese Government purpose establishing a convict station at Sapporo, with the intention of bringing land at that place under cultivation by the aid of convict labour. It is said that, on the 18th instant, Mr. Tsukigata, an attaché of the Home Department, left Tokio for the North, in order to select a site for the proposed operations.

We learn that the Penang-Madras cable is interrupted, but that communication is maintained via Rangoon. This necessitates an increased charge on *Indian* telegrams of 3.3 cents per word.

The numerous friends of Mr. Francois Silvain in Yokohama will be pleased to hear of his promotion to be Chancellor of the French Consulate in Hongkong. The nominee, who till his advancement was First Clerk in the Consulate in this port, has often and for extended periods, filled the office of Chancellor here. People of all nationalities who have had business in the Chancellerie will testify to his ability and willingness to oblige.

The number of visitors to the Bazaar in the Swamp Gardens on the 18th and 19th instant amounted to 8,076 persons. The purchases made exceeded 330 yen in value.

One of the most pressing needs in a community such as exists here in Japan, is a high class school where European boys can obtain an education calculated to fit them for occupying a worthy position in after life. In order to accomplish this object parents have hitherto found it imperative to send their children either to Europe or America, thereby incurring very heavy expenses. We are therefore pleased to learn that educational advantages of no ordinary description are now brought within the reach of the children of foreign residents in Japan, and we hail the establishment of the Hongkong public school as a boon to the scattered foreign communities in the Far East. This school, we gather from the prospectus, is founded and supported by residents in the colony of Hongkong, for the purpose of affording a thoroughly sound public school education to European boys. The institution is under Government supervision, and the course of study is very comprehensive, including (in addi-

tion to the usual branches of English) Latin, Greek, French and the higher mathematics. We also notice that His Lordship the Bishop of Hongkong is the visitor of the institution, and that the committee list contains the names of the Revd. Dr. Chalmers, Sir John Smale, the Honble. Mr. Keswick and other leading gentlemen of the colony, so there can be no doubt that the school has secured support of the most influential and valuable description. Having regard to the advantages offered, the fees are remarkably moderate:—upper school, \$16.00 per term, of which there are three in the year, and lower school, for boys under nine years of age, \$12.00. Arrangements can also be made by which students from places beyond the colony may be accommodated in the house of the head master, Mr. W. M. Sutton, F. G. S., Oxon, who was formerly military and civil service tutor at Woolwich, head master of the Pembroke Corporation endowed grammar school and also of the endowed grammar school of Alcester. This gentleman's experience is a sufficient guarantee that, with adequate support from the public, the Hongkong public school will, in the course of a highly prosperous career, supply a want long felt and much deplored in the Far East.

The *Whitehall Review* mentions that Sir Arthur E. Kennedy, K.C.M.G., C.B., is expected to vacate the Governorship of Queensland shortly, in which case it is highly probable that Mr. Pope Hennessy will be transferred to that Colony from Hongkong. We notice that Sir Arthur and Miss Kennedy intended leaving Brisbane for England about the middle of last month and returning to the colony before the end of the year. It is possible that fresh arrangements may be made when Sir Arthur reaches home, and the statement in the *Whitehall* seems to render it probable that such will be the case. Sir Arthur's term of office in Queensland has still two years unexpired.

There seems to be a possibility of some unpublished letters of Burns being given to the public in New Zealand. The other day there died at Dunedin Mr. Robert Gilkison, the grandson of Richard Brown, who was a crony of the poet in Irvine, Ayrshire. For a number of years he had the custody of all the letters addressed to his grandfather by Burns.

The statue of Admiral Farragut, for which the United States Government gave a commission of £4000 sterling, is now being cast at the foundry of the Washington Navy Yard. It is said that the sculptor, Mrs. Vinnie Ream Hoxie, "in a big gingham apron," superintends every day the preparations for the casting of the statue. The model, which is ten feet high, represents the Admiral on the deck of a ship, standing with his foot upon a coil of rope, and in his hand a marine glass, which he is in the act of raising to his eyes.

The *Pall Mall Gazette* publishes the following extract from a letter of an English officer at Cabul:—"That night some of the bodies were brought in, but mutilated in such a manner that we could not identify them except by parts of their dress. I can't tell you all the indignities they had suffered; their faces smashed in with the butts of rifles, their bodies cut in slashes from feet to head—crimped like a fish, in fact; their throats cut from ear to ear; the hands and feet of many cut off; their toes cut down between each one: in fact, every cruelty exercised that could be devised." And yet, in the face of these fiendish atrocities, there are persons who blame General Roberts for executing their perpetrators!

There is, says the *Deutsches Montags Blatt*, a certain powerful ruler of a somewhat Asiatic country whose son is unfortunately unable to limit his expenses by his income, and consequently often finds himself caught in the pitfalls of impopecuniosity. To pawn jewels belonging to an august relative has been tried before, and the joke is now played out; money, however, must be had, and the ingenious prince hit upon the following idea: One day on parade he suggested to several officers of high rank that a dinner should be arranged at a fashionable restaurant in celebration of the anniversary of some battle. The officers of course consented, and the dinner took place. When the meal was over the cashier of the establishment, according to the custom of the country, came to each guest for his share of the bill, and began with the prince. This august personage, however, condescendingly indicated that the general to his right should have the honour of the first payment. The cashier went the

round and finally presented to the prince the salver, full of notes and gold, for his final contribution. The prince coolly put the money in his pocket, saying at the same time: "Will you tell the proprietor that I intend to pay for the whole entertainment myself, and to put it on my bill?" Whether the restaurateur was paid or not, history does not mention; this much, however, is certain, that a very august personage has recently been compelled to leave the capital, and has been sent down to the south of the Empire on a civilising mission.

A short time since we published the account of a series of murders committed by an Indian "Brave" named "Swift Runner," who killed his mother-in-law (which might perhaps be easily accounted for) and also his wife and several children; the apparent motive being his extraordinary love for human flesh, as he ate the bodies of his victims. We now notice in an exchange that Swift Runner has been hanged at Saskatchewan, Canada, the temperature at the time being 40 deg. below zero. A gallows had been built out of doors so that the Indians could see the execution, but when the officers and prisoner arrived at the spot it was found that part of the scaffold had been used for firewood by the half-frozen crowd. Swift Runner complacently warmed himself at the fire while the gallows was repaired. When everything else was ready the nervous hangman said he had forgotten to bring a strap to fasten the prisoner's arms and legs. The prisoner offered to save further trouble by killing himself with a tomahawk, but his proposition was rejected, and he ate a hearty meal of pemmican with the noose around his neck while a messenger was fetching a strap.

On Sunday evening the Bussan Chinretsu Ba, or bazaar for the display of wares manufactured, or dealt in, in this kon, was formally opened. The institution is intended to afford buyers and sellers an opportunity of displaying and seeing the best samples of merchandize, and is established principally with a view to export. It is situated in the Public Gardens in the Swamp, facing the Creek, and is thus in a central position and easy of access. The stalls are in two buildings, and are occupied by representatives of the largest firms in the district. We noticed at least two Paris medallists from the Exposition of 1878, one Mr. Ota Makadzu, who received a gold medal for his porcelains, and the other Mr. Ito Toki, the well-known silk manufacturer of Yokohama, to whom was awarded a silver medal. The show of bronzes, vases, porcelain and silks, though not large, is very well chosen; and taste and judgment have also been exercised in the selection of the cheaper articles of commerce. Among the more uncommon exhibits are samples of fruit preserved in this neighbourhood, and of white wine manufactured in the Yamanashi Ken, which a connoisseur informed us is of excellent taste and good quality. Then there are some wondrous vases from the Koransha store, and marvels of landscape photography by Mr. Susuki. A number of foreign and Japanese gentlemen engaged in commerce, and the representatives of the press, were invited to be present at the opening ceremony, which was fixed for five o'clock. The buildings and grounds were decorated in the usual Japanese style, but with more than ordinary profuseness; and during the day fireworks of quaint design were exploded at intervals. At half-past five, Their Excellencies Sano Tsunetami, Finance Minister; Shinagawa, Vice Assistant Minister for Home Affairs, and the Governors of Tokio Fu and Kanagawa Ken, entered the exhibition. After a walk through the buildings, accompanied by Mr. Hara Zenzaburo and other members of the Committee, and a careful inspection of the articles on view, they came to a canopy specially prepared for their reception. Mr. Sano in a brief speech explained the object of the bazaar, and urged the merchants of the district to support it, and work diligently to promote and augment the commerce of the nation. A r-past was then served to the guests, for whose amusement a splendid display of fireworks was also provided. At nightfall the place was illuminated with great brilliancy and effect. The exhibition is well worth a visit, not only in order to view the objects it contains, but to gain an idea of the fair prices that should be given for them. Everything in the rooms is for sale, and its cost is labelled upon it.

Among the latest pamphlets issued in Berlin is one entitled "The Russo-Franco-German War of 1880 and 1881, together

with a description of the Festivities in celebration of the Fiftieth Anniversary of the Battle of Warsaw." The pamphlet, which is supposed to be published in 1931, describes, in the style of the "Battle of Dorking," a conflict in which German armies contend successfully, by the aid of new military inventions, with the hosts of France and Russia. According to this account, Germany must at present be full of diabolical machinery—torpedoes, gun-cotton, siege artillery, explosive fluids, and man-reaping machines.

The report of the *Challenger* Expedition promises to be almost a unique work when completed. It is to extend to fifteen volumes, and will cost to produce upwards of £4,000. It is not quite easy to understand why only a limited number of copies are to be printed, and why these are to be distributed solely among learned societies. Once produced, the whole cost would be greatly lessened if the work were permitted to have a general sale. The Tokio Geographical Society should endeavour to obtain a copy of the report. We have no doubt it could be readily obtained by application in the proper quarter.

A new development has been imparted to the advertising art by an astute Berlin tradesman named Mielche, who has hit upon the happy expedient of combining announcements of family events, fraught with thrilling domestic interest, with ardent and tempting recommendations of saleable wares. His latest appeal to the public of the German capital runs as follows: "Twins are come to me for the third time. This time a boy and a girl. I entreat my friends and patrons to support me stoutly. Excellent butter, well worth its price. Similarly, sausage and cheese. Berlin, 2nd February; Mielche."

We observe in an English exchange that a Liverpool merchant last year took his son, who was recovering from scarlet fever, (i.e., was in the most infectious stage of the disorder), to stay at a large hotel in Wales. The young man's condition transpired, and there was a general exodus from the house. The landlord thus had his house empty at the busy time, and besides was obliged to go to considerable expense in disinfecting it. He brought an action to recover the loss he had sustained, and it has just been settled out of court by the payment of a large sum, nearly £2,000, inclusive of costs.

The *Examiner* of the 28th of February says:—"The accident to the *Chimborazo* has once more called attention to the serious dangers large steamers of that class incur in exceptionally bad weather. There have been several awkward accidents of late to large steamers, and an opinion is gaining ground that the extreme length of these vessels results in a corresponding degree of weakness. This view of the matter was taken in an interesting paper read a few nights ago at the United Service Institution by Major Moody, R.M.L.I., on the "Construction of Steamships." In support of his contention the writer referred to the daily records of the breaking of shafts in the case of long, narrow ships, although in other structural respects these ships were known to be of a superior class. Their great length allows them to bend and buckle about so much in bad weather and cross-seas that a tremendous strain is brought to bear upon the shaft—that being the only portion which cannot bend—and when once a steamer's shaft is broken she is entirely at the mercy of the waves. Major Moody considers that another great obstacle to the navigation of this class of steamships is the vibration caused by the racing of the engines, combined with the effect of the broken water which rushes upon the rudder from the propeller. This causes the compass to fly about five or six points in rough weather, and makes it difficult to tell what course is being made. The interference with navigation from these structural defects is, in Major Moody's opinion, the principal cause of the loss or injury of 90 per cent. of the steamers that are run ashore. Again, vessels of this kind are such bad sea-boats that frequently in dirty weather water gets down on the stoke-hole floors, and renders it impossible for the firemen to remain below. The fires soon go out, the steamer becomes unmanageable, and, if she does not founder, comes into port a perfect wreck. To obviate the danger of the breaking of shafts, and to improve the steering qualities of steamers, Major Moody advocates the use of Sadler's double-rudder and movable propeller. By this invention both rudders

can be used at the same time, thus giving double steering power to the ships; while the propellers can be raised or lowered by vertical screws either by hand or by steam. Major Moody also recommends that no steamship should be longer than seven times the length of her beam, and that no part of the lines of the ship should be flat, square, or hollow. Whatever may be the causes of the recent mishaps to large steamers, it seems evident that sea-going qualities have been too much sacrificed to the anxiety to attain a very high rate of speed."

In *Eight Months in an Ox Wagon*, Mr. E. F. Sandeman gives some interesting particulars respecting Natal, the Transvaal and the recent war. He does not seem particularly charmed with the Boers or their country. The one is arid and without a railway being run through it is never likely to be of much value. The others are "boorish" in the extreme, and altogether to an English mind an unamiable class of agriculturists. To what desperate straits the Government were run for volunteers the following humiliating poster indicates:—"V. R. Volunteers wanted for the Front and Grand Attack on Secoceni's Town. Loot and Booty Money. Better prospects than the Blaaubank Gold Diggings. Pay awarded £5 before leaving. Same rations as a General. Enrol before it is too late."

We notice in an American journal that "Mr. B. G. Northrup of Connecticut, was more than a year ago requested by General Kiyotaka Kuroda, minister of the Interior Department of his Imperial Japanese Majesty, 'to accept a small token of their appreciation of his service on behalf of Japanese students.' That 'small token' of sincere thanks arrived last month (February) in the form of a beautiful breakfast, dinner and tea-set of china, of about 200 pieces with his initials on each. The exquisite decorations of each piece show why so long a time was needed to complete the set."

So much attention has recently been directed to the enormous and constantly increasing quantity of artificial butter now manufactured, that it may be useful to know how to readily distinguish the difference between the fraudulent and the genuine article. M. Donny remarks, in a recent note to the Belgian Academy, that the two behave very differently when heated to between 150 and 160 degrees in a capsule or test-tube. At this temperature, artificial butter produces very little froth, but the mass undergoes a sort of irregular boiling, accompanied by violent jerks which tend to project some of the butter out of the vessel. The mass grows brown, but this is by reason of the caseous matter separating out in clots on the wall, the fatty portion of the sample sensibly retains its natural color. Natural butter, on the other hand, heated to from 150 to 160 degrees, produces abundant froth, the jerks are much less pronounced and the mass grows brown, but in a different way. A good part of the brown coloring matter remains in suspension in the butter, so that the whole mass has a characteristic brown aspect similar to that of the sauce called *au beurre noir*. All natural butters behave thus, and it is strange, M. Donny says, that this simple method of distinguishing natural from artificial butter has not been indicated before. We are aware that considerable suspicion attaches to some of the compounds sold in Yokohama for butter, the question can now be easily settled.

The local correspondent of one of the London journals writing from Constantinople says with reference to the labours of the Public Works Department in the Ottoman Empire:—

There is one "Route Impériale" which no doubt occupies a considerable portion of the energy of the Ministry of Public Works. I allude to that quarter of a mile between the gate of Yildiz Kiosk and the Palace of Dolmabahçe along which his Majesty makes his weekly procession to mosque. Mud is more in harmony with the Turkish departmental mind than its congenial dust. There is a repose about one to which the other seldom attains; besides, is it not easier to water dust than to cart away mud? Just now that favoured bit of road is in its normal condition, and the mind of the Minister may repose. But his halcyon days are not long; spring and fine weather will shortly come, and the public works must be resumed with their usual vigour. Some dozen water-carts must make their Friday morning parade, each dragged by a sorry animal who looks as if he had hibernated in his harness and is scarcely yet awake. One man drags him by the head, one on each side belabours him with a stick, whilst a fourth wields the leather hose and dashes the water about according to his fancy, totally regardless of all the world besides. What rank he may hold in

the department I can't say, but his proficiency in hydrodynamics would lead one to infer that he had taken a high degree in "L'école du génie dépendant du Ministère." There is no evidence to show that the Ministry of Public Works has gone deeper into hydraulic engineering, since harbours, docks, canals, and works of drainage and irrigation are conspicuous by their absence; and the question of water-supply to Constantinople is as dangerous a subject to approach as though it were another untranslated work of propagandism. Should my stranger friend follow my advice and judge for himself, I fancy he will return a wiser man and feel disposed to agree with me that in the *promise-and-non-performance business* the Turkish Government is without rival. It is pleasant, however, to record some little improvement in another department of the public service. The tall chimneys of the Arsenal, which for some time back had left the snow unsullied, have begun once more to send forth black clouds, which serve to show that the mountain is again in labour. The phases of rest and disturbance are, however, accounted for by some who are believed to be *au courant*. The coal supply from Heraclea fell short, owing to bad weather, says the Marine; or owing to the indisposition of the miners to give further credit, say the others. What was to be done? Turkish talent rose to the occasion. Tenders were invited for the supply of coal to the Arsenal, each tender to be accompanied by a *ten ton sample*. The bait took, the coal merchants hastened to send in their offers and their offerings, which are both being now consumed on the altar of astuteness.

#### ASIATIC SOCIETY OF JAPAN.

##### TOKIO MEETING.

A General Meeting of the Asiatic Society was held at the Shōbeikuwan, Seidō, Tōkiō, on Tuesday, April 13th; Dr. Divers, president, in the chair.

After the formal business, Mr. Bramsen, in accordance with the notice which he had given at the preceding meeting, moved:—"That three members of the Council and three ordinary members of the society be chosen by this meeting to form a committee whose duty it shall be to consider what measures can be taken to secure uniformity in the transliteration of Japanese words in the Society's Transactions; and that the results of their deliberation, in the form of some rule, be placed before a general meeting for adoption."

After some discussion the motion was adopted, and the following gentlemen were elected members of the committee, with power to add, if necessary, to their number:—

Dr. J. C. HEPBURN,	} as Members of Council.
Mr. SATOW,	
Mr. CHAMBERLAIN,	
Mr. BRAMSEN,	
Mr. KNIPPING,	} as Ordinary Members.
Mr. GUBBINS,	

Mr. Chamberlain then read part of a paper entitled "Suggestions for a Japanese rendering of the Psalms," in which, after reviewing at length the difficulties that beset the translator, he proposed the plan of printing two parallel versions, one a paraphrase and the other a literal rendering in the *Chiyoku-yaku* style. All the scriptures should be treated thus; but in the case of poetical books, the paraphrase should, if possible, be in verse, in order the better to please the native taste. The bulk of the paper consisted of double translations, made according to the principles here advocated; but the latter, having already been privately perused by several members, were not read out to the meeting.

In the discussion which followed, the Rev. J. L. Amerman observed that the Japanese could use their colloquial dialect with the element of vulgarity eliminated. It then became suitable for serious compositions. He knew of several serious publications in the colloquial dialect which had achieved a very wide circulation. He considered that the greatest objection to the plan proposed by Mr. Chamberlain was the fact that there was a double rendering. In translating the scriptures it was very essential that the sacred text should be expressed in one way and one way only. Any paraphrase would be apt to reflect the distinctive doctrinal views of the translator. The experience of those who had used the English prose version of the psalms seemed to show that a paraphrase, versified and amplified, was unnecessary. The present tendency in Japan was towards the extended use of Sinico-Japanese; between which and the colloquial style a gradual approximation seemed to be taking place.

Mr. Satow said he had had the pleasure of reading Mr. Chamberlain's translations into ancient Japanese verse, and he had no

hesitation in saying that they appeared to him to convey the spirit of the English original much more closely than the literal versions. In spite of the success obtained by the author of the paper, he was inclined to agree with the view of the last speaker, that the style would not be found adequate to translating the whole of the Old Testament. The Chinese classics to the follower of Confucius, and the Chinese versions of the Buddhist scriptures to the Buddhist priest, were what the Bible is to the European, and their style ranked as high in the judgment of Japanese as that of the English version in the opinion of Englishmen. If the Chinese versions of the Old Testament already in existence were made to conform more closely to the classical Chinese, it could be read with facility by educated Japanese, and if published with a Japanese translation in the same way as the Chinese classics are, would be easily understood by the common people, who by the medium of the popular newspapers, printed in Chinese characters with Japanese characters alongside, were daily becoming more familiar with the Sinico-Japanese style. Such had been the opinion expressed to him by several Japanese with whom he had conversed on the subject.

Dr. Faulds said that there were elements at work tending to raise the colloquial language out of its present degraded state and the Japanese were beginning to look on the high Chinese style as rather ridiculous, and to compare scholars of Chinese to those painters who were celebrated for their classical pieces, which no one understood, but who failed miserably when they laid themselves open to general criticism by painting something commonplace and intelligible.

Mr. Blanchet handed in copy of a Japanese version of the hundredth Psalm, translated by a committee of missionaries in Sinico-Japanese style.

Mr. Wright asked Mr. Chamberlain whether the plan he advocated was intended to apply to the translation of the Psalms for actual use by Japanese converts to Christianity?

Mr. Chamberlain said that, having already exposed his views at length in the paper now under discussion, he would not take up more than a few moments of the meeting's time. He simply desired to remind Mr. Amerman, who had objected *on principle* to the plan of printing two parallel versions of the Psalms and making one of these versions a poetical paraphrase, that in the chief book of one of the chief churches of Christendom,—the English Prayer-Book,—too such versions were given. That the metrical version was in this particular case a very unsatisfactory one, did not affect the argument. He also begged to correct a statement of Mr. Amerman's to the effect that he (Mr. Chamberlain) had denied the existence of any serious works in Sinico-Japanese, and observed that, after all, the distinction between Sinico-Japanese and the *Chiyoku-yaku* style which he had advocated, was not essential. If, as Mr. Satow seemed to think, the existing Chinese versions of the scriptures are those which are most likely to suit the taste of Japanese readers, then we may find pleasure in the thought that the labour of translation is already accomplished. If, on the contrary, the colloquial, when it shall have been rendered fit for literary purposes, is to be the medium, then in all probability no person now living will survive to see the result. No one would hail with greater delight than himself the substitution of one common easily understood language for the present cumbersome system according to which the Japanese write in a manner different from that in which they speak. But the versions in his paper had been made with a view,—not to a distant future,—but to the present moment, and were intended to be of a kind that would please the educated class, the most important of all classes, leading, as it does, the way in which the masses afterwards follow.

Mr. Satow then read his paper on "Ancient Sepulchral Mounds in Kaudzuke." Some two years ago three mounds were opened, and were found to contain a quantity of pieces of pottery buried in a thick layer of dust, many of them quite perfect, and ornamented in a peculiar manner. Hardly any traces of bodies were found. The material of the vases and *tasse* was coarse black or red earthenware, but the shapes of some were very tasteful. In addition to vessels there had been found fragments of the clay images formerly buried at the graves of persons of rank as a substitute for the more ancient human sacrifices. It was shown that, as late as the year 646

A. D., the necessity of prohibiting these sacrifices still existed. Drawings were exhibited of about forty objects, including vases, *tazze*, iron arrow-heads, a bronze cheek-piece for a horse, two large clay busts, a clay horse's head and earthenware posts of which fences were constructed round the burial mounds.

Dr. Faulds remarked that the presence of bronze and iron in the find was perhaps one of its most interesting features, as it seemed to point to an age of transition.

The usual votes of thanks were passed to the authors of the papers, and the meeting was then adjourned.

#### REUTER'S TELEGRAMS.

LONDON, 9th April, 1880.

Five more Russian war vessels have been ordered to China.

LONDON, 19th April, 1880.

A new Russian loan is announced of £15,000,000.

The Elections are concluded, and have resulted in the return of 849 Liberals, 285 Conservatives, and 68 Home Rulers.

#### PARIS LETTER.

PARIS, March 6th, 1880.

(General Topics and Political.)

It is a pretty quarrel as it stands, that between the Jesuits and the Republicans, for both now remain face to face. The Senate has rejected by the unexpectedly large majority of 19 the dynamic "clause 7" of the government education bill, intended to blow up the Jesuits. The Senate was asked to refuse to the Jesuits liberty to teach, and it said, in the name of the Republic, which professes to be the incarnation of liberty, "we exclude none from teaching." The bill is now Hamlet without Hamlet, but religious passions have only become the more excited. The Republicans say that the Jesuits, contrary to the law of association, nevertheless associate; they are permitted to violate the Code, while if we attempt a reunion we shall be prosecuted. We have no objection to the Jesuits existing if all be equally authorized to associate, and if they be deprived of the power and influence they command, by reason of the connection between Church and State. The Ministry avow that the order of Jesuits is inimical to the interests of the country, by training up youth to repudiate the principles of toleration and equality, combined with intellectual freedom—the legacies of the Revolution. If the Jesuits desire to reside in France, they must conform to the law like other religious orders, or depart.

The outcry against the Senate for exercising its very constitutional right, only shows the immense backwardness of the political education of the country, and its impatience to battle constitutionally. If the Senate is merely to be a simple registry office for the bills sent up from the other house, rather than a salutary break, the sooner Louis Blanc's measure for abolishing senators is taken into consideration the better. The Senate has ignored the strong feeling of the country in favor of the rejected clause, which was, after all, but a compromise. The Chamber of Deputies will now, their indignation having cooled, vote a resolution calling upon the Cabinet to enforce the unrevoked laws, prohibiting any and every unauthorized religious confraternity from residing in France. This means the expulsion of the Jesuits—legally. As to its opportuneness and execution, time will decide. On the closing of the Jesuit establishments, will follow an electoral agitation for the disendowment of all religions. Perhaps these thorny subjects would have been allowed to slumber on, had the clerical party not committed the lamentable blunder and folly of joining all its influence with MacMahon and his advisers to crush the Republic, that is, the modern principles it professes, and so successfully propagates. As we sow so shall we reap.

With the departure of Hartmann, has vanished all interest in the diplomatic demand to hand him over to the St. Petersburg hangman. If Russia becomes huffy at France defending her honor and upholding the rights of humanity, she must be allowed to come out of the sulks when she pleases. I have just read a letter from a "Prince," who after much difficulty was allowed to visit the S.S. Peter and Paul fortress—the Russian Bastille—on an island in the Neva. It is also the necropolis of the Romanoff family and visible from the Winter Palace. The Czars are less afraid of suggestions of *Memento quia pulvis es*, than Louis XIV; who built and planted Versailles to screen the sight of St. Denis and its royal sepulchre, but where he was interred—less heart and intestines. This caused his subjects to observe, he was buried as he lived "*sans cœur, sans entrailles*." The governor received the "Prince Special," as one charged with dynamite, and with a sigh ordered an aide-de-camp to act as cicerone.

A clock tower of the prison, on the stroke of midnight, chimes the national hymn, "God protect the Czar," and if a citizen smiles at the ringing out, Melikoff's agents will send him to the casemates. The latter extend under the Neva, and below the ramparts, and have but a tiny hole to admit air and light. On descending to the depths, the officer remarked, "few revolutionists ever ascend them." The cells are full of political prisoners, and before each door is a soldier with fixed bayonet and loaded musket; the straw of the beds is only changed on the birthdays of the Czar and his wife, the dietary is soup minus meat, and black bread; as for water, thanks to the walls of the cell there is abundance. Once a year, too, the writings on the cell walls are scrubbed out, and the prisoners punished for damaging a state residence. The cell occupied by Michel Bakounine, who escaped from Siberia to London, is shown, as also that wherein the Princess Tarakanova—a kind of Mary Queen of Scots—was confined by her successful rival Catherine II., till an unexpected rise of the Neva drowned and so released her. The cells for the Upper Ten political prisoners are lined with mattresses, but in compensation for this luxury, the walls are provided with rings and chains. A tunnel under the Neva communicates with the private study of the Czar in the Winter Palace, the door of which opens by touching a spring. When Paul I. attempted to use the passage in connection with another palace, the assassins struck him as he was half way through the door. It is by this passage that the imperial family passes to obtain a private view of notorious culprits. It appears that Russian ladies when they now go to a ball, wear all their jewels, so that, in case of a surprise by the Nihilists, they may be able to save something from the wreck of matter. Turkish ladies are said to go to bed with all their jewellery in a handbasket by their side, in order to be able to bolt with it, in case the infidels make a raid.

Some women in Paris have formed a society to secure their "rights," and have just held a public meeting: no press invitations were issued, but any authorized journalist, on presenting his card, was welcomed on the platform. The programme was devoted to "demolishing the Bastille of masculine abuses and usurpations," and this was to be accomplished in nine years hence—on the anniversary of 1789—by lectures, meetings, and special journals. All the official ladies had the air of "withering on the virgin thorn;" few were prepossessing—a grave error when men are to be converted, for they give when sued by maidens—young and pretty Shakespeare meant—like gods. Poor old Blanqui hobbled into the presidential chair, to the air of the *Marseillaise*; he avowed his opinion, that a lady ought to preside—a proof that the old conspirator has a ray of sense. Mlle. Ancelero, aged 25, was the *oratrice*. Her features appear as if they had got jammed between a door, but she had quite an agitator's flux of words. She eulogized the "ladies of the commune," and claimed that if they had rights to be shot, they had the same to civic existence. She was very strong in her praise of ex-schoolmistress Louise Michel, now passing her time in New Caledonia, until France shall apologize for having extinguished the Commune. This lady it seems will, on her return, be run by her sisters for the presidency of the Republic; so be warned in time Dauphin Gambetta!

Very strong rumours are afloat respecting the Queen of Italy; quidnuncs hint mysteriously that she has the symptoms of ex-Empress Charlotte; one of her desires is to be allowed to visit the Holy Father. It is said she is subject to fits of excitement since the attempt of Passanante to kill the King. The simple fact is, she is outrageously jealous of her husband who follows in the footsteps of his papa, by having a weakness for ladies like a financier. The ex-Empress Eugenie once flew to Scotland because she thought her lord and master was sometimes a little gay.

The weather is deliciously mild, we almost fear to speak of it lest it it might vanish, just as two aged celebrities never alluded to death, fearing he might overhear and remember them. The Bois de Boulogne is covered with more fashionable vehicles than during the palmiest days of the second empire; only the luxury of the present is solid. Many forgotten celebrities are returning to the front. Prominent is Behague, against whom, on account of her being a tradesman's daughter, all aristocratic salons were once shut; yet by perseverance and tact, by snubbing snubbers, and regarding, as the Princess de Lieven said, "Paris as a city of *invités*," she belongs now to the *crème*, as the Viennese boast, or the *gratin* according to the Faubourg St. Germain. Her husband was a distinguished agriculturist, and on his visiting cards were the words, "cattle breeder." The Duc de Nemours takes his drives sadly. He is considered to resemble Henri IV.: not a bit of it; he is as like Don Quixote as one pea is like another. Old Mme. de Baulincourt is a curiosity, she is the first "flower girl" in the city; all she makes is for charity bazaars. Commerce would give her talent any terms she demanded. There is a story told of her. One day the then English ambassador, Lord Normanby, called at the Elysée to see Prince-President Louis Napoleon; he was ushered into a salon; kept waiting a few minutes too. He commenced to pace the room, and hearing merry laughter in an adjoining apartment, separated only by some tapestry, drew the latter aside, and placing his forefinger on his lip, walked on tip-

toe towards the Prince, who kneeling on one knee had his face covered with his hands concealed in the lap of Mme. de Baulincourt, while around were Miss Howard, Mme. de Contades and others—all playing forfeits. Lord Normanby touched the Prince's hand. "That's Pauline, I know," and on looking up, saw his lordship, who was forced to join in the game for the evening. On the news reaching the Exchange that the English ambassador was closeted for hours with the President, funds fell eleven sous—because the ladies who at once "farmed" the game of forfeits, ordered their brothers to buy up all stock offered for sale, and so realized millions, by propagating a *canard*.

The son of Musurus-Bey, the Turkish ambassador at London, has taken a few wrinkles from the infidels; he made the acquaintance of Mlle. d'Imécourt, heiress. Ottoman stock is next to worthless, and she belongs to a distinguished family of the Faubourg St. Germain. He induced her to elope with him last winter to London, where they were married. After fifteen days—half a honeymoon—her family discovered her, brought her to Paris, where she is now in a convent, pending the decision on the application to annul the marriage. The Prince de Bauffremont has his troubles. His wife, on being separated from him by the French courts, went to Saxony, and, after six months residence, took out letters of naturalization as a German subject; next she married the Prince Bibesco, an old admirer, by whom she has a family. On the occasion of the appearance of each little stranger, de Bauffremont files an affidavit that he is not its father. The court believes him. Valmignot is a matrimonial agent, and sues Grimbarre for fr. 517—not fees, as he charges nothing for making couples happy; he is a fruiterer and clothier, and the bill is for leeks, salad, and onions supplied to the bride to soften her heart, plus the cost of Sunday pantaloons furnished to the lover, who when he got tired of one pair, had them brushed up and sold to his father-in-law on the sly, at half-price.

A *mirant* writes to prove that our mental superiority is due to chairs; man he observes originally had a tail—Lord Montbodo maintained we have them still, only pride urges us to conceal them—but as he began to rule he required to be seated. Hence, the necessity of chairs: this led to the contraction of the spinal cord, and the concentration of its nervous matter upwards till it concentrated and predominated in the brain.

There is an eminent doctor in Paris, so stout and so afflicted with gout, that he cannot ascend the staircases to examine his patients; he remains in the hall; an invalid comes down or appears on the landing, replies to all questions; then the recipe is written. The doctor can boast of killing fewer persons than are disposed of by his more active confrères.

Business is flourishing: the demand for space at the cosmopolitan ham and gingerbread fairs is double that made at any former animal gathering. Dealers in horse and ass flesh, whether fresh, corned, smoked or in sausages, must state the fact distinctly on their sign-boards or run the risk of being heavily fined. Meat-biscuits are finding a brisk sale and make capital soup. In countries where beef and mutton are next to nominal in price and flour nearly ditto, they might be profitably compounded, baked and exported.

The queen of beauties at this season's official balls, is Mme. Gautherot, a blonde and an American. This is a fact as important to ladies as the blowing up of a Winter Palace or the sacking of a Summer one.—Worth, the man-milliner, is to be married.—On an average it costs one million of francs to consecrate a French King, three-quarters of that sum, to marry him, and a quarter to bury him. It entailed an outlay of ten millions to get rid of Napoleon III.—Two surgeons performing an operation: "It is done!" "So soon! let me give him a touch of my lance, too, to secure my fee."

#### LONDON LETTER.

LONDON, March 4th, 1880.

We have been somewhat excited by the report of an earthquake in Tokio, which was telegraphed to England by Professor Milne; the gravity of the phenomenon being estimated by a friend of the Professor's, Mr. Dickins, according to the amount expended in transmitting the telegram. I think it was Mr. Dickins also who stated that the Japanese had predicted many earthquakes about this period and Mr. Dickins thinks they will prove correct (this is cheering for you!) because they are admirable weather-prophets. This is no doubt the case, but then all people who live in the vicinity of high mountains, particularly in sight of an isolated peak such as Fusi-yama as depicted on screens, fans, plates, and every conceivable article of furniture in every shop in London, must be good weather-judges. They can see the effect of every slight change in atmospheric pressure long before it would be felt in the plain, and the top of a mountain is the best weather-cock you can have. But I am not meteorologist enough to comprehend the connection between atmospheric pressure and earthquakes, or how an earthquake can be foretold. I asked my Japanese friend about this the other day, and he maintained that the atmosphere had much

to do with these subterranean movements, though he could not explain it in a way that was at all intelligible to me. Indeed he told me some things which required several grains of salt to assimilate, though I was careful not to hurt his feelings by betraying the least incredulity. For instance he mentioned some hot springs on the sea coast about two days' journey from Tokio, which are subject to a daily tide; at a certain hour every day, if not twice a day, the boiling water being thrown up with great force and subsiding again during the interval. He also described to me a certain cave or subterranean passage of such vast extent that Lord Lytton's "Coming Race" might find room for developing their peculiar institutions therein, but such stories seem to belong to the fabulous era in every country. I am, however, somewhat anticipating. I must tell you that according to arrangement I presented myself one evening last week at Mr. O——'s rooms in Tavistock Square and was agreeably entertained by him, and extremely interested in all I saw and heard. At the risk of offending against the laws of hospitality to a small extent I must tell you a little of the household economy. The door was opened by a boy in buttons and a queerish motley uniform. I found my friend engaged in a game of whist—it was at 6 o'clock in the afternoon—the party being another Japanese gentleman Mr. K——; Mr. P——, an American; and Miss B——, a handsome woman of about 30; of whom to prevent any misapprehension I shall first give some account. She is the elder of two daughters of a Lincolnshire rector, who died three years ago, leaving a very modest competence to the daughters, on which, however, they might have lived fairly well had they united their forces as was the father's intention they should. This was found to be impossible, however, the two sisters each possessing strongly marked characteristics of an opposite kind. They had both been carefully educated so far as book-learning went, having acquired not only a competent knowledge of English history and literature, but considerable proficiency in the Latin and Greek classics. In addition to these accomplishments, Eva, the elder, had fortunately, or unfortunately as the event may prove, dipped rather deeply into modern social science. The effect of this training on an imaginative and original mind, allowed to assimilate ideas with very little friction or disturbance from living men or women, is never to be predicted beforehand. And of all men who are blind to the influences which are secretly moulding the character of their children, especially their daughters, commend me to a plodding, conscientious, humdrum English clergyman. The good Dr. B——'s ideal for his daughters was—whether within or without the pale of holy matrimony—a life of parochial usefulness adorned by scholarly culture. Yet here is his eldest daughter, within three years of his death, following a perfectly independent career in the great world of London. She confessed to me, the second evening I passed in her company, that from a rather early age, even while her mother was yet alive, she chafed somewhat at the daily, weekly and monthly routine of a clergyman's religious observances, which she declares she was never able to see the good of. It was decency or constraint, therefore, rather than devotion, that kept her in the groove befitting a clergyman's daughter. All the while her mind, as she thinks, was growing too big to be held down by those brittle bonds. She longed to see the world, to play a part in it, to do something to improve the human race in ways where she could see the result in visible and tangible shape. She was captivated, she told me, by Mr. Disraeli's oracular *Sanitas Sanitatem* some years ago, and she professes more confidence in the utility of good drainage than of the distribution of tracts. But to cut a long story short, being obliged to make a living, she had to consider, not what she would like to do, but what people would the most readily pay her for doing, and having unbounded confidence in herself she sought and obtained an engagement on the stage. At first it was on trial, but she had not been acting a week when the managers offered her a season's engagement at £10 a week. This was between two and three years ago, since when she has been improving her position pretty steadily. I have not seen her act, not being much of a theatre-goer myself, but I notice her name favourably mentioned by the newspaper critics who know everything. Well, she occupies rooms with her maid in the same house where my Japanese friend has his apartments, and they interchange civilities occasionally on an afternoon, which explains my surprising the party at a rubber.

I was interested in a discussion which fell out, quite accidentally between the two Japanese gentlemen on Political Economy as applied to the immediate circumstance of their own country. They were polite enough to carry on their dialogue in English, which enabled Mr. P. and myself to interject a word here and there. O——, it seems, has been studying all the books on the subject, from Adam Smith to Mr. Fawcett, and has become a convert to the principles of Free Trade, which, like all *doctrinaires*, he would apply universally and without exceptions. K—— on the other hand, is a pure experimentalist, shaking his head over so-called "principles," scowling at theories and shuddering at hypotheses. Because Free Trade is acknowledged to be good for one country (and he fully admitted this in the case

of England) it not only is not proven that it will be good for every other country, but the experience of England is not even a presumption in its favour elsewhere. For Japan he is a decided protectionist, although he abjures the title, and he is much delighted with what he hears at the Japanese Legation that, in the new Treaties, the Japanese Government will be allowed to impose high duties on imports. That this will curtail the import trade he fully admitted, but it was the very thing he wished to see. Japan, he said, had been buying more than she could pay for out of her own products, and was consequently impoverished, all her coin being exhausted. Mr. O—— ventured to argue, according to the text books, that coin is not money or that money is not value or that value is not wealth; that the "commodities"—that is the politico-economical word for goods or merchandize—which Japan imported, were useful or they would not be bought, and so forth. But the other broke in upon his flowing periods with scornful impatience, asking him how he felt about it when he had emptied his pockets and used up his credits in buying things which at the worst he could have done without, and at the best he would have been ten times better, both in body and mind, to have gone without. This argumentum ad hominem cut deeper than I was aware of at the time, for it appears that the very week before, Mr. O—— had been beholden to his friend for administering to his financial necessities under circumstances not very dissimilar from those to which K—— had alluded in his argument.

#### JAPANESE PERSONAGES.

##### VII.

##### HIS EXCELLENCY HIJIKATA MOTOHISA.

**H**IJIKATA Motohisa, Assistant Vice-Minister of the Imperial Household Department, belongs to an aristocratic family of Tosa. It is now little over twenty years since he arrived in Yedo and entered the educational establishment conducted by Wakayama whence he subsequently changed to that of Ohashi. Hijikata pursued his studies for about four years, during which time he became intimately acquainted with many of those warriors and statesmen who have since by their actions indelibly written their names on the pages of the history of Japan. After returning to his native province he was ordered to Kioto by his feudal lord in 1863, and in the month of August of the same year he received an appointment in the Imperial College (Gakushuin). In this position Hijikata greatly distinguished himself, and made manifest the possession of those abilities and aptitudes which have gradually led him to his present important office in the *entourage* of the Emperor.

Hijikata accompanied Sanjo Sanetomi and the imperial Ministers to Choshu, and subsequently in 1865 to Chikuzen. While at the latter place he was commissioned by Sanjo to visit Kioto and obtain intelligence respecting the course of events. At this particular time strict measures were being taken to arrest all fugitive members of the Tosa clan and Hijikata was therefore in imminent danger. However, he managed to remain undetected in the Satsuma yashiki at Inadekawa, and thus was afforded an opportunity of gaining the information he desired through the imperialists of Kioto.

The Bakufu Government now determined upon the second expedition against Choshu, and as soon as Hijikata received the news he at once returned to Chikuzen, when he lost no time in acquainting Sanjo with all the intelligence he had gathered during his perilous visit to Kioto. During all this time Hijikata was in constant communication with the leaders of the movement for the restoration of the imperial authority, and devoted all the resources of a fertile mind, rapid to conceive and daring in execution, to the accomplishment of a project fraught with such important consequences to his country. Accordingly, when Tokugawa Keiki resigned the office of Shōgun in December, 1867, we find the subject of this memoir accompanying Sanjo and the imperial ministers in their triumphant return to the capital from which a few years before they had hastily fled, yielding to circumstances and hoping for the more prosperous time now happily arrived.

The coveted reward of long, faithful and devoted services had at length come, the imperial authority was fully restored, and Hijikata found himself not passed over in the distribution of honours among the brave men who risked all that life holds most precious in their unswerving attachment to the rightful sovereign. First appointed assistant military inspector, and subsequently Hanji of the local government of Yedo, in May, 1861, Hijikata at the head of a body of troops dispersed a rebel rising at Kozuke, and in 1869 he

received further recognition of his loyalty by being awarded a pension of one hundred koku of rice. In the following year disturbances occurred among the people of Choshu; and Tokudaiji Dainagon was despatched by the imperial authorities to act the part of peace maker. Hijikata was associated with Tokudaiji in his mission which proved a complete success; and on their return both envoys received presents of silk brocade and money, while Hijikata was also decorated with the senior fifth rank of the Japanese Order of Merit and appointed a grand secretary. In 1877, further promotion was conferred upon Hijikata: he received the honorable office of chamberlain of the first class. This position he continued to occupy worthily until the recent changes took place when he became Assistant Vice-Minister of the Imperial Household Department.

#### JAPANESE PARABLES.

##### V.

**A** GENTLEMAN who was passionately fond of field sports happened to shoot a large stork. Carrying the bird home in triumph he instructed his cook to roast it whole, and, so proud was he of his achievement, that he invited all his friends to a grand banquet in order that they might regale themselves on the proceeds of his skill.

Early the following morning the cook set to work to prepare the stork for the spit; but, while his attention was diverted for a few seconds, a stray cat, taking advantage of the opportunity thus afforded, pounced upon the bird and devoured nearly the whole of one leg before the theft was noticed. As may easily be imagined the man was in a sad quandary; but being a quick-witted knave he bethought him of a plan by which he hoped to divert the inevitable wrath of his master when he came to discover the mutilation of his much-prized stork.

By the appointed time the guests bidden to the feast arrived, and the viands were placed on the table. The host quickly noticed that the stork was minus one leg, and flew into a violent passion. Sending for the cook he pointed out the condition of the bird, and angrily demanded an explanation. The cook, however, appeared in no whit surprised and said in the most grave and calm manner possible:—

"Why, Sir, a stork has, as you must be well aware, only one leg."

This reply increased the gentleman's fury, but, being unwilling to further disturb the harmony so essential on festive occasions, he dismissed the man without comment. The flippant explanation of his servant, however, rankled in his mind, and he accordingly sent for him very early the next morning and questioned him again. The cook still adhered to his assertion of the previous evening and offered to give ocular demonstration of its truth, if his master would only accompany him a short distance into the country *at once*. Although he was much incensed, the gentleman's curiosity was excited, and he agreed to the proposition. They accordingly went a little way until they reached a swamp close to a river, where three storks were noticed asleep supported on one leg.

"Now, Sir," said the cook, "look at those storks. You see they have only one leg. Just as I told you!"

"Yes, so it seems," replied his master, "but I'll very soon show you the other legs;" and, as he spoke, he ran towards the birds shouting and clapping his hands.

The noise of course awoke the storks and they sailed off with the full complement of legs trailing away gracefully behind them. Turning back to his cook the gentleman said, quite jubilantly;—

"Look at them, you rascal! Don't you see they have two legs?"

"Yes, I see they have two legs *now*, but I also saw that they had only one leg until you, by your exertions, caused them to show another. If you had only acted in the same way to the stork last night, no doubt it would have done the same; and then all this potter would have been avoided."

The master was much amused at the wit displayed by his servant and he gave him a handsome reward for the amusement he had afforded, instead of what he deserved—a severe punishment for his carelessness.

[We recollect something very closely resembling this fable in other languages—Ed. J. W. M.]

## SYLVAN SOUNDS.

(From the Japanese.)

## XI.

## THE SCATTERING OF THE BLOSSOMS.

Fair is the sheen of the sapphire heaven,  
Calm and clear:

Fair the radiant cloud of blossoms,  
Far and near!

In my garden's narrowing spaces,  
Bough with bough half interlaces,  
Branches droop, with fragrance cumbered.  
Blushing bud and bloom unnumbered  
Twine themselves in soft embraces.  
Breaths of perfume blend together,  
Wafted thro' the golden weather.

Hark! the God of wind is blowing,  
Fierce and strong of heart is he;  
And he rends the fairest floweret  
From the blossom-laden tree.  
In a foam-like snow descending,  
Drifting, eddying, wildly blending,  
Or, like snowy mist-clouds driven,  
Fluttering, scattered, tossed and riven,  
From the topmost bough they fall  
Over all.

O what beauty! O what gladness!

Thus to see  
Fold on fold of filmy whiteness,  
Veil the scene in bloom and brightness!  
Yet there lurks a subtle sadness,  
In the airy flood of fragrance  
Borne to me.

F. B. H.

Tokio, 24th April, 1880,

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

## COURT, POLITICAL AND OFFICIAL.

The *Nichi Nichi Shinbun* says: "the King of Corea is going to despatch an Ambassador to this country. The cause of this step is said to be that the Coreans are disturbed at the action of the Japanese Government in sending police to the new port of Gusan. The object of the mission is therefore thought to be to ask the Japanese authorities not to take such active measures at present."

Mr. Seki, Governor of Ehime, arrived in Tokio on the 17th instant.

His Excellency Kono, Minister of Education, has been appointed a member of the suite to accompany His Majesty the Emperor, on his intended visit to the provinces.

Their Majesties the Empress and Empress-Dowager will accompany His Majesty the Emperor, as far as Taka-ido.

The Prime Ministers, Privy Councillors and other officials, are going to present various sums of money towards the construction of the new Imperial Palace.

The Chief of the Colonization Department has sent in an application to the Prime Minister, for permission to establish an office for fixing the current price of goods in Yesso.

Mr. Hanabusa, *Chargé d'Affaires* for Corea, was appointed Resident Minister in that country on the 17th instant.

Mr. Watanabe, Chief Secretary of the Daijo Kuwan, was transferred to the Department of Foreign Affairs, on the same day.

General Noza has been nominated to accompany His Majesty the Emperor on his visit to the provinces.

The *Uochi Shinbun* mentions a rumour that His Excellency Tamano, Assistant Minister of Justice, is to be transferred to the Presidency of the Dai-shin-in: that Kenji and Senator Watanabe is to be appointed Assistant Minister of Justice: and Kishira, President of the Dai-shin-in, a Kenji.

The Aikokusha (Patriotic Society) of Osaka, is going to apply to the authorities for permission to hold its meetings under the provisions of the new regulations.

The students who recently passed the examination in the Imperial College of Engineering, are to be despatched next June to different districts, for the purpose of practising surveying.

The new criminal code has been passed in the Senate.

Those prefectures which have not yet been brought within the telegraph system, will have telegraphic communication extended to them out of the moneys appropriated to the Telegraph Department for the current year. If these funds prove insufficient, the work will be completed next year.

A telegram has been received in Tokio, that Mr. Sakata, and the other commissioners and exhibitors at the Sydney Exhibition, left that city for Japan on the 17th instant.

His Excellency Nagaoka, Minister to Holland, was entertained, by the Envoy in Japan for the Netherlands, at a dinner in the Grand Hotel, on the evening of the 19th instant.

Mr. Watanabe, Governor of Fukuoka, is shortly expected in Tokio, on official business connected with the construction of the harbour at Hakata.

Mr. Matsuda, Governor of Tokio, will entertain the German Minister at the Enri-Kwan, on the 25th instant.

The *Osaka Nippo* gives it as a current report that the new Governor of Osaka will probably be Mr. Iwashita, a member of the Senate. This gentleman was formerly secretary to Mr. Goto Shojiro, at the time he was Governor of the southern city.

It is estimated that the sum of about 45,000 yen will be required for the forthcoming Imperial Progress. This amount is much less than that spent on the Imperial Progress in 1878.

Mr. Asakura, the superintendent of the Ikuno silver mine, lately discovered a new vein of silver ore at Koyama, situated a short distance beyond the Ikuno mine.

His Excellency Nabeshima, Envoy Extraordinary and Minister Plenipotentiary to the Court of Rome, will leave for his post on the 28th instant.

The local assembly in the prefecture of Hiogo, is to be opened for business on the 1st of May next.

On Monday last, Tokunaga, a rice merchant in the capital, forwarded a petition to the Tokio Fucho authorities, respecting the suspension of the rice guilds. We hear that he also demanded an interview with the Governor.

The total number of police in Tokio amounts to 4,647 men.

Messrs. Kataoka and Kono, the representatives of 94,733 persons who compose the Aikokusha, have forwarded a petition on the establishment of a National Assembly to the *Daijo Kuwan*, where its receipt was rejected. The delegates then presented the memorial to the *Genro In*, where it was received on the 19th instant.

His Excellency Iwakura, Junior Prime Minister, entertained the German Minister and a number of foreign gentlemen, on Monday last, at his private residence at Takarada-cho.

Mr. Ashiura, Vice Superintendent of the Yokohama Custom House, has left for Wakayama on leave of absence.

His Excellency Sano, Minister for Finance, will shortly inspect the Yokohama Custom House.

Mr. Iida, Under Secretary of the Finance Department, accompanied by Mr. Hattori, a *Sakan* of the 7th class, has been ordered to proceed to Saitama and eleven other prefectures on some business connected with exchange.

Mr. Wada, an officer of the Agricultural Bureau, left Tokio on the 21st instant for Iwateshiro, in the prefecture of Fukushima.

Kwazoku M'nezono, as the representative of all the nobles in Kioto, has arrived in Tokio, to inquire after the health of His Majesty the Emperor.

Mr. Chida, the new Governor of the prefecture of Hiroshima, left the capital for his post on the 21st instant.

Judge Kishira, President of the Dai-shin-in, has resumed the duties of his office on the 21st instant, having recovered from his recent illness.

Judge Miyashi, President of the Yokohama Saibansho, has been transferred to the Secretariat of the Judicial Department.

A native paper states that His Majesty the Emperor accompanied by the Empress and Empress Dowager left the palace at 10 a.m. on the 21st instant, and proceeded to the Fukiage Park to witness an exhibition of sword and lance exercise on horse-back, conducted under the direction of

Kwazoku Yama-no-uchi, the ex-Daimio of Tosa. There were also present the Princes of the Blood, the members of the Cabinet and other dignitaries, among whom were Kwazoku Shimadzu Tadayoshi, who gave the exhibition of *inn-o-mono* the other day in the same park. The entertainment commenced by Mr. Hakodate riding the horse lately presented by General Grant. His Majesty was so pleased with the skill of the rider and the graceful manner in which he showed off the beauties of the noble animal, that His Majesty asked Mr. Hakodate to repeat his performance, which he did, bare-backed, to the great astonishment of all present. Then the sword and lance exercise was gone through, the gentlemen taking part being divided into two bodies of nineteen men each, all armed with swords and lances, and mounted on horse-back. Victory inclined first to one side, then to the other; and no decisive advantage had been gained by either party at four o'clock when His Majesty ordered that the sports should cease, and returned to the palace.

The *Nichi Nichi Shimbun* says that "Mr. Inouye, Chief Secretary of the Daijo Kwan, left for Shanghai the day before yesterday (the 21st instant) in the *Takasago Maru*. We hear that as the Chinese Government is going to declare war against Russia, it requested our Government to assist China with an armed force, and the object of Mr. Inouye's mission is to convey an answer to the Peking Government. But as China and Russia are both nations with which Japan has friendly treaty relations, we must, of course, preserve a strict neutrality. It would therefore be quite impossible for our Government to comply with the request of the Chinese Government. At any rate, if war really does break out between the two countries, it will indeed be a very important matter for the East, and our military officers are accordingly carefully watching the progress of events. It is also said that Mr. Inouye's mission is to a certain extent connected with the Loochoo question."

[The *Nichi Nichi Shimbun* of the day following that on which this report was published denied the accuracy of the rumour.]

His Excellency Nagaoka, Envoy Extraordinary to the Hague, entertained the Foreign Representatives and his friends, at a farewell dinner at the Seiyoken Hotel in the public gardens of Ueno, to-day. He will leave for Europe on the 28th instant, and will be accompanied by His Excellency Nabeshima, Envoy Extraordinary and Minister Plenipotentiary to the Court of Rome. Their Excellencies Awoki, Envoy Extraordinary and Minister Plenipotentiary to the Court of Berlin, General Ida, Minister to the Court of Vienna, and Yanagisawa, Minister to the Court of St. Petersburg, are all to proceed to their respective posts early next month.

A geography of the island of Yesso is about to be published by the Colonial Department. The work has been entrusted to Mr. Secretary Kounaki, who is said to be well qualified for the task.

The local assemblies of the prefectures of Chiba and Hiogo are to meet on the 1st of next month.

The 14th of next month, being the third anniversary of the death of His Excellency Okubo Toshimichi, the late Minister of the Interior, religious ceremonies are to be performed at his *yashiki* at Kasumigaseki, and at his grave at Aoyama. A representative of the Emperor will be in attendance.

The *Mainichi Shimbun* says:—"It is currently reported that two or three of the articles in the recently issued Regulations for Public Meetings are to be revised, but we cannot tell if the report be correct or not."

We read in the same paper that it is rumoured the United States have made a treaty of friendship and commerce with Corea, through the intermediation of Japan.

#### NAVAL AND MILITARY.

Rear-Admiral Hayashi, commander of the Eastern Naval Division, inspected the *Amaki Kan* on the 17th instant. The vessel left Yokohama for Corea on the following day.

The military cadets of the Kiododan are under orders to proceed to the district of Chichibu-gori, in the prefecture of Saitama, for the purpose of practising field manoeuvres.

All the military forces that were reviewed on the Narashino Plains, returned to the capital on Saturday last.

The *Kongo Kan*, having received a thorough overhaul, has returned from Yokosuka and is now the flag-ship.

At Tawarazaka, in the prefecture of Kumamoto, the most severe engagements took place which were fought during the South-Western Rebellion in 1877. In that locality alone, over four thousand men lost their lives, and it is now proposed to erect a monument to the memory of those slain on the field of battle. The inscription on the monument will be written by His Imperial Highness Prince Arisugawa, who commanded the loyal army during the sanguinary battles around Tawarazaka.

The reserve force that was called out recently was disbanded on the 19th instant.

Five military cadets, accompanied by a Major, are to be sent to Russia to study the language, and otherwise obtain information respecting that country.

The *Tenkuba Kan* having now been completely overhauled, Captain Sagaura and all the crew have gone on board. The vessel has had her engines tested, and will be stationed at Shinagawa until she leaves for America. Rear-Admiral Nirei inspected her on the 21st instant.

Work on the *Jingei Kan*, which is now being built at Yokosuka, has been hastened by order. It is said that it is desired to complete the vessel before His Majesty sets out on his approaching visit to the provinces, and that she will be despatched to Kobe and stationed there.

Of the students belonging to the Kiododan who lately successfully passed their examination, seven were appointed to the cavalry; sixteen to the commissariat; eight to the Tokio Garrison; four to the Osaka Garrison, and the same number to the Kumamoto Garrison.

Generals Noze, Tani, and Miura, are shortly going to inspect the different garrisons.

#### INDUSTRIES, TRADE AND FINANCE.

The new tea from the provinces of Totomi and Izu, which arrived in Yokohama a short time ago, has been exported. It realized from \$80 to \$85 per picul, being fancy garden tea, but the quantity was only about ten piculs.

The *Shurio Maru* brought from Osaka, on the 16th instant, 100,000 trade dollars for the Expenditure Bureau of the Finance Department.

The number of visitors to the competitive exhibition in Osaka, for the fifty-one days it remained open, was 8,936. The tickets sold during the same period realized 114 yen 56 sen.

A heavy gale suddenly sprung up on the 10th instant at Kuraki-gori, and occasioned great damage to the young wheat in that district.

A special meeting of the Tokio Marine Insurance Company has been held, in the premises of the Fifteenth National Bank.

The *Takasago Maru* bought the sum of \$130,000 to the Expenditure Bureau from Kobe, on the 16th instant.

From a native paper we reprint the following account of the daily coining capacity of the Osaka Mint:—1,000,000 yen in 20 yen, 700,000 yen in 10 yen, 500,000 yen in 5 yen, 250,000 yen in 2 yen and 100,000 yen in 1 yen gold pieces. In silver 1 yen pieces, 100,000; 40,000 yen worth of 50 and 20 sen; 25,000 yen in 10 sen silver; and 10,000 yen in 5 sen silver pieces. The copper coining department is capable of turning out 3,600 yen in 2 sen copper; 2,500 yen in 1 sen copper, and 8,300 yen in 5 rin coins.

A Japanese tea merchant in China, writing to a fellow merchant in Kobe, says:—"The tea crop, which is the principal article of export in China, is likely to prove a failure this year, and the price has already risen considerably."

An Industrial Exhibition is to be open in the prefecture of Iwate, from the 1st until the 31st of May next.

The application made by Kwazoku Shimadzu to the Finance Department for a loan of 500,000 yen, on the security of his pension bonds, for opening the mines on his property, was granted on the 21st instant. The loan will be repaid in five equal annual instalments.

The Native Chamber of Commerce in Yokohama is to be formally opened on Monday next.

The establishment of a Chamber of Commerce in Kagoshima is now under consideration.

#### MISCELLANEOUS.

The prohibition in Kioto against fencing was removed on the 8th instant.

Mr. Goto, the proprietor of the Takaabima Mine, has written

to the Governor of Nagasaki, stating that the deaths caused by the recent explosion in the mine were forty-seven, and that the same number of men were injured more or less severely. Eight horses were killed by the explosion.

A native paper states that the Nagasaki Kencho is about to show an example which may be followed throughout the country with advantage; it is going to repair the road between Fukuoka and Saga.

The races at Toyama Park commenced at 3 p.m. on Saturday last, but were not well attended in consequence of the weather being unfavourable. On Sunday last, however, there were many visitors, and the different events caused considerable excitement. Some of the racing was very good, and, altogether, a very enjoyable day was spent.

It being discovered that the silver obtained from Corea contains some gold, an analysis was made at the Osaka mint, and it was found that the percentage of the superior metal was .005.

Great exertions are being made to complete the Osaka-Yama tunnel on the extension of the railway from Ootsu, prior to the visit of His Majesty the Emperor. Work is now carried on day and night, and the tunnel is expected to be finished before the end of May. It is reported that when the line is open to Tsuruga, it will be further extended to the town of Nagoya, in the province of Owari.

Yokoyama, a sword-smith living in Nagafune Mura, in Okayama Ken, has manufactured a sabre and presented it to the War Department as a sample.

A new journal called the *Tokio Shimban*, made its first appearance in Kioto, on the 17th instant.

On the night of the 13th instant, about a thousand farmers from the surrounding villages assembled in the district of Mizuuchi in the prefecture of Nagano. They armed themselves with miscellaneous weapons, and separating into several parties marched to attack the Kencho authorities. On the way they set fire to buildings and committed other acts of violence. News of the disturbance was sent to the Nagano Police Station, whence police sergeants and men to the number of fifty were despatched to the scene of riot, and succeeded in quelling the disturbance. Although a number of the ringleaders were arrested, the people are still in a state of excitement. No reliable information as to the cause of the trouble is yet to hand, but it is said to have arisen in consequence of the increase of local taxes and the distress thus brought about among the poorer classes of the district.

Mr. Shibusawa, President of the First National Bank, will leave for Osaka in a day or two.

A fire occurred at Yoshioka, Sendai, at 2.30 p.m. on the 20th instant, and destroyed about one hundred and sixty houses, a police station and eight telegraph posts, before it was extinguished.

A native paper states that cholera made its appearance at Kikizu Mura, in the province of Hizen and prefecture of Nagasaki, on the 14th instant.

From a similar source we learn that an out-break of small-pox has taken place at Saku-gori, in the prefecture of Nagano. Over five hundred persons, including numbers of grown up people, have been attacked, and above one hundred and fifty have already succumbed to the disease.

The *Meiji Maru*, the Lighthouse Department tender, lately returned from a cruise on the western coast, and is shortly to leave for the north to survey an anchorage which it is proposed to establish in the Straits of Tengaru. After this has been done, the *Meiji* will visit the lighthouse at Hakodate, and subsequently the north-west coast of Yesso, returning to Yokohama via the Island of Sado.

The lighthouse situated on the island of Okinoshima, in the harbour of Shimabara, has been destroyed by fire.

The *Saikai Shimban* says that an emence has occurred among the men employed in the Takashima coal-mine, and was not quelled without great difficulty.

The total number of private buildings in Tokio Fu is 253,844, covering about 4,360,814 *taubo* of ground. Of these 172,482 houses, covering 3,136,858 *taubo*, are in the city, and the remainder are in the suburbs. There are also 4,331 buildings belonging to the Government, which cover 218,913 *taubo*.

The total number of ships owned by private individuals

throughout the whole of Japan is:—151 steamers, 54 sailing-vessels, 18,908 Japanese junks of a carrying capacity of over fifty koku, 432,446 junks under fifty koku, and 155,263 small boats which are exempt from taxation.

#### ARRIVAL OF THE FRENCH MAIL.

##### TELEGRAMS.

London, March 24th.—The Royal Proclamation dissolving Parliament was issued to-day. It expresses thanks for the support accorded to the policy of the Government, the whole object of which has been to defend the Empire and secure peace. It states that the foreign relations of the country are friendly and favourable to the maintenance of tranquillity in Europe, and concludes by hoping for a speedy settlement in Afghanistan.

March 25th.—Her Majesty the Queen leaves Windsor Castle for the Continent to-day.

The Empress Eugenie has sailed for Natal.

March 26th.—Mr. Gladstone is indisposed from overwork. Abdul Montaleb has been appointed Grand Sherif of Mecca.

Bombay, March 13th.—In addition to the address from yesterday's public meeting and the Chamber of commerce, Sir Richard Temple received to-day an address from the Bombay Trades' Association. Afterwards Sir Richard Temple attended a garden-party of Sir Jamsejee Jejeebhoy's where he was presented with an address from the Parsee community. Then His Excellency departed for the Apollo Bunder, receiving a grand reception *en route*. The roads were lined with troops and crowded with people, who loudly cheered him as he passed. At the Bunder the leading members of the European and native community were assembled and wished His Excellency farewell.

The *Vingorla* Court of Inquiry has been unable to come to a decision as to the cause of the foundering, nor as to the measures adopted to save the vessel. Some measures appear to have been good, some inexplicable. The pumping power was not fully made use of. No attention was paid to fixed load-line. An additional bulkhead is required in such vessels. The Court little doubt that if there had been such a bulkhead, the *Vingorla* would not have foundered. No provision appears to have been made as to required boat accommodation for passengers. The Court strongly point out the absolute necessity of all passenger vessels being compelled to carry boats, rafts, or other appliances for saving life.

March 20th.—A telegram to the *Times of India* from Candahar states the first Bengal Brigade starts for Ghazni

in about a week; the second shortly after. Ayub is said to be in strength at Furrak.

Calcutta, March 12th.—The British Indian Association have memorialised the Viceroy against the Factories Bill as revised by the Select Committee, their chief objection being the withdrawal of its permissive character. A discussion on the Bill is anticipated to-day in the Viceroy's Council. A Bill making vaccination compulsory will be introduced into the Bengal Council to-morrow.

Calcutta, March 13th.—The Government has sanctioned the formation of a corps of Volunteers at Akyah with the designation of the Akyah Volunteer Rifle Corps, and attached to the Rangoon Volunteers, with Mr. Hodgkinson, Commissioner of Arakan, as Major Commandant.

The Government have assumed the direct charge of the Kandahar Railway, placing it under the Director-General of Railways, consequent on Sir Richard Temple's departure.

Nagapatam, March 19th.—There was a torchlight decoity yesterday in the heart of the Municipal Town. The Police were absent during the commission of the crime. Two inmates were wounded. Energetic steps were taken this morning for the detection of the culprits.

### THE JAPANESE PRESS.

#### THE RUMOURED DISSENSIONS IN THE CABINET.

(Translated from the *Kinji Hiron*.)

FOR some time past it has been currently reported that grave conflict of opinion obtains between the different members of the cabinet. It is said some of the Ministers consider that, in order to preserve the country from trouble and disorder, it is necessary to concede the general demand for representative institutions, and that they have expressed themselves strongly opposed to the newly issued regulations regarding public meetings. Other Ministers, again, are reported to affirm that the proper policy to be followed in Japan, is to withhold all political rights from the people, and retain all power and influence in the hands of the Government. With regard to the other prominent questions, such as the fall in the value of kinsatsu, the rise in the price of rice and specie, and the revision of the existing treaties with foreign nations, it is generally asserted that very warm discussions are constantly occurring in the cabinet, as the members composing it are divided in opinion. Hence great confusion arises and no one Minister is sufficiently popular and influential to preserve order and due decorum. His Excellency Okuma is credited with having resolved to resign in consequence of his financial administration having been found fault with, and was only induced to alter his determination by the persuasions of the venerable Privy Counsellors, Oki and Terashima, whose wise and peaceful monitions have succeeded in restoring the Cabinet to something approaching amity and concord.

Now the Prime Ministers and Privy Counsellors who constitute the present cabinet are known to be wise and able men. They are charged with important functions, and have undertaken the grave responsibility of the preservation of the safety, peace, and well-being of this empire. Can it be imagined that they would make the prosperity of the nation subordinate to the rabid assertion of their own ideas or crochets, like a parcel of school-boys chattering about their lessons in the school-room? It must also be remembered that the meetings of the cabinet are strictly private. How then can anyone ascertain what has taken place? We consider, therefore, that the current rumours are entirely without actual foundation, but that there was some cause why they were bruited abroad. It appears to us the public judged that the action of the Government in issuing the new regulations regarding meetings was intended to convey an intimation that the authorities had decided not to accede to the demand for a national assembly. And again the fall in the value of kinsatsu, and the rise in rice and specie, which were followed by the closing of the exchange offices and rice guilds, seems to have given occasion for the idea that the Government was short of money, and then arose the rumour that His Excellency Okuma, the late Minister for Finance, was compelled to resign. We are of opinion that the reports and rumours so prevalent shew con-

clusively that the people are warmly interested in public affairs, and anxiously desirous of ascertaining the intentions of the authorities. This, however, they have no present means of doing. "The ten fingers," aptly remarks one of our proverbs, "are each of different length, but they are sensitive to pain in exactly the same degree." Of the thirty millions of people who compose the population of Japan, some are wealthy while others are poor: some belong to the aristocracy, others to the lower orders, but the same feelings and desires actuate all equally. It is human nature that causes the people to be anxious on great questions affecting the national weal, and therefore we cannot, under the circumstances, blame them for spreading these rumours, unfounded though they undoubtedly prove to be. Indeed, the very fact of reports on public matters occurring with such increased frequency convinces us more than ever, that representative institutions are now absolutely necessary for the welfare of the empire of Japan.

#### THE CLOSING OF THE MEETING OF THE AIKOKUSHA.

(Translated from the *Mainichi Shimbun*.)

THE meeting of the Aikokusha, to the results of which the public has long looked forward, was closed on the 11th instant, by the Osaka Fuchu authorities, under the recently issued regulations affecting public meetings. When we first heard about these regulations, the thought immediately occurred to us that this society would be the first to receive a check. The regulations were issued in due course, and then it was rumoured that the Government would not enforce them for thirty days, so as to allow the public to become acquainted with their provisions. We felt pleased that the authorities were going to be so lenient, but it is now evident from the fact of the Aikokusha meeting being closed, that the Government put the new regulations into operation immediately.

When the proceedings of the members of the Aikokusha are taken into consideration, it will be found that they have laboured long and diligently, making great sacrifices of time and money, in order to achieve their object. Now, however, all their praiseworthy efforts have vanished in smoke, and the members will no longer have the privilege of freely debating upon political questions. This will undoubtedly occasion them great grief.

We do not belong to the Aikokusha, nor have we had any communication with it, and therefore we suffer no injury by the meeting being closed, but the members of the society may possibly reflect upon the action of the authorities somewhat after the following fashion:—

1st.—It is a duty imposed by natural laws upon every member of a community to take part in political matters, and this duty can only be successfully performed through the agency of representative institutions, where the opinion of the people can influence the affairs of the nation by the voices of their chosen representatives. But the inhabitants of Japan have been accustomed to a despotic form of government for so long a period that they have lost sight of their duties in this respect; they have no idea of what a national assembly really is, and rest perfectly content with their present slavish condition, which provokes the scorn and derision of the people of other countries. If, therefore, public spirited men in different localities do not form a league, with the object of instructing the inhabitants, who have been kept in subjection for centuries, on their political rights and responsibilities, what reasonable expectation can there be of the establishment of a national assembly? This was the object of the meeting of the Aikokusha, which was attended by large numbers of patriotic men from different districts, and the cause of the application sent in for the granting of a constituent assembly during the present year. Now, however, the Government has enacted new regulations and closed the meeting. These regulations are as injurious to the community as wind and rain are to the blossoms of a tree. Is the Government averse to the establishment of a constitutional monarchy? If this be so, the desire of the Government is directly opposed to that of the Aikokusha, and, as the authorities have made regulations as it were in the morning, and enforced them in the evening, for the purpose of controlling public meetings, there is no

thing left for the members of the society but submission, no matter how distasteful it may be. But then, again, if the administrative measures of the Government are considered, we find that it is not opposed to a constitutional monarchy. The Emperor himself took a solemn oath, shortly after ascending the throne, that the affairs of state should be decided according to the will of the people, and subsequently, in April, 1875, a proclamation was issued announcing that steps were being gradually taken towards the same end. Already local assemblies have been established in every town and village, city and prefecture. Therefore the Government is anxious for representative institutions. Why then have these new regulations been issued, and the meeting of the Aikokusha closed?

2ndly:—Although the Government has sanctioned assemblies such as exist in the cities, prefectures, &c., is it the intention to prohibit private societies such as the Aikokusha? Any such proceeding on the part of Government cannot be approved of, in the face of the universal principles deciding what is right and wrong. Warm and animated discussions frequently take place in the legalized assemblies, but can anyone affirm that the private societies have proved prejudicial to the peace of the country? If any assemblage, whether legalized or otherwise, be found injurious to the peace of society, the Government is quite right in at once suppressing it, but the Government approves of some assemblies and discourages others. How can we account for this leniency on the one hand and severity on the other? Surely the Government should not pursue such a partial course.

3rdly:—In not a few instances the violent assertion of political opinions has disturbed the peace of various countries. Does the Government seek to prevent, by the new regulations, anything of the kind occurring here? It is no doubt perfectly justifiable for the Government to take precautions against possible disorder, but we know that the sole object of the Aikokusha is the preservation of the peace of the country on a secure basis, by the establishment of a national assembly. Now the sixteen rules for the coalition meeting at Osaka were advertised in the public journals, and no one had a word to say against them because they were so temperate. However, the Government has thought fit to introduce new regulations and enforce them at once, thus controlling the actions of the thousands of people who compose the Aikokusha. Can we, under the circumstances, conclude that the authorities have taken these measures simply for the purpose of preventing the expression of violent and intemperate opinions?

What we have written may be supposed to be the reflections of a member of the Aikokusha. We may be asked,—What are your own opinions in the matter? This question we cannot readily venture to answer.

## RUSSIAN POLICY AND THE FEUDAL SYSTEM.

(Translated from the *Dekinci Sodan*.)

RUSSIA is far behind the other nations of Europe in civilization. The system of government is despotic, the laws are used for the purpose of checking the aspirations of the people towards liberty, and all the measures of the authorities are based upon the most arbitrary and oppressive principles. How then can any lover of the peace and welfare of his country desire to follow the pernicious example of that state? And yet we hear that among the statesmen of Japan are to be found some who yearn with an indescribable longing to model the policy of this empire upon that of Russia. If what we heard be true, is it not indeed passing all comprehension?

We are quite aware that any such scheme is altogether injurious, and that it would be as foolish on our part to preach before blocks of wood or stone, as to explain the advantages and disadvantages of their plan to people so devoid of common sense. We believe, however, that the best course for us to adopt is to point out the means by which they may attain the end they desire.

It is admitted that the inhabitants of Japan have made great progress in civilization since the restoration. Not only are more accurate opinions on political subjects formed by our countrymen than is the case in Europe or America, but the people are now devoting their attention to questions of internal reform, and desire to

secure to themselves the management of the affairs of state by the establishment of a national assembly. Now if we look to Russia we find that no political party exists there save the Nihilists, whose sole object is the overthrow of the imperial family and the restoration of power to the masses of the people. The inhabitants of Russia are, as a rule, in a state of crass ignorance. Without an idea of their inherent rights, they regard the Czar as a God, possessed of supreme power to direct all things according to his uncontrolled will, and hence they slavishly submit to the decrees of the authorities, no matter whether right or wrong. Judging from these facts, we have little difficulty in arriving at the conclusion that our people are more civilized and better educated than the inhabitants of Russia. It is, of course, ridiculous to suppose that civilization will follow in the footsteps of barbarism, or that a cultivated people will take pattern from savages; but if the attempt must be made here, then our civilization will have to be checked, the people brought under control, and education denied them. These measures might be easily accomplished by the reestablishment of the feudal system.

Let us look back upon the state of Japan, under the feudal system some ten years ago. Then the country was divided into different states, each governed despotically by its own prince. If any one meddled in political affairs he was at once arrested and put to death with merciless severity, while the central Government dealt in a similar way with the rousins. Now, if we were to reestablish the feudal system in all its pristine power and strength, there can be no doubt that civilization and knowledge would be most effectually put a stop to; and then the Russian political régime might be introduced with some prospect of success. But, on the other hand, if the statesmen we have referred to are of opinion that feudalism cannot be reestablished, why then they may abandon all hope of seeing the Russian system of government they are credited with yearning after in force in Japan.

## BIRDS IN THE SNOW.

"Onida" in *Belgravia*.

There was a very hard Winter in the world. It was a hard Winter everywhere, and the snow fell over land and sea so heavily, so blindingly, so continually, that ships were wrecked, trains were blocked, posts were stopped, and traffic well-nigh came to an end in many of the districts even of Southern England, and how much more so in the always cold, bleak North! Even down in Devon, snow was deep and ice was thick—even in mild, moist Devon, where mostly in Winter-time the roses blow, and the south winds, too, and all is green at Yule.

Some little people who lived at an old vicarage on the Dart River did not know what to make of it. None of them, except Ray, the eldest, who was seven years old, had ever seen snow lie on the ground at all; he had, and knew all about it, because he had spent a Christmastide on the moors of the East Riding with his god-mother; but his brothers and sisters, Rob and Tam and Dickie, and the little twins, Susie and Nellie, never had seen the earth white in this way before and they were very much delighted and very much alarmed, which is a state of mind that has its pleasures at all ages, and its pains, too.

These six little mortals lived in a vicarage, and their father was the Vicar, and mother, alas for them! they had none, for she had gone away into the sky (so they were told) when little Susie and Nellie came down from there on to earth. "Perhaps it is the down off mamma's wings," said little Rob, who could remember her very well, and cried for her still, when he saw the fine snow flakes come falling down through the air. "If she had wings, I am sure she would come to us," said Ray, wistfully looking up. "I don't believe she has wings; I don't." "But papa says she is an angel, and angels always have," said Rob, who was very positive. "She would come to us if she could fly," said Ray; "at least, if God would let her," he added, on reflection. "Don't you think, if she said to Him, I want to kiss Rob and Tam and Dickie because they miss it so, He wouldn't say no?" Rob thought a minute, then said to his brother, "Papa always says 'No,' so 'papa' God does, too."

"P'papa!" sighed Ray, with a tired voice. "No" was always said to them, and how much sorrow that means in the life of a child!

The vicarage was an old, long, wooden house, overrun with creepers, the very house to be a paradise for children and dogs, with all kinds of deep, old casements and chimney-places, and corner cup-boards and panelled passages; the very place for twilight romps and fire-lit stories, for fun and play, and mirth and mischief, were all a quartet frowned on at the vicarage, and though they crept in at times, because they never can be wholly absent where six children are, yet they came in timidly and were in hiding for the most part, and never laughed out lustily or scampered about without fear. For a cold, dark shadow was upon the house and the hearts of its children, and this shadow was that of their father. He was the vicar of the out-of-the-world parish of Goldenrod, that lay on the banks of the Dart, in a secluded part of the country, as Herrick's

did before him; but he was in every way unlike that bright-hearted and genial country priest. Unhappily for his children, he was of a taciturn and gloomy nature, very mean, too, and very harsh, and the sound of his heavy foot along the passages made Rob and Ray see trembling and the younger morsels cry. What little tenderness he had ever had was buried with his wife under the big green yews on the south side of the church, and the children were afraid of him—sadly and terribly afraid.

Their father was a very good; that is to say, he was very truthful, very honest, very laborious, never shrank from any duty, however distasteful, and never indulged in any pleasure, however tempting. But he was also very mean; "close-fisted," Keziah called it. His parish was immense in extent, and very poor in what it rendered to him. There was scarcely a well-to-do person in it, and the Vicar, though he had a snug sum in the county bank and was by no means straitened, lived like a poor man, too, from inclination rather than from necessity; his thoughts were apt to be harsh.

They were very happy very often indeed, because there were the old mossy orchards and the broad green meadows, and hedges, and the woods, and cattle, and the huge kitchen, where they could curl on the new settles, and eat their porridge and hear wonderful tales from Keziah, who was cook and nurse and dairymaid and housewife, one in all. Keziah loved them; she had seen them all born, and when their mother had lain dying had promised never to leave them, and she kept her word, she was a buxom woman much beloved, and might have married the rich miller that had the water-mill eight miles away down the river. But there were many things Keziah wished to do for them that she could not do, because she never disobeyed her master, and she had to give them water when she would have given them milk, and cold porridge when she would have given them hot bread, and was often ashamed at the darned and threadbare clothes in which she had to array their little bodies—the children that ought to be the first in the parish! she would say to herself. "It is good to be a saint, no doubt; but it is bad to be a skinflint, too." For a skinflint she called her master, in the secrets of her soul.

When the snow fell, she called him so more bitterly than ever. The snow made all the little people very cold, and she could not set big oaken logs and good cannel coal roaring with flame up all the chimneys, as she would have liked to do, and Goldenrod grew very damp and chilly.

"Run out, my chicks and get warm that way," she said to them when the white covering that was so strange to them stretched over field and wold, and made the leafless trees and swollen river look quite black against it.

Rob and Ray were taught their lessons by their father in his study, a little, dark, close place, that was as terrible to them as if it had been a torture chamber, for their acquaintance with letters was small and with the cane was large, and their canings were always given them there. But this morning they were free, for their father had been called away to a dying parishioner on the other side of the big brown moor that shelved away from the edge of their orchards. So Rob and Ray ran out into the air and dragged their little brother with them, and the babies even, and their wooden cart, and romped about, and raced, and slid, and danced, and made themselves merry, as though no cane were lying on the study-table, and no blurred copy-books waiting, grim and grimy. They played at sledging, of which they had some prints in Christmas papers, and made believe the babies were princesses; they then played at being Napoleon at Moscow, whose story Ray had just come to in their "Markham's History," and were so delighted with their marches and battles, and their own deaths and burials in the snow, that they never heard the one step which at all times sent a tremor of fear through them. The cold voice of the Vicar cleft the cold air like a knife.

"Are your lessons done?"

Rob, who was burying Tammie in the snow, and Ray, who was carrying Dickie as a frostbitten soldier of the Old Guard on his shoulders, both heard, and their innocent sport ceases as at the sharp crack of a whip.

Ray, grown whiter than the snow, alone spoke:

"We have done no lessons, papa."

"What have you done, then?"

"We have been at play."

"Very well. Go into the study."

Rob began to cry, and Ray's lips quivered. They knew what the order meant.

"It was my fault, master, all mine," cried Keziah, running out, but the Vicar put her aside.

"You spoil the children; that is well known," he said coldly.

"But the boys are too old not to know their own duty."

Keziah spoke in vain; the boys were bidden to go to the study.

"Whip only me, papa," said Ray, timidly, "only me, please, because if I had stayed in, Rob would have stayed in, too."

The Vicar in his inmost soul recognized the generosity of the plea, and felt proud of his little son, but he did not seem to have heard it, and he gave both equal punishment upon the palms of their small, sunburnt, cold hands. Then they were shut in to do their lessons, with two hunches of dry bread instead of dinner.

The Vicar was a man who held discipline in high esteem, and enforced it.

They did their lessons; Ray quickly, Rob tardily, both watering the pages of primer and copy-book with scalding tears. Then they huddled together in the deep bay of the one narrow window to hear each other repeat what they had to learn by rote. The casement looked on the lawn at the side of the house; on the grass was a big, old hawthorn tree, and under the tree were huddled together, like themselves, scores of birds.

"Do look at the birds," says Ray. "How pluffed out they look and how dull, and all their feathers stick upright."

"They're cold," said Rob thoughtfully, and added with fellow-

feeling, as he heard the sound of dishes and knives and forks in the adjoining chamber.

"I'm sure they're hungry, too."

"Hungry!" repeated Ray, who had never thought how birds lived. Then the color flushed back into his little pale face, he jumped up, and upset all the lesson books.

"Of course, they are hungry—how silly I am!—the ground is frozen—they eat worms and seeds, and now they can't get any. Oh, the poor, poor, poor, little things!"

He jumped off the window-seat, got his dry bread and jumped on again, threw open one of the leaded window panes, and crumbled up his bread and flung it out to the birds. Instantly they darted down, a motly little throng: brown sparrows, gray linnets, speckled thrushes, chaffinches with their variegated wings, three big black-birds, one tiny blue tom-tit, and many robins. They were no longer dull; they hopped and pecked and fluttered and chirped to each other and ate in concert, and were very much better behaved than a famished crowd of human beings ever would have been.

The great hawthorn tree spread above them, glittering with icicles on every branch, the white, hard, smooth snow was beneath them, the bright-natured feathered things soon grew themselves again, and their merry chirping made the frosty air alive with *Lieder ohne Worte*, as gaily as if the hawthorn tree were in flower and they at work in it making their nests. Rob and Ray were in ecstasies; they hung against the casement pouring out showers of crumbs, laughing and half-crying in delight at their clever and wonderful discovery that the birds in the snow had been hungry. They never remembered that they would be very hungry themselves, for in their excitement and sympathy they had crumbled away both bits of bread. They watched the little multitude eat every crumb, shake out their feathers and fly away. One robin flew up to the lower boughs of the hawthorn, and sang as if he were deputed by the rest to speak their common praise and thanksgiving.

"Oh, how lovely!" cried Ray, with clasped hands and caught breath. "Oh, how beautiful! Oh, how clever of you, Rob, to remember they were hungry."

"And me, who isn't clever!" said Rob, with a little chuckle of content.

"What are you doing at the window, boys?" said their father's voice.

All their joy ceased, and the robin flew away. Rob was the one this time to answer.

"We gave our bread to the dicky-birds. It was me thought of it."

"All your bread?"

"Yes, papa, both bits."

The Vicar frowned.

"Then you may go hungry until your tea-time, and remember that I will have no folly of the kind again. Keep your crusts for worthier objects. Birds are mere thieves. They steal fruit and grain, and it is God's merciful provision that frost should come to aid, and other of His means, in the destruction of their numbers. It is very impious to interfere with God's designs."

Ray's face grew very weary and perplexed, Rob's very weary and resolute.

"God kills birds!" Rob asked at last.

His father replied, "The frost God sends kills them—yes."

"I don't like God, then," Rob said, after a little while.

"Hush!" said Ray. "God is good. Papa it is that makes some mistake."

Their father grew gray with horror, and stony white with rage. Were these blasphemers his own children?

They were once more punished alike. They were this time flogged instead of being caned, and their little stiff hands were set to write in large crooked characters. "Frost is a provision of nature, instituted by the mercy of God, to destroy the numbers of birds that devastate the Autumn crops of farmers, and destroy the buds of the gardener's Summer fruits."

"It is not true," said Ray between his teeth, as his hands travelled painfully over the long sentence. "I am quite sure it is not true."

"No, it isn't true," said his echo, Rob, whose chubby, fat fingers could scarcely manage, at the best of times, to make a round O, and now that they were numbed with cold could not do it anyhow. "I don't care for the farmers," added Rob. "The farmers trap the bunnies; that they do."

Ray did not say anything; his heart was too heavy for talk; he had read in one of the story books at his godmother's of a northern country where a sheaf of wheat is tied up above the doorway for the frozen birds in Winter-time; he wished they were in that country. He and Rob cried themselves to sleep that night, for their little bones were all aching, and both their hearts, too.

In the morning, when they got up, they ran to the window. It was scarcely light; a big white moon was just vanishing over the brown edge of the moor: snow had fallen all night, the duck pond was frozen over; the cold was great; on the sill of their casement there lay a little dead bird.

It was a young goldfinch.

Ray choked all over as he saw it; Rob's cheek grew red with rage.

"Oh, the poor, poor, poor, little dear!" they sobbed together, and life seemed so dreadful to them both that they clung crying to one another. This hard, cold, white world in which God let the dickybirds die—it frightened them as they had been frightened when they heard the sobs beaten down above the grave where their mother's body was.

Ray looked up with a great light in his eyes.

"I will give the birds my breakfast, and papa may kill me."

"Me, too," said Rob, who would not be behind in any act or word though his heart gave a terrible throb, for he was very hungry this chilly morning.

"It will hurt to go without anything," he whispered. "Won't it hurt, Ray?"

"Of course it will hurt," said Ray, with scorn in his steadfast, shining eyes. "It hurt all the martyrs, but they did it."

Rob shut his little, firm, rosy mouth, and resolved to demur no more.

Ray was always telling him about the martyrs, but Rob did not care much for them; he cared more for the bunnies in the traja.

"Let us go," said Ray, and together, hand in hand, they trotted down the old dark, steep, oak stairs.

The children always had their first meal in the kitchen, for the convenience of Keziah and the quietude of their father. They all sat round the deal table before the fire, the little ones in their high chairs, Rob and Ray on wooden stools.

For breakfast they had porridge sometimes; this morning they had milk-and-water in their mugs, and bread, and Keziah for a treat added honey, "because it is so nigh Yule," as she said, for it was the 23d of December.

Ray looked at the honey and bread.

"Is it my own, this?"

"Yes, dear," said Keziah, wondering.

"I may eat it or not eat it, as I like?"

"For sure, my dear. What big eyes you make, my Raidie, for naught."

Ray looked at his bread with a swelling heart. He had all the hunger of a seven-year-old country boy; but he saw in his fancy all the birds of the world lying dying. He rose up and took his bread in his hands, and, with a glance at his brother, went to the kitchen door. Rob, with a tear rolling down each cheek, bravely grasped his bread and followed. Their nurse did not notice them, her back was turned as she fed the little twin girls.

"Papa may kill us, but God won't be angry," said Ray calmly, and never one of the martyrs he loved had felt more solemn and more sure. Then he began to crumble his bread and throw it out on the snow.

Rob took one big bite that he could not help, then valorously flung his away in large morsels.

From a lattice above them the voice of their father thundered:

"I will have no such waste in my household. Disobedient and wicked children! Is my word not law?"

"He may kill me, I do not mind," said Ray with a pale, firm face.

Rob, frowned and looked surly.

"It isn't waste. It'd have been in our tummites, and now it's in the dicky-birds."

Meanwhile the feathered multitude of the old hawthorn tree and all the hedges round were flocking joyous round to share the alms.

Their father's step came down the stairs in haste and called Keziah.

"Job Stevens had cut his hand off chopping furze; he is at the point of death; they have come for me this moment; take these children in and lock them in the study; they will have their chastisement when I return."

"Yes, your reverence," said Keziah, in amazement. "But, sir, Job Stevens is sixteen mile if one, and in the snow—"

"I must walk, of course," said her master, hastily; "no horse could get along. That is nothing. Lock these boys in, and do not let them out till I come back."

Then the Vicar threw his cloak about him and went out toward the moor in the teeth of the savage north wind. Rob and Ray stood motionless.

Their nurse came out to them.

"My darlings, you heard the orders that the master gave," she said, with the water in her honest eyes.

Rob threw his fat arms about her.

"Yes, but he's gone, Nurse; you won't lock us in?"

Keziah hesitated, and kissed his curls. Ray's face changed from white to rosy red, and then grew white again.

"We must be locked in Rob," he said sadly. "We mustn't get nurse blamed."

"Oh, the noble little lad you are, my Raidie!" cried Keziah, and sobbed over him. So locked in they were. At one o'clock she brought them their dinners, and looked wistful and longing. "His reverence said not till he comes back," she mutters, stroking Ray's hair.

"Never mind, Nurse," murmured Ray; "we do very nice here. We've done our lessons, and we can play."

"What's there to play with?" groaned Rob, who was lying on what he called his "tummy" underneath the table.

"There's ourselves," said Ray.

Keziah locked them in, her heart more bitter against her master than ever it had been in all the years that would have been, but for the children, very joyless and very thankless.

"Them's just cherubs, and he's a brute. He as drinks the blessed wine every sacrament day, and should know better!" she muttered in her wrath. Had she been learned in hagiology, she would have wished that her master could have swallowed a spider in the holy wine like German St. Narbert, and be blessed with a beautiful spirit ever afterward.

The day wore on; a snowy, blowing, boisterous day, dark and dreary. When twilight fell and the Vicar had not come back. "There's reason in roasting eggs," thought Keziah. "I must let 'em out now. I'll tell him as they've been all day, and he knows as we ain't a one to fib."

So she let them out. Rob rushed with a shout down the passage; Ray came with a slow step, wondering if letting them out would get his nurse into trouble.

"Master's rare late," said the man who did odd jobs. "Mappen he'll sleep at Squire's!" "Ay, I should wonder that he do," answered Keziah. The Squire's was the biggest house at Tamsleigh, the village where the furze-cutter, Job Stevens, lay on his death-bed.

"Sure, he's staying at Squire's, and a more natural thing than what he often do," she thought, as she did the bolts and bars and shut the shutters, and told the old man that he had better sleep upon the premises, as master was away.

No one felt anxious. The Vicar had gone to Tamsleigh, and, seeing how bitter and wild the day was, had stayed to sleep at his old friend's; what more likely?

The children had a merry time while the snow fell and the winds blew; Keziah was a merry soul by nature, and had all kinds of funny stories, and, saying it was next but one to Christmas Eve, roasted apples for them, and stuck the apples full of cloves and set them bobbing in a bowl of currant wine in the old game that Ben. Johnson sings of in his carol.

It was quite late, quite eight o'clock, when the children went to bed.

"And please God take care of the birds in the snow. Amen," said Ray at the close of his bedside prayers.

"Amen," said Rob, winking and sleepy.

No one was anxious at all that night, but when the morning came, and the noon passed, and their father had not returned, a great alarm spread itself from the servants to the children.

The weather had become terrible. The snow fell perpetually, the air was very dark, the winds were very rough; such a day had not been seen in Devon for over twenty years; and away where the sea was, ships and barks were tossing in the snow-storm in sore peril.

"Where can the master be?" said Keziah in great perplexity. "It would be impossible to stay at the Squire's at Tamsleigh, for the morrow was Christmas Day, and where would the church be without its church service?"

The parish was a very scattered one; a few farms, a few cottages, with miles between each, spread over the moorland, and about the vicarage and church itself there were only a few poor houses; the only house of any importance was the Squire's, over at Tamsleigh. The few people however, who did dwell near, came—dropping in as the short day wore itself on, and each had some darker suggestion some ghostlier remembrance than the last to offer in consolation.

Ray stood listening with big startled eyes. He was happy because his nurse had given him a sieverfull of grain for the birds, yet he felt a dull sense of something dreadful being near. Rob sang, and raced, and shouted, and played at his pleasure; the terrible snow-storm had no terrors for him.

"It is passing strange," said Keziah anxiously, and knew not what to do, for it was not weather to send man or beast over the moor, and the Vicar might only scold if she did send, supposing he was safe and well at Tamsleigh great hall; he always hated "a fuss."

She did not know what to do.

But at twilight, or rather just as the black day was merging into the yet blacker night, and the mounds of snow were rising higher and higher against windows and door, there came a poor peddler who had struggled through the storm with his pack on his back and was half-frozen, and begged shelter.

He was a man well known in the district. They had him in and set him in the chimney-corner, and gave him mulled wine and the promise of a bed; but scarce had he come to his full senses out of his cold and his fright than he asked for the Vicar, and when he heard that as yet the master of the house was not at home, he got up in his agitation, though his limbs were all stiff as statues with rheumatism.

"But I passed his reverence yester eve, coming for home above Tamsleigh," he shouted. "The Lord save us! Lord save us! Sure as I be a living soul, he's lost on the moor."

The few neighbours who were gathered in the kitchen screamed aloud, and the children listening grew pale.

"Art sure 'twas master?" cried Keziah.

"Lord bless us, I be sure!" reiterated the peddler. "He gev me good-even, and said as how he'd be here long afore me, but I struck aside to take some hooks and thread to Dame Carew as he'd ordered of me, and so we parted company, and I slept at Carew's hut and come on i' the morn."

"Lord, save us! he's a dead man!"

In the bustle and outcry that succeeded no one noticed the children for a few moments till Rob shrieked out:

"Raidie's dead, too!"

It was then seen that Ray had fainted.

In a little while he was brought round, and opened his eyes bewilderingly.

"Father wouldn't help the birds!" he murmured, and shuddered and wept.

Keziah, with more grief on her shoulders than she felt it right for one lone woman to have to bear, carried Ray up to his little bed, and bidding him not to fret so, because there was always hope, ran down stairs, stormed at the peddler for having been such a fool as to speak so before the children, and then took counsel with her neighbours as to what was best to do.

The men volunteered to go out in search, but there were only four or five of them, and two of them were very old. Still out they went with their horns, lanterns, and their pick-axes, and the thick falling snow soon hid them from sight.

They thought on going up to the church-tower, and ringing the two bells that were there; but they reflected that it would be no use, because the wind was so high that the bells could have no chance of being heard. So the men went out to search as best they could in the wild night, and their frightened women sat for most part in the kitchen of the vicarage, taking a strange and terrible pleasure in hearing the peddler cry a hundred times, "Lord save us! he's a dead man!" till Keziah told him to go to bed for an old fool, which at last reluctantly he did.

The women sat over the fire and sipped spiced wine, and told each other horrible tales their fathers and forefathers had done or known, with many a "He says, says he," occurring in their narrative.

Keziah sat up by the bedside of Rob and Ray; Rob slept, but Ray lay wide awake, and ever and again he shivered and moaned; "Papa wouldn't help the birds—he wouldn't—and I know God was angry."

The long night wore away, the winds never ceasing to howl, the snow never ceasing to fall. At daybreak the men returned, having found nothing. They said they had searched all the moor for eight miles, but in real truth, though they did not know it, they had scarcely been a mile from home, having only gone round in a circle, not seeing where they were in the darkness. The morning broke gray and dreary; the snow fell still, but the winds dropped. Keziah chose the youngest and strongest of the men and bade him strive to get across to Tamsleigh. It was hard to do an errand of danger, for the paths were all obliterated and communications of every kind stopped, but the man was a bold young fellow and promised to do his best. "Though as for that," he muttered, "his Reverence is a dead man if he's out all this freezin' night." The other men went up the church-tower and set the bell tolling; the wind had fallen, and it was possible that in the more distant houses they might be heard and some help or some news come.

It was now 11 o'clock in the morning, the hour at which the service of Christmas Day should have begun. The church was a little dark, dismal place; here and there it had been brightened with a bit of holly or a bough of bearberry tree. The Vicar did not approve such follies, and there was little done to relieve the bare stone walls, the square box of a pulpit, the tiny chancel dismal and damp as any dungeon. As the weather cleared a little the women dropped in, in their red cloaks, and made a glow in the darkness, but they did not stay, for the church was very cold, and it seemed more cold and horrible having no prayer there on Christ's morn, and the pastor, maybe, frozen dead in some snowdrift.

At the vicarage Keziah tried in vain to read the morning service to the children by the kitchen fire; her voice faltered and their attention wandered. They were all grave and frightened, even the twin babies, and Ray sat in the window-seat with his face pressed against the glass, quite silent. The look of the boy frightened his nurse more than the loss of her master.

"He do take things to heart so," she said to herself, with a sigh. It was of no use to try and read; she closed the big black prayer-book, and let the startled parishioners come in; some of them had plodded many miles over the snow not to miss the blessing of the Christmas prayer, and they found the church empty and the Vicar absent. All were sure that he was dead; surer yet, when a man, at great risk to himself, came over from Tamsleigh Great House to say the Squire trusted that his Reverence had reached home safely.

"Didn't I tell ye the truth, ye unbelievin' Jews?" said the peddler, who enjoyed his own importance as a sharer in this terrible history.

There could be no doubt now. The Vicar had left Tamsleigh, refusing all the Squire's offers, and had set forth to walk home.

Every one there knew that he must have lost his way, and in all likelihood had perished.

"It does come like a judgment," whispered Keziah to a friend out of the children's hearing. "Ay, it do. He scolded and punished them dear little souls just for feeding the frozen-out birds? And now—he knows himself what it is—death in the snow."

Rob began to cry because the women were crying and he was frightened. Ray never shed a tear nor said a word; he only thought to himself with an unutterable horror, "God was angry!"

Christmas morning began to pass away. The beef lay unroasted; the pudding that had been in its pot all night, boiled maddly unnoticed! the bells of the church tolled without ceasing. Folks began to come in from the outlying parts of the parish as the skies cleared and the frost made the snow passable. They all brought terrible tales of the past day and night; of sheep frozen to death, of carts blocked, of travellers lost, of horses killed, of boys drowned by the splitting ice, and of hamlets shut off from each other. It was even rumored that the great train from London, twenty miles away, was standing still all the night with its freight of passengers unable to move, and that some of them had been frozen to death.

Keziah listened with a beating heart to all these histories. It was now three o'clock. She had put away the Christmas dinner and fed the children on milk porridge, and kept them quiet round her. There was no love in them to agitate their little souls for their missing father, but the sense of some great calamity around weighed on them and kept them still and frightened. Ray was mute, and scarcely moved.

By four it was once more quite dark. The villagers hung about, cowed and afraid like the children. Christmas Day was passing, and there had been no service in the church. It seemed to them a thing so terrible that the sin of it would lie on them forever.

All the hushed whitened moor was without a sound; the safely-folded sheep bleated now and then, and the cattle lowed in the byre; that was all; otherwise, a silence like that of death enveloped the village and the church, and the people dared not speak above their voices. All at once Keziah rose and took the two little girls, one on each of her own strong arms, with woollen hoods pulled over their flaxen heads.

"Christ's Day must not go by without a prayer said in His church," she said to the folks in her kitchen. "Let us go and pray there for master. 'Twill save the day from heathendom."

She went out into the deepening gloom, into the air that was bitter still, quite windless. Followed by the children, she went over the snow under the dark boughs of the trees to the church door, and entered it, the women going behind her with lanterns under their cloaks. They set down their lanterns in the middle of the aisle, and the light made a little pale glow on the tombstones that formed the pavement. Keziah knelt down and prayed aloud, and the voices of the people echoed here; when her prayers had ceased and all was silent the little faint tones of Ray stole through the stillness:

"God, please do not be angry any more because papa made a

mistake: he did not mean to be cruel. Please save the sheep and the birds and save him. Please do not be angry any more."

Then his own little voice died away in a sob, and all the women kneeling there in the cold and the dark, wept too. Solemnly, as they had entered, they left the church; some one had said: "Let us sing a psalm," but no one could sing; their hearts were too full, for all their men were out on the moors, and who could tell what might chance there? Then Keziah on her threshold turned and said to her neighbours:

"Now thank ye all kindly, but go to your homes: Gossiping is bad at such a time as this. For me I will keep by the hearth with the children. Lord snocour their father!"

The women were moved at the seriousness of a woman always mirthful and neighbourly, and each went quietly to her own cottage. She herself went home, as she had said that she should, and the little boys gathered about her knees, and the little girls slept in her arms. Night once more began to fall over the world of snow. In the inner kitchen the old peddler and an old labourer, too aged to go out and assist in the search, were talking low over their ale, of storms they had known forty long years before.

Keziah had shut no shutters; she lit candles and put them against each casement, so that by chance the light might assist her master if he were unable to find his homeward way.

"Lord help them all, poor souls!" she thought, rocking the babies in her arms, and thinking of the ships at sea, of the travellers on the moor, of the sheep lost on the tors, and the trains blocked in the snow.

Ray, with his hand clasped about his little naked legs, sat and gazed into the fire, his eyes wide open, his mouth parted. "Pray, do not make me go to bed," he said, once; "pray, do not."

So, when she put the others to sleep, she let him sit up with her by the fire. "Why won't you go to bed, my dear?" she asked him; as the cuckoo clock told 9 of the night.

Ray shuddered.

"In my bed, last night, when I did sleep, I saw papa dead in the snow, and God's birds covering him with leaves. I should see it again now."

"Ah, my poor child!"

He leaned his head against her, and they sat in the chimney corner together.

The cuckoo called 10 o'clock.

There was a sound of voices outside the house, the shuffling of men's feet in the crisp snow; the dog barked outside, the flash of torches flared red on the lattices. Ray and his nurse sprang up and rushed to the door and forced it open. The men were bearing a litter, and the foremost of them cried out, "Little master, its your father. We've done a good Christmas night's work. Nay, nay, he's not dead; never fear!"

Ray rushed out into the snow.

For many moments all was confusion; then the men laid the shutter gently down before the fire, and taking off the wraps strewn over him, showed Ray the motionless form of his father, whose eyes unclosed, and whose gray lips feebly murmured:

"My little boy, do not be afraid."

Ray burst into tears, and kissed his father as he had never dared to kiss him in his life.

Setting out to walk homeward from Tamsleigh, he had crossed half the moor in safety, in the teeth of the blinding snow, then as darkness fell had misused his way and had wandered so far and become so exhausted by the wind and the bitter air that he had lost all power of even guessing where he was, and so had grown feebler and blinder at each step, and had staggered for shelter into a hollow space made by some rocks and trees; there he had sat down, wrapped himself in his cloak, and trusted the dawn would break. But the fury of the storm had uprooted some of the trees and loosened some of the boulders; with a roar as of thunder the huge stones and oak that grew with them barred him in a prisoner. There, half-frozen, famished, miserable, he had passed the night of Christmas Eve and the wild day of Yule itself, while his people were searching for him east and west, north and south, and his little son was praying to God "not to be angry." He had resisted the longing to sleep that came over him, knowing such sleep fatal; but he had given himself up for lost, hemmed in by the rocks, and knowing well that none could see him or hear his voice, about as he would over the desolate moor.

Death was very near him, and in its awful presence he regretted many things and repented many. He thought of his poor little children with shame and sorrow, and he remembered how he had struck the child for its charity to the birds—for the alms of bread that now he would have thanked heaven for himself! When the sound of searchers coming over the snow was borne to his ear, and the cries of his own dog—the dog he had often chained and often beaten!—brought them to his hiding place, and with ropes let down to him from above they dragged him up into the starlit world, the stern Vicar was no stronger than his little son; he swooned away!

He had been imprisoned in the snow for thirty hours.

As he lay in the warmth of his own hearth, with the firelight dancing on the light curls of Ray, he opened his feeble arms to the child.

"My boy, I have been cruel to you. Forgive me. Since my life has been spared, I will try to make it a blessing to you and to your brothers."

"And the birds?" whispered Ray.

His father smiled.

"You shall hang a sheaf of corn out every Winter, as they do in the Sweden of your story books. I know now what it is to die in the snow."

Ray laid his head upon his father's breast, and was happy.

When the morning, which was cloudless, came, he had his sheaf of wheat, and hung it above the door, and all the birds flocked to

it, fluttering and chirping in little multitudes, the bold, bright robins foremost.

"God did hear me when I asked Him not to be angry any more," said Ray; and Rob said, "Me, too. I asked Him."

And hand in hand they looked up at the broad blue sky.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XLVI.

#### THE PASSAGE OF THE YOSHINO.

Looking at the limbs and thwens of the man he had slain, the Genji knight could not but confess to himself that without the accident of his adversary's fall, the issue of the combat might have been very different. Among all the followers of the white pennon there was not one, Benkei alone excepted, who could compare with the 'Black Priest' in point of physical endowments, and it was easy not only to appreciate the influence such a man must have exercised over his comrades, but also to guess how grievously they would be disheartened by his death.

And indeed when they saw Takanobu come forth from the thickets carrying their champion's head in his hand, the main part of the cenobites thought less of revenge than escape. They began to remember that Yoshino was after all but an insignificant place, and that if Kakuhari had found no peer there, Yoshitsune on the other hand was without equal in the whole empire, within the four seas. Viewed in this light the friar's discomfiture now appeared less marvellous than the expectations they had before entertained of his victory, and so it resulted that none were found to answer Tadanobu's defiance when, casting down his ghastly burden in the snow, he called on the 'Black Priest's' followers to come and pay the last rites to their leader's remains. Where Kakuhari had failed another was little likely to succeed, or so at least his comrades were content to think. Moreover the darkness, now fast closing in, was beginning to suggest a new motive for forbearance. If the Genji men remained in the valley until the following day, there would be time enough to devise some less hazardous method of compelling their surrender, while, for the rest, there was certainly no means of preventing their escape during the night should they elect to make the attempt.

Tadanobu foresaw the enemies' hesitation. He had believed death inevitable, and was nothing loath to meet it now that the purpose for which he laid down his life was accomplished, but at the same time since it was part of his project to prolong the cenobites' error as long as possible, and since this could only be accomplished by avoiding capture, he was not disposed to hasten the end unnecessarily. While standing beside Kakuhari's body on the ledge of rock overlooking the precipice, he had been visited by an idea which he deemed at the moment a mere caprice of desperation, but which now recurred to him with so much force that he no longer hesitated to carry it out.

The precipice, inaccessible at it looked at first sight, consisted in reality of a number of ledges similar to that upon which the 'Black Priest' had received his death stroke. These, though separated sometimes by intervals whose passage a man might well have hesitated to attempt under ordinary circumstances, were nowhere absolutely impracticable, while they afforded a much speedier means of descent than the beaten path by which the friars must return. Tadanobu had noted all this, and he now set himself to make the essay before the darkness doubled its perils. Once or twice he wellnigh abandoned all hope of reaching the bottom safely, such small space did he find to stay his feet, but on the whole the difficulties proved less than he had anticipated, and while the cenobites were still lingering on the mountain, undecided what course to pursue, he had passed behind them and was making his way rapidly to the cloisters.

He entered the main gate unopposed and walked boldly towards the court yard on the north side of which the friars' residences stood. The doors of the first house he reached stood open, and on the threshold a glow of ruddy comfort kept guard against the coming of the frost. Two or three pages and as many serving-men sat by a huge fire of pine logs that flared on the kitchen hearth, and in the shower of

ascending sparks a large rice-cauldron hung suspended, responding to the fitful crackle of the flames by a deep-toned murmur of delicious promise.

Tadanobu could not have resisted the temptation this spectacle afforded though it had been in his design to do so. Not alone was he worn out by the toils he had endured from sunrise to sunset and the constant company of mortal peril, but also since the day he turned his back upon Kiyoto, shelter and plenty had been wellnigh unknown to him. He entered the house and passing to the hearth-side began to unlace his helmet, paying no heed to the serving-men and pages, who indeed fled precipitately when they heard the clank of his mail and saw that he was one of the very warriors whose deeds they had just been recounting to one another.

The knight helped himself freely from the stores of food and wine that were prepared against the return of the master of the house, laughing aloud at the thought that while the cenobites were perhaps searching for him in the darkness and among the snow on the mountain, he was quietly enjoying their good fare under their own roof-tree. As for what he had done that day, or might still do before he died, he deemed it a small matter that it should remain unknown and unapplauded, but he would have given much for a moment's meeting with his old comrades that he might stir their mirth by the recital of this marvellous plesantry. This however was not to be. Neither the thought that he had accomplished more than his undertaking, nor the easy prospect of escape that now presented itself could make him forget his six liegemen, who had been content to die in the faith that he would not survive them. In this respect his resolve remained unshaken, and if he had not yet achieved his original design of falling sword in hand upon the enemy and making his last moments memorable, it was not because he desired to prolong his life, but because he had conceived a plan for securing Yoshitsune from all further molestation so far as the cenobites were concerned. Meanwhile he did not quarrel with fortune if she had brought within his reach the means of renewing some genial memories before the end. The fatal moment would come in good time, and in the interim he was well content to sit within the circle of the mellow firelight, lulled by the fumes of the wine into happy unconsciousness of everything but present comfort.

Little by little this fitful doze deepened into quiet sleep, and in his dreams it seemed to him that he had been listening for years to a babel of voices shouting out confused and unintelligible sounds, until at last these adapted themselves to the name of 'Yoshitsune,' and he awoke to find that the cenobites had come back, and were calling on him to come forth and surrender, since his fate was now completely in their hands.

He rose from his seat with an air rather of annoyance than apprehension, and walking slowly to the door looked out into the courtyard. The moon had now risen and shining across the lattice of cedar branches, shewed him a multitude of men surging backwards and forwards and filling the air with a clamour of defiance. Those whom the curiosity of their companions had thrust forward to within arm's length of the vestibule, fell back precipitately at Tadanobu's appearance, while those who had been most careful to keep beyond striking distance, brandished their weapons and sought to atone for their timidity by increased vociferation.

The knight listened to all this din and watched all this confusion with an unmoved countenance. Old experience made it easy for him to distinguish between the outcry that precedes and that which replaces action, and he saw that so long as his own sword remained sheathed he might count on immunity from attack. Once or twice the cenobites, fancying he was about to speak, called on one another to keep silence, but he remained motionless and apparently unconscious alike of their uproar and their quiet. His thoughts, indeed, were not intent upon his own plight, not busied with any device to amend it, but engrossed rather by the marvel that an unjust fate should have brought the noblest and stoutest knight in Japan low enough to be within reach of such a craven rabble as this. If even those who had only watched Yoshitsune's career from a distance found it difficult to reconcile his present condition with his recent high estate, how much more unaccountable must these things have seemed to the man who, standing beside him from first to last, had learned to know him as the peerless soldier he was.

Pondering all this, Tadanobu had some pain to restrain himself from leaping into the midst of the friars and teaching

them how little fitted they were for the task they had set themselves, but when he saw how, despite their numbers and strength, they held carefully aloof, nor ever ventured within reach of his sword, contempt took the place of passion. Turning back into the house, he resumed his seat before the fire and poured himself out another cup of wine, with as little evidence of concern as though the noisy multitude without had assembled, not to take his life, but to guard it.

He had not even taken the trouble to close the door, so that everything he did was visible from without, and the cenobites infuriated by his contempt, redoubled their clamour, taunting him with fear and promising to take ample vengeance for Kakuhau's death. Still, however, the knight declined to make any reply. He was beginning to think that to die by the hands of these miscreants would, after all, bring him more shame than glory, and to ask himself what sort of welcome he might expect from his brother and ancestors, who had met their end in fair fight with men worthy of their steel.

These fancies once admitted soon recalled the love of life common to weak and strong alike; recalled it perhaps too late to achieve, but not too late to attempt escape. Before resuming his seat he had piled a fresh supply of fuel on the fire, which was now sending up thick jets of spark and flame that made every corner of the house, and even the faces of the multitude without, easily visible. Tadanobu selected from the centre of the hearth two of the most vigorously burning fire logs, and carrying them into the next room, applied them to a large heap of trays and wooden salvers that lay beside the paper sliding doors. Those in the courtyard, suspecting his design though they might not perceive what he did, raised a shout of fury and half-a dozen of them had almost entered the vestibule when the knight, springing forward sword in hand, dealt a few blows that soon relieved him of these intruders. Then waving his hand to enjoin silence, he addressed the cenobites for the first time:—"Hearken ye truculent friars, who have mistaken glaive and sword for rosary and annulet. I that address you am not Yoshitsune, as your suppose, but Sato Tadanobu, whose greatest glory it is to have taken his lord's place even for a moment. Think you that our guardian god Hachiman could have endured to see his best soldier fall into the hands of a cassocked rabble? Not so in truth. The life of the Genji chief is as safe from your schemes as mine shall presently be, for you yourselves are my witnesses, that I die here of my own choice, who have waited of my own will to meet you. My head, indeed, you may carry to Kamakura, if you deem the guerdon worthy the pains, but I think that hereafter when you come to cast up the balance of profit and loss, you will not find that you have gained overmuch by leaving your bells and bibles to cross blades with men who deserved your prayers rather than your enmity."

When the knight had ceased speaking he stepped back a pace, as though to avoid the smoke which was now rolling in thick volumes from the door-way, and drawing his short-sword plunged it into his left side. It happened, however, that the shadow of the eaves falling across the spot where he stood, prevented the friars from observing his actions very distinctly. Thus, although with a burning house behind him, and a sea of hostile weapons before, it seemed neither unlikely nor inconsistent with what he had said, that he should hasten the death he might not avoid, and though the onlookers did certainly so interpret his proceedings, the fact was, that instead of stabbing himself, he passed the blade under his arm and turning immediately, disappeared amid the smoke and flame.

The avowal he had made infuriated the cenobites beyond measure. They understood at once the trick that had been played on them, and believing their enemy no longer capable of harm, the most timid among them were now loudest in their clamour for revenge. But while they hesitated whether to follow the knight or leave him to die a more painful death than sword or glaive could achieve, the flames deprived them of the power of choice. All their exertions were needed to save the adjacent buildings and even the temple itself from destruction, so that they were constrained to content themselves with the assurance of Tadanobu's fate.

He, however, finding as he had anticipated, that no attempt was made to pursue him, forced his way out at the back of the house, and succeeded without much difficulty in climbing to the roof. He scarcely entertained any definite hope of escape, since at whatever part of the courtyard he descended he was almost certain to be observed, but in such a scene of confusion as the place now presented, a resolute

man may find many an unforeseen chance and to some of these he trusted.

Neither did fortune fail him at the last. Creeping along the roof, from which the flames were already bursting, he discovered that the hill had been cut away to afford space for a wing of the building, and that the gable was only separated from the edge of the scarp by an interval of a few feet. The leap was nothing to one whose life depended on its accomplishment and would not have been much to Tadanobu at any time. He reached the other side with but little effort, and in a forest of cedars that clothed the mountain, found a little shrine where he took shelter for the night. It was impossible that his escape could be discovered before the morning, if even then, but he would only have deemed his ruse half successful had it remained unknown to his enemies. At daybreak, therefore, before setting out, he took off his armour, and piling it at the threshold of the shrine, carved his name in large characters on the pillar of the portal, adding also an intimation that, if the friars were not yet satisfied, they might perhaps overtake him before he reached Kiyoto, since he did not purpose to hasten his journey overmuch.

But though the armour was found and the writing read within an hour of the knight's departure, and though the cenobites would not have deemed any labour lost or pains misspent in seeking revenge, they never for a moment believed that Tadanobu had been really so rash as to remain in their vicinity all night. He was no doubt far out of reach by this time and the idea of pursuit was hopeless. Fresh counsels too had induced new resolves. Yoshitsune had not yet completely eluded them. He must necessarily have followed the mountain tracks, since both the coast line and the main northern route presented inevitable perils; and, if so, the friars' knowledge of the country told them that his progress would be at first slow and in fine completely barred by obstacles not to be surmounted at this time of year. Moreover, he would be quite as much unprepared for a renewal of the attack as his assailants would be unlikely to be baffled by any fresh stratagem, and all these considerations, supplemented by the wrath they felt, not only at their unjustifiable failure, but also at the heavy losses accompanying it, determined them to undertake the pursuit again with a century and a half of their hardest men.

Yoshitsune's progress had indeed been even slower than the cenobites' calculations, but not altogether from the causes they had foreseen. Still hoping against hope that his loyal and well-loved comrade, of whose skill in fight and wealth of device all his previous achievements had seemed but an earnest, might yet discover some method of baffling his assailants and rejoining the little band so weakened by his loss, the Genji chief had loitered long on the way, scarcely achieving by sunset a distance that would not have measured a few hours' effort under ordinary circumstances. Thus looking back from their halting place, his knights were able to be sure that the red glow in the sky to the south was the reflection of a fire at either the village or the cloisters of Yoshino, but for the rest it was long before they had any certain tidings of Tadanobu and his incredible escape. They had now passed beyond the region of which Benkei had any certain knowledge, and being unable to procure a guide, had no resource but to follow whatever paths seemed to offer the least difficulty. The choice indeed, was not large, for there was seldom more than one accessible way, but even that was so little trodden, and so often hidden by snow drifts, that the utmost care scarcely sufficed to decipher it. More than once what they mistook for a path turned out to be nothing more than the bed of a torrent or the track of an avalanche, this ending on the verge of a precipice, and that at the brow of a cliff.

Impeded by the delays these errors caused they found themselves still among the mountains at the close of their second day's journey. At noon they had rested for a time in a wayside shrine, such as that which witnessed Yoshitsune's parting from Shidzuka, but with this exception no trace of human handicraft nor any evidence of man's presence met their eyes from sunrise to sunset. They might well have believed, as Benkei said, that straying from the land of life, they had reached a region where the only change ever destined to take place was the fading of the snowy wastes from their mid-day glitter to their ghastly pallor in the gloaming.

Towards evening they became aware of a sound like distant thunder growing gradually louder as they advanced, and shortly afterwards, at the exit of a deep gorge, they came in

sight of the celebrated 'Silver Thread Cataract.' The cliff over which the water leaped was semicircular in form and from sixty to seventy feet high. It was traversed, apparently, by veins of hard and soft rock, for the stream, on the verge of its fall, had worn for itself a thousand different channels, not deep enough to divide the broad sheet of water above, but still causing it to separate midway into a multitude of jets, which reuniting presently in an entanglement of spray and foam, presented the appearance of an immense skein of floss silk shaken out by the wind. At either side, huge fragments of rock, raised upon each other's shoulders, threatened each moment to fall crashing into the basin of the cataract, and over these again the snows of months had gradually piled themselves, smoothing away every rugged outline and filling the crevices with a forest of glittering icicles.

Of very much greater moment to the Genji knights, however, than the grandeur of the spectacle, was the question how the river might be crossed, for at the first glance they saw that it was well-nigh impracticable. Immediately below the cataract its course was bounded by perpendicular cliffs, between which it surged and staggered, still giddy from the effects of its fall, and though on escaping from these, it spread itself out into a broader and quieter stream, the black depth of its waters and the ominous force of their rushing currents, forbade any attempt to pass over by wading or even swimming.

Still there was little probability that a ford did not somewhere exist, and since Benkei had hitherto acted as guide, he now ascended a neighbouring hill in the hopes of discovering a rapid or perhaps a bridge, whether of rock or fallen tree, that might help them across. Nothing of the sort, however, was to be seen. On the contrary, the only break discernible in the line of dark water was a second cataract, from which the wind at times wafted a muffled roar, scarcely less full-voiced than the thunder of the 'Silver Thread' fall itself.

Apparently there was nothing for it but to retrace their steps, though this would expose them to all the perils they had been at such pains to avoid. No doubt the information sent by the cenobites to the neighbouring barons had already produced its effect, and if they had not been pursued before, it was simply because their enemies knew that escape by the route they had chosen was impossible. Perhaps even now a force was following leisurely in their rear, ready to hem them into this issueless defile and crush them under a weight of weapons.

Disturbed by this fancy, Benkei turned half involuntarily to examine the path by which they had come. He remembered to have remarked when approaching the defile that the very hill on which he now stood was conspicuous from various points of the route, and he therefore naturally expected to find himself favourably posted for purposes of observation, but such was not the case. Except at one place where it wound over the spur of a mountain some two miles distant, he could not certainly distinguish the track, and rendered vaguely uneasy by this discovery he was about to seek a better position, when he was startled by a sight that set all his doubts at rest forthwith.

Just where the path climbed into view from behind the slope of that far off spur, something glittered for an instant and then disappeared. So brief indeed was the apparition, that many a one might have been content to regard it as a delusion, but not so Benkei. The glint of the setting sun on glaive or morion was a sight too familiar to be mistaken, and without even waiting to seek confirmation or details, he returned at once to his comrades with the news that they were pursued, and that they had but little leisure to determine the fashion of their death.

The intelligence seemed to produce neither astonishment nor consternation. From the moment they had abandoned their ships and trusted to the precarious chances of an unnoticed journey through districts filled with foes, every one of the sixteen men, with the exception of Benkei, had schooled himself to be prepared for the worst. Neither was the glaivesman's assurance based upon any well considered prospect of escape. He was sanguine, because under no circumstances could he have been otherwise, and this unreasoning faith had found perhaps more credit with the rest than any intelligible confidence might have done. Receiving therefore from his lips the tidings of impending disaster, his comrades never thought of questioning his verdict, but disposed themselves at once to carry out the instructions they knew their leader would presently issue.

They were not mistaken. Yoshitsune was least of all inclined

to postpone the end. Friendship, power, love, all these were irrevocably lost, and in their absence what could the future present but an utterly barren prospect? There was still one method of escaping the worst and this he chose without hesitation.

"Comrades and lead followers," he said, "that to which all life tends has overtaken us. Whoever these our pursuers may be, and whether we vanquish them or be vanquished, there is no possibility of ultimate rescue. For my own part, therefore, I am minded to die peacefully beside this stream to which our fate has misled us. Benkei will sink my head in the basin of yonder cataract where our foes, methinks, may not easily find it, and my death will remove the cause that has made you for my sake fugitives and unfortunate."

With that he drew his sword and would have placed it in Benkei's hands, but the glaivesman, whose eyes had been for some moments fixed on a distant point of the river, now strode suddenly off as though unconscious of the import of his leader's words.

Looking vaguely up and down the bank, rather for the sake of avoiding Yoshitsune's gaze than with the idea of making any new discovery, he had observed something which projected into the stream from the opposite margin, not forming a bridge, but yet considerably diminishing the width of water. Rock or stump, if this prominence only afforded firm footing, it might perhaps be accessible by a vigorous leap, in which case the torrent would prove a protection instead of a destruction.

But when he reached the river, Benkei saw that this seeming promontory was nothing more than a clump of bamboos brought almost level with the ground by a weight of snow entangled in their foliage. He observed, however, at the same time, that they had not assumed this position yesterday or to-day. Over their bowed heads the flakes of successive snow-falls had piled themselves from month to month and this frail edifice gradually consolidated by the frost, had at last formed a barrier just sufficiently strong to stem the sluggish current in the bend where it lay, and so suffer the ice to accumulate over the still water below. Dare any men adventure the leap with such an uncertain landing place beyond? Benkei himself would not have hesitated, but he had little hope that Yoshitsune would forego his resolve. This newly discovered chance was too slender to beget much confidence; nay, almost too precarious to justify a suggestion of attempt.

A consideration, however, of which the glaivesman had not taken account was already weighing painfully with Yoshitsune. The instant he made known his resolution, it had become apparent that not one of his followers could endure to survive him. Already the whole band were preparing their dirks, or casting lots to determine which of their number should act as headsmen to the rest.

To prevent this, though it was after all nothing more than he might have anticipated, Yoshitsune would have adventured anything. For him at any rate, he said, the leap was easy, and it would be strange if one on the other side could not devise some means of facilitating the others' passage. Selecting therefore what seemed the most advantageous point for the attempt, he tightened the loops of his sandals and drew back to a few paces from the bank.

The Genji men did not lack instances of what their leader was capable, but in this case it was not a mere question of agility. However vigorous the leap, it could not provide against the perils of the landing, and for all its apparent stability, the little cape might prove as frail as the flakes and foliage of which it was composed. Thus, while some stood still in breathless expectation, others hastened to a bend in the river lower down, whence there seemed to be a possibility of extending aid to one swimming for his life, and Benkei, unlacing his helmet as well as the points of his cuirass, shewed plainly that in the event of accident he meant to plunge in at once after his master.

None, however, could have been in time to be useful had that which they dreaded occurred, for before they had leisure to mark how it was done, Yoshitsune was standing safely on the other bank. His leap had carried him almost beyond the point of danger, but he now advanced to the very verge of the promontory, and shewed that although it trembled a little under his tread, it was nevertheless firm enough to be trusted.

After this the others crossed over without much difficulty, Benkei was the last to jump, and though he did his part no less nimbly than any of his comrades, his immense weight nearly completed the destruction of the landing place, shaken

as it had already been by repeated shocks. So soon as he found himself on the other side, he drew his sword and severed the stems of the bamboos. "It is an evil return to make in sooth," he said, "for the good you have done us, since you too have lives as well as we. But at spring-tide you will live again in your saplings, while for us there is no return from the grave."

The whole party then retired a little way from the margin and waited to see the issue, for they desired not only to discover who their enemies were, but also to be sure that the pursuit ended here.

A few moments afterwards the cenobites came in sight. They had certainly reckoned on encountering the Genji men by the way, for they supposed that the impossibility of passing the river would have obliged Yoshitsune to turn back. When therefore they reached the defile, and saw the little band of soldiers they had hoped to capture standing quietly beyond the stream, their first idea was that the Gods had interposed to aid the fugitives. Indeed many of them were so fully persuaded of this that they proposed to retrace their steps at once, but others, less superstitious and more resolute, suggested that they should first make an examination of the river bank. Where the pursued had passed, the pursuers also could not fail to find a means of crossing, and the result of course was that, by following the tracks of the Genji men, they immediately discovered the point at which they had leaped.

The friars were now as much elated as they had previously been down cast. There before them was, not Tadanobu nor another, but Yoshitsune himself, guarded by a mere handful of liegemen, and separated from them by only a few feet of water that presented no impossible obstacle. The Minamoto chief, recognizing the futility of any further attempt to escape, had no doubt resolved to make a final stand at this place; hoping, perhaps, to take his adversaries at a disadvantage while they were in the act of passing the stream.

But if this was his scheme it could be easily frustrated. The cenobites divided their force into two bands. Of these the one took post by the margin of the river, ready to pour in a volley of arrows if the enemy showed any inclination to advance, while the other disposed themselves to leap the chasm in succession; of the latter, the first to make the attempt were three friars who had taken Kakuhai's place as leaders of the expedition. Stout men and hardy mountaineers, they made light of this leap, which to them presented no peril but its magnitude, and advancing hand in hand, they sprang boldly from the margin, amid a chorus of encouragement from their comrades.

The result may be easily conceived. The moment their feet touched the promontory it sank like a stone under the water, and the three friars falling back into the stream were swept away by the torrent, clutching wildly at each other or shouting vainly to their comrades for aid.

So ended the cenobites' second and last attempt. They were so horrified by their leaders' fate, that even had it been possible to advance they could scarcely have mustered resolution to do so. Standing disconsolately by the river, they watched the Genji knights take their way slowly northward, Benkei bringing up the rear, and dancing the while a merry measure to commemorate the friars' discomfiture.

"With cherry bloom the stream is strewn  
In spring, and when the summer's dead,  
The russet leaf by chill winds blown  
Dapples the foam with flecks of red.  
But who, like us, hath seen, my mates,  
A winter's drift of friars' pates?"

(To be continued.)

#### DOUBLE ACROSTIC.

My first is good, if he in truth believes  
That for the burdens of mankind he grieves,  
And has no wicked feeling in his heart,  
That prompts him to adopt a hostile part.  
But if no generous feeling rules his mind,  
His politics are of a different kind,  
And though to be my first he does lay claim,  
My second is a more becoming name.

1.

'Tis male or female, and it feeds on love,  
Each ooce the other like a turtle-dove.

2.

Here Venus passed a classical exam.  
And gained the prize without a student's cram.  
Some lovely creatures in our precincts live,  
Who'd win the prize that Paris dared to give.

3.

By Jingo, or by Jove, it means the same,  
An Irish oath, comparatively tame.

4.

An aged priest, who when the Ark was lost,  
—Not Noah's Ark by raging billows tost—  
But quite another vessel, was so grieved  
His sacred trust, in which his soul believed,  
Had come to grief, in fact become a wreck,  
That in despair he fell and broke his neck.

5.

'Tis steady as my light, we're wont to say,  
And yet we move our cradles in this way.  
Still this is not the kind of word I mean,  
For read it right, a fabled bird is seen.

6.

This blank applies, savans are prone to tell,  
To her who loves not wisely but too well.

7.

A poetess, romantic, kind, and good,  
We'd bring her back to earth if but we could,  
Alas! she's left us for the unknown land,  
You'll find the monument on Afric's strand.

FUJIYAMA.

Calcutta, 28th January, 1880.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, APRIL 16TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

.....represents velocity of wind

.....percentage of humidity

Max. velocity of wind 25.5 miles per hour on Saturday, at 2 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.345 inches on Tuesday at 7 a.m., and the lowest was 29.649 on Friday at 10 p.m. South winds have prevailed during the latter part of the week accompanied by a considerable rise in the temperature and during most of the time by a high barometer.

The total rain fall for the week was 1.065 inches.

## SHIPPING INTELLIGENCE.

## INWARDS.

April 19, British barque *Madame Demorest*, Walker, 430, from Newcastle, N.S.W., coal, to Walsh, Hall & Co.  
 April 20, British barque *Flecher*, Corlyou, 730, from Antwerp, General, to Malcolm & Co.  
 April 20, American ship *Leonora*, Peterson, 1,491, from New York, Kerosene and General, to C. & J. Trading Co.  
 April 20, American 3-masted schooner *Hattie N. Bangs*, Bangs, 566, from Takao, Sngar, to Chinese.  
 April 21, American ship *Charles Dennis*, J. Carney, 1,710, from New York, Kerosene and General, to C. & J. Trading Co.  
 April 22, Japanese steamer *Toyoshima Maru*, Hubbard, 597, from Kobe, Mails and General, to M. B. Co.  
 April 22, French steamer *Tibre*, Reynier, 1,726, from Hongkong, Mails and General, to M. B. Co.  
 April 22, Japanese steamer *Genkai Maru*, Conner, 1,260, from Shanghai and ports, Mails and General, to M. B. Co.  
 April 23, American barque *Harrard*, Prey, 1,033, from New York, Kerosene and General, to Cornes & Co.  
 April 24, Japanese barque *Kinokuni Maru*, Nicols, 960, from Nagasaki, Coals, to M. B. Co.

## PASSENGERS.

Per British barque *Madame Demorest*, from Newcastle, N.S.W., Mrs. Walker and family and Mr. Smith.Per French steamer *Tibre*, from Hongkong:—Mr. and Mrs. Lohmann, Messrs. Aranguren, Watanabe, Enouye, and 3 Chinese in Cabin.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Mr. and Mrs. D' Iffanger, Mrs. Ahrens and child, Mrs. Voigt and 2 children, Captain Wiffard, Dr. Scheube, Messrs. M. Isaacs, St. John, Pegnault, Mouchet, W. Kennedy, Schraub, Howie, Heinemann, Cuthbertson, E. C. Kirby, P. Lerme, Fujikawa, Takei, Matsuoaka, Ishibashi, Owatari, Susuki, Watanabe, Shoshi, Nakashima, Utangi, Hattori, Takiba and 3 Japanese ladies in cabin, and 3 Europeans, 274 Japanese and 6 Chinese in steerage.

## OUTWARDS.

April 19, Japanese steamer *Saminoye Maru*, Frahm, 852, for Hako-date, Mails and General, despatched by M. B. Co.April 19, British barque *Lady Boreas*, Pain, 891, for Nagasaki, Ballast, despatched by Mollison, Fraser & Co.April 19, British steamer *Flintshire*, Morgan, 1,286, for Hongkong via Nagasaki and Kobe, despatched by Adamson, Bell & Co.April 20, American ship *L. J. Morse*, Ames, 1,390, for Hongkong, 10,000 cases Kerosene, despatched by Frazar & Co.April 20, Japanese steamer *Shario Maru*, Kilgour, 524, for Kobe, Mails and General, despatched by M. B. Co.April 21, Japanese steamer *Tamaura Maru*, Carrew, 558, for the North, Mails and General, despatched by M. B. Co.April 21, Japanese steamer *Takago Maru*, Young, 1,230, for Shanghai and ports, Mails and General, despatched by M. B. Co.April 22, Japanese steamer *Tsuruga Maru*, Steadman, 661, for Kobe, Mails and General, despatched by M. B. Co.April 22, British steamer *Sunda*, Reeves, 1,029, for Hongkong, Mails and General, despatched by P. & O. Co.April 22, British brig *Lady Abernethy*, Holm, 256, for Melbourne, Rice, despatched by Jardine, Matheson & Co.April 22, British steamer *Scotus*, Tilmouth, 784, for Kobe, despatched by Walsh, Hall & Co.April 23, Japanese steamer *Tokai Maru*, Hogg, 652, for Kobe, Mails and General, despatched by M. B. Co.April 24, Japanese steamer *Iliogo Maru*, Moore, 896, for Hako-date, Mails and General, despatched by M. B. Co.April 24, Japanese steamer *Toyoshima Maru*, Hubbard, 597, for Kobe, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Per British steamer *Flintshire* for Kobe:—Messrs. Hunt, Reid and Smith.

Per Japanese steamer *Takago Maru* for Shanghai and way ports: His Excellency C. H. de Groot, Belgian Minister; General Stabel, U. S. Consul, Kobe; Mr. and Mrs. Thomas, Mrs. James, Mr. and Mrs. Adams and 2 children. Mr. and Mrs. Terada, Mr. and Mrs. Yoda, Mrs. Tuijoka and child, Mrs. Nakano, Messrs. Sendu, Inouye, Tamana, E. Cameron, J. Green, Omura, Torii, Niyama, Horiuchi, Tasaki, W. R. Cuthbertson, A. J. H. Carlile, T. Craven, Mitsui (2), Kitamura, Matsuda, Ito, Unsanchi, Cagett, Oyama, Ota, Naka, Ichiji, Wada, Hosi, Nakamura, and Rev. T. Alexander.

Per British steamer *Sunda* for Hongkong:—Messrs. B. H. Pratt, S. Porteous, R. A. Mees and child; 6 Europeans and 4 Chinese in steerage.

## CARGOES.

Per Japanese steamer *Takago Maru*, for Shanghai and ports:—

Treasure ... .. \$50,500.00  
 " " " " " " Yen 1,800.00

Per French steamer *Tibre*, for Hongkong:—

From London ... .. 1,751 pkgs.  
 " " " " " " 1,037 "  
 " " " " " " 1,180 "

Total ... .. 3,968 pkgs.

Per Japanese steamer *Genkai Maru* from Shanghai, and ports:—

Treasure ... .. \$100,600.00

Per British steamer *Sunda* for Hongkong:—

Silk for France ... .. 18 Bales  
 " " " " " " 15 "

Total ... .. 33 Bales

## REPORTS.

The British barque *Madame Demorest* reports: Left Newcastle, N.S.W., 1st March. Experienced light northerly winds to Norfolk Island, then took a heavy gale from north-east to south-west. Thence to Line variable winds. Good north-east Trades to Bonin Islands, thence light winds to Rock Island, being 4 days from Rock Island to anchorage at 7.30 p.m. on the 19th instant.

The British barque *Flecher* reports: Left Flushing on the 25th of November; had fine weather and easterly winds in the Channel, and strong south-west winds until entering the north-east trades, which proved light and of short duration. Crossed the Equator on the 1st of January in Long. 25 W. Had fresh E.S. trades, and crossed the meridian of the Cape on the 18th of January. Ran to the eastward on the 38th parallel, before fresh westerly gales. Came up by Flores, Ombay, and Bass' Straits and entered the Pacific on the 18th of March. Had light N.E. trades, and strong N.E.

winds to the coast of Japan on the 10th of April when were detained by thick and dirty weather. Arrived in port on the 19th of April. Passage, 145 days.

The Japanese steamer *Toyohima Maru* reports: Left Kobe at 6 p.m. on the 20th instant. Experienced light and variable winds with fine weather throughout the entire passage. Arrived at Yokohama, at 7.30 a.m., on the 22nd instant.

The American ship *Charles Dennis* reports: Left New York on the 20th of November; had a heavy S.W. gale to the 23rd, and light S.W. winds and wet weather to the equator, which was crossed in long. 28 W., 41 days out. Carried the S.E. trades to lat. 35 S., and crossed the meridian of Greenwich in 48 S. Ran the easting down between the 50th and 51st parallels, before strong westerly gales. Came south of Australia. Had light variable winds in the Pacific, and crossed the equator in long. 164 E. Had no N.E. trades, but experienced light easterly winds to port. Arrived on the 21st of April. Passage, 152 days.

## EXPORTS.

**SILK.**—We have had a slow and dragging market for Silk during the past week, only about 100 shipping bales are reported sold and against this we even have rejections amounting to about the same quantity.

Prices are again weaker, but the business done has been too insignificant to test them. Good Silks are becoming very scarce.

Total shipments to date 17,316 bales against 17,816 bales at the corresponding period last season.

Stock about 2,500 Japanese bales.

	In London at 3/11½ per lb.	In Lyons at fr. 5.05 per kilo.		In London at 3/11½ per lb.	In Lyons at fr. 5.05 per kilo.

*CAMOMILE PILLS are confidently recommended as a simple Remedy for Indigestion, which is  
the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful  
and beneficial, that it is with justice called the "Natural Strengtheners of the Human Stomach."  
"Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe  
under any circumstances, and thousands of persons can now bear testimony to the benefits to be  
derived from their use, as they have been a never-failing Family Friend for upwards of 45 years.  
Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.*

**CAUTION.***Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.*

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- & 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Guildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—**THOMAS KEATING, London.**

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.
